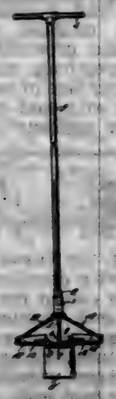
2,031,352
METHOD AND APPARATUS FOR HANDLING SLAG
Raymond N. Wilson, Cleveland, Ohio
Application June 11, 1932, Serial No. 616,837
3 Claims. (Cl. 82—46)



1. In combination with a blast furnace having an outlet passage in the base portion thereof, a tower in juxtaposition with said furnace, a structure uniting the top of the tower with the base portion of said furnace and associated with said outlet passage thereof, a conveyor belt within said structure, buckets mounted upon said conveyor belt, arranged to receive molten slag discharged from said outlet passage and deposit same in a solid condition at the top of said tower, a roof upon said structure, means within said roof to facilitate the control of the dissipation of heat from the slag and a grating adjacent the base of the tower to effect the disruption of the slag by its fall thereon.

2,031,353
UNDERREAMER
Harvey Ellis Woodruff, Corpus Christi, Tex.
Application August 16, 1935, Serial No. 36,569
1 Claim. (Cl. 255—76)

An underreamer comprising a tubular rod, means for actuating said rod, a shaft extending slidably into said tubular rod but non-rotatable relative thereto, a cross-head fixed on the lower end of said shaft, blades mounted for swinging movement in a vertical plane on said cross-head, means operatively connecting the blades to the

tubular rod for raising and lowering thereby, and a bucket mounted for swinging movement on the

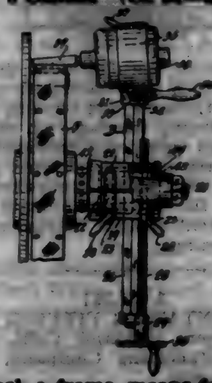
cross-head and adapted to receive excavated material from the blades.

2,031,354
VENETIAN BLIND TILTER
Richard H. Wright, Cleveland, Ohio
Application May 24, 1935, Serial No. 22,369
5 Claims. (Cl. 156—17)

1. A tilt unit for Venetian blinds, comprising a supporting bracket, a tilt member tiltably mounted thereon for cooperation with a tilt bar, operating means for moving the tilt member including a wheel and an operating shaft therefor, and a guide member rockably mounted upon said shaft adjacent to said wheel and having a guide portion for a pull cord spaced from the wheel and a pull cord looped about the wheel and passing through the guide portion of the guide member, the guide member being swingable upon the shaft in the direction of lateral pull exerted upon the pull cord for turning of the wheel to cause tilting action of the tilt member.

2,031,355
WHEEL AND WHEEL COVER
Oscar U. Zerk, Chicago, Ill.
Application December 12, 1932, Serial No. 646,859
2 Claims. (Cl. 301—37)

2. A sheet metal cover for vehicle wheels of the type comprising a central hub portion, a felloe portion provided with a plurality of circumferentially spaced inwardly projecting tongue elements, and a plurality of radially extending spoke portions generally of channel form inboardly concave secured to the felloe portion and hub portion, the cover comprising a central nave portion and a plurality of spoke simulating portions extending radially therefrom, generally of channel form inboardly concaved and mutually nestable with the wheel spoke portions, and resilient means secured to the cover and to the wheel constantly urging the radially outermost spoke simulating cover portion axially inwardly



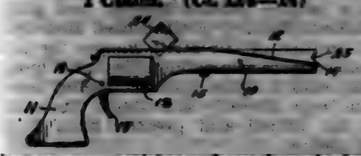
toward said tongue elements to resiliently maintain the cover upon the wheel.

2,031,356
PROCESS FOR DYEING OR COLORING CELLULOSE ESTERS AND CELLULOSE ETHERS
Franz Ackermann, Binningen, near Basel, Switzerland, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Original application May 16, 1933, Serial No. 671,762. Divided and this application April 2, 1935, Serial No. 14,575. In Switzerland May 23, 1932
8 Claims. (Cl. 8—5)

1. A process for dyeing or coloring cellulose esters or cellulose ethers, consisting in dyeing or coloring the material by means of a colored product of the general formula R_1—CH—R_2, wherein R_1 stands for any residue of a compound containing a heterocyclically bound reactive methylene group, and R_2 for any aryl residue.

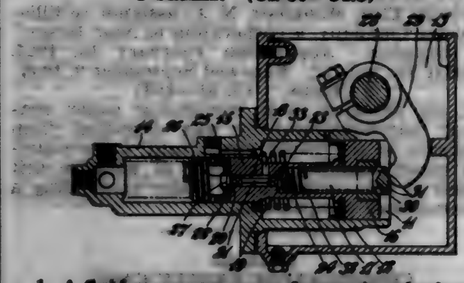
2,031,357
COMBINATION PRECISION GRINDER AND CALIPERS
Harry E. Barrett, Los Angeles, Calif.
Application July 10, 1933, Serial No. 679,697
2 Claims. (Cl. 51—241)

1. In a tool, a frame, means for mounting the frame for oscillation with respect to the work, a collar fixed on the frame, a motor-bearing mounted pivotally on the collar, and means comprising a yoke on the collar and a projection on the bearing working between the legs of the yoke for adjustably regulating pivoted movement of the bearing with relation to the frame.



2,031,358
APPARATUS FOR PRODUCING PERSPECTIVES
Johannes Bartholewsky, Los Angeles, Calif.
Application April 24, 1933, Serial No. 667,667
9 Claims. (Cl. 33—24)

1. An apparatus comprising a main framework with a longitudinal portion and a transverse portion at the far end, a vision localizing means on the near end of the framework, a base for production purposes on the far end of the framework, and a small frame adjustably mounted between the far and near ends and including means for tiltably holding matter to be produced on the base according to the appearance from the vision localizing means.

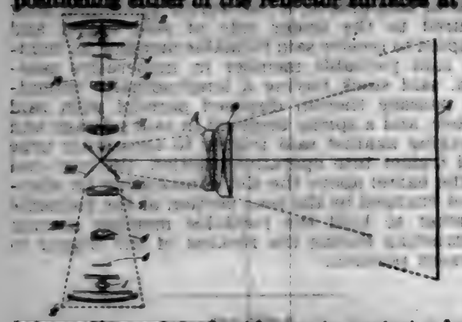


9. An apparatus comprising a main framework with a production base at the far end, a vision localizing means on the near end of the framework, a secondary frame mounted on the main framework shiftable between the near and far ends and having means for holding matter to be produced in the production base, control members at the near end, an indicator for elevation points, another indicator for lateral points, both indicators adjustable to points above the base with respect to points selected from said matter as seen through the vision localizing means, means shiftably mounted across the framework for supporting the indicators, operating means for the supporting means, other operating means for each of the indicators, means for selectively connecting the operating means for either of the indicators to the control members, and means for selectively connecting the operating means for either the shiftable supporting means or the indicators.

2,031,359
TOY GUN
John Betty, Corcoran, Calif., assignor to John Austin Betty, Corcoran, Calif.
Application August 10, 1933, Serial No. 684,582
1 Claim. (Cl. 124—14)

A toy gun comprising a barrel, a stock integral with the barrel, said stock having a vertically disposed slot therethrough opening through the upper end thereof at a point below the top of the barrel, a trigger, a hammer integral with the trigger and projecting through the upper end of said slot and in a rearward direction, a yieldable looped member engaging the front end of said barrel and engaging said hammer, said stock having a longitudinally extending groove therein, said yieldable member at the rear portion thereof being disposed in said groove and engaging over the rear end of the barrel, said stock having a recess in the groove at a point intermediate the ends of said groove, a rearwardly extending hook secured to the under side of said barrel and adapted to receive said yieldable member for holding said yieldable member in inoperative position, said stock having a longitudinally extending passage therein disposed parallel with said groove, and a spring disposed in said passage and engaging against said trigger to constantly urge said trigger into operative position, the rear end of the barrel above the slot constituting an abutment engaged by the rear portion of the yieldable member to hold the yieldable member against contracting during the rocking of the trigger to released position.

2,031,360
HYDRAULICALLY OR LIQUID PRESSURE OPERATED BRAKE
Edward Bishop Boughton, London, England, assignor to Lockheed Hydraulic Brake Company, Limited, London, England
Application May 29, 1933, Serial No. 673,527
In Great Britain June 4, 1932
4 Claims. (Cl. 60—54.6)



1. A fluid pressure means for use in a hydraulic brake system of the type having a liquid reservoir, a high pressure cylinder, a low pressure cylinder, a passage therebetween, a communication between said reservoir and one end of said passage, communication between said high pressure cylinder and the other end of said passage, communication between said low pressure cylinder and said passage at a point intermediate said reservoir and high pressure communications with said passage, a double-valve unit spring-influenced to close normally by one end thereof said reservoir communication and movable in the passage to close by the other end thereof said high pressure cylinder communication and constituting a means closing the high pressure cylinder communication against liquid flow from the high pressure cylinder, an apertured elastic member normally cooperating at the margin of the aperture together with the other end of the double valve unit for valve closing function.

2,031,361
PROJECTION APPARATUS
Lester W. Bowen, New York, N. Y., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y., a corporation of Delaware
Application November 1, 1933, Serial No. 316,493
Renewed April 4, 1935
5 Claims. (Cl. 88—24)

2. In a projection apparatus, a pair of opposed and axially aligned projectors, a diverging lens having its axis perpendicular to that of the projectors and centrally thereof, and a pair of reflectors disposed at an angle of 90° to each other on a line inclusive of the intersection of the

diverging lens and projector axes, and means for positioning either of the reflector surfaces at the

intersection point of said axes to project a beam from one or the other projectors through the diverging lens.

2,031,362

WATER-RESISTANT SANDPAPER AND OTHER ABRASIVE PAPERS AND PROCESS OF MAKING SAME

Carleton Ellis, Montclair, N. J., assignor to Ellis-Foster Company, a corporation of New Jersey

No Drawing. Application February 18, 1927, Serial No. 169,412. Renewed September 9, 1933

9 Claims. (Cl. 51—280)

1. An abrasive sheet comprising paper rendered water-resistant by wax deposited from emulsion in the paper stock, said water-resistant paper carrying a coating of abrasive grit bound to the surface by a binder comprising a nitrocellulose composition.

2,031,363

COMBINATION VANITY CASE

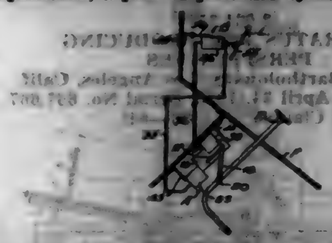
Erik Elof Eriksen, North Canton, Ohio

Application January 28, 1935, Serial No. 3,324

1 Claim. (Cl. 206—35)

A case comprising a body having compartments therein, a cover for said body, means for securing the cover in closed position, said cover having compartments and a chamber therein, a lid for closing the compartments of the cover, a flange surrounding the upper end of the body and providing a channel, said channel having a branch channel cooperating therewith for disposal about one of the compartments of the body, a compressible gasket in the channel and the branch thereof, and means extending from the cover to be received by the gasket to provide a leak proof connection between the cover and body, and the chamber and the last mentioned compartment.

2,031,364



HYDRAULIC GEAR SHIFT

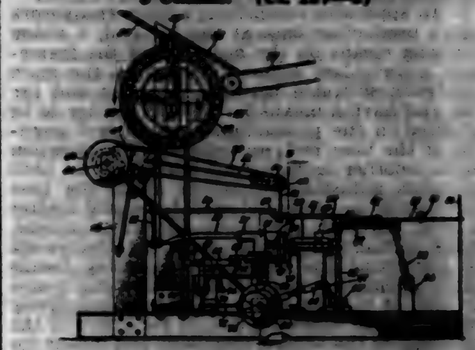
Louis D. Foley, Louisville, Ky.

Application June 17, 1925, Serial No. 37,462

16 Claims. (Cl. 74—134)

1. In a pneumatic gear shifting attachment for automobiles having a gear shift lever and a clutch pedal, a cylinder, a piston reciprocable in said cylinder provided with a piston rod for connection to the gear shift lever to move the lever backward and forward as the piston reciprocates, a pair of pressure cylinders each pipe

connected to a respective end of the first cylinder, each of said pressure cylinders being provided with a piston and piston rod, and means adapted to be actuated by depression of the clutch pedal for alternately moving the piston rods in pressure producing direction.



2,031,365

MACHINE FOR MAKING PRETZELS

Harry A. Garland, Baltimore, Md.

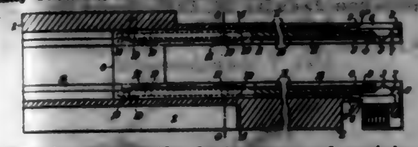
Application October 12, 1934, Serial No. 748,138

5 Claims. (Cl. 107—8)

1. A pretzel making machine comprising a carrier for a rolled strip of dough to suspend the same with its free ends hanging from the carrier, a twister disposed beneath the carrier in the line of the free ends of the strip for engaging and twisting the same together to provide a closed loop on the carrier and spaced extremities beneath the twisted portions of the strip ends, combined folding and spreading means at the forward end of the carrier for engaging the strip above the twisted portion thereof and admitting the downward folding of the closed loop upon the free extremities of the strip, means for pressing the closed loop to the extremities, and means for operating said folding and spreading means to draw the loop laterally and shape the same and extract the folded and pressed strip from the pressing means.

2,031,366

TYPOGRAPHICAL SLUG CASTING MACHINE



William Fairall Gorse, Altrincham, and Richard Henry Scott, Enfield, England, assignors to Linotype and Machinery Limited, London, England, a company of England

Application March 17, 1934, Serial No. 716,115

In Great Britain April 8, 1933

14 Claims. (Cl. 199—39)

1. In a typographical slug casting machine, the combination with a transporter in which a composed line of matrices is carried to and from casting position, of matrix-retaining means normally located at the receiving end of the trans-

porter, to engage the last composed matrix of a line, said means being movable endwise in the transporter simultaneously with endwise movement of the composed line.

2,031,367

DISPLAY DEVICE

Samuel J. Graham, New York, N. Y., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a corporation of Pennsylvania

Application October 15, 1933, Serial No. 694,154

1 Claim. (Cl. 40—16)

The combination with a dispensing device including a support for a stack of articles to be dispensed, a removably mounted dome adapted to confine the stack, and means including an arm for attaching the support to an object, of a display device including a frame portion and a member adapted to be engaged with the arm, said member having flange portions adapted to engage the sides of the arm and means passing through the flange portions for detachably connecting the member to the arm, the frame portion extending parallel with the dome but spaced therefrom to permit grasping of the dome in its removal or replacement operation.

2,031,368

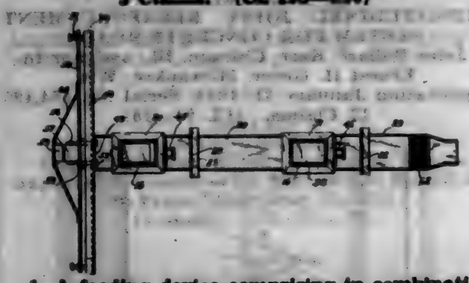
METHOD OF LUBRICATION AND LUBRICANT THEREFOR

Walter D. Hudson, Chicago, Ill.

No Drawing. Application April 6, 1934, Serial No. 718,407

5 Claims. (Cl. 87—9)

1. The method of lubricating a hot roll neck bearing normally requiring lubricating greases which are hard at atmospheric temperatures, which comprises adding to such a hard grease a small proportion of a grease compatible solvent volatile at the operating temperature of the bearing, said solvent being a hydrocarbon or derivative thereof and having a boiling point high enough that it does not evaporate under the temperature and pressure conditions of the lubricant feeding mechanism, the proportion of the solvent being large enough to soften the grease sufficiently to be applied by mechanical lubrication systems and being small enough that the grease structure is retained in the softened grease, and mechanically applying the grease to the bearing, where the heat of operation of the bearing evaporates the solvent and produces a grease inherently of the original consistency.



2,031,369

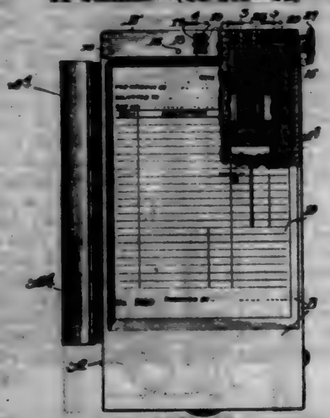
FEEDING APPARATUS

Austin A. Holbeck, Long Lake, Mich.

Application March 23, 1935, Serial No. 12,665

5 Claims. (Cl. 198—220)

1. A feeding device comprising in combination a trough, a transverse member connected to the trough with its ends extending beyond the sides of the trough, a second transverse member having an intermediate part thereof connected with the trough and having extending portions with means thereon for striking engagement with the extending ends of the first transverse member, and means for vibrating the extending portions of the second transverse member to cause such striking engagement.

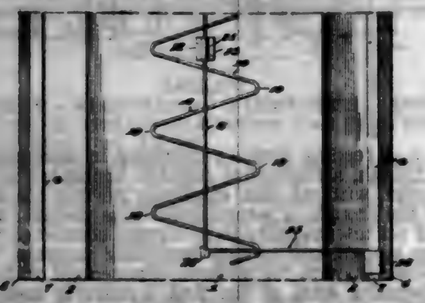


2,031,370

AUTOGRAPHIC REGISTER

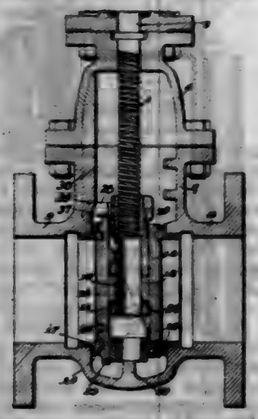
Louis Jensen, Chicago, Ill., assignor to United Autographic Register Co., Chicago, Ill., a corporation of Illinois

Continuation of application Serial No. 703,595, filed February 2, 1934. This application filed November 17, 1934, Serial No. 753,551



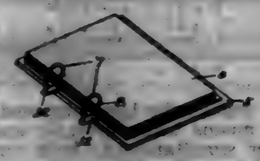
11 Claims. (Cl. 283—21)

1. An autographic register comprising: a casing having a platen over which a plurality of stationery strips provided with register perforations may be led; a tear-off bar near the front of said platen whereon the strips may be severed, a rotatable presser-roll mounted on said tear-off bar and adapted to engage the strips; register pins yieldingly urged into engagement with the register perforations in strips advanced over the



platen; and an initial feed device for said strips comprising a transverse rotatable shaft provided with a mutilated feed wheel adapted upon rotation to press the strips against the presser-roll, cam-means for holding the register pins depressed while the strips are engaged by said feed wheel, and yielding means for holding the mutilated portion of the feed wheel adjacent to the strips when the register pins are released by said cam-means.

2,031,371
LONGITUDINAL JOINT REENFORCEMENT SYSTEM FOR CONCRETE ROADS
John Willard Kerr, Chicago, Ill., assignor to Ernest H. Geyer, Milwaukee, Wis.
Application January 31, 1933, Serial No. 654,495
12 Claims. (Cl. 94—18)

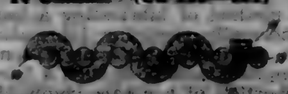


1. In a concrete roadway comprising slabs of concrete meeting on a line longitudinal of the roadway, a continuous tie rod in zig-zag form extending on opposite sides of the meeting line of the slabs in a succession of hooks in a plane above the plane of the lower faces of the slabs.

2,031,372
GATE VALVE
John S. Kiesel, Williamsport, Pa.
Application September 18, 1934, Serial No. 744,568
10 Claims. (Cl. 251—71)

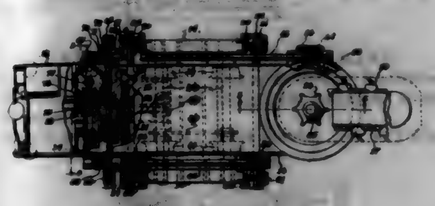
1. A gate valve casing having a fluid opening with a seat ring, a valve disc and raising means by which to raise the disc from a closed position against the ring, and means carried by the raising means and in turn carrying the valve disc positively operating directly against means on the casing for first pulling the disc away from the seat ring.

2,031,373
LOOSE LEAF BINDER
Edward F. Lenow, Minneapolis, Minn.
Application January 30, 1935, Serial No. 4,007
6 Claims. (Cl. 129—43)



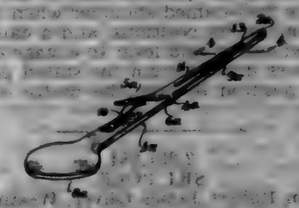
1. In a loose leaf binder, a back board, an inverted U-shaped leaf engaging member having one leg secured to the board adjacent one edge thereof and with the other leg disposed outwardly of said board edge, a spring clip pivoted to the inner leg for swinging and closing movement with respect to the other leg and for releasably securing the loose leaves on said member, and means for frictionally retaining the clip in adjusted position.

2,031,374
DUST MOP CLEANER AND RECEPTACLE
Raymond C. Liedtke, Hankinson, and Carl O. Welen, Northgate, N. Dak.
Application October 3, 1933, Serial No. 692,924
5 Claims. (Cl. 15—142)



1. A dust collector for mops including, a cabinet having a slot in one wall of said cabinet for the handle of the mop, and a brush closure for said slot including bristles bendable equally in any direction.

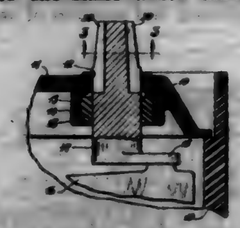
2,031,375
NONCREEP ELASTIC STRANDS FOR ELASTIC FABRICS
Samuel Clark Lilley, Hamden, Conn., assignor to The American Mills Company, Hamden, Conn., a corporation
Application December 28, 1933, Serial No. 703,716
10 Claims. (Cl. 139—421)



1. As a new article of manufacture, a filamentous non-creep elastic strand adapted for incorporation into fabrics comprising: an elastic core of rubber or equivalent material; and a covering of fibers connected to the surface of the said elastic core around the entire periphery thereof and in amorphously-disposed relationship with respect to each other.

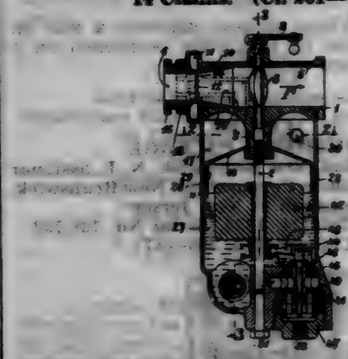
2,031,376
MINING MACHINE
Frank A. Lindgren, Western Springs, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application April 2, 1930, Serial No. 441,935
Renewed April 7, 1934
25 Claims. (Cl. 262—25)

22. In a mining machine, a motor, a cutter bar carried forwardly of said motor for pivotal movement with respect thereto about a vertical axis, feeding mechanism disposed rearwardly of said motor including a winding drum adapted to have a flexible feeding member wound thereon, a planetary geared reduction device driven from the rearward end of said motor and having driving connection with said winding drum, and a geared drive connection from said planetary geared reduction device to said cutter bar independent of said winding drum for pivotally moving said cutter bar about said vertical axis.



2,031,377
HAIR CURLING DEVICE
Myrtle E. Lindsay, Los Angeles, Calif., assignor to Joseph Lewis, Los Angeles, Calif.
Application March 24, 1935, Serial No. 13,050
6 Claims. (Cl. 132—51)

1. A hair curler comprising a supporting member having a flat metal tapered strip provided with a suitably shaped butt end for convenience in handling, and a tapered clamping finger provided with a struck up finger grip tiltably mounted on said strip and normally lying within the boundary thereof and resting on said strip, said finger at a point adjacent said grip having flanges embracing said supporting member.

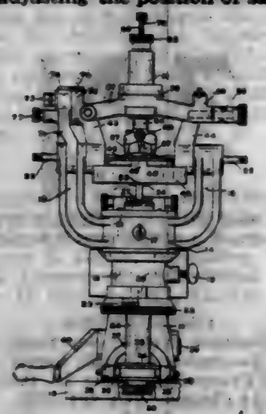


2,031,378
BATTERY TERMINAL POST
Henry W. Lorraer, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Application February 14, 1933, Serial No. 656,737
4 Claims. (Cl. 136—168)

4. A terminal post for storage batteries, having alternate longitudinal ribs and grease grooves, the outer surface of the post being tapered, said ribs being of the same width throughout their

length, and said grooves gradually increasing in width from the top of the post downward.

2,031,379
CARBURETOR
Eugene Mathieu, Neuilly-sur-Seine, France
Application December 15, 1932, Serial No. 647,496
In France December 15, 1931
14 Claims. (Cl. 261—79)



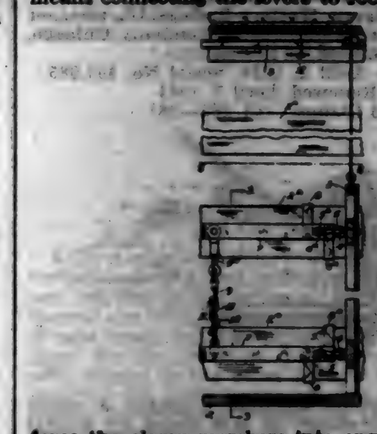
1. A device for producing gaseous fuel mixtures from liquid fuels for use in internal combustion engines or motors, comprising in combination a container holding a gaseous fluid, a screen dividing said container into upper and lower chambers and having a peripheral aperture causing inter-communication between said chambers, an atomizer having a discharge aperture opening into said upper chamber, a pump feeding liquid fuel under pressure continuously to said atomizer, a regulator housing having separate spaces communicating with said upper chamber and with the atmosphere, a passage in said housing communicating with the engine intake and having apertures in its walls causing communication between said passage and each of said spaces, a sleeve mounted for rotary movement in said passage and for longitudinal displacement and having apertures in its walls corresponding to the apertures in said passage walls said sleeve being submitted to the suction action of said engine intake, a spring controlling the longitudinal displacement of said sleeve against said suction action and means to control the relative angular positions of said sleeve and said passage.

2,031,380
LENS BLOCKING DEVICE
Joseph J. McCabe, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application August 10, 1931, Serial No. 556,147
13 Claims. (Cl. 51—277)

1. In a lens blocking device the combination of a body, a lens support rotatably mounted on

said body, means for moving said support about an axis lying in a horizontal plane and means for relatively adjusting the position of said axis with

respect to said lens support whereby a lens on said support can be selectively positioned on a lens block carried by said device.

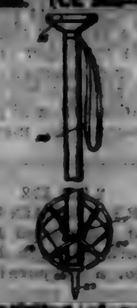


2,031,381
COMPOSITE PACKAGE
Arthur McCallum, New Brunswick, N. J., assignor to Flake Products Corporation, New Brunswick, N. J., a corporation of New Jersey
Application July 24, 1934, Serial No. 736,732
8 Claims. (Cl. 206—47)

1. A composite package consisting of a casing, a partition member slidable in said casing and arranged transversely thereof, a body of relatively heavy material packed between said partition and one end of said casing and normally supporting said partition, a fragile content packed between said partition and the opposite end of the casing, and extensions at the side edges of said partition movable against said opposite end of the casing when the latter rests on said end, said partition and extensions having sufficient strength to support said body of relatively heavy material and said extensions being of a length exceeding the depth of said fragile content whereby the latter will be protected against crushing when the casing rests on said opposite end.

2,031,382
STOCK-CAR PARTITION
Malcolm J. McQueen, Toronto, Ontario, Canada
Application December 6, 1934, Serial No. 756,197
In Canada December 6, 1933
9 Claims. (Cl. 119—11)

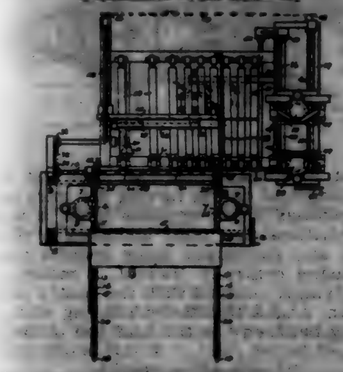
1. In a device of the class described, the combination of a partition; levers having pivotal connections with said partition to swing in a vertical plane; clamp members carried by said levers for engagement with side *slats* of a stock-car; and means connecting the levers to rock the same to



force the clamp members into engagement with the slats.

2,031,383
MACHINE GUN BOLT MECHANISM
Rafael Mendoza, Mexico, D. F., Mexico
Application October 1, 1934, Serial No. 746,441
5 Claims. (Cl. 89—8)

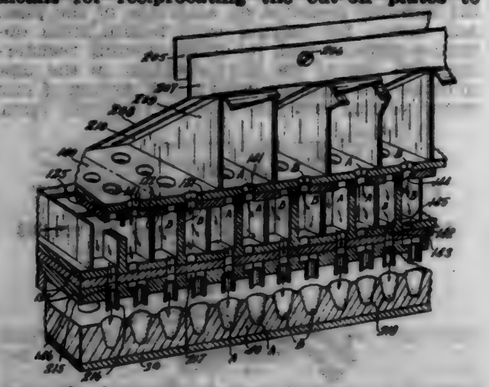
1. A firearm including a gun frame and a barrel removably mounted thereto, said barrel and frame having tapering grooves to align when the barrel is mounted to the frame, a wedge to enter said groove, a shoulder on the frame, a lever pivotally and slidably secured to the wedge, a shoulder on the pivoted end of the lever to engage the first-named shoulder when said lever occupies one of its positions, and a cam face on the pivoted end of said lever to engage the frame by said lever moving from the stated position to a second position to urge the wedge out of the grooves.



2,031,384
SKI POLE
William Robert James Oliver, Westmount, Quebec, Canada
Application May 3, 1933, Serial No. 669,945
In Canada May 19, 1932
1 Claim. (Cl. 280—11)

A ski pole consisting of a metallic tubular standard, a tube secured to and positioned intermediate the ends of and within the standard, a block forming a closure for the lower end of the

standard, washers engaging the upper and lower faces of the block, a washer engaging the lower end of the standard and in contact with the washer engaging the lower face of the block, a bolt projecting through said washers and block, said bolt having a nut on the upper end thereof and engaging with the upper washer, and a spike on the lower end thereof and engaging with the lower washer, and a handle forming a closure for the upper end of the standard.

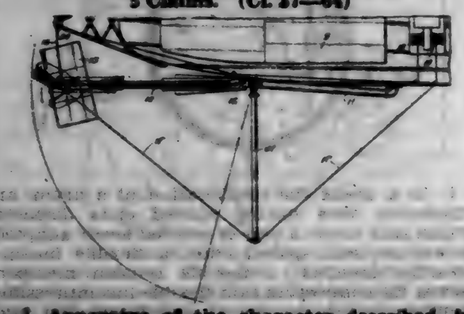


2,031,385
PANEL CHAMFERING MACHINE
Theodore A. Peterman and Frederick Nicholson, Tacoma, Wash.; said Nicholson assignor to said Peterman
Application May 31, 1933, Serial No. 673,786
4 Claims. (Cl. 144—2)

1. An automatic chamfering machine embodying a first pair of chamfering means adapted to chamfer two opposite edges of a panel being fed therethrough; a driven feed means adapted to engage and feed panels through said chamfering means at a predetermined rate; a gauge bar operatively positioned to engage panels delivered from said first pair of chamfering means; a series of power driven rollers forming a non-positive feed means adapted to receive thereon the panel from said first chamfering means, said rollers being shaped and positioned to align said panel squarely against said gauge bar and to frictionally engage said panel in accordance with the weight of the panel, so as to move it at right angles to its former direction and said rollers being driven at a speed greater than that at which the said driven feed means passes the panels through said first chamfering means; a second pair of chamfering means positioned substantially at right angles to the first pair of chamfering means and adapted to chamfer the remaining two edges of panels; and pressure rollers adapted to grip said panel as it leaves said power driven rollers and feed it through said second pair of chamfering means.

2,031,386
PRINTING AND DEPOSITING MECHANISM
Edward D. Eastwood, Agawam, Mass.
Application January 18, 1935, Serial No. 2,466
8 Claims. (Cl. 197—29)

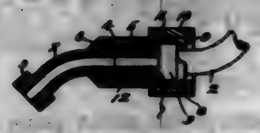
1. A multiple depositing mechanism for fluent material comprising a pair of port plates connected by a plurality of fingers in a rectangular array of spaced rows and columns, each port plate having a hole on each side of each finger, a cellular structure each cell of which surrounds a finger and extends between the port plates, means for reciprocating the cellular structure as a unit; a top and a bottom cut-off plate each having one hole corresponding to each finger-separated pair of holes in the port plates, and means for reciprocating the cut-off plates to



cause the holes in the cut-off plates to register alternately with the holes of each pair in the port plates.

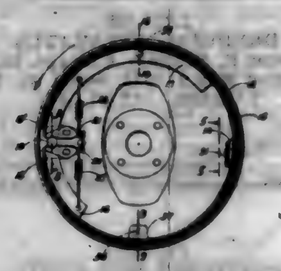
2,031,387
NOZZLE
Arthur Schwarz, Berlin, Germany
Application November 30, 1934, Serial No. 755,457
In Germany August 22, 1934
6 Claims. (Cl. 18—8)

1. A nozzle device for producing extremely fine threads from the raw substance of artificial silk or the like, particularly for use in producing line-screens for colour photography, characterised in that a number of thin plates, of for example metal laid side by side with their flat surfaces in contact, are securely joined together to form a block or the like, the plates according to the number of different substances to be formed into threads, contain a number of holes combined in the block to form holes or channels passing right through the block and separated one from the other while each plate has a slot which extends from one of the holes as far as the edge of the plates, the slots of adjacent plates extending from different holes or channels and not overlapping as far as their outlets which lie at the edges of the plates.



2,031,388
DREDGING APPARATUS
Jacob E. Bensabar, Chicago, Ill.
Application May 9, 1934, Serial No. 724,789
5 Claims. (Cl. 37—64)

1. Apparatus of the character described, including; a swingable suction pipe having an inlet



opening at each side near the end; means for swinging said pipe; a mouth with an outlet opening movably mounted on each side of the pipe; and means for moving each mouth from operative position with its outlet opening registering with one of the inlet openings in the pipe to inoperative position with a wall portion of said mouth closing said inlet opening, and vice versa.

2,031,389
PACKED, FLEXIBLE, CONDUIT JOINT
Grover C. Smith, Los Angeles, Calif.
Application May 11, 1935, Serial No. 21,303
1 Claim. (Cl. 285—9)

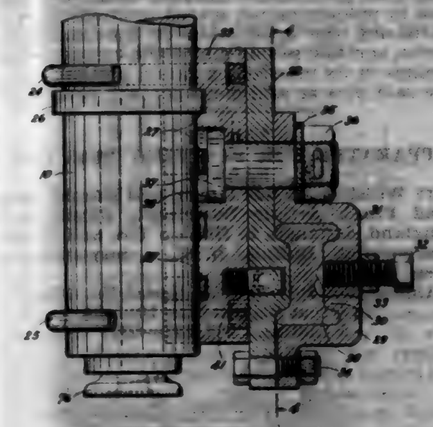
A packed, flexible conduit joint having, in combination, duplicate elbow sections each having a cup end and a bowed neck of less diameter than the cup, the neck terminating in a cylindrical head larger in diameter than the neck, and the cup having a cylindrical bore slidably and turnably receiving the complementary head of the next section, an elongated, tubular, packing gasket in, and seating against an end shoulder of, said bore, and means to detachably secure said head within said bore and against said gasket and including a horse-shoe washer lying against the outer face of the inserted head and a thimble having a bore to pass over the head of the neck in assembling the joint and screwing onto the cup and passing over and engaging the interposed washer; the latter having an external diameter greater than said head and less than that of the cup, and the total length of the compressed gasket and said head being about equal to the length of said bore.

2,031,390
BRAKE
John Sneed, Grosse Pointe Shores, Mich., assignor to The Midland Steel Products Company, Cleveland, Ohio, a corporation of Ohio, trustee for Steeldraulic Brake Corporation, Detroit, Mich., a corporation of Michigan
Application December 30, 1929, Serial No. 417,301
12 Claims. (Cl. 188—78)

1. In a brake the combination of a drum, an expansible shoe having spaced ends disposed within said drum, a pair of pivoted levers adapted to engage said spaced ends, a flexible incompressible member, a flexible tension member, means for connecting said flexible incompressible member to actuate one of said levers and said flexible tension member to actuate the other of said levers whereby relative movement of said incompressible member and said tension member will cause movement of one of said levers and means for causing one end of said shoe to regis movement more than the other end of said shoe.

2,031,391
HEAT GUN
Milton H. Spielmans, Cuyahoga Falls, Ohio, assignor to The Black & Decker Electric Company, Kent, Ohio, a corporation of Ohio
Application February 16, 1935, Serial No. 6,356
19 Claims. (Cl. 219—39)

1. In an electrically operated heat gun, a generally cylindrical casing having air inlet and air outlet openings in its opposite ends, a multiple stage centrifugal fan unit, including a plurality of rotary and stationary blade couples mounted in the casing centrally thereof, a motor in the casing drivingly coupled with the rotary elements of the fan, and a resistance heating element in the casing between the fan and the outlet opening.



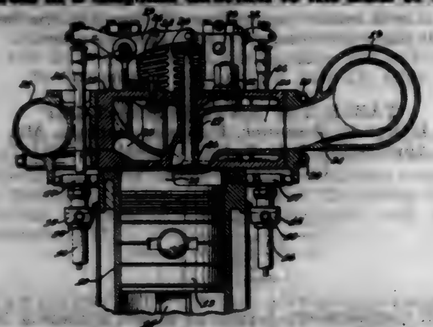
2,031,392
PARKING APPARATUS
Eugene S. Taylor, Chicago, Ill.
Application June 26, 1934, Serial No. 731,541
4 Claims. (Cl. 214—16.1)

1. Apparatus for storing vehicles, including a floor of unit area; a plurality of vehicle carriers in rank and file formation substantially filling said area with the exception of one file, said carriers comprising independent front and back wheel sections sufficiently close to the floor to permit free passage of vehicles thereover on their own wheels; and means for moving said carriers sidewise, said means including means for moving one carrier in each rank and means for rigidly connecting to any one of said carriers any number of additional carriers in the same rank.

2,031,393
VEHICLE JACK
Michial A. Tirabasso, Cleveland, Ohio
Application June 12, 1933, Serial No. 675,336
5 Claims. (Cl. 254—86)

1. A fluid operated jack, comprising a cylinder, a plunger therein, a transversely disposed rib on the periphery of said cylinder, a plate adapted to support said cylinder, said plate having a plurality of spaced grooves in the face thereof for receiving the rib in said cylinder, a second plate adapted for support upon a vehicular axle,

and a pivoted connection between the said first and second named plate.

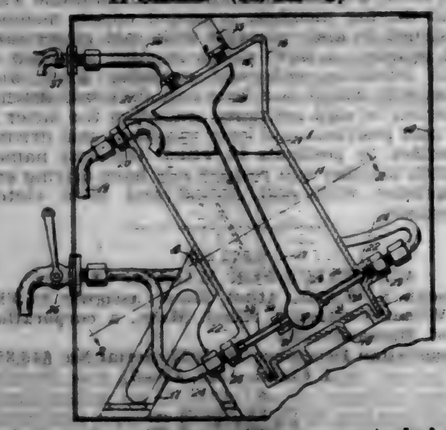


2,031,394
PLANT MARKER
Nicholas C. Vander Kraats, New Brunswick, N. J.
Application March 7, 1935, Serial No. 10,718
4 Claims. (Cl. 40—18)

4. In a waterproof identification marker, a casing open at its front, a rim formed on the side walls of said casing, a transparent window panel seated against and within said rim, a suction cup member secured by vacuum to the inside of said window panel and adapted to have an identification label interposed therebetween, a rigid stem, and a resilient split clamp carried by said stem and seated in said rim in abutting engagement with said window panel.

2,031,395
INTERNAL COMBUSTION ENGINE
Jesse G. Vincent, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application April 17, 1931, Serial No. 529,318
21 Claims. (Cl. 123—73)

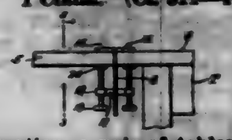
1. In an in-line internal combustion engine, a cylinder having a combustion chamber therein, a piston in the cylinder having its head end forming one end of the combustion chamber, said piston head end having a recess extending thereacross in a diagonal direction to the sides of the



engine, and a cylinder head forming the other end of the combustion chamber.

2,031,396
TRAFFIC MARKER
August L. Voight, Lakewood, Ohio
Application February 3, 1934, Serial No. 709,630
2 Claims. (Cl. 94—1.5)

1. A traffic marker of the character described, comprising a securing stem and a head secured to the upper end thereof, said stem having at its lower end a transverse opening forming separated legs and downwardly convergent portions connecting the lower ends of said legs, said opening, legs, and convergent portions constituting means which automatically expands when the stem is driven into a pavement and provides an anchoring wedge for holding the stem in position in the pavement.



2,031,397
BEER COOLER
August L. Voight, Lakewood, Ohio
Application February 27, 1934, Serial No. 712,143
11 Claims. (Cl. 225—8)

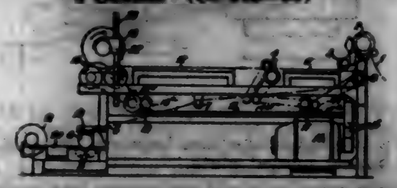
1. A beer cooler comprising a receptacle having a portion at its upper end providing a gas chamber, a beer inlet pipe below said portion but adjacent to the upper end of the receptacle and shaped to direct the beer against the wall

of the receptacle, a beer outlet pipe adjacent the bottom of the receptacle, and a tube connected with said outlet pipe below the level of the beer inlet and extending into said gas chamber.

2,031,356
TABLE TOP EXTENSION CLAMP
Arthur F. Wagener, Excelsior Springs, Mo.
Application July 6, 1935, Serial No. 30,147
1 Claim. (Cl. 311—4)

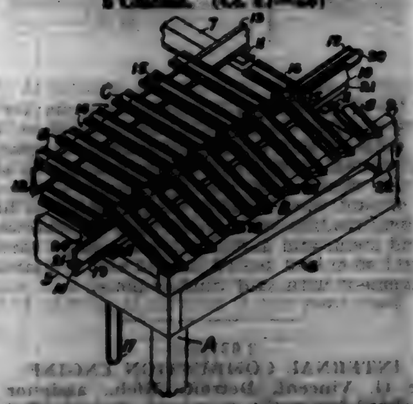
In combination, a pair of tables including top panels, a top panel to be disposed in co-planar relationship with top panels of the tables, means whereby the second mentioned panel may be supported in co-planar relationship with the other panel, said means comprising a pair of clamps, each clamp comprising a plate having end members with oppositely disposed extensions to be placed over the panel, oppositely disposed brackets under the panels, and bolts engaged in the brackets to engage under the panels.

2,031,358
AUTOMOBILE POWER TAKE-OFF MECHANISM
Hollce N. White, Cameron, Mo.
Application February 16, 1934, Serial No. 711,476
8 Claims. (Cl. 74—11)



1. In an automobile power take off mechanism, the combination with the driving means and the propeller shaft of an automobile, of a rotary power take off member, supporting means rotatable by said driving means and adapted to swing to two positions, a driving member longitudinally slidable on and rotatable with said supporting means and movable to said two positions, a shifting lever, a clutch member on and rotatable with said driving member, a second clutch member fastened to and rotatable with said power take off member, a third clutch member attached to and rotatable with said propeller shaft, and means by which said lever can shift said driving member to said positions, and when the latter is in said positions said lever can move said driving member to positions in which the first named clutch member will respectively have driving engagement with said second and third clutch members.

2,031,360
APPARATUS FOR MAKING COMBS
Joseph S. Wilcox, Athol, Mass., assignor to The Wilcox Company, Athol, Mass., a corporation of Massachusetts
Application December 12, 1932, Serial No. 646,356
1 Claim. (Cl. 15—3)



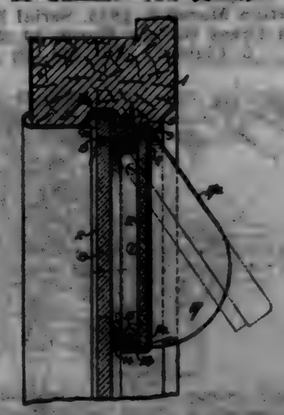
Apparatus for making a comb comprising a pair of dies having tooth recesses therein separated by intervening raised portions and a plurality of tooth-locating pins in one die positioned in said intervening raised portions and effective to hold the previously separated teeth of a comb blank in predetermined spaced positions prior to and during the application of the second die thereto, and said second die having corresponding openings in its intervening raised portions to receive said pins as said dies approach each other.

2,031,441
APPARATUS FOR SEVERING BIAS CUT FABRIC
Harry Willshaw, Wylde Green, and Harold Smith and Frank Arthur Davenport, Birmingham, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York
Application July 8, 1935, Serial No. 30,504
In Great Britain May 10, 1934
5 Claims. (Cl. 242—59)

1. Apparatus for separating bias cut fabric into successive bias plies which comprises a feed roll, a pair of fabric engaging rolls in advance of said feed roll, means for rotatably supporting a supply roll of lining material, means for guiding said lining material from said supply roll below said bias cut fabric through said engaging rolls, means for reeling said lining material after passing through said engaging rolls, and means for driving said reeling means and said engaging rolls at a greater surface speed than said bias material feeding means.

2,031,442
SLAT HOUSE
Kirk Grove Wirick, Glendale, Calif., assignor to Lounsberry and Harris, Los Angeles, Calif., a corporation of California
Application March 20, 1935, Serial No. 12,017
5 Claims. (Cl. 47—38)

5. In a slat house: a roof frame including sloping grooved fixed rafters; sloping grooved movable rafters; spaced grooved slats on the rafters thus forming a sloping roof plane; one end of each slat pivoted to a fixed rafter and the other end pivoted to a movable rafter and means to shift the movable rafters parallel to the roof plane.

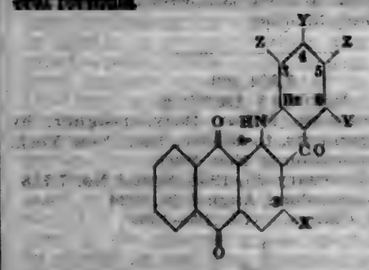


2,031,496
SULPHUR BURNER
Isaac Rapoport, New York, N. Y., assignor to Texas Gulf Sulphur Company, a corporation of Texas
Application March 13, 1935, Serial No. 10,528
5 Claims. (Cl. 23—179)

1. The method of producing sulphur dioxide which comprises spraying molten sulphur and oxygen in independently regulable quantities into a heated combustion chamber, simultaneously agitating the sulphur and oxygen to effect intimate mixing thereof, passing the resulting mixture along a tortuous path in the heated combustion chamber to oxidize the sulphur, and subsequently passing the mixture of gases through heated checkerbrick to cause intimate contact of the components of the mixture with heated solid surfaces.

2. Sulphur burning apparatus comprising a combustion chamber, means for introducing a stream of molten sulphur into the combustion chamber, means for directing a whirling current of air against the stream of molten sulphur to form a spray comprising an intimate mixture of finely divided sulphur and air, means for withdrawing gases from the combustion chamber, means defining a tortuous path of travel for gases within the combustion chamber adjacent the firing end, and means adjacent the discharge end for causing intimate contact of gases passing through the combustion chamber with heated solid surfaces.

2,031,494
VENTILATOR
Floyd E. Biggs, Detroit, Mich.
Application January 22, 1934, Serial No. 707,733
10 Claims. (Cl. 98—2)



1. An arrangement of the character described comprising a window molding, a window movable therein, a ventilator pivoted adjacent the window, and fingers on the ventilator coacting with one window margin for moving the ventilator pivotally as the window is moved, said fingers being held between said window margin and the molding when the window is closed.

2,031,495
CASTOR MACHINE OILS
Arthur L. Blumel, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application July 22, 1933, Serial No. 681,717
7 Claims. (Cl. 87—9)

1. A castor machine oil comprising, a mineral oil, 0.1% to 5.0% of a mono lower alkyl ether of glycol and 1.0% to 5% of the aluminum soap of a higher saturated fatty acid of the group consisting of stearic acid and palmitic acid and behenic acid.

2,031,496
VAT DYESTUFFS OF THE ANTHRAQUINONE-2,1(N) BENZACRIDONE SERIES
Walter Brunk, Mannheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application January 5, 1933, Serial No. 650,948. In Germany January 19, 1932
6 Claims. (Cl. 260—37)

1. Vat dyestuffs of excellent fastness properties and tinctorial power corresponding to the general formula

in which X stands for halogen, and in which at least two of the positions marked Y and Z are substituted by halogen atoms, at least one of which stands in a position marked Y, said dyestuffs dissolving in concentrated sulphuric acid giving an orange to red coloration and giving a violet vat from which cotton is dyed orange to bluish-red shades.

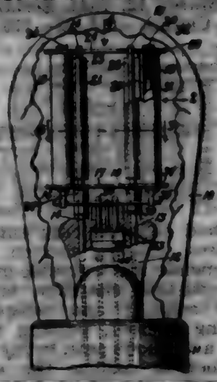
2,031,497
FASTENER
Stanley E. Campbell, Saginaw, Mich., assignor to Germain Manufacturing Company, Saginaw, Mich., a corporation of Michigan
Application June 12, 1935, Serial No. 26,343
5 Claims. (Cl. 24—126)

1. A housing including spaced side walls and a curved cord guide between said walls, having in combination an elongated guide member spaced from and opposite said cord guide and positioned substantially upright, a jaw member slidably mounted for free movement lengthwise upon said elongated guide member and also capable of slight turning movements in relation thereto, said jaw member having a serrated working face.

2,031,408
CONTROL DEVICE
Lewis W. Eggleston, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application January 24, 1933, Serial No. 653,263
22 Claims. (Cl. 236—48)

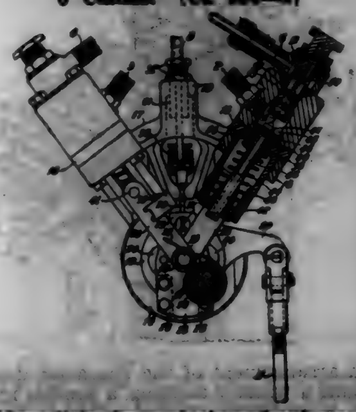
1. A device of the character described, comprising a base member, a support mounted adjacent one end of and on said base member, a lever member carried by said support and movable relative to said base member, a contact member carried by said base member, a contact member carried by said lever member and cooperable with said first-named contact member, said lever member having an abutment, and a moisture responsive element positioned between said support and said abutment and operable upon variation of moisture content to move said lever member relative to said base member.

2,031,409
DISPLAY DEVICE
Raffaele Fioravanti, Milan, Italy, assignor, by mesne assignments, to Bialite, Inc., New York, N. Y., a corporation of New York
Application February 23, 1935, Serial No. 7,758
In Luxemburg August 20, 1934
5 Claims. (Cl. 40—130)



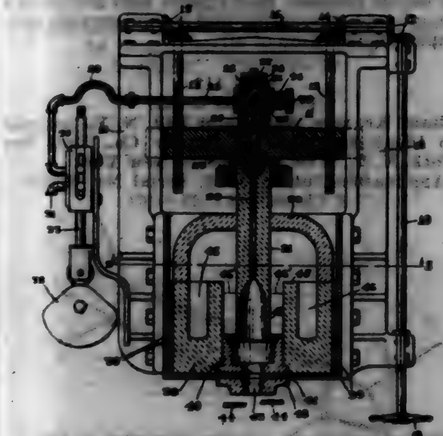
1. In a display device of the type described, a hollow translucent display element containing a liquid having an ornamental substance therein, an upwardly extending vaporizing chamber adjacent the lower portion of said element, a passageway between said chamber and the interior of said element, and means for establishing an oscillating liquid-vapor interface in said passageway, whereby deposits of said substance may be removed from said passageway and retained in said liquid.

2,031,410
PURIFICATION OF GAS FROM OXIDES OF NITROGEN
Walter H. Fulweiler, Wallingford, Pa., assignor to The United Gas Improvement Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application September 16, 1933, Serial No. 689,797
6 Claims. (Cl. 23—3)



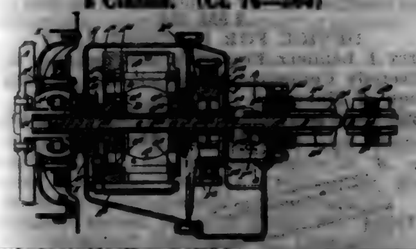
1. In the purification of commercially distributable, manufactured gas from oxides of nitrogen by contact with a metallic sulphide or sulphides, the method of maintaining the efficiency of the sulphide or sulphides for the complete removal of oxides of nitrogen which comprises removing substantially all of the oxygen content of the gas prior to contacting the gas with the sulphide or sulphides.

2,031,411
RECTIFIER
William M. Fury, Philadelphia, Pa.
Application March 20, 1933, Serial No. 661,488
5 Claims. (Cl. 250—27.5)



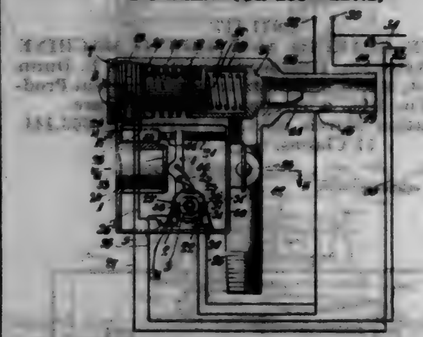
1. A tube type rectifier comprising a plate bent to form a hollow chamber, a pair of cathodes mounted within the chamber and spaced apart, said cathodes comprising metallic sleeves filled by insulating material having longitudinal passages therethrough, filaments extending through one of said passages and bent back upon itself and extended beyond the same end of said insulator, one of said extended ends being connected with an extended end of the other of said filaments, the other ends of said filaments being electrically connected with the sleeves, and conductors leading into said tube and connected with said opposite ends of the filaments.

2,031,412
AIRCRAFT BRAKE CONTROL MECHANISM
Ernest Frederick Goodyear, Mexhall Part, Wishaw, and Joseph Wright, Stoke Part, Coventry, and Henry Trevaskis, Keresley, Coventry, England, assignors to Dunlop Rubber Company Limited, London, England, a British company
Application March 9, 1935, Serial No. 10,144
In Great Britain March 14, 1934
6 Claims. (Cl. 244—2)



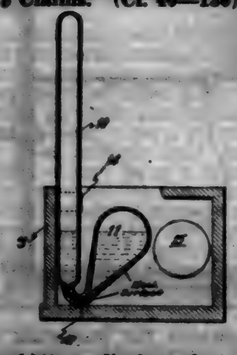
1. Aircraft brake control mechanism comprising a plurality of fluid pressure control relays, a pair of spaced guides, actuating means slidable between and guided by said guides, [illegible] connecting said actuating means to said brake mechanism, means to rotate said guider as a unit on an axis perpendicular to the plane of movement of said links, means extending between the guides perpendicular to said axis of rotation of said guides for moving said actuating means, and comprising flexible elements, spaced spindles slidable in said guides, an abutment spindle connected to said flexible elements, a pair of plates carrying said abutment spindle and in which one end of one of each of the spaced spindles is fastened to move between lateral guideway surfaces of said guides.

2,031,413
GLASS FEEDING DEVICE
John William Hamilton, Brockway, Pa.
Application March 16, 1934, Serial No. 715,993
3 Claims. (Cl. 49—55)



1. A glass feeding device comprising a forehearth having a discharge opening therefrom, a tubular needle associated with said discharge opening, a chamber in communication with the tube of said needle, means adapted to project air under pressure across said chamber to entrain air from the tubular part of the needle, and means to vary the distance of projection.

2,031,414
POWER TRANSMISSION MECHANISM
Howard Frederick Hobin, Leamington Spa, England
Application December 31, 1934, Serial No. 759,965
In Great Britain December 29, 1933
3 Claims. (Cl. 74—264)



1. Automatically variable power transmission comprising a driving shaft, a driven element, a rotatable member, means connecting said member to said element, means to prevent rotation of said member in one direction, a plurality of rotatable elements comprising cranks associated with said driving shaft, a set of planetary weights carried on said rotatable elements, and means operatively connecting said rotatable elements to said rotatable member.

2,031,415
SAFETY DEVICE FOR GAS RANGES, GAS BOILERS, ETC.
Willy Kalz, New York, N. Y.
Continuation of application Serial No. 536,243, April 15, 1931. This application August 12, 1932, Serial No. 628,909
1 Claim. (Cl. 158—117.1)

A safety device for gas stoves comprising a gas burner, an electromagnetically controlled cut-off valve controlling the supply of gas to said burner, an igniter, a circuit in which said igniter is located, a push button operating a spring controlled lever, contact wheels operated by said lever to close said igniter circuit to glow said igniter, the spring of said lever returning the same into its original position after each operation by said button, for opening the igniter circuit, a thermostat and a circuit in which said thermostat is located to be closed upon the closure of said igniter circuit to heat the thermostat by the heat developed by the glowing igniter upon the closure of its circuit by said lever operated contact wheels, an electromagnet in said thermostat circuit to be energized upon the closure of this circuit to open the valve for supplying gas to said burner, and to be de-energized upon the extinguishing of the burner flame and consequent cooling off of the thermostat, and springs for moving the valve mechanically into its gas supply cutting off position.

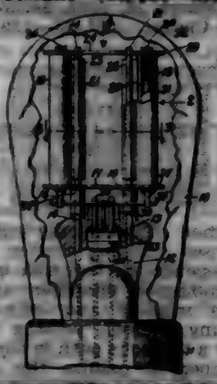
2,031,416
DISPLAY DEVICE
Alfonse Kaufman, Long Beach, N. Y., assignor, by mesne assignments, to Bialite, Inc., New York, N. Y., a corporation of New York
Application May 31, 1935, Serial No. 24,242
5 Claims. (Cl. 40—130)

4. In a bubbling display device, a hollow translucent display character, a liquid contained in said device, a vapor chamber extending upwardly adjacent the lower end of said character,

2,031,408
CONTROL DEVICE
Lewis W. Eggleston, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application January 24, 1933, Serial No. 653,263
22 Claims. (Cl. 200—52)

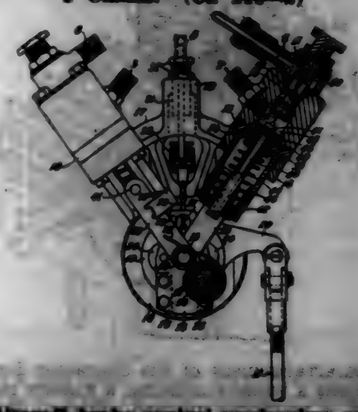
1. A device of the character described, comprising a base member, a support mounted adjacent one end of and on said base member, a lever member carried by said support and movable relative to said base member, a contact member carried by said base member, a contact member carried by said lever member and cooperable with said first-named contact member, said lever member having an abutment, and a moisture responsive element positioned between said support and said abutment and operable upon variation of moisture content to move said lever member relative to said base member.

2,031,409
DISPLAY DEVICE
Raffaele Fioravanti, Milan, Italy, assignor, by mesne assignments, to Bielite, Inc., New York, N. Y., a corporation of New York
Application February 21, 1935, Serial No. 7,758
In Luxemburg August 20, 1934
5 Claims. (Cl. 40—139)



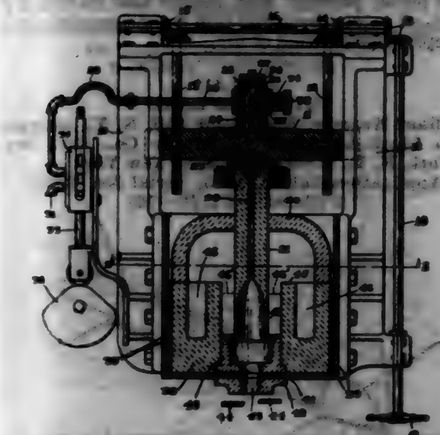
1. In a display device of the type described, a hollow translucent display element containing a liquid having an ornamental substance therein, an upwardly extending vaporizing chamber adjacent the lower portion of said element, a passageway between said chamber and the interior of said element, and means for establishing an oscillating liquid-vapor interface in said passageway, whereby deposits of said substance may be removed from said passageway and retained in said liquid.

2,031,410
PURIFICATION OF GAS FROM OXIDES OF NITROGEN
Walter H. Fulweiler, Wallingford, Pa., assignor to The United Gas Improvement Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application September 16, 1933, Serial No. 689,797
6 Claims. (Cl. 23—3)



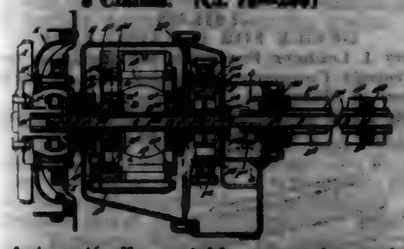
1. In the purification of commercially distributable, manufactured gas from oxides of nitrogen by contact with a metallic sulphide or sulphides, the method of maintaining the efficiency of the sulphide or sulphides for the complete removal of oxides of nitrogen which comprises removing substantially all of the oxygen content of the gas prior to contacting the gas with the sulphide or sulphides.

2,031,411
RECTIFIER
William M. Flory, Philadelphia, Pa.
Application March 28, 1931, Serial No. 524,423
5 Claims. (Cl. 176—27.5)



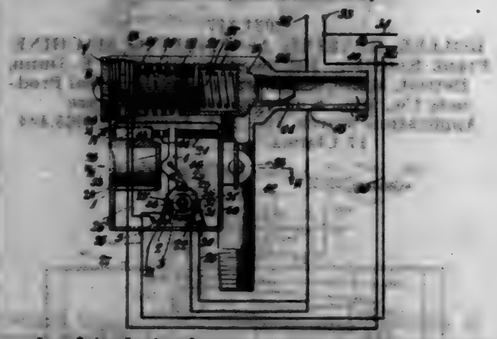
1. A tube type rectifier comprising a glass bent to form a hollow chamber, a pair of cathodes mounted within the chamber and spaced apart, said cathodes comprising metallic sleeves filled by insulating material having longitudinal passages therethrough, filaments extending through one of each of said passages and bent back upon itself and extended beyond the same end of said insulator, one of said extended ends being connected with an extended end of the other of said filaments, the other ends of said filaments being electrically connected with the sleeves, and conductors leading into said tube and connected with said opposite ends of the filaments.

2,031,412
AIRCRAFT BRAKE CONTROL MECHANISM
Ernest Frederick Goodyear, Meriball Park, Wishaw, and Joseph Wright, Stoke Park, Coventry, and Henry Trevaskis, Keresley, Coventry, England, assignors to Dunlop Rubber Company Limited, London, England, a British company
Application March 8, 1934, Serial No. 10,144
In Great Britain March 14, 1934
6 Claims. (Cl. 244—3)



1. Aircraft brake control mechanism comprising a plurality of fluid pressure control relays, a pair of spaced guides, actuating means slidable between and guided by said guides, links connecting said actuating means to said brake mechanism, means to rotate said guides as a unit on an axis perpendicular to the plane of movement of said links, means extending between the guides perpendicular to said axis of rotation of said guides for moving said actuating means, and comprising flexible elements, spaced spindles slidable in said guides, an abutment spindle connected to said flexible elements, a pair of plates carrying said abutment spindle and in which one end of one of each of the spaced spindles is fastened to move between lateral guideway surfaces of said guides.

2,031,413
GLASS FEEDING DEVICE
John William Hartley, Stourbridge, Pa.
Application March 19, 1934, Serial No. 716,581
2 Claims. (Cl. 49—55)



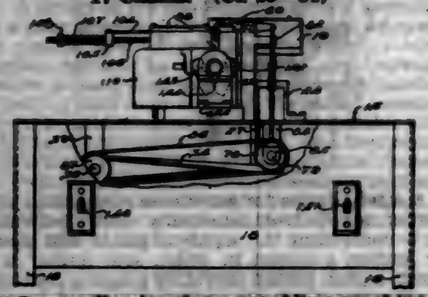
1. A glass feeding device comprising a forehearth having a discharge opening therefrom, a tubular needle associated with said discharge opening, a chamber in communication with the tube of said needle, means adapted to project air under pressure across said chamber to entrain air from the tubular part of the needle, and means to vary the distance of projection.

2,031,414
POWER TRANSMISSION MECHANISM
Howard Frederick Hobbs, Leamington Spa, England
Application December 31, 1934, Serial No. 759,585
In Great Britain December 29, 1933
8 Claims. (Cl. 74—240)

1. Automatically variable power transmission comprising a driving shaft, a driven element, a rotatable member, means connecting said member to said element, means to prevent rotation of said member in one direction, a plurality of rotatable elements comprising cranks associated with said driving shaft, a set of planetary weights carried on said rotatable elements, and means operatively connecting said rotatable elements to said rotatable member.

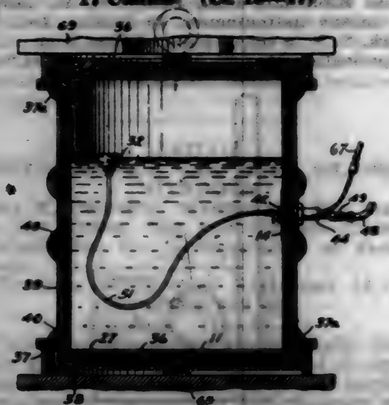
2,031,415
SAFETY DEVICE FOR GAS RANGES, GAS BOILERS, ETC.
Willy Katz, New York, N. Y.
Continuation of application Serial No. 530,981, April 15, 1931. This application August 12, 1933, Serial No. 684,946
1 Claim. (Cl. 158—117.1)

A safety device for gas stoves comprising a gas burner, an electromagnetically controlled cut-off valve controlling the supply of gas to said burner, an igniter, a circuit in which said igniter is located, a push button operating a spring controlled lever, contact wheels operated by said lever to close said igniter circuit to glow said igniter, the spring of said lever returning the same into its original position after each operation by said button, for opening the igniter circuit, a thermostat and a circuit in which said thermostat is located to be closed upon the closure of said igniter circuit to heat the thermostat by the heat developed by the glowing igniter upon the closure of its circuit by said lever operated contact wheels, an electromagnet in said thermostat circuit to be energized upon the closure of this circuit to open the valve for supplying gas to said burner, and to be de-energized upon the extinguishing of the burner flame and consequent cooling off of the thermostat, and springs for moving the valve mechanically into its gas supply cutting off position.



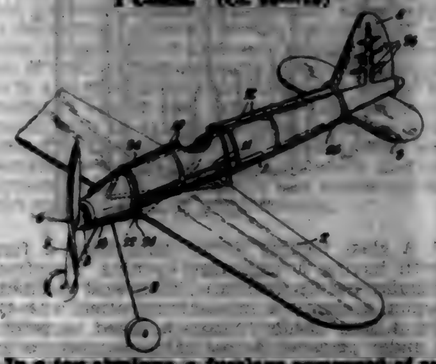
2,031,416
DISPLAY DEVICE
Alfonse Kaufman, Long Beach, N. Y., assignor, by mesne assignments, to Bielite, Inc., New York, N. Y., a corporation of New York
Application May 31, 1935, Serial No. 24,242
5 Claims. (Cl. 40—139)

4. In a bubbling display device, a hollow translucent display character, a liquid contained in said device, a vapor chamber extending upwardly adjacent the lower end of said character,



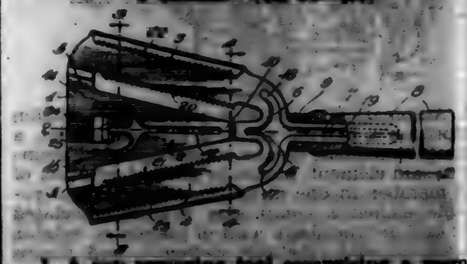
a passageway of substantially smaller cross section than the interior of said character, said passageway extending between said vapor chamber and the interior of said character, and means for generating vapor pressure in said character whereby a succession of bubbles rises through the liquid in said character.

2,031,417
ROLLER BEARING ASSEMBLING MACHINE
Frank Ketelsen, Dearborn, and George E. Dunn, Detroit, Mich., assignors to The Universal Products Co., Inc., a corporation of Delaware
Application March 30, 1933, Serial No. 663,444
17 Claims. (Cl. 29—84)



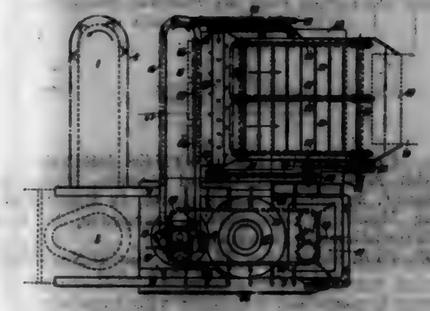
1. In a roller bearing assembling machine, a rotatable and axially reciprocable mandrel, means for supplying rollers to the mandrel, means for rotating the mandrel to cause a plurality of rollers to encircle the same, means for moving the mandrel axially in one direction to move the rollers grouped thereabout to a bearing member, stripper blades operatively associated with the mandrel, means for moving the blades toward the mandrel for engagement back of the rollers thereon and means for moving the mandrel axially in the opposite direction for stripping therefrom the rollers engaged by the blades.

2,031,418
APPARATUS FOR MAKING CONTAINERS
Herman T. Kraft, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application November 19, 1934, Serial No. 753,728
17 Claims. (Cl. 18—17)



11. In apparatus for producing non-metallic containers of vulcanizable material, the combination with a container enclosing mold, of a heater of the pot type having a chamber for receiving said mold, and means for introducing liquid into and exhausting air from the enclosed container, said means comprising a float insertable into the container through the container, a member extendible through said mold into the interior of the container and arranged to have sealed engagement with the container, said member having an inlet passage and an outlet passage extending therethrough, a flexible conduit carried by said float and in communication with said outlet passage, a second conduit in communication with said outlet passage and opening to the atmosphere through said heater, and means extending through said heater and communicating with said inlet passage for introducing liquid into the container, said float being supported by the rising liquid to permit air above the liquid to exhaust from within the container through said conduits and outlet passage, said means also including a shut-off valve for closing said second conduit upon complete exhaustion of air.

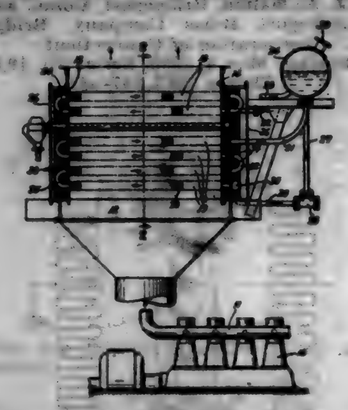
2,031,419
TOY AIRPLANE
William Kramer, Richmond Hill, N. Y., assignor to Ideal Aeroplane & Supply Co., Inc., New York, N. Y., a corporation of New York
Application July 2, 1935, Serial No. 29,595
1 Claim. (Cl. 46—73)



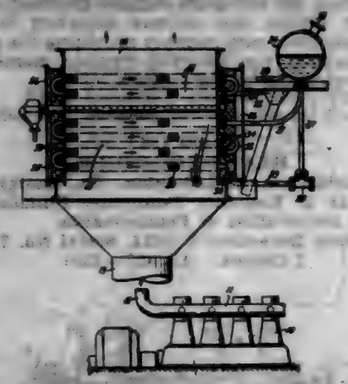
In a toy airplane, a fuselage composed of relatively stiff sheet material shaped and moulded in hollow form and having its meeting edges presenting flanges and secured together, the flanges at the upper rear portion of said fuselage being extended and shaped to form a vertical stabilizer of double thickness with walls in immediate contact to afford increased rigidity, the flanges and stabilizer being in the same plane.

2,031,420
DEVICE FOR OPENING JARS
Harry J. Lehberg, Frederick, Md., assignor to The Eveready Company, Frederick, Md., a corporation of Maryland
Application September 1, 1932, Serial No. 630,853
6 Claims. (Cl. 81—3.1)

1. A cap removing tool comprising a member including a pair of side portions tapered toward each other and laterally extending end portions interconnecting opposite ends of said side portions, and teeth formed on the opposite peripheral edges of each of said side portions, the teeth on the outer peripheral edges of said side portions being directed toward each other and extending in a plane offset from the plane of the teeth formed on the inner peripheral edges of said side portions, and one of said laterally extending end portions being offset in a plane removed from the planes of said side portions and the peripheral edges thereof.



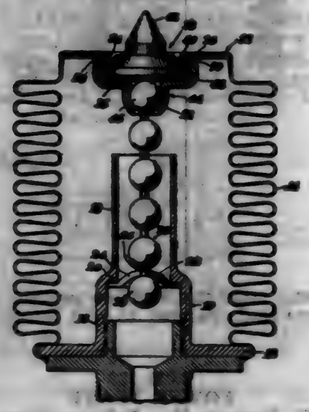
2,031,421
ATTACHMENT FOR MINING MACHINES
William Archibald Legath, Kinghorn, Fife, Scotland
Application April 2, 1935, Serial No. 14,196
In Great Britain April 6, 1934
2 Claims. (Cl. 262—30)



1. For a longwall mining machine having a horizontally disposed cutter element and a face conveyor, an attachment including a horizontally disposed cutter element adapted to make an incision in a mine seam above the incision made by the cutter element of the mining machine, an upright shearing cutter element adapted to make an upright incision in the seam between the inner ends of the said first and second mentioned incisions, means for loading the mined material on to the face conveyor, haulage means for imparting feeding movement to the mining machine and the attachment, means for removing cuttings from the cutter element of the mining machine, a driving motor, and speed-reducing gearing for transmitting power from said motor to the said second and third mentioned cutter elements and to said loading, haulage and removing means.

2,031,422
POWER PLANT
James Black Halsted, Brooklyn, N. Y., John Thomas Welsh, Ridgeway, Pa., and Walter Francis Keenan, Jr., Pelham Manor, N. Y., assignors to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application March 15, 1929, Serial No. 347,434
Renewed September 17, 1932
13 Claims. (Cl. 122—7)

1. An exhaust muffler comprising wall structure forming a gas tight chamber and a plurality of spaced rows of tubes containing water disposed transversely to the flow of gases through said chamber having outwardly tapering cast iron fins thereon, joints between said tubes outside said wall structure, adjacent tubes of a row being so closely spaced that the fins are almost in contact to provide a series of restrictions between said fins to deflect the flow of gas, and said tubes and wall structure being so arranged and constructed as to prevent access of gases from said chamber to said joints.

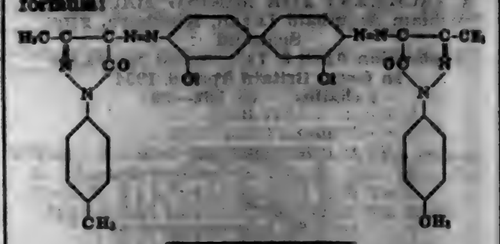


2,031,423
POWER PLANT
Walter F. Keenan, Jr., Pelham Manor, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Original application March 15, 1929, Serial No. 347,434. Divided and this application October 12, 1934, Serial No. 748,143
9 Claims. (Cl. 122—355)

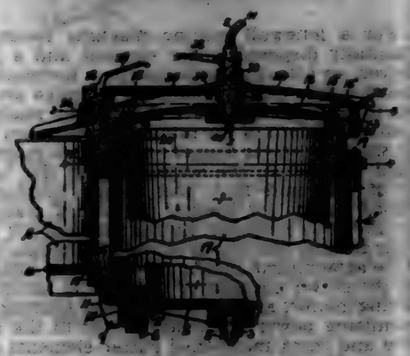
1. A boiler comprising walls forming a heating zone, a plurality of horizontally disposed tubes in said heating zone arranged one above the other, connections between said tubes outside said heating zone for flow of water and steam from each tube to the next higher tube, a steam and water drum outside said heating zone and disposed above the highest of said tubes, a connection outside said heating zone between the highest of said tubes and the bottom part of said steam and water drum, a down-comer connection outside said heating zone between the water space of said steam and water drum and the lowest of said tubes, a fixed orifice member in said down-comer connection proportioned to supply water to said tubes only slightly in excess of the amount of steam generated for stabilizing circulation at high ratings, and said down-comer connection extending below the lowest of said tubes and having an upwardly extending unheated portion for preventing reversal of circulation at low ratings.

2,031,454
FLEXIBLE INTERNAL STOP
Joseph J. McMahon, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a corporation of Connecticut
Application May 4, 1935, Serial No. 19,814
7 Claims. (Cl. 297—8)

6. A thermostat bellows and the like having within it a laterally-flexible, lengthwise-inextensible member connecting the movable end of the bellows with its base, said movable bellows-end having an inwardly cupped portion; and a member within the bellows attached to said cupped portion, said member providing the means for attaching the laterally-flexible member to the movable end of the bellows.



2,031,455
HEAT EXCHANGER
Karl Muhlstein, Philadelphia, Pa., assignor to Schutte & Koerting Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 1, 1934, Serial No. 755,671
2 Claims. (Cl. 257—239)



1. A heat exchanger comprising in combination, a casing, a plurality of aligned tubes within said casing, an inner tube sheet carried by said tubes and movable relative to said casing, an inner head having a domed portion spaced from said inner tube sheet and opposite said tubes and having a peripheral flange thereon forming a joint with said inner tube sheet, an annular groove formed in said joint between said tube sheet and said inner head and encircling the ends of said tubes, a pipe forming a drain from said groove and extending through said casing, and a gland sealing said pipe to said casing where said pipe passes through said casing and affording limited movement to said pipe relative to said casing.

2,031,456
DISAZO DYESTUFF
Georg Niemann, Ludwigshafen-on-the-Rhine, Germany, assignor to General Aniline Work, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application May 16, 1935, Serial No. 21,941. In Germany June 2, 1934
1 Claim. (Cl. 260—44.5)

The disazo dyestuff corresponding to the formula:

2,031,457
CENTRIFUGAL CLOTHES DRIER
Walter A. Papworth, Grand Rapids, Mich., assignor, by mesne assignments, to Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware
Application September 10, 1932, Serial No. 632,356
20 Claims. (Cl. 210—76)

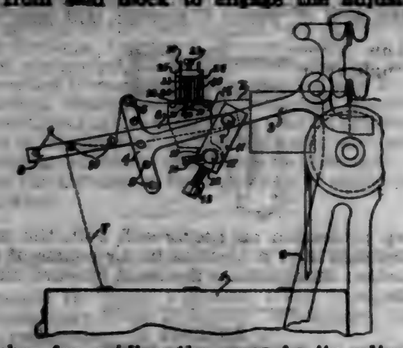
1. In an apparatus for the purpose set forth, a vertically disposed revoluble receptacle forming a combined rinsing and drying chamber, an adjustable drain board, means carried at the top of the receptacle to permit of adjustably positioning said board circumferentially with respect to the receptacle for directing the overflow from said chamber to the point desired.

2,031,458
BOAT HULL STRUCTURE
Earl J. W. Ragsdale, Norristown, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 12, 1932, Serial No. 610,788
14 Claims. (Cl. 114—66.5)

1. In combination, in a step-bottom boat structure, sheathing having upper and lower steps and a riser, a bulkhead in parallel inside relation

forcing relation to the riser and projecting to a position thereabove, and braces subtending the

angles between the bulkhead and each of the steps.

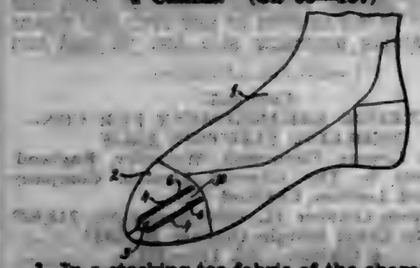


2,031,459
EYELET SOCKET
Herman Reiter, Brooklyn, N. Y.
Application January 10, 1935, Serial No. 1,665
10 Claims. (Cl. 24—216)

1. A separable snap fastener socket comprising stud-engaging and receiving members adapted to be arranged on one face of a sheet of material and an exposed centrally apertured clinching member adapted to be arranged on the other face of the sheet of material, said stud-engaging and receiving members comprising an outer socket member having a centrally arranged bell-shaped portion, a flanged portion surrounding the outer bell-shaped portion and an eyelet portion of less diameter than and projecting from and arranged coaxially with the bell-shaped portion, and an inner stud-receiving and bracing member having a flange coextensive with and projecting inwardly of said flanged portion and having an integral wall entering the bell-shaped portion and terminating in an open end portion in contact with and bracing said bell-shaped portion, said clinching member being provided with a recessed portion surrounding the aperture therein for the reception of the outermost extremity of the eyelet portion whereby the eyelet portion may be passed through the aperture of the clinching member for direct access thereto and bent on to the clinching member and into the recessed portion to secure said members to the sheet with said outermost extremity exposed.

2,031,460
THREAD TENSIONING ATTACHMENT FOR TEXTILE MACHINES
Richard Schletter, North Wales, Pa.
Application September 19, 1934, Serial No. 744,618
6 Claims. (Cl. 66—144)

1. A thread tensioning and guiding attachment for simultaneously and uniformly controlling a plurality of threads in a textile knitting machine, comprising a fixed support block carrying in relatively spaced relation a plurality of rods adapted to receive the threads thereover, a member positioned above said block carrying a plurality of rods in suspension between the rods carried by said block and above the threads, a screw threaded element rotatably mounted in said block and having screw threaded engagement with said member, whereby to displace the latter for adjustment relative to the block, and a pin on each side of said screw threaded element and extending from said block to engage the adjustable

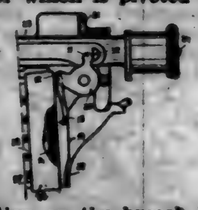


member for guiding the same in its adjusting movement.

2,031,461
QUENCHING OILS
George Chapelier Shepherd, Jr., Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application January 9, 1933, Serial No. 650,263
3 Claims. (Cl. 148—13)

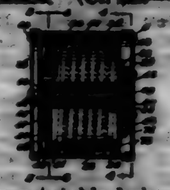
1. A method of quenching metals which comprises immersing the heated metal in a heavy cracked hydrocarbon oil fraction, said oil being characterized by having a flash point of 250° F. or higher and a viscosity of between 75 to 200 seconds, Saybolt Universal at 100° F.

2,031,462
HOSIERY TOE FABRIC
Dietz Sickerett, Philadelphia, Pa.
Application October 26, 1935, Serial No. 46,889
4 Claims. (Cl. 66—187)



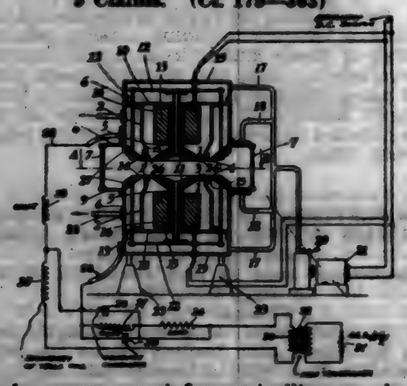
1. In a stocking toe fabric of the character described, a toe gore including a panel consisting entirely of closely knitted loops, a ridge consisting of overlapping loops and bordering each side of said panel walewise of the fabric, and a wale of dropped stitches forming a single row of openings disposed adjacent and in paralleling relation to each ridge.

2,031,463
AMMUNITION LOADING DEVICE WITH CHAIN CONVEYER FOR SMALL-ARMS
Giulio Sessa, Turin, Italy
Application June 19, 1934, Serial No. 731,246
In Italy June 26, 1933
6 Claims. (Cl. 42—6)



1. In combination with an automatic small-arm an ammunition loading device comprising, in combination with a breech bolt, an endless band conveyer for feeding the cartridges, ratchets secured to said band, one for each cartridge,

a pawl adapted to engage said ratchets to push the endless band conveyer forward, a crank lever, on one arm of which is pivoted said pawl and

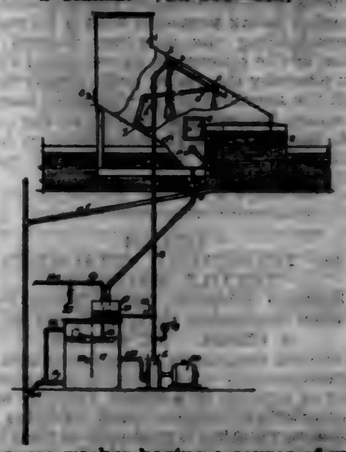


a stop projection on the breech bolt, the other arm of said lever projecting in the course of said projection thus pushing the band forward during recoil.

2,031,434
CONDUCTOR REEL
Isaac Stern and Leah Shoolhoff, Brooklyn, N. Y.; said Shoolhoff assignor to said Stern
Application May 18, 1934, Serial No. 725,336
10 Claims. (Cl. 242—107)

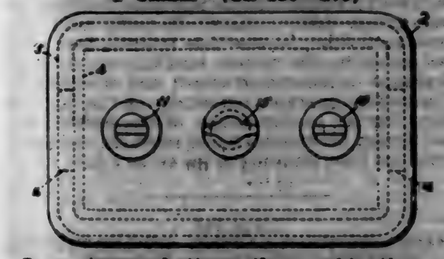
1. In a reel; a rotatable hub; a drum secured to and rotatable with said hub; a conductor wound on said drum; a first and second plate secured to and at one end of said hub and forming therebetween a chamber; said first plate having a radial slot extending from its periphery to said hub for admitting the conductor wound on the drum into said chamber; a removable casing for said reel; removable end covers for engaging said casing; an opening in said casing for providing a passage for said conductor from said chamber to the exterior of said reel; and means for rotatably mounting said hub on said end covers.

2,031,435
ELECTRODE ARRANGEMENT FOR CONTROLLING ELECTRIC ARCS
William George Thompson, Wembley, England, assignor to The General Electric Company Limited, London, England
Application October 12, 1934, Serial No. 748,022
In Great Britain October 16, 1933
5 Claims. (Cl. 175—363)



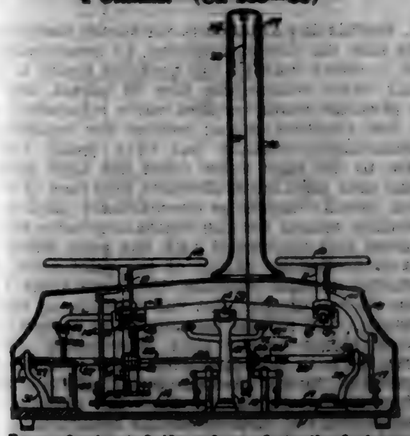
1. An arrangement for controlling an electric arc fed from an alternating current supply, comprising in combination a pair of opposed electrodes, each of said electrodes having a long but narrow working face, nozzle elements on each side of the respective working faces and separated therefrom by narrow ducts, means for causing a flow of cooling fluid past the working faces of the electrodes and on opposite sides thereof through said ducts and cooperating magnet members arranged to produce a magnetic flux component across the respective working faces for causing movement of the arc along said working faces.

2,031,436
TURBINE-DRIVEN VESSEL
Hans Thormeyer, Berlin, Germany
Application July 18, 1933, Serial No. 680,841
In Germany July 18, 1931
9 Claims. (Cl. 115—34)



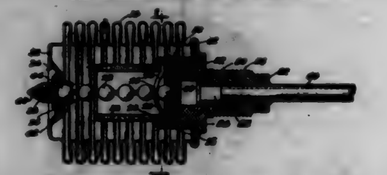
4. In water craft, in combination, a hull having a compartment closed at its sides, top, front and rear and open at its bottom, the open bottom of said compartment being disposed substantially at the level of the water line of the hull, a bladed propeller wheel disposed within said compartment for rotation in a plane at substantially right angles to the longitudinal axis of the hull, the axis of said wheel being disposed above the water line so that only the blades at the lower side of the wheel are immersed, and means for rotating said wheel.

2,031,437
GAS WASHER
Thomas C. Vincent, Jr., New Canaan, Conn., assignor to The Fred'k Page Contracting Co., New York, N. Y., a corporation of New York
Application February 21, 1933, Serial No. 657,522
2 Claims. (Cl. 261—112)



1. In a gas washer having a source of water, a water reservoir, and means for recirculating the water from the reservoir so that only sufficient water is drawn from the source to compensate for that evaporated by the heat of the gas being washed: the combination of, a water-tight box having an inlet for unwashed gas at one end and an exit for washed gas at the other end, a trough arranged in the lowest part of said box, a plurality of nozzles arranged to discharge generally crosswise of said box, baffles in the box arranged so as to direct gas through the spray from the nozzles and disposed generally parallel with the direction of discharge of the nozzles, another nozzle arranged adjacent said trough so as to wash precipitate into said trough, means for removing liquid and precipitate from the bottom of said trough, and an overflow connection for said trough adjacent to but spaced above the bottom of said trough.

2,031,438
GLASS JAR AND COVER FOR STORAGE BATTERY CELLS
Curtis C. Wallace, Philadelphia, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa., a corporation of New Jersey
Application June 26, 1935, Serial No. 28,432
1 Claim. (Cl. 136—170)



In a storage battery, the combination of, a glass jar and a glass cover from which plate structures are suspended in the jar, with raised glass pads interposed between the under face of the cover and the top of the wall of the jar and arranged transversely of a line passing through both points of application of the weight of the plate structures to the glass cover to bring the supporting point of the cover as close as possible to the points where the weight of the plate structures is applied.

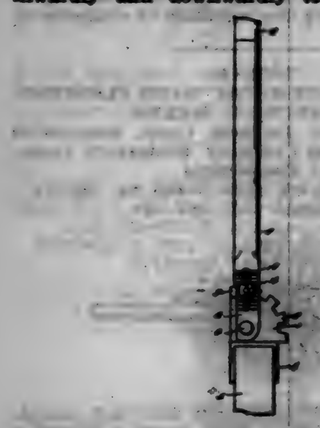
2,031,439
WEIGHING SCALE
Foster V. Waltz, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application April 15, 1935, Serial No. 16,289
4 Claims. (Cl. 265—58)

1. In a device of the class described, in combination, a lever oscillatively mounted thereon, load and counterpoise receptacle mounted upon free ends of said lever, torsional resistance means upon said base and below said lever and extending parallel to the longitudinal axis of said lever, said torsional resistance means having an indicator connected thereto and connecting means connected to one of said receptacles and to said torsional resistance means whereby movement proportional to the weight of a load on said receptacle is transmitted to said indicator and means including an index to cooperate with said indicator for indicating the condition of equipoise of said lever.

2,031,440
BELLOWS THERMOSTAT WITH FLEXIBLE CONNECTING MEANS
Marshall H. Ward, Fairfield, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a corporation of Connecticut
Application July 27, 1933, Serial No. 682,379
10 Claims. (Cl. 237—3)

1. A device of the character described, including, in combination, a base member having a sleeve provided with a shoulder, a washer mounted within said sleeve and adapted to abut said shoulder, a bellows member on said base member, a flexible member secured at one end to said washer and at its other end to said bellows member for limiting the expansion movement of said bellows member.

2,031,441
RADIO SIGNALING APPARATUS
John C. Warner, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 8, 1929, Serial No. 345,498
14 Claims. (Cl. 250—27)



1. The combination with an electric discharge device having a control grid, an anode and a cathode, and means providing an anode voltage and a normal static negative bias voltage for said grid, said voltages being of such values that said device operates as a bias detector for substantially maximum rectification, of means connected in series with said grid and said first-named bias means for applying an additional negative bias voltage to said grid in a direction to add to the normally applied bias voltage in response and proportional to the amplitude of an impressed carrier wave, to increase the detector efficiency of said device in response to an increase in the amplitude of said wave.

2,031,442
ADJUSTABLE HANDLE
Alphaus Weber, Syracuse, N. Y.
Application June 27, 1935, Serial No. 28,744
1 Claim. (Cl. 296—12)

In a device of the class described, a head of segmental shape and having teeth formed on its

curved wall, the spaces between the teeth being of substantially wedge-shape, a handle having a forked end with the prongs straddling the head and pivoted thereto, said handle having a slot passing therethrough at right angles to the space between the prongs with the lower part of the slot intersecting said space, an elongated block slidably arranged in the slot and having the upper portion of its sides straight to engage the side walls of the slot with the rest of the sides sloping inwardly and downwardly to form a wedge-

shaped part for engaging a wedge-shaped space between a pair of teeth, the ends of the block being reduced and projecting from the slot, a head connected with one reduced end for engaging a side of the handle, the other reduced end being threaded, a washer on said threaded part for engaging an opposite side of the handle, and a nut on the threaded part and contacting the washer, and said sides of the handle being corrugated and the head on the reduced end of the block and the washer being corrugated to engage the corrugated parts of the handle.

2,031,443

METHOD OF PRODUCING CREAMERY PRODUCTS

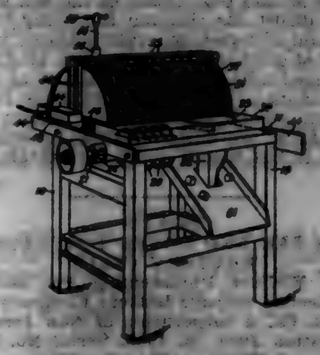
Herman D. Wendt, West Chester, Pa., assignor to Milk Processes, Inc., Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Application September 24, 1934, Serial No. 745,347

5 Claims. (Cl. 99—11)

1. The method of converting plastic cream having a butter fat content of over 65% into a liquid creamery product containing butter fat in the dispersed phase which comprises adding a liquid to said plastic cream and agitating the cream in contact with said liquid while maintaining the cream and liquid at a temperature below 50° F.

2,031,444



CUTTING MACHINE

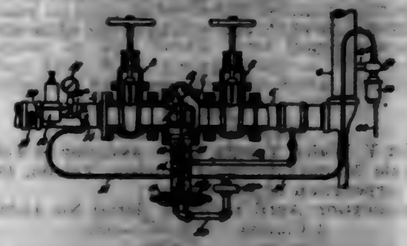
Arthur C. Whiting, Mount Vernon, N. Y.

Application January 19, 1935, Serial No. 2,570

20 Claims. (Cl. 143—32)

16. In a machine for cutting a block into pieces, in combination, a movable table top section, a cutter guard movable with respect to said section and with respect to which said section is also movable, said guard being adapted to receive therein resting on said section a block to be cut, said section being movable to change the position of said block, and means carried by said guard and movable with respect thereto for the purpose of turning said block while resting on said top section.

20. In an ice cube cutting machine, independent power driven cutters spaced laterally with relation to each other, a movable cutter guard at all times enclosing the cutters and the ice to be cut, and means to move said guard and the ice to be cut manually operable exteriorly of the guard to subject the ice to the action of the cutters, said guard being provided with a movable section to permit the insertion of the ice to be cut.



2,031,445

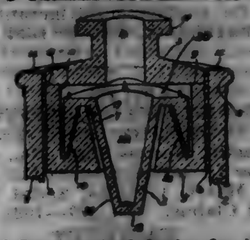
AUTOMATIC REGULATING APPARATUS FOR STEAM HEATING SYSTEMS

Edgar C. Wiley, Lynchburg, Va., assignor to Simplex Heating Specialty Company, Inc., Lynchburg, Va., a corporation of Virginia

Original application June 15, 1930, Serial No. 460,952. Divided and this application June 14, 1932, Serial No. 617,136

6 Claims. (Cl. 236—20)

1. Regulating apparatus for steam heating systems and the like comprising, in combination, a high pressure main; a low pressure main; a regulating valve controlling flow of steam into the low pressure main; a pilot valve connected with the low pressure main; means for supplying a substantially constant but very small flow of steam to the pilot valve from the high pressure main; said pilot valve stopping said flow of steam when closed; means to operate said pilot valve; operating means for the regulating valve so constructed and connected with the pilot valve that it is controlled by action of the pilot valve, said operating means opening the regulating valve when closing of the pilot valve builds up enough pressure; said means for supplying a very small flow of steam to the pilot valve being directly connected with said operating means; and a pipe connecting the low pressure main with the aforesaid operating means, so that the pressures on opposite sides of said operating means are practically balanced irrespective of the pressure in the low pressure main.



2,031,446

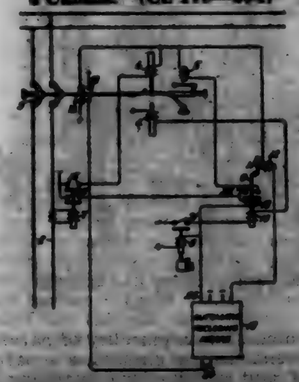
NONREFILLABLE BOTTLE AND CONTAINER STOPPER

Liberio Amaro, Boston, Mass., assignor of one-half to Fortunato Amaro, Boston, Mass.

Application March 15, 1935, Serial No. 10,456

3 Claims. (Cl. 215—15)

1. A liquid flow-control device for the mouth of a container, comprising an annular plug body, adapted to be permanently secured in the mouth of the container, the hollow of this annulus being open both inward and outward of the container, for passage of liquid, but having a ledge facing inward near its outward opening; and having an annular mound, rising in axial direction within said hollow, with crest surface therein transverse to the axis and constituting a seat for a valve; and a valve housed within said hollow and movable axially to and fro relative to said seat; said valve being a relatively deep cup, whose well is open outward into direct axial communication with said outward opening in the plug body, and whose walls have outer surfaces continually and entirely exposed for being contacted by liquid flowing from the container, and have inner surfaces continually and entirely exposed for being contacted by liquid entering the mouth of the container; there being stand-off means between said ledge and that face of the valve which is toward said mouth, for maintaining the valve in spaced relation to the adjacent wall of the hollow when the valve moves from its seat.



2,031,447

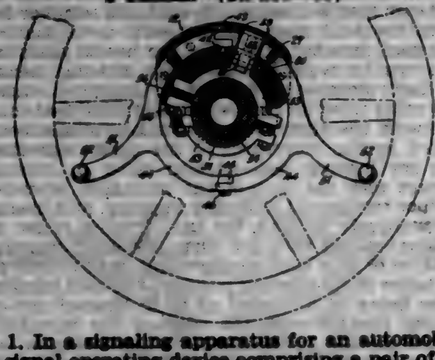
AUTOMATIC RECLOSING CIRCUIT BREAKER SYSTEM

Arvid E. Anderson, Drexel Hill, Pa., assignor to General Electric Company, a corporation of New York

Application October 9, 1934, Serial No. 747,511

6 Claims. (Cl. 175—294)

1. In combination, two electric circuits, a circuit breaker interconnecting said circuits, closing means for said circuit breaker, tripping means for effecting the opening of said circuit breaker independently of the condition of said closing means, additional tripping means for effecting the opening of said circuit breaker only under certain conditions of said closing means, fault responsive means normally arranged to effect the operation of said additional tripping means, means for effecting the operation of said closing means to produce a predetermined number of substantially instantaneous reclosures of said circuit breaker after the initial opening thereof and time delayed reclosures thereafter if the circuit breaker fails to remain closed, and means for causing said fault responsive means to effect the operation of said first mentioned tripping means after said predetermined number of substantially instantaneous reclosures has been effected.



2,031,448

CIRCUIT CONTROLLER

John Arcelon, Mount Vernon, N. Y.

Application March 27, 1935, Serial No. 12,345

3 Claims. (Cl. 200—59)

1. In a signaling apparatus for an automobile, a signal operating device comprising a pair of independent pivotally mounted arc-shaped trackways disposed around the steering spindle of the automobile, a pair of independent switches each located adjacent one of said trackways and cooperable to be operated thereby and a member rotatable with said spindle and slidable along said trackways, said trackways having portions disposed in different planes so that the trackways are caused to shift pivotally during different periods of rotation of said spindle so as to operate the switches.

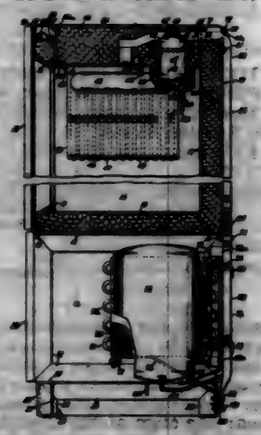
2,031,449

AUTOMATIC GRAMOPHONE

Svante Philip Arvidius, Malmö, Sweden

Application November 1, 1934, Serial No. 751,044

In Sweden August 23, 1934

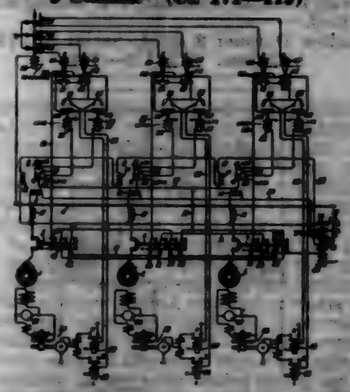


5 Claims. (Cl. 274—19)

3. An attachment for gramophones having a rotatable turntable, in combination, a base plate to be mounted underneath the turntable on the gramophone and to extend at both ends beyond the turntable, rotatable uprights mounted on said base plate near the edge of the turntable at diametrically opposed points thereof, lateral projections at different levels on each of said uprights for supporting a pile of records centrally above the turntable, and displaceable through rotation of said uprights for dropping said rec-

cords one at a time upon the turntable, arms secured to said rotatable uprights and a spring biased push rod linked to said arms for rotating said rotatable uprights, a framing mounted on one projecting end of said base plate, a cam disk rotatably mounted about a vertical axis in said framing, a sleeve rotatably mounted in said framing above said cam disk eccentrically thereto, a slidable pin fitted in said sleeve and resting at its lower end on said cam disk, a bent arm secured to the upper end of said sleeve, an arm pivoted to the free end of said bent arm and carrying a pick-up having a reproducing needle, said needle carrying arm extending above the said slidable pin, whereby to raise and lower the needle carrying arm through raising and lowering said pin by the said cam member at each revolution thereof, a lever secured to said sleeve and having a bifurcated arm, means on said rotatable cam member for actuating said bifurcated arm, whereby to swing the needle carrying arm outwardly and inwardly at each revolution of said cam member, means on said cam member for operating said push rod at each revolution of said cam member and after the needle carrying arm has been swung outwardly, driving means for said rotatable cam member, including a friction roller movable in to and out of frictional contact with the edge of the turntable, means controlled by the movement of the needle carrying arm for moving said friction roller in driving contact with the edge of the turntable, whereby to start rotation of said cam member, and means for positively holding the said friction roller in driving contact with the turntable after starting rotation of said cam member and until return of the latter in its starting position, the said friction roller being so arranged as to be pushed out of driving contact with the edge of the turntable by the driving frictional force therebetween, as soon as positive holding of said roller in such contact with the edge of the turntable ceases.

2,031,450
REFRIGERATOR
Leonard W. Atchison, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 22, 1935, Serial No. 22,762
17 Claims. (Cl. 62—116)

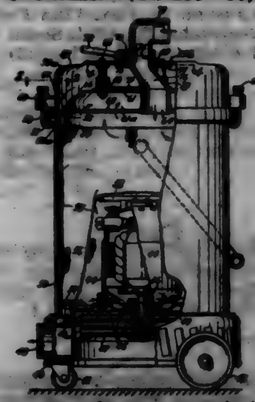


1. In combination with a refrigerator cabinet provided with a machinery compartment and a cooling compartment, a refrigerating machine for said cabinet and separable therefrom comprising, means including a refrigerant evaporator for abstracting heat from said cooling compartment, a vertical frame extending along the exterior side of a vertical wall of said cabinet, a refrigerant circulating unit, means including a second frame pivotally connected to said first mentioned frame for supporting said refrigerant circulatory unit in said machinery compartment, and means for supplying refrigerant from said refrigerant circulatory unit to said evaporator.

2,031,451
EXHAUST SILENCER FOR INTERNAL COMBUSTION ENGINES
Harry C. Austin, Kansas City, Mo., assignor to Chester L. Austin, Kansas City, Mo.
Application March 17, 1933, Serial No. 661,314
2 Claims. (Cl. 137—160)

1. An exhaust silencer comprising in combination a helical baffle structure providing a plurality of paths of different length, an enlarged chamber communicating directly with said baffle structure, means to vary the volume of said chamber to a predetermined point and a second baffle structure directly communicating with said chamber.

2,031,452
ELECTRICAL REGULATING SYSTEM
Herman Beny, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York
Application March 2, 1935, Serial No. 8,869
9 Claims. (Cl. 171—119)

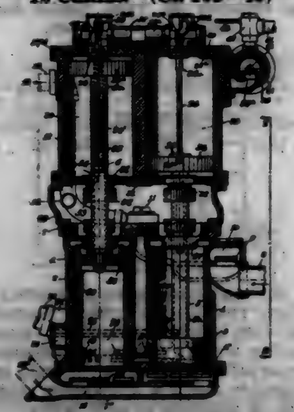


1. In combination, a plurality of parallel alternating current electric circuits, a separate relay for each of said circuits for controlling a corresponding electrical quantity thereof, each of said relays having a winding connected to be energized in accordance with the value of said quantity of its associated circuit, and each of said relays having a winding connected to be energized in accordance with the value of the sum of said quantities of all of said circuits, the windings of each of said relays being inductively related in such a manner that when the currents in them are in phase they produce no net operating effect.

2,031,453
CONVENIENCE OUTLET
George B. Semander, Valleyville, Conn., assignor to Monowatt Electric Corporation, Bridgeport, Conn., a corporation of Connecticut
Application June 28, 1931, Serial No. 547,557
6 Claims. (Cl. 173—330)

3. A convenience outlet comprising a body member of insulating material having rearward extensions forming spaced recesses, flat contact strips with depending ends bent up to form contact clips, serrated edges adjacent the bent up ends of said contact strips embedded in the insulating material for securing the contact clips in said recesses, and a supporting strap secured to said body member.

2,031,454
VACUUM CLEANER
Tord Erik Daniel Bilde and Anders Eriksson-Jons, Stockholm, Sweden, assignors to Electrolux Corporation, Dover, Del., a corporation of Delaware
Application December 15, 1932, Serial No. 647,344
In Germany December 24, 1931
6 Claims. (Cl. 183—57)



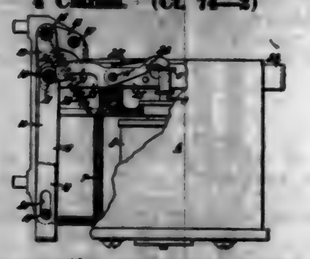
6. In a vacuum cleaner, an air-tight casing, a dust bag within said casing having a first wall portion of pervious material and a second wall portion of pervious material, walls forming a chamber bounded in part by said second portion, said casing formed with an inlet, means for passing air through said casing, and valve means for selectively connecting said inlet with the interior of said dust bag so that the air will pass out through the pervious first and second wall portions in parallel and for connecting said inlet with the interior of said chamber so that the air will pass into said dust bag through said second portion and out of said bag through said first portion.

2,031,455
SAFETY RAZOR
William Harman Black, New York, N. Y.
Application April 17, 1935, Serial No. 16,912
8 Claims. (Cl. 30—61)

1. A safety razor, including a guard, a tubular handle fixed to the guard, a cap pivotally connected to one end of the guard, a blade clamp pivotally connected to the other end of the guard, and mechanical means constituting a part of the razor and adapted to positively move both the cap and blade clamp on their pivots and other means in the handle for operating said first mentioned means.

2,031,456
PUMP CONSTRUCTION
Edmund H. Hunt, Brooklyn, N. Y.
Application February 2, 1930, Serial No. 425,662
Renewed January 13, 1934
12 Claims. (Cl. 103—49)

1. The combination of two double-acting steam driven pumps having steam cylinders with a common steam supply and pump cylinders having common low pressure inlet valves and common low pressure outlet valves at corresponding ends of the pump cylinders, common high pressure inlet valves and common high pressure outlet valves in the opposite ends of the pump cylinders, each steam cylinder and each pump cylinder having a piston, a single piston rod connecting one steam piston with a pump piston and a single piston rod connecting the other pump piston with the other steam piston, said piston rods being operable independently of each other and being movable simultaneously in opposite directions, said piston rods being movable toward the steam piston ends at a higher rate of speed than in the opposite direction, and means for supplying materially greater steam pressure to each steam piston when moving toward its pump cylinder

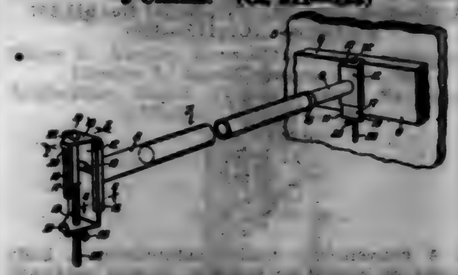


than when moving in the opposite direction whereby each pump piston pumps effectively against much greater pressure when moving in one direction than when moving in the opposite direction.

2,031,457
FUSE
George R. Brown, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application February 27, 1934, Serial No. 713,681
3 Claims. (Cl. 200—130)

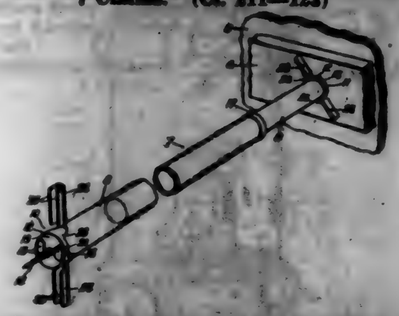
1. An electric fuse comprising a base of insulating material, a cap of insulating material, an extension from said cap passing over a portion of said base, communicating recesses to permit gases to escape between said extension and said base, a fuse link located within said extension, and a metal sleeve covering the inner wall of said extension whereby escaping gases may condense on said sleeve.

2,031,458
OPERATING MECHANISM
Ralph R. Bush, Manoa, Pa., assignor to General Electric Company, a corporation of New York
Application October 30, 1934, Serial No. 750,743
4 Claims. (Cl. 74—2)



1. In an operating mechanism having collapsible structure, restraining means therefor comprising a pivoted latch arranged to engage at its operating edge a part of said collapsible structure, said operating edge being defined by an arc having its center along a line offset with respect to the center of rotation of said latch.

2,031,459
SHADE ROLLER
Ersyl F. Chambless, Chicago, Ill., assignor of one-half to Joseph W. Fay, Villa Park, Ill.
Application July 25, 1934, Serial No. 736,819
17 Claims. (Cl. 156—96)



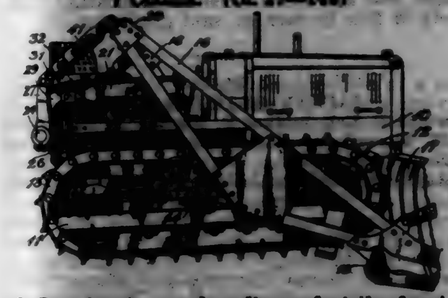
15. In combination, a spindle with a flattened end having two positions of engagement with a bracket and held against rotation thereby, a shade roller rotatable with respect to said spindle, and means comprising a cam member on the spindle and cooperating wedging means operable in each position of said spindle in said bracket for preventing too rapid rolling of said shade up on said roller.

2,031,460
CLOTHESPOLE
Ersyl F. Chambless, Chicago, Ill., assignor of one-half to Joseph W. Fay, Villa Park, Ill.
Application November 23, 1934, Serial No. 754,339
5 Claims. (Cl. 211—123)

1. An extensible clothes-pole comprising telescoping pole sections, bracket members rigidly secured to the outer ends of said sections, second bracket members slidably adjustable in said first bracket members, said first and second bracket members being disposed and adjustable substantially normal to the axis of the pole and extending radially from opposite sides of the pole, inturned flanges at the upper and lower ends, respectively, of said bracket members, and bolts passing through said flanges and engaging in cooperating nut members for clamping the flanges to the upper and lower edges of a molding strip.

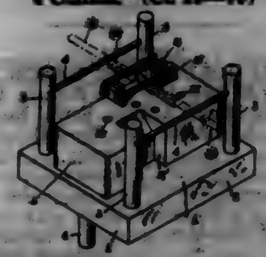
2,031,461
CLOTHESPOLE
Ersyl F. Chambless, Chicago, Ill., assignor of one-half to Joseph W. Fay, Villa Park, Ill.
Application November 23, 1934, Serial No. 754,339
7 Claims. (Cl. 211—123)

1. An extensible clothes-pole comprising telescoping pole sections and wood screws extending axially from the outer ends of said sections and joined rigidly thereto, whereby said screws may be threaded into molding strips and the like by grasping and turning the pole sections.



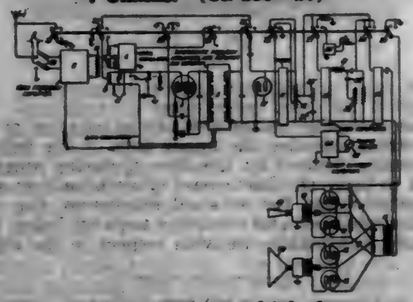
2,031,462
STRAP STRETCHING DEVICE
William G. Childress, Oak Park, Ill., assignor to Acme Steel Company, Chicago, Ill., a corporation of Illinois
Application October 17, 1935, Serial No. 45,498
13 Claims. (Cl. 254—46)

1. The combination in a strap stretching device, of means for gripping opposite end portions of a strap, means for effecting relative movement of said gripping means to draw said strap taut



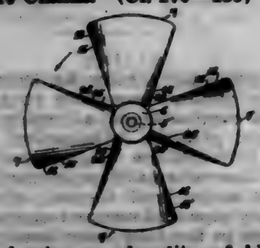
around a package or the like, and means actuated by said last named means for releasing said strap from one of said gripping means.

2,031,463
EARTH MOVING DEVICE
Roy E. Cheate and Waldo E. Redler, Cedar Rapids, Iowa, assignors to La Plant-Choate Manufacturing Co. Inc., Cedar Rapids, Iowa, a corporation of Delaware
Application October 3, 1932, Serial No. 635,895
7 Claims. (Cl. 37—144)



1. In a tractor, a plow disposed at the front of the tractor, frames disposed one on each side of the tractor and pivotally mounted thereon for tilting movement, and operatively engaged to the plow at the front ends thereof, a cross-shaft at the rear of the tractor, a power means for rotating the cross-shaft, a lever for connecting the cross-shaft with the power means, other levers connected to the cross-shaft and projecting to positions near the rear ends of the frames, and shock absorber links disposed between and operatively connecting the last named levers and the rear ends of the frames.

2,031,464
FEED DOG RECUTTING FIXTURE
Leonard C. Corcoran, Cleveland Heights, Ohio
Application June 18, 1928, Serial No. 27,319
4 Claims. (Cl. 29—76)

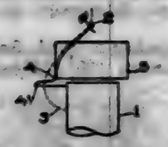


1. In a sewing machine feed dog recutting fixture, the combination of a base block having parallel side faces adapted to be gripped by an ordinary vise, file guides carried in spaced relationship with respect to said block, and a work holding block movable with respect to said guides, said work holding block having a flat upper surface for the attachment of legless feed dogs, and also having slots in its side faces for the attachment of feed dogs with extending legs.

2,031,465
SIGNALING SYSTEM
McKenzie Cottrell, Stratford, Conn., assignor to General Electric Company, a corporation of New York
Application December 5, 1934, Serial No. 756,165
7 Claims. (Cl. 250—20)

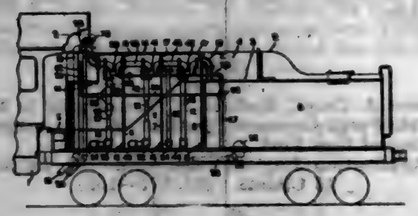
1. The combination, in a high frequency receiver, of an input circuit, means for converting high frequency currents received in said receiver to currents of different frequency, signal means responsive to said currents of different frequency, and means to disable said first means and to connect said input circuit to said signal means.

2,031,466
FAN
Albert A. Criqui, Buffalo, N. Y., assignor to Buffalo Forge Company, Buffalo, N. Y., a corporation of New York
Application July 26, 1934, Serial No. 737,055
10 Claims. (Cl. 170—159)



1. A fan having a plurality of blades, each arranged at an angle to the axis of the fan, each blade having a curved heel portion at the trailing edge of the blade, such heel portion curving upwardly toward the working face of the blade and being wider at the inner end of the blade than at the outer end thereof.

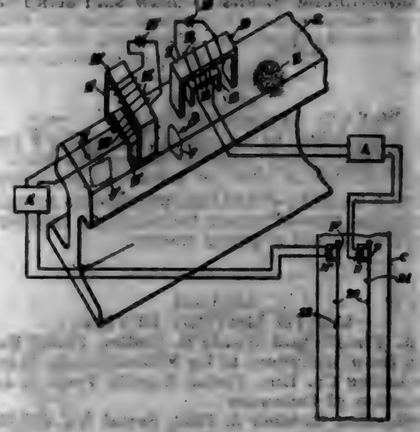
2,031,467
DEVICE FOR CONTINUOUS SPINNING AND/OR TWISTING OF TEXTILE FIBERS
Otto George Johan Struythem de Reyssenoor, Breda, Netherlands
Application August 6, 1932, Serial No. 627,697
In the Netherlands August 19, 1931
7 Claims. (Cl. 118—49)



1. In a device for the purpose described, the combination with a revolving member on which thread is to be wound, and a guide for the thread

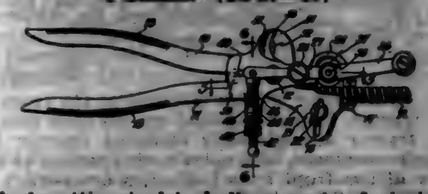
axially aligned above the revolving member; of only and exclusively a single hollow member forming an unbroken annular guide arranged to move up and down over the revolving member, said hollow member being open at both ends to permit passage of the thread therethrough, said hollow member being arranged to engage and

force inwardly toward the axis of rotation of the revolving member the upper part of the balloon normally formed by the thread during winding and to leave the lower part of such balloon substantially free for outward expansion, the said hollow member and revolving member being vertically traversable one with respect to the other.



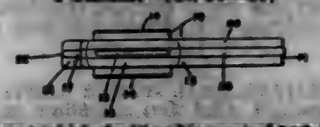
2,031,468
FEED WATER HEATER FOR LOCOMOTIVES
Myron W. Dole, Belmont, Mass.
Application February 13, 1935, Serial No. 7,157
14 Claims. (Cl. 122—434)

1. In a feed water heater for locomotives, the combination with a locomotive tender having a main water compartment, a feed water heating compartment provided with a feed water outlet and an intermediate compartment, said compartments communicating with each other below the normal water level thereof, of an exhaust steam supply pipe and means responsive to pressure changes in the feed water heating compartment to establish communication between the steam supply pipe and the feed water heating compartment when the steam pressure in said latter compartment is below a predetermined point and between said supply pipe and the intermediate compartment when the steam pressure in the feed water heating compartment is above said predetermined point.



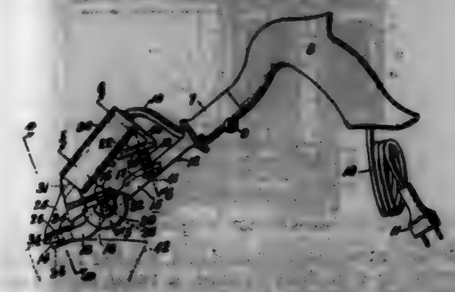
2,031,469
METHOD AND MEANS FOR DETECTING FLAWS
Harcourt C. Drake, Hempstead, N. Y., assignor to Sperry Products, Inc., Brooklyn, N. Y., a corporation of New York
Application February 17, 1933, Serial No. 657,229
Renewed June 18, 1935
9 Claims. (Cl. 175—183)

1. The method of detecting fissures within magnetizable objects consisting in setting up flux in a plurality of directions through the object



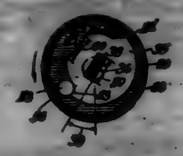
under test and simultaneously indicating variations in flux in each of said directions.

2,031,470
SAFETY CUTTING TOOL
Herbert P. Eck, Isidore B. Rosenberg, and Harry M. Rosenberg, Portchester, and Isaac Fleer, New York, N. Y.
Application March 3, 1934, Serial No. 715,358
9 Claims. (Cl. 29—99)



1. A cutting tool including a pair of pivotally connected members having handle portions at their free ends, a clamping jaw integral with and disposed at the other end of one of said members, a rock lever pivoted on the same end of said member, a cutter wheel journaled in the outer end of said pivoted rock lever for swinging movement above and below the clamping face of said clamping jaw, an indicating pointer on the inner end of said rock lever, a graduated scale on the outer side of the member on which said rock lever is mounted with which said pointer coacts, handle operated means for rotating said cutter wheel, and a work support carried by the other end of the other of said members.

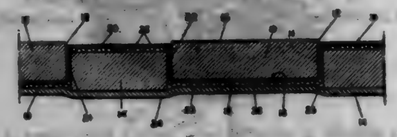
2,031,471
STROKING HOLDER FOR RAZOR BLADES
Charles E. Edwards, New Britain, Conn.
Application March 5, 1934, Serial No. 714,879
8 Claims. (Cl. 30—36)



1. In a stroking holder for razor blades, a holder proper comprising opposed plate-like wings, said wings being provided with registering grooves, and a key of rod-like form and uniform cross section fitting within the space that is provided by said grooves, whereby means are provided for operatively holding a slotted blade positioned between said wings for stropping the blade.

2,031,473
HAND TIRE-GROOVER
William F. Errig, Philadelphia, and George M. Pfundt, Churchville, Pa., assignors to Pece Manufacturing Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application February 28, 1935, Serial No. 8,766
12 Claims. (Cl. 30—20)

3. In a tire groover the combination of a manipulating member with a handle at one end and a forked shoe section at the other, said shoe section having its top surface upwardly and rearwardly inclined, a heater holder supported over the manipulating member and embodying a forwardly-directed foot piece adapted for slidable movement lengthwise of the shoe section inclined surface, a grooving blade seated in a transverse groove in the underside of the heater holder foot piece, means whereby the heater holder and grooving blade can be moved and the latter set at various depths of projection below the manipulator shoe section, and upwardly acting means carried by the manipulating member and engaging the heater holder to arrest the grooving blade at the requisite adjustment.



2,031,513
SHADE ROLLER
Joseph W. Way, Villa Park, Ill., assignor of one-half to Lloyd F. Chambless, Chicago, Ill.
Application March 18, 1935, Serial No. 11,615
14 Claims. (Cl. 156—36)

8. In combination, a spindle having an end engageable in a bracket and held against rotation thereby, a shade roller rotatable with respect to said spindle, a shell fixed to the roller for rotation therewith, a cam disc mounted on said spindle within said shell and slidable up and down obliquely on said spindle; a pocket formed in said disc and provided with a depression within its length, a locking member operable in said pocket, and an internal hump on said shell for operating said locking member.

10. In combination, a shade roller, a spindle for said roller, a bracket for said spindle, said bracket having a tapered opening and said spindle having a tapered end for engagement in said opening in only one position of said spindle with respect to said opening.

2,031,474
DECORATIVE PRODUCT AND METHOD FOR MAKING THE SAME
Joseph Frank, Brooklyn, N. Y., assignor to Gemloid Corporation, New York, N. Y., a corporation of New York
Application April 23, 1934, Serial No. 721,924
15 Claims. (Cl. 41—35)

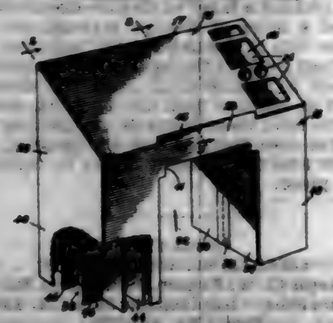
1. A decorative product comprising three laminæ consisting in superposed order of a backing sheet, a layer of scintillating material, and a stencil sheet, said stencil sheet having cut-out portions forming a design with the scintillating material extending across and projecting into the opening forming the cut-out design and visible from the upper side of the stencil sheet, and fillers backing the portion of the scintillating material exposed through the opening and projecting into and thus filling in the balance of the opening, and said backing sheet secured to the underside of the fill-in pieces and to the underside of the layer of scintillating material.

11. In the art of forming a decorative article, the method which consists in forming a cut-out opening in a basic sheet, forming a filler piece of the same contour and slightly smaller than the opening, placing a layer of flexible decorative material and a layer of flexible transparent material on one side of the basic sheet, with the transparent sheet next to the basic sheet, locating the filler piece in engagement with the decorative layer and in registry with the opening, and then forcing the filler piece towards the opening thereby to force into the opening the portion of the decorative and transparent layers in advance of the filler piece.

2,031,475
OXIDIZING CATALYSTS
Joseph C. W. Fraser, Baltimore, Md.
No Drawing. Application June 25, 1931, Serial No. 546,025
7 Claims. (Cl. 23—2)

1. A method of continuously and completely oxidising carbon monoxide comprising passing a stream of carbon monoxide and oxygen into contact with a catalyst comprising artificially prepared copper chromite.

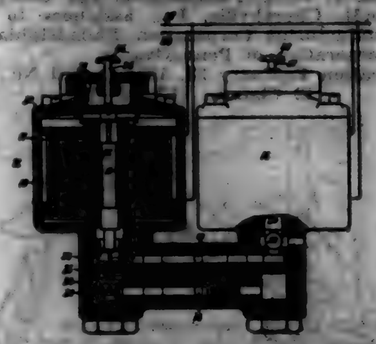
2,031,476
TAGGING MACHINE
Ralph W. French, Junction City, Kans.
Application January 8, 1934, Serial No. 705,763
8 Claims. (Cl. 93—38)



1. In a machine of the character described, a support, an anvil carried by the support, a hammer member mounted on the support for movement to and from the anvil, means for actuating the hammer member, means on the hammer member for supporting a stapled tag with prongs projecting toward the anvil, a guide member, means for pivotally mounting the guide member on the support for guiding the tag into said tag supporting means on the hammer member, a work support, and means carrying the work support for movement relatively to the tag supporting means on the hammer member above the anvil to ef-

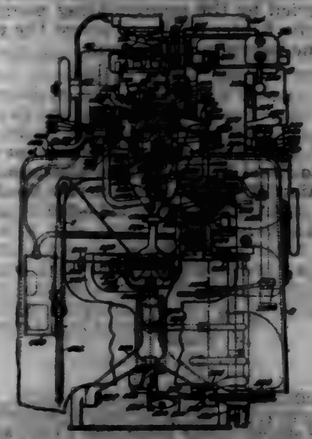
foot penetration of the prongs through the work and movable over the anvil under force of the

hammer member whereby the prongs are clinched on the anvil.



2,031,477
COLLAPSIBLE DRAWING TABLE
Frank A. Giannincto, Yonkers, and Abraham I. Friedman, Brooklyn, N. Y.
Application July 16, 1935, Serial No. 31,704
8 Claims. (Cl. 45—131)

1. In a collapsible drawing table, a member including two superimposed layers of relatively light but strong fibrous material, the upper layer providing a drawing surface and being formed with cutout portions to receive receptacles and drawing implements, and the lower layer providing a backing for the upper layer and a support for receptacles and implements disposed in the cut-out portions, and collapsible means for supporting said member so that the drawing surface is disposed at an angle.



2,031,478
FLUID CONTROL MEANS
William Train Gray, Altrincham, England, assignor to General Electric Company, a corporation of New York
Application September 21, 1932, Serial No. 634,499
In Great Britain October 7, 1932
3 Claims. (Cl. 50—16)

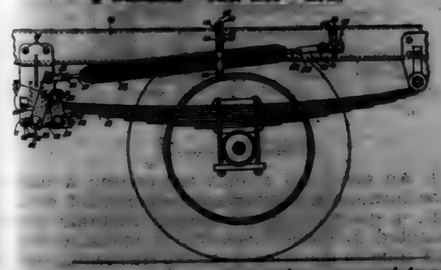
1. The combination with a fluid supply pipe and a delivery pipe of a regulating device for controlling the pressure of fluid in said delivery pipe, comprising an electromagnetically biased inlet valve interposed between said pipes, an engining circuit, an operating coil for said valve responsive to a variable electrical condition of said circuit for applying a force in a direction to open said valve, a spindle for said valve arranged for axial movement conformably in accordance with said electrical condition and with the fluid pressure, and means for biasing said spindle against

opening movement by said coil, a relief valve connected to said delivery pipe, a relief valve operating coil therefor for biasing said relief valve to a closed position, and means connecting said relief valve operating coil to said circuit so as to be responsive to said variable electrical condition of said circuit.

2,031,479
SHOE SEWING MACHINE
Otto R. Haas, North Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application March 16, 1933, Serial No. 660,616
36 Claims. (Cl. 112—57)

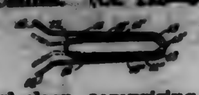
3. A shoe sewing machine having, in combination, stitch-forming devices including a hook needle and looper shiftable in and from looping position, a main driver for the machine, a clutch having driving and driven parts for connecting said stitch-forming devices with the main driver, apparatus driven through the clutch for disengaging the clutch parts subsequently to a predetermined operation of the stitch-forming devices, auxiliary mechanism driven by the main driver for causing the engagement of the clutch parts and for shifting said looper to looping position, and a manually actuable member for controlling said auxiliary mechanism.

2,031,480
BALLAST RESISTANCE
Seitoku Hasuda, Tokyo, Japan, assignor to General Electric Company, a corporation of New York
Application November 28, 1933, Serial No. 700,681
In Japan May 30, 1933
2 Claims. (Cl. 201—63)



1. A ballast resistance comprising an insulating rod having a plurality of longitudinal openings extending therethrough, supporting means for said rod arranged at one end thereof, a ballasting resistance element wound on said rod and having terminals adjacent to said end, and means for maintaining said resistance element at a predetermined elevated temperature comprising a resistance heating element in each of said openings, said heating elements having terminals at said one end of the rod and being connected together at the opposite end thereof.

2,031,481
SYNTHETIC RESIN AND METHOD OF PREPARATION
Caryl P. Haskins, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application March 23, 1934, Serial No. 717,884
3 Claims. (Cl. 260—8)



1. A resin produced by reacting cyprene, maleic anhydride and polyhydric alcohol.

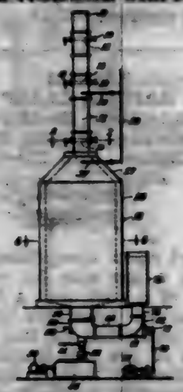
2,031,482
VEHICLE SPRING SUSPENSION
Albert F. Hickman, Eden, N. Y., assignor to Hickman Pneumatic Seat Co., Inc., Eden, N. Y., a corporation of New York
Application November 2, 1931, Serial No. 572,549
4 Claims. (Cl. 280—124)

1. A vehicle spring suspension comprising a chassis frame; a rock shaft bearing secured to each side of said frame; a rock shaft journaled in said bearings; a cross brace having forked ends which are secured to said bearings whereby the same are held in fixed angular relationship relatively to said frame irrespective of the tendency of said frame to weave; vehicle springs operatively connected with the outer ends of said rock shaft; and a vehicle axle provided with wheels secured to said springs.

2,031,483
HAIRPIN CLASP
Frank Interrante, Brooklyn, N. Y.
Application February 14, 1935, Serial No. 6,449
3 Claims. (Cl. 132—50)

1. A hair curl clasp, comprising a single piece of wire having a top arm for engaging across the outer face of a curl, and a bottom arm for engaging across the inner face of the curl, each of said arms consisting of two side members, the front ends of the side members of the top arm being connected with a bent section, the rear ends of the side members of the top arm continuing into the rear ends of the side members of the bottom arm, the side members from the bottom arm being formed with upward bent portions adapted to engage the inner side of the side members of the top arm to latch the clasp closed on the hair.

2,031,484
HAIRPIN CLASP
Frank Interrante, Brooklyn, N. Y.
Application May 1, 1935, Serial No. 19,126
2 Claims. (Cl. 132—50)



1. A hair pin clasp, comprising a single strand of wire having a bottom section consisting of a pair of parallel side portions, a top section above said bottom section and consisting of a U-shaped portion, a connection section connecting the free end of one of the arms of said U-shaped portion with the adjacent free end of one of said side portions, another connection section connecting the free end of the other of said arms of said U-shaped portion with the adjacent free end of the other of said side portions, and said connecting section being concave and touching each other to prevent the hair from extending between the arms of said U-shaped portion.

2,031,485
METHOD OF BLEACHING PULP
Hans John and Clarence C. Le Febvre, Appleton, and Horace Du Bois, Neenah, Wis., assignors to Paper Patents Company, Neenah, Wis., a corporation of Wisconsin
Application May 20, 1931, Serial No. 538,659
26 Claims. (Cl. 8—8)

16. A process of bleaching cellulosic material and the like, comprising pre-bleaching said material under acid conditions in a hypochlorite bath, washing and thickening the pulp, subjecting it to a second bleaching operation under alkaline conditions maintained throughout the stage and with a sufficiently high concentration of hypochlorite bleach so that an excess thereof remains at the end of the second stage, substantial agitation being avoided throughout the second stage, thickening the material and removing a large portion of the excess of bleach remaining at the end of the second stage, adding water to the thickened pulp so as to produce a low consistency and low bleach

concentration, adding sufficient acid to render the mixture distinctly acid, allowing the mixture to react under said conditions with substantially no

agitation until the bleaching is completed, and then neutralizing the bleaching agent and washing.

2,031,426

PROCESS FOR THE PRODUCTION OF ALLOYS OF THE ALKALINE EARTH METALS WITH LEAD OR OTHER METALS

Gustaf Newton Kirstebom, Oslo, Norway, assignor to Calley Limited, London, England, an English joint-stock company

No Drawing. Application December 22, 1932, Serial No. 648,443. In Great Britain June 11, 1932

9 Claims. (Cl. 75—1)

1. A process for preparing alkaline earth metal alloys which process comprises melting together a non-metallic compound of the said alkaline earth metal and aluminum and mixing therewith while in molten condition metallic lead and allowing the metal to form into two layers and separating the aluminium layer.

2,031,427

PROCESS FOR THE PRODUCTION OF ALLOYS OF THE ALKALINE EARTH METALS WITH CADMIUM

Gustaf Newton Kirstebom, Oslo, Norway, assignor to Calley Limited, London, England, an English joint-stock company

No Drawing. Original application December 22, 1932, Serial No. 648,443. Divided and this application August 11, 1934, Serial No. 739,418. Renewed October 24, 1935. In Great Britain June 11, 1932

11 Claims. (Cl. 75—1)

1. A process for preparing alkaline earth metal alloys for the production of cadmium alkaline earth metal alloys, which process comprises the step of mixing together in the molten condition cadmium and an alloy with aluminium containing the said alkaline earth metal and allowing the melt to form into two layers and separating the aluminium layer.

2,031,468

CHECK FOR PIANO ACTIONS

Adolf Klein, New York, N. Y.

Application July 19, 1935, Serial No. 31,319

2 Claims. (Cl. 84—253)

1. In a piano action, a hammer butt, a back check, the opposite sides of the butt having recesses therein, said check having spaced lugs disposed in said recesses respectively, a pivot extending through said lugs and butt, to thus pivotally connect the check with the butt, a projection

on the butt, and a spring having one end engaged with said projection and the other end engaged with the check to yieldingly hold the check in operative position with respect to the butt.

2,031,469

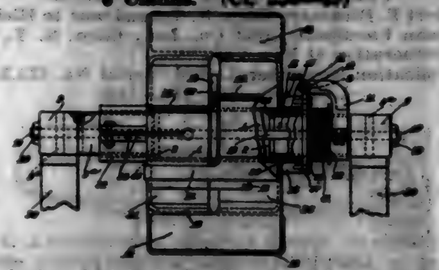
STABLE DEPILATORY

Franz Koenigsberger, New York, N. Y., assignor to Parfumerie St. Denis, New York, N. Y., a corporation of New York

No Drawing. Application April 15, 1933, Serial No. 665,549

4 Claims. (Cl. 167—82)

2. A transparent stable depilatory, comprising a transparent gum base, a depilatory agent containing lithium and an inert gas dispersed throughout the depilatory, all the ingredients being substantially water soluble so as to be easily and completely removable from the skin after use.



2,031,490

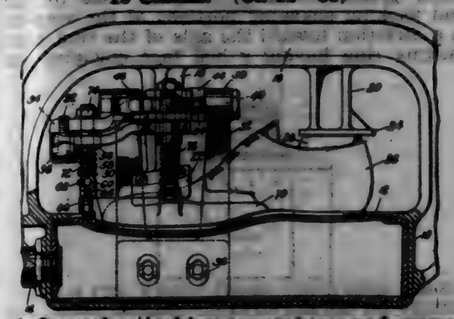
HIGH FREQUENCY CIRCUIT

Frederick A. Kolster, New York, N. Y., assignor to Federal Telegraph Company, Newark, N. J., a corporation of California

Application October 31, 1934, Serial No. 750,513

6 Claims. (Cl. 250—43)

1. An electrical circuit comprising a metallic tube forming an inductance element of said circuit, a pair of dome-shaped metallic devices mounted in spaced relation at opposite ends of said tube in electrical contact therewith, one device being fixed and the other rotatable relative to said tube, flanges on both devices positioned to form a variable capacity element of the said circuit and so that the separation thereof is variable by rotation, and means for rotating said rotatable device to vary the distance between the flanges of said devices.



2,031,481

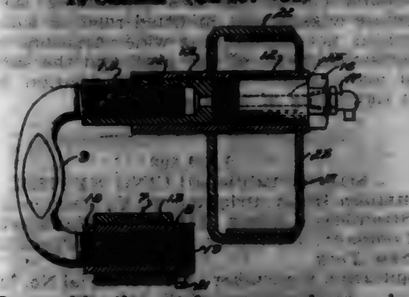
SOLE ATTACHING APPARATUS

John T. Lancaster, Newton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application December 22, 1934, Serial No. 759,545

16 Claims. (Cl. 12—33)

1. In a sole attaching apparatus, a pad support, a pad upon the support, a yoke sustained by the pad support, heel and toe supports sustained by the yoke, and a welt holddown sustained by the pad support independently of the yoke and of the heel and toe supports.



2,031,482

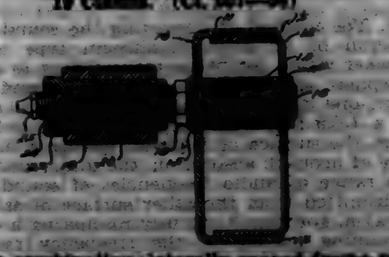
SHACKLE SUPPORT

John W. Leighton, Port Huron, Mich.

Application June 8, 1934, Serial No. 729,579

10 Claims. (Cl. 267—54)

1. In combination, a frame member, a sleeve projecting through the frame member and rigidly connected thereto, a bushing threaded into the sleeve and projecting from one side of the frame member, and a shackle bolt threaded into the projecting end of the bushing.



2,031,492

SPRING BOLT ASSEMBLY

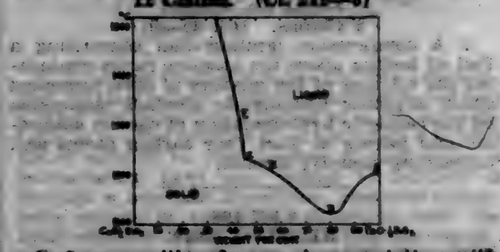
John W. Leighton, Port Huron, Mich.

Application June 8, 1934, Serial No. 729,580

19 Claims. (Cl. 267—54)

1. In combination, laterally spaced frame portions having openings, an internally threaded

bushing projecting through the openings and being welded to the frame portions, and a bolt threaded into the bushing, the threads on the bolt and bushing being of self-locking character.



2,031,494

WELDING ROD COATING

Paul G. Lemmerman, East Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware

Application December 19, 1933, Serial No. 703,158

12 Claims. (Cl. 219—8)

1. A composition for use in association with welding rods comprising a system of the formula

$$FeO \cdot xMeO \cdot ySiO_2$$

where x and y represent the number of mols present, and where Me represents calcium or barium, the compound having a melting point not substantially higher than 1900° C.

2,031,495

APPARATUS FOR AND METHOD OF LOADING GUNS FOR DISPENSING VISCID OR SEMI-LIQUID MATERIALS

Louis A. Mackinburg, Oklahoma City, Okla.

Application December 29, 1934, Serial No. 759,726

8 Claims. (Cl. 266—56)

1. A load for apparatus of the class described, said load including a collapsible container adapted to be inserted within the apparatus, a fluidic material in the container, and a carton of semi-rigid construction for receiving the container, said carton being of a dimension which will scrape and clean the interior surface of the apparatus when inserted therein.

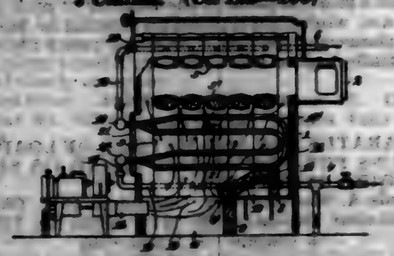
2,031,498

AUTOMOBILE ROBE SUPPORT AND BRACKET THEREFOR

Arthur Chand-Manilo, Trumbull, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut

Application June 8, 1933, Serial No. 675,957

8 Claims. (Cl. 24—128)

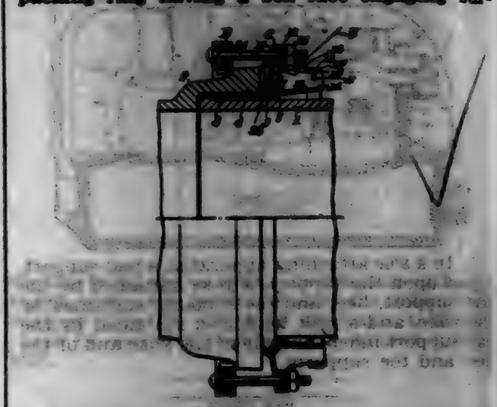


1. A bracket for an automobile robe support, comprising a casing adapted to receive the end member of a robe supporting cord, spring means arranged in said casing to act between said end

member and said casing to normally draw said cord toward said bracket, and abutment means arranged to limit the outward pull of said cord at a point between the normal expansion and compression limits of said spring means.

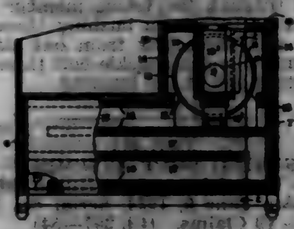
2,031,497
FUEL
Carl S. Marvel, Urbana, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 21, 1933, Serial No. 652,927
2 Claims. (Cl. 44—9)

1. A compression ignition fuel comprising a fuel oil boiling above the gasoline range containing the nitrates of the mixture of open branched chain aliphatic monohydric alcohols obtainable by the catalytic hydrogenation of carbon monoxide and having at least four carbon atoms and containing isobutyl alcohol.



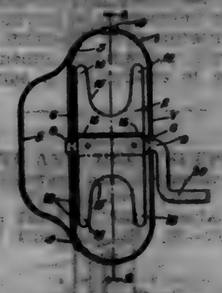
2,031,498
HEATING UNIT
William R. Miller, Passaic, N. J., assignor to Ray F. Van Segger, Maplewood, N. J.
Application January 23, 1932, Serial No. 588,415
Renewed October 14, 1933
3 Claims. (Cl. 122—146)

1. A heating apparatus including a furnace having a boiler, a fire box and an ash pit, an oil burner for projecting flame substantially horizontally into the ash pit, baffling means for deflecting said flame into the fire box and into a direction to cause the flame to move substantially vertically, a plurality of sets of tubes arranged in said fire box in the path of said flame, the ends of the respective sets of tubes being connected to a lower header outside of said furnace, the outlet ends of said sets of tubes being connected to an upper header and tubular means for connecting the respective headers to said boiler at the top and bottom thereof.



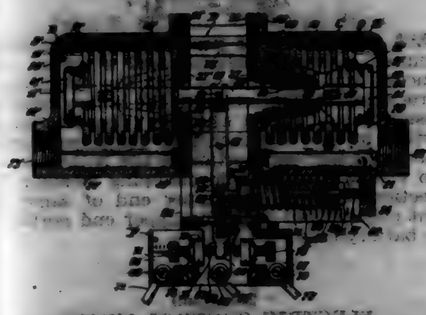
2,031,499
ADJUSTABLE REPAIR CLAMP FOR BELL AND SPIGOT JOINTS
Charles E. Norton, Bradford, Pa., assignor to S. R. Dresser Manufacturing Company, Bradford, Pa., a corporation of Pennsylvania
Original application February 24, 1933, Serial No. 658,518, now Patent No. 1,991,024, dated March 12, 1934. Divided and this application February 21, 1934, Serial No. 712,370
6 Claims. (Cl. 285—119)

1. A self adjusting clamping ring comprising a plurality of independently movable segments provided with packing engaging portions curved in cross section adjacent to their inner edges, and provided with means for securing clamping bolts thereto at points located at a distance outwardly from said packing engaging portions, and portions extending rearwardly of the packing engaging portions, annularly arranged tension means engaging said rearwardly extending portions of said segments for holding said segments in ring formation, said segments each having a turning moment with respect to said tension means and reacting against said tension means under pressure of the clamping bolts to force said packing engaging portions of the segments in a direction toward the axis of the ring, and a packing ring having a bell face engaging sur-



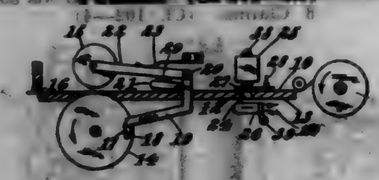
face, a pipe engaging surface and an exterior surface having a curvature in cross section substantially corresponding to that of the packing engaging portions of the ring, the said corresponding curved surfaces permitting the immediate engagement in fitted relation when assembled, notwithstanding wide variations in the exterior diameter of the pipe, and the substantial maintenance of said fitted relation during the tightening of the clamp.

2,031,500
SOUND REPRODUCING SYSTEM
Benjamin Olney, Brighton, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a corporation of New York
Application September 17, 1934, Serial No. 744,303
19 Claims. (Cl. 181—31)



1. The method of improving the sound reproduction of an open diaphragm type of loud speaker which comprises transmitting to the atmosphere substantially unmodified sound waves from one surface of said diaphragm, absorbing in a folded passageway by multiple reflection from the surface of material having a high degree of acoustic absorption, the major portion of the range of audio frequencies of sound waves transmitted from the other surface of said diaphragm, and simultaneously resonating a certain remaining portion of the frequency range of sound waves transmitted from said last-mentioned diaphragm surface.

2,031,501
REEL
Kenneth R. Porter, Shaker Heights, Ohio
Application April 9, 1935, Serial No. 14,859
7 Claims. (Cl. 242—101)

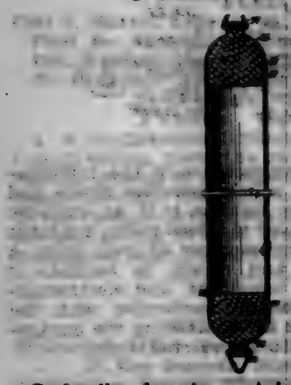


1. In a reel, a spool frame comprising a looped continuous metallic element having its opposite ends lapped and secured together in spaced areas, the lapped sections between said spaced areas separated so that one of the same serves as a handle for the frame, and a spool rotatably supported between opposite sections of said looped element and in such close proximity thereto that upon flexure of said band the latter will engage said spool and effect a braking action thereon.

2,031,502
ELECTRICAL CONTROLLER
Ellis G. Powell, Michigan City, Ind., assignor to C. A. Dunham Company, Marshalltown, Iowa, a corporation of Iowa
Application September 28, 1932, Serial No. 691,364
9 Claims. (Cl. 200—83)

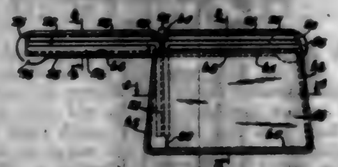
1. In an electrical controller, a pair of opposed pressure-actuated devices, each device comprising a housing having one open end, and a bellows diaphragm positioned within the housing and having one closed end and one open end, the open end of the diaphragm being connected with the open end of the housing to form a closed chamber within the housing and about the diaphragm, means for admitting fluids under pressure to each of the chambers, one chamber being under higher pressure than the other chamber, a stem mounted between the two housings and within the bellows diaphragms and having its ends abutting the closed ends of the two bellows respectively, a movable member connected with and actuated by the stem, an adjustable spring device firmly mounted at one end and abutting at the other end against the movable member to balance the normal difference in pressure exerted on the two diaphragms, and a circuit controller actuated by movements of the movable member.

2,031,503
LIGHT-SENSITIVE CELL CONTROL MECHANISM
Alexander Griffith Ramsay, London, England
Application May 17, 1930, Serial No. 453,289
In Great Britain June 1, 1929
4 Claims. (Cl. 271—3.6)



1. In sheet feeding mechanism the combination of feed rollers, a light-sensitive device and a lamp for projecting light on to it, an epicyclic train of gearing coupled to a feed roller, a ratchet wheel coupled to one member of said train, a co-operating pawl and means to oscillate it through a constant amplitude, and electromagnetic means in electrical connection with the light-sensitive device for controlling the engagement of the pawl with the ratchet wheel.

2,031,504
MANUFACTURE OF SULPHUR DIOXIDE
Brodie K. F. Shanlin, Caldwell, N. J., assignor of one-half to Albert Harry Chitty, Sault Ste. Marie, Ontario, Canada, and one-half to David Munroe, Belleville, N. J.
Application November 18, 1931, Serial No. 575,733
8 Claims. (Cl. 23—277)



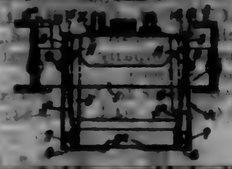
1. Apparatus for production of sulphur dioxide from pyrites, comprising in combination with a furnace structure, a mechanical pyrites conveyor closed to admission of air and arranged to deliver pyrites into the top of the furnace, the upper portion of said furnace having controllable air inlets adjustable to regulate admission of air entirely independently of the pyrites feed, means for trapping the oxides and venting the gas from the bottom of the furnace structure and including a gas discharge line, means for applying suction to said gas discharge line to draw off the gas and to induce a supply of air into the top of the furnace in accordance with the regulation of the adjustment means aforesaid, said trapping means including a tubular water cooled deflector having gas passages about the same and external inclined surfaces for directing the oxides to form dry seals.

2,031,506
CONTAINER FOR EXPLOSIVES
Carey O. Rison, Oklahoma City, Okla., assignor of one-half to Indian Territory Illuminating Oil Company, Bartlesville, Okla., a corporation of New Jersey
Application November 15, 1933, Serial No. 698,100
6 Claims. (Cl. 102—4)

2. A nitroglycerin container including a shell formed of fibrous material, and a binder produced by reaction of formaldehyde upon phenol in the presence of a sufficient amount of an alkali to insure against presence of acid in the shell at any time during effective life of the shell.

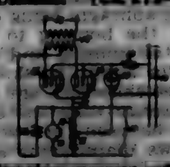
2,031,506
HANDBAG
Harry V. Ritter, New York, N. Y.
Application December 6, 1935, Serial No. 53,183
4 Claims. (Cl. 150—42)

1. A portable receptacle including a bag closed at the bottom and having a top opening, said bag having first and second side walls, angle frame members for the respective side walls, the frame members having arms extending generally horizontally along said opening and having their other upright arms located at an end of the bag and extending downward, the upright arms being pivotally interconnected for relative movement of horizontally extending arms toward and away from each other to cause closing and opening of the bag, one horizontal arm being connected to the first side wall, the second horizontal arm being relatively movable to the second side wall and being adapted to engage the same in bag closing position, and means for releasably interconnecting the horizontal arms to maintain the bag closed.



2,031,507
ELECTRIC CANDLE
Harry Rothenberg, West Norwood, N. J., assignor to Henry Hyman, Brooklyn, N. Y.
Application June 25, 1931, Serial No. 546,761
3 Claims. (Cl. 240—10.64)

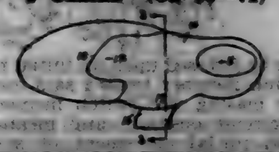
1. In an electric candle, a hollow base, a metal closure for said base, a flat spring attached to said closure, a slidable switch in said base in contact with said spring, a battery in said candle, and a contact for one end of said battery, said closure



having a slot varying in width at different portions and said switch having a conical extension projecting through said slot.

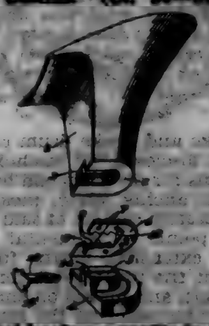
2,031,508
BATTERY HOLDER
Elmo C. Scott, St. Louis, Mo.
Application April 23, 1935, Serial No. 18,741
11 Claims. (Cl. 136—63.5)

1. A battery holder provided with a pivotally mounted clamping member and a spring, constructed and arranged so that the operation of introducing the battery into the holder creates a tension in said spring which is utilized to force a portion of said member into tight engagement with the lower end portion of the battery and is also utilized to rock said clamping member in a direction to force the upper end of same into tight engagement with the upper end portion of the battery case.



2,031,509
ELECTRIC CONTROL MEANS
Harold T. Seeley, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York
Application January 25, 1934, Serial No. 708,145
13 Claims. (Cl. 171—312)

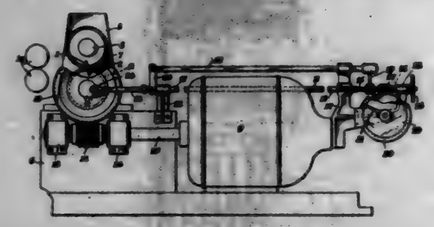
10. In combination, means subject to variations in an operating condition, means for controlling said first-mentioned means, means for controlling said second-mentioned means comprising a circuit element having a voltage component varying in accordance with said operating condition and current consuming means having a substantially constant voltage component thereacross when in



a continuously conductive state and connected in differential voltage relation with said circuit element, an electric circuit having the same character of current as said first-mentioned means for supplying current to said current consuming device, and means entirely static for deriving from said electric circuit a component of direct current voltage sufficient to maintain said current consuming means conductive throughout the operating range of variations of said operating condition.

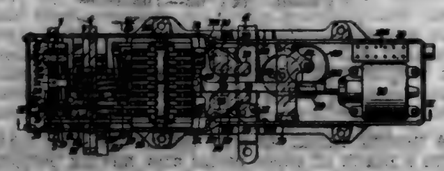
2,031,510
ARCH AND HEEL SUPPORT
Earl M. Stewart and Seymour Shagrin, Youngstown, Ohio
Application June 27, 1935, Serial No. 29,111
2 Claims. (Cl. 36—71)

1. In an arch and heel support, a resilient body portion, an elongated semi-saucer shaped recess in the heel of said body portion, a resilient heel support in said recess, said recess formed slightly to the outside of the heel portion of the body portion, an inner longitudinal arch support formed in said body portion, a built up portion on said arch support, a tab extension on said built up portion to be attached to a shoe, a metatarsal support in said body portion having its front edge shaped to conform to the varying lengths of the metatarsal bones.



2,031,511
HEEL
Peter E. Sullivan, Randolph, Mass.
Application December 20, 1933, Serial No. 703,275
8 Claims. (Cl. 36—36)

5. A shoe heel having a cavity in its lower face, said cavity extending rearwardly into the heel from the breast surface thereof, a rubber top lift having an integral lug extending upwardly therefrom into said cavity, said lug being split longitudinally, and a device extending into the split in said lug for expanding the lug laterally.

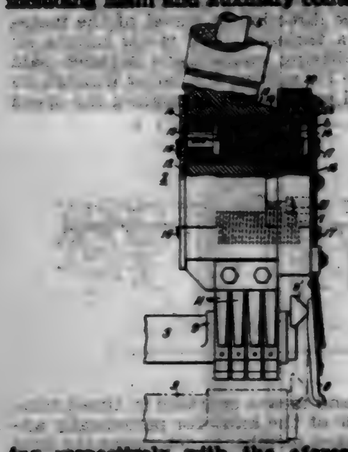


2,031,512
CUT-OFF MACHINE
George W. Swift, Jr., Bordentown, N. J., assignor to George W. Swift, Jr., Inc., Bordentown, N. J., a corporation of New Jersey
Application July 2, 1935, Serial No. 29,471
9 Claims. (Cl. 164—68)

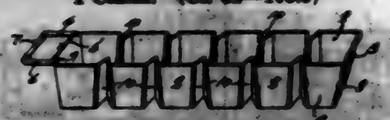
1. In combination, a cut-off knife movable through a cycle including operating and non-operating positions, said knife having a component of movement in operating position which is substantially in the direction of travel of the material to be cut, a variable speed motor having an output shaft, driving connections between said shaft and knife for moving the latter through its cycle, a control member for regulating the speed

of said motor, and means operated in timed relation to the cycle of the knife for periodically adjusting said control member to determine the time between successive operations of the knife and maintain its aforesaid movement during operation at substantially the same speed as the material to be cut.

2,031,513
RAILWAY SWITCH MECHANISM
Charles C. Thorn, Camden, N. J.
Application December 1, 1933, Serial No. 700,297
22 Claims. (Cl. 246—146)



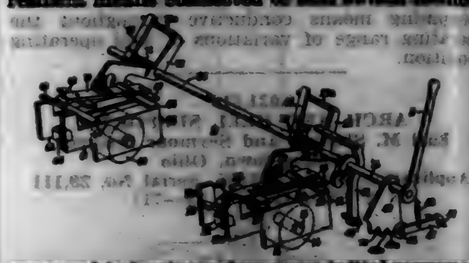
1. In a switch mechanism of the class described, switch operating and switch locking rods directly connected to the switch points, means at the switch with its movement controlled electrically from a remote station for performing all the operations required for locking and unlocking the locking rod, and means controlled mechanically from said remote station for actuating said switch operating rod, said electrically controlled means operating as an antecedent condition to the operation of said mechanically controlled means.



2,031,514
ELECTRIC CIRCUIT INTERRUPTER
Carl Thumim, Philadelphia, Pa., assignor to General Electric Company, a corporation of New York
Application July 2, 1934, Serial No. 733,563
2 Claims. (Cl. 200—146)

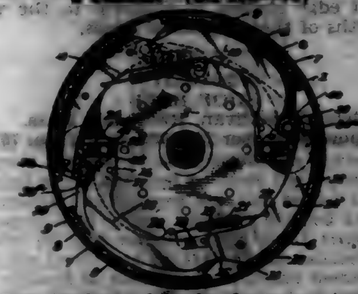
1. An electric circuit interrupter comprising coacting stationary and movable contact structure, said stationary structure including a lead-in conductor, a block of conducting material forming an adapter connected to said lead-in conductor, main and auxiliary contacts supported by said block, and a resistance coil positioned in a recess formed in said block, one terminal of said coil electrically connected to said block and the other terminal electrically connected to said auxiliary

contact, said movable contact structure likewise including main and auxiliary contacts for coacting respectively with the aforesaid stationary main and auxiliary contacts.



2,031,515
ICE TRAY
Guy L. Tinkham, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a corporation of Michigan
Original application March 16, 1934, Serial No. 714,966. Divided and this application July 5, 1934, Serial No. 732,736
1 Claim. (Cl. 62—108.5)

A flexible metal ice tray folded into tray form from a blank of sheet metal and having bottom, side, and end walls, expansion joints in the bottom and the side walls of the tray extending across said walls and through the upper edges of the side walls, said joints projecting into the tray in spaced relation along the length of the tray to divide the tray into a series of integrally connected cells, the end walls of the tray being formed by overlapping sections integral with the bottom and the side walls, respectively, a flange on the innermost section of each end wall and bendable over the outermost sections for securing the sections in overlapping relation, and a bail-like handle member having a pair of cross portions and side portions connecting the cross portions, said handle member being pivotally attached to the tray by having one of said flanges bent over one of the cross portions of the handle member between and free of its side portions, said flange having a width to extend about and under the cross portion of the handle member engaged thereby to hold said cross portion against the adjacent end wall of the tray and the sections of said end wall in overlapping relation.



2,031,516
CIRCUIT CONTROLLER
John P. Tritle, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application October 11, 1934, Serial No. 748,524
11 Claims. (Cl. 200—87)

1. A circuit controller comprising a switch member operable between open and closed circuit positions, a coil having a plurality of turns operatively associated with said switch member, means responsive to movement of said switch member towards said closed position for energizing said coil whereupon the magnetic force produced by said coil operates said switch member to said closed circuit position with a snap action, resilient means connected to said switch member

arranged to be stressed upon an initial movement of said switch member toward said open circuit position for biasing said switch member toward said open circuit position, and means responsive to said initial movement of said switch member for reducing said magnetic force whereupon said resilient means operates said switch member to said open circuit position with a snap action.

2,031,517
BRAKE
Harry D. Van Brunt, Los Angeles, Calif.
Application October 23, 1933, Serial No. 695,439
8 Claims. (Cl. 188—79)

1. In a brake and brake drum construction of the character disclosed, an anchor plate, a pair of levers, means for pivoting said levers at spaced points to said anchor plate, means permitting shifting the relative centers of said levers relative to said pivot points; a segmental shoe provided with an arm extension, means for one of said levers adjacent the pivot point for securing one end of said shoe, and means on the other of said levers for movably securing the arm extension of said shoe, whereby upon movement of the levers the shoe is moved, the levers shifting through the first means to effect equalized surface drum engagement with the shoe.

2,031,518
METHOD OF PRODUCING COPPER HAVING HIGH ELECTRICAL CONDUCTIVITY AND BEING FREE FROM OXYGEN
Hermann von Forster and Fritz Kinstel, Frankfort-on-the-Main, Germany, assignors to American Lurgi Corporation, New York, N. Y.
No Drawing. Application June 30, 1933, Serial No. 678,572. In Germany June 27, 1934
9 Claims. (Cl. 75—62)

1. The method of producing practically oxygen-free copper having high electrical conductivity which comprises blowing air into molten copper to remove impurities, overpoling the thus-treated molten copper to reduce the oxygen content to an accentuated degree to produce practically oxygen-free and sulfur-free copper, treating such copper with a lithium-containing material to remove gases therefrom, and casting the degasified practically oxygen-free and sulfur-free copper while preventing the access of air.

2,031,519
SHAVING DEVICE AND THE LIKE
Daniel M. Wilson, Binghamton, N. Y.
Application October 5, 1933, Serial No. 692,732
6 Claims. (Cl. 30—43)

1. A shaving device comprising a toothed stationary cutter member having a recess therein, and a toothed movable cutter member reciprocably mounted in said recess and having substantially its teeth only overlying the teeth of said stationary cutter member, the underside of the teeth of said movable member engaging against the outer surface of the teeth of said stationary member and the outer surface of the teeth of said movable cutter being adapted to directly engage the skin, the teeth of said stationary cutter member being integral therewith and the outer surface of said movable member being wholly free of overlying portions of said shaving device whereby all of said outer surface is directly engageable with the skin.

2,031,520
TRAP
Joseph D. Zahm and John U. Lehn, Lititz, Pa., assignors to Animal Trap Company of America, Lititz, Pa., a corporation of Pennsylvania
Application September 29, 1932, Serial No. 635,237
11 Claims. (Cl. 43—89)

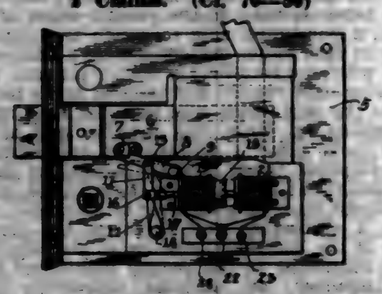
1. In an automatically set trap, the combination with a base, a spring actuated striker pivotally mounted thereon, of a pivotally mounted locking blade provided with a detent portion, a lever portion to rock said blade into set position, and a forwardly extending trigger engaging arm, of a pivoted bait pedal having a curved trigger portion against which said arm is pressed by the spring actuated striker in the set position, the curvature of said trigger being such as to permit of the release of said arm, without moving it against the action of the spring actuated striker.

11. In a trap of the class described having a base, a spring actuated striker member attached to the base, a locking blade over said base, and a bait treadle having a trigger for engaging said blade; a pivotal support for said blade comprising two parallel guiding plates rising rigidly from said base on opposite sides of said blade, and a pivot portion connecting the upper ends of said plates, said blade having an opening through which said pivot portion passes.

2,031,521
HYDRAULIC COUPLING
Karl Baumann, Urmston, and Harold Sinclair, Surbiton Hill, England
Application June 14, 1932, Serial No. 675,842
In Great Britain June 23, 1933
2 Claims. (Cl. 60—54)

4. For a hydraulic coupling, a rotary member comprising a plurality of approximately semi-elliptical and approximately radially spaced vanes; a housing therefor comprising an inner ring member, an outer ring member and an annular cover plate intermediate said ring members, each of said ring members and said cover plate being welded to each vane at two points on the outer curved edge of the vane.

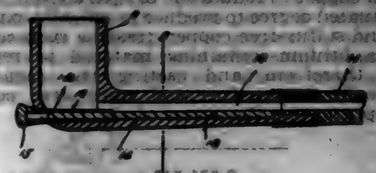
5. A hydraulic coupling including an impeller comprising an inner ring member, a plurality of approximately semi-elliptical vanes disposed radially in spaced relationship, an outer ring member, an annular cover plate disposed between said ring members, said ring members and cover plate being secured to the convex edges of said vanes, a shrouding ring to which the concaved edges of said vanes are connected, a runner coaxial with the impeller, a dished annular plate enclosing said runner and secured at its periphery to the said outer ring member, said runner comprising an inner ring member and an annular cover plate, a plurality of approximately semi-elliptical vanes secured radially in spaced relationship at their convex edges to the second mentioned inner ring member and annular cover plate, a shrouding ring to which the concave edges of the last mentioned vanes are secured, a shaft connected to the second mentioned inner ring member, an annular supporting plate mounted at its center on said shaft and secured at its periphery to said runner cover plate to provide a reservoir for liquid, said shrouding rings coacting to provide a scoop chamber between them, and a plurality of tubular members communicating at one end with said reservoir and at the other end with said scoop chamber.



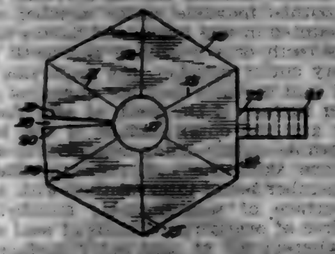
2,031,522
LATCH
John T. Biglin, Hastings, Nebr.
Application June 30, 1932, Serial No. 675,544
1 Claim. (Cl. 292—239)

In a latch, a casing open at the bottom and having an outer and side vertical walls, means

to rigidly secure said casing to a door frame or the like, a horizontal pin mounted in and extending between said side walls of the casing in close proximity to said outer wall and near the bottom of the casing, a resilient keeper ring loosely suspended from said pin and normally engaged at its outer side with said outer vertical wall of the casing so as to be normally supported by the latter in latching position at a downward and inward inclination from said pin, said ring being free to be swung inwardly and upwardly in an arcuate path about said pin when struck by a latch bolt during closing of the door or the like, said ring further being limited in its upward swinging movement by said outer wall to a released position wherein the ring extends at an upward and inward inclination from said pin, whereby said ring will instantaneously swing downwardly and outwardly in such arcuate path back to latching position due to gravity and rebounding of the ring from said outer wall for positively engaging the latch bolt to hold the door closed as soon as the door reaches its completely closed position, the outer wall of the casing being cut away at its lower end and said side walls of the casing having alined vertical elongated slots allowing said pin limited vertical movement so that the ring will swing upwardly to a released position entirely above the bottom of the casing and will lower to a latching position with its center below the bottom of the casing.



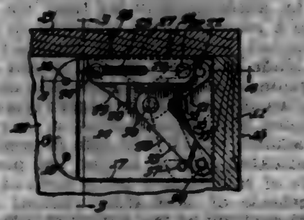
2,031,523
AUTOMOBILE LOCK
Waldo W. Benzer, Pasadena, Calif.
Application May 2, 1935, Serial No. 19,488
2 Claims. (Cl. 70—59)



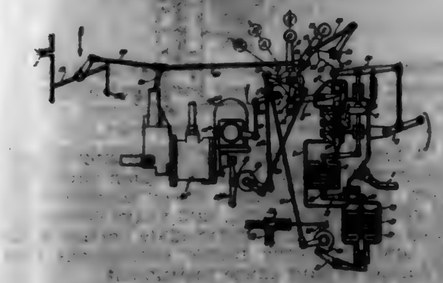
2. In an automobile door lock a sliding bolt secured thereto a stop formed on said bolt, a detent capable of being moved into alignment with said stop, a toggle link connected to said detent and to the casing of said lock, a pair of spaced magnets mounted in said lock, an armature positioned therebetween, and a pull rod secured to said armature and to said toggle link whereby when said armature is moved in one direction said detent will be in alignment with said stop and when said armature is moved in the opposite direction said detent will be moved out of alignment with said stop.

2,031,524
TOBACCO SMOKING PIPE
Maurice Champeux, Quebec, Quebec, Canada
Application January 25, 1935, Serial No. 2,546
1 Claim. (Cl. 131—12)

In a structure of the class described, a pipe including a bowl having a stem provided with a passage, the lower portion of the passage being constructed to provide a saliva trap, the lower part of said bowl being formed with a socket communicating with said passage, a removable plug in said socket, and an absorbent element carried by said plug and located in said trap, said plug extending for a length in said socket beyond the inner wall of said bowl.



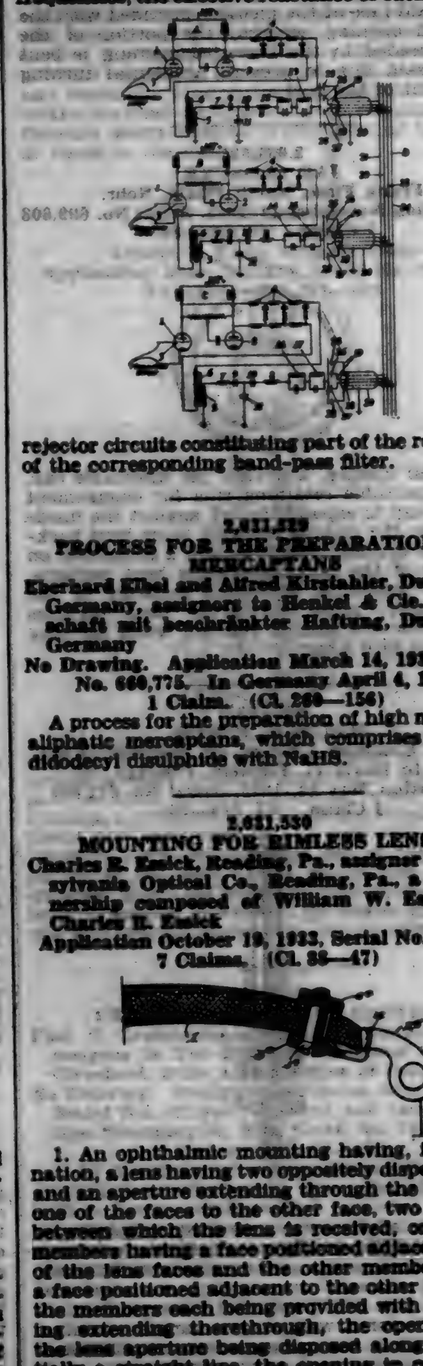
2,031,525
GOLF HOLE
John D. Clarke, Chicago, Ill., assignor to Chicago Carton Company, Chicago, Ill., a corporation of Illinois
Application May 3, 1935, Serial No. 19,581
6 Claims. (Cl. 273—36)



1. A golf practice hole comprising a sheet material member folded upon itself and having a tab integral with and extending from an edge portion of one of the folds, said tab being folded so as to be interposed between the folds of the member, and means uniting said tab to the other fold, said tab serving to maintain the member in folded condition and being adapted to be severed from the fold from which it extends to permit unfolding of the member.

2,031,526
LINK TYPE HINGE
George Demuth, Green Bay, Wis.
Application August 17, 1933, Serial No. 685,085
3 Claims. (Cl. 16—163)

1. A hinge structure for mounting a cover upon a receptacle, comprising a single supporting plate having opposite edges formed with angularly extended flanges and having a third edge formed with a laterally extended flange whereby the plate and the flanges will define a housing, said first named flanges being apertured for the passage of securing elements whereby the housing may be secured with its open side against the end of the receptacle, a member right angular in cross section adapted to be secured upon the underside of the cover and formed with an elongated slot, a pair of angle levers arranged with their vertices in overlapping relation and pivotally connected, one of said angle levers having one arm pivotally connected within one corner of the housing and having its other arm pivotally and slidably connected in said slot, the other angle lever having one arm pivotally connected with the member carried by the cover, said housing being formed with an inclined slot, and the other arm of the second named angle lever being pivotally and slidably connected in said last named slot, both of said angle levers being accommodated and entirely enclosed within said housing when said cover is in closed position whereby the levers will be prevented from contact with the contents of the receptacle.



2,031,527
CONTROLLING MEANS FOR FUEL INJECTION ENGINES
Edward Dodson, Streatham, London, England
Application May 28, 1935, Serial No. 23,911
In Great Britain April 23, 1935
7 Claims. (Cl. 123—139)

1. Means for controlling fuel injection engines comprising a fuel controlling device for varying the amount of fuel supplied to said engines, an induction pressure sensitive device, means operatively connecting said induction pressure sensitive device with said controlling device, a throttle control, throttle control actuated means for operating said controlling device independently of said induction pressure sensitive device, and means for operating said controlling device independently of said throttle control actuated means and said induction pressure sensitive device when the throttle control is moved beyond its normal full throttle position into an emergency position.

2,031,528
WIRE BROADCASTING SYSTEM
Peter Pendleton Eckersley, Chelsea, London, and Rupert Evan Howard Carpenter, London, England
Application July 26, 1934, Serial No. 737,180
In Great Britain August 1, 1933
9 Claims. (Cl. 179—2.5)

2. A multi-channel high frequency wire-broadcasting system comprising in combination, a distributing network, a plurality of amplifiers each effective over a band of frequencies and each associated with one of the channels, a plurality of step-down transformers each interposed between the output of one of said amplifiers and said distributing network, a plurality of band-pass filters each interposed between one of said amplifiers and said distributing network and a plurality of rejector circuits interposed between one of said amplifiers and said distributing network, each designed to present a high impedance to a band of frequencies, the effective reactance of each of said

rejector circuits constituting part of the reactance of the corresponding band-pass filter.

2,031,529
PROCESS FOR THE PREPARATION OF MERCAPTANS
Eberhard Elbel and Alfred Kirstahler, Duesseldorf, Germany, assignors to Henkel & Cie., Gesellschaft mit beschränkter Haftung, Duesseldorf, Germany
No Drawing. Application March 14, 1933, Serial No. 660,775. In Germany April 4, 1932
1 Claim. (Cl. 260—156)

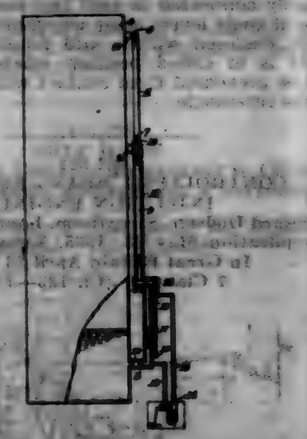
A process for the preparation of high molecular aliphatic mercaptans, which comprises treating didodecyl disulphide with NaHS.

2,031,530
MOUNTING FOR RIMLESS LENSES
Charles R. Esslck, Reading, Pa., assignor to Pennsylvania Optical Co., Reading, Pa., a co-partnership composed of William W. Esslck and Charles R. Esslck
Application October 19, 1933, Serial No. 694,291
7 Claims. (Cl. 88—47)

1. An ophthalmic mounting having, in combination, a lens having two oppositely disposed faces and an aperture extending through the lens from one of the faces to the other face, two members between which the lens is received, one of the members having a face positioned adjacent to one of the lens faces and the other member having a face positioned adjacent to the other lens face, the members each being provided with an opening extending therethrough, the openings and the lens aperture being disposed along substantially a straight line, the opening in one of the members being substantially cylindrical and screw threaded, and a correspondingly substantially cylindrical, threaded post received in the openings and the lens aperture and being threaded in the threaded opening to secure the lens and the members together, the axis of the cylindrical

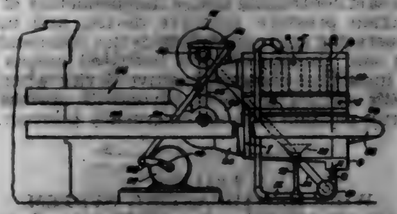
threaded opening being inclined at a substantial angle to the said straight line and to the normal to the said face of the member provided with the threaded opening, whereby the portion of the post threaded in the threaded opening is bent out of said line to prevent accidental turning movement of the post.

2,631,531
JAR CLOSURE
Frank Fiene, North Platte, Nebr.
Application November 24, 1933, Serial No. 699,666
1 Claim. (Cl. 215—35)



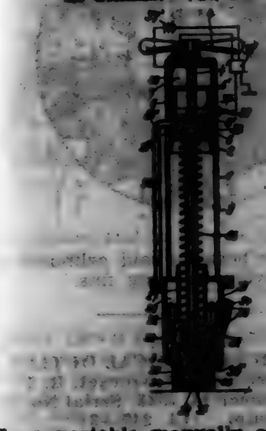
In a jar closure, a flexible jar insertable cap, a slit expansible retaining ring for engagement into the cap to expand the cap against the inside of the jar, the ends of the ring being bent backwardly in opposite direction, and a projection on the ends of the said backwardly bent portions, the said projection extending inwardly of the ring proper, said backwardly bent portions adapted for overlapping relation when the ring is engaged with a cap.

2,631,532
ELECTRIC PENCIL
Ralph H. Goldman, Chicago, Ill., assignor of one-half to David G. Einstein, Chicago, Ill.
Application May 24, 1933, Serial No. 672,697
1 Claim. (Cl. 219—29)



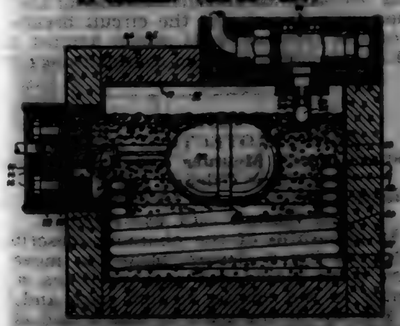
A device of the type described comprising a tubular metallic point, an electrical resistance unit positioned within said tubular metallic point, insulating material surrounding the electrical resistance unit and positioned between the latter and the inner wall of said metallic point, a grip member, a mineral lava connection between the grip member and said metallic point, said mineral lava connection comprising two portions provided with perforations, tubular rivets passing through certain of the perforations in said portions for connecting the two together, a perforated metallic disc associated with each of said portions, said metallic discs being larger in diameter than the cross-sectional perimeter of said grip member, insulating material disposed upon said grip member, and wires extending through said grip member and connected with said electrical resistance.

2,631,533
COLUMN LEVEL GAUGE
James W. Gray, New York, N. Y.
Application April 8, 1933, Serial No. 665,695
7 Claims. (Cl. 73—34)



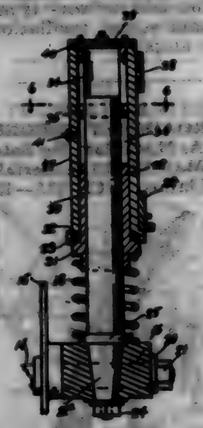
1. A tower level indicator, comprising in combination with a tower a gauge column having top, bottom and intermediate tower connections, a level gauging instrument, said gauge column including sumps in the intermediate portion of the same and selectively usable connections from said sumps to said gauge instrument.

2,631,534
AIR COOLING DEVICE
Robert H. Hardin, Bakersfield, Calif.
Application November 2, 1931, Serial No. 571,331
1 Claim. (Cl. 62—139)



An apparatus for the treatment of air, comprising a body portion including upper and lower compartments, spaced vertical water tubes within the upper compartment, a spray head in the lower compartment, a pump, a pipe establishing communication between the pump and upper compartment, said pump adapted to draw water from the lower compartment and force the water through the pipe to the water tubes, said pump also forcing a portion of the water through the spray head, means for drawing air of atmospheric temperature through the water passing from the spray head, setting up rapid evaporation with the lower compartment lowering the temperature of the water delivered to the tubes, cooling the tubes, and means for forcing air to be cooled against the tubes.

2,631,535
RAM
Ernst Kleinow, Leipzig, Germany, assignor, by mesne assignments, to Meco-Bremskraft-Maschinen G. m. b. H., Frankfort-am-the-Main, Germany
Application August 17, 1932, Serial No. 629,265
In Germany August 20, 1931
12 Claims. (Cl. 122—7)



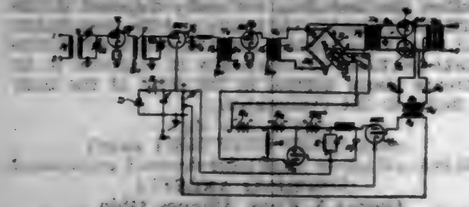
1. In a portable manually operated internal combustion ram hand tool, a ram body having a cylinder therein, a working piston in said cylinder, said ram body and piston being mounted for relative movement in a direction axially of the cylinder, said ram body having a chamber communicating with said cylinder, a fuel feeding piston movable in said chamber, said ram body having a vaporizing chamber therein for holding liquid fuel communicating with said first chamber, said vaporizing chamber being located below said cylinder, said ram body having an annular chamber within said vaporizer chamber, a piston rod connected to said first piston and extending through said annular chamber, and a coil spring around said piston rod normally urging said piston into said cylinder, said spring extending into said annular chamber.

2,631,536
REFRIGERATING APPARATUS
Jesse G. King, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application December 28, 1932, Serial No. 649,688
Renewed July 17, 1935
11 Claims. (Cl. 62—126)

1. A refrigerating system comprising in combination, an evaporator adapted to contain a body of liquid refrigerant, means for maintaining the body of liquid refrigerant at a normal substantially constant level, a compressor, a gaseous refrigerant suction line communicating with said compressor and with said evaporator, said suction line including vertically disposed intake portions exposed to the interior of the evaporator, and means for closing some of said suction line intake portions automatically in response to an increase above normal in the level of the body of liquid in the evaporator.

2,631,537
SPRING AXLE
George N. Knox, Alliance, Ohio
Application June 13, 1934, Serial No. 730,523
2 Claims. (Cl. 267—66)

1. A spring axle including a cylindrical housing adapted to be mounted on the frame of an automobile, a sleeve rotatably mounted in the housing and provided with longitudinal slots, an axle housing, a pivot rod movable longitudinally in the sleeve and connected at one end with the axle housing, a key on the inner end of the rod engaging in the slots of the sleeve, and a spring disposed about the pivot rod and having an end bearing against one end of the sleeve, and a second end bearing against the axle housing.



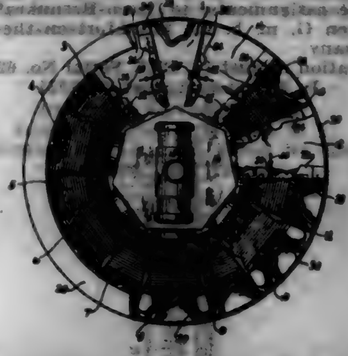
2,631,538
PROCESS FOR METAL CASTING
Paul C. Lemmerman, Cleveland Heights, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Original application June 13, 1932, Serial No. 617,947. Divided and this application November 29, 1934, Serial No. 755,365
3 Claims. (Cl. 22—190)

1. In a process of casting metals the step of pouring the molten metal into a container lined with a porous agglomerated material comprising sand, the grains of which are bonded together through an anhydrous unfused alkali metal silicate and an alkaline earth metal silicate.

2,631,539
METHOD AND MEANS FOR REDUCING ELECTRICAL DISTURBANCES
David G. McCue, Philadelphia, Pa.
Application January 23, 1936, Serial No. 60,317
23 Claims. (Cl. 250—20)

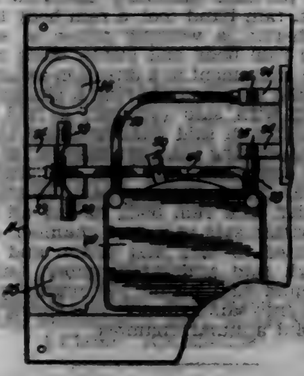
3. In a receiving system, means for reducing the effects of disturbing oscillations on signal oscillations comprising a balancing network, nor-

mally unbalanced to cause said signal oscillations to pass therethrough, means for amplifying said signal oscillations from the output of said network, means for deriving a uni-directional voltage from said amplified signal oscillations, and means for applying said derived voltage to said network whereby said network is maintained unbalanced for said signal oscillations in accordance with their amplitudes.



2,031,540
BROADCAST SEEDER
Joseph A. Macaulay, De Soto, Wis.
Application May 22, 1935, Serial No. 22,985
7 Claims. (Cl. 275—12)

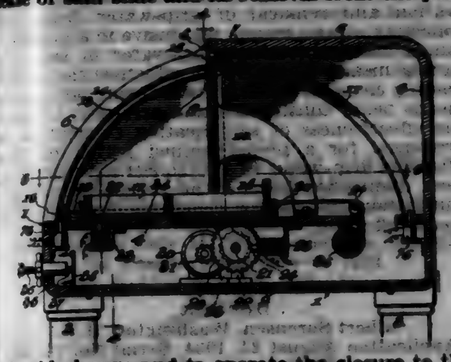
1. In a machine of the class described, a seed supply hopper at the front of the machine, a shaft depending from the bottom of said hopper and having a longitudinal bore in communication with said hopper, a pair of seed distributing members rotatably mounted on said shaft in superposed relation, said hopper and shaft each having a discharge aperture therein for gravitational feed of seed therethrough from the hopper to one of said members, said apertures being disposed upon opposite sides of the axis of rotation of said members, respectively, and in substantially the transverse center of said shaft, and means operative to rotate said members in opposite directions respectively.



2,031,541
ENGINE COOLING SYSTEM
Albert Lewis MacClain, Manchester, Conn., assignor, by mesne assignments, to United Aircraft Corporation, a corporation of Delaware
Application July 8, 1932, Serial No. 621,425
2 Claims. (Cl. 123—171)

1. Means for decreasing the drag of an air-cooled radial engine having heat radiating fins and increasing its heat radiating properties comprising a cowl of substantially ring form enclosing the entire finned area of said engine and extending with diminishing size in the direction of travel of said engine said cowl being open in front and in back, and baffles between the cylinders of said engine, substantially completely

closing the space between said cylinders except between the individual cooling fins.

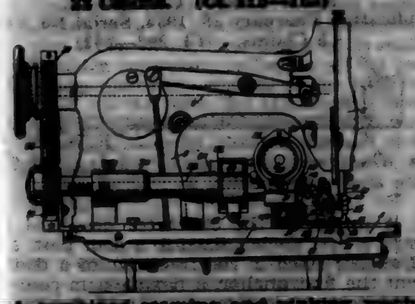


2,031,542
EXTENDED ELECTRICAL OUTLET
Paul Manchester, Pawtucket, R. I.
Application December 15, 1933, Serial No. 702,571
1 Claim. (Cl. 247—8)

A combined junction and distribution box for building construction designed for elimination of fuse plugs, comprising an elongated casing adapted for wall mounting and for housing electrical wires for necessary circuit connections, a plurality of outlets in the casing for electrical appliances and an automatic circuit breaker in the casing operative to prevent overload of the wires connected in the circuit the circuit breaker being of the type which is sealed against unauthorized adjustment of the overload mechanism.

2,031,543
BANK PROTECTING DEVICE
Christian Joseph Meunier and Harold Stember, New Orleans, La.
Application February 15, 1935, Serial No. 6,715
12 Claims. (Cl. 29—1.01)

4. In apparatus of the character described, a counter having a closure, means to move said closure to its closed and open positions, a slide mounted on the counter to slide back and forth into and out of the path in which said closure moves, means normally holding said slide projected into the path of said closure, means to remove said slide from the path of said closure and controlling means operative to effect the release of said slide and its removal from the path

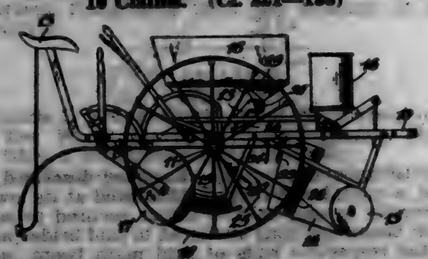


of said closure and to operate the closure to the closed position.

2,031,544
LOADING DEVICE FOR MINING MACHINES
Matthew Smith Moore, Malvern, England, assignor of one-half to The Mining Engineering Company Limited, Worcester, England, a British company
Application April 4, 1934, Serial No. 718,962
In Great Britain April 7, 1933
11 Claims. (Cl. 198—9)

1. In a loading device for mining machine, a frame, a gear box on said frame, an overhung bar journalled adjacent one of its ends in said gear box, picks on said bar, means for rotating said bar, a comb on said frame, the side of said comb adjacent said bar being provided with ribs projecting towards the bar between said picks, said ribs encircling said bar for a substantial position of its circumference both above and below the axis of said bar, said ribs terminating above pavement level.

2,031,545
COMBINED SEAMING AND PINKING MACHINE
Harley C. Moulton, Maplewood, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a corporation of Maine
Application September 17, 1934, Serial No. 744,445
22 Claims. (Cl. 112—125)



1. A combined seaming and pinking machine including a reciprocable needle and a work supporting base, and a pink cutting attachment mountable on and removable from the base as a unit and including a base plate, pink cutting

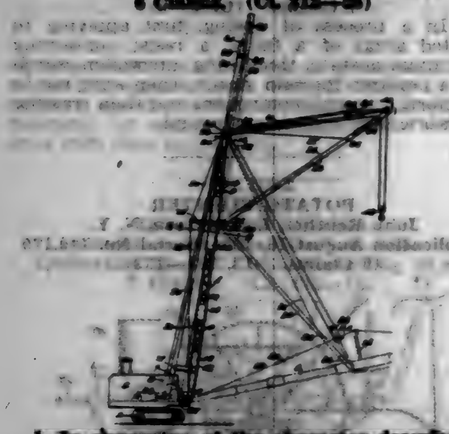
means disposed in cooperative relation to said needle, and pneumatic means for disposing of the cuttings resulting from the pink cutting operation.

2,031,546
RESIST EFFECTS WITH AZO DYESTUFFS
Charles Schwabe Parker, Charles Leonard Wall, and Franklin Farrington, Bolton, England
No Drawing. Application July 13, 1933, Serial No. 680,332. In Great Britain July 20, 1932
4 Claims. (Cl. 8—5)

1. In a process of dyeing, first applying to selected areas of a fabric a resist containing aluminium acetate, thickening, unswollen starch and a peptizer for said starch, then applying to the fabric a passive component and then treating the fabric with a diazo compound.

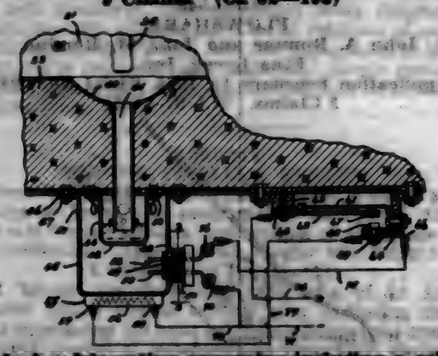
2,031,547
POTATO PLANTER
John Reuther, East Aurora, N. Y.
Application August 16, 1934, Serial No. 740,170
10 Claims. (Cl. 221—133)

1. In a potato planter, a receiver for the potatoes including a potato-engaging trough having a counter-groove therein below the plane thereof, and movable means mounted on said frame to traverse the receiver and having releasable potato-engaging jaws thereon, one of the jaws facing outwardly and being spaced from the bottom of the receiver, and the companion jaw being releasably movable toward and from the first-named jaw and engaging said counter-groove while traversing the receiver with its gripping face substantially flush with the adjoining bottom side of the receiver, the releasable jaw contacting with the bottom of the counter-groove to retain it in its open position to receive a potato.



2,031,548
PLOWSHARE
John A. Romine and John M. Romine, Etna Green, Ind.
Application February 19, 1935, Serial No. 7,285
2 Claims. (Cl. 97—115)

1. In a plow, a share, a point, the adjacent edges of the point and share being beveled with the bevel of the share overlapping that of the point, means for attaching the parts in a de-

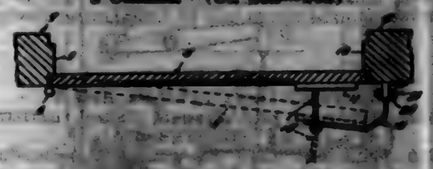


tachable manner to the plow, the lower portion of the rear edge of the point having a notch therein and the lower portion of the front edge of the share having a projection thereon fitting into the notch.

2,031,549
CRANE
Seymour W. Ruff, Baltimore, Md.
Application February 14, 1935, Serial No. 6,562
6 Claims. (Cl. 212—58)

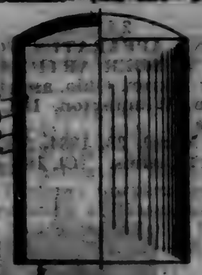
1. In apparatus of the character described, a base, a main boom hingedly mounted at its lower extremity to said base, a bridge secured to said main boom, hog rods anchored to said bridge and to the respective ends of said main boom, said bridge extending transversely from the main boom rearwardly, an auxiliary boom hingedly mounted on said main boom at the front thereof and adjacent said bridge, a main boom elevating and lowering cable and a drum therefor carried by said base, an extension boom lowering and raising cable and a drum therefor carried by said base, a load cable carried by said booms and a drum therefor carried by said base.

2,031,550
REFRIGERATING APPARATUS
Jacob Smlinck, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application October 31, 1934, Serial No. 750,849
9 Claims. (Cl. 62—103)



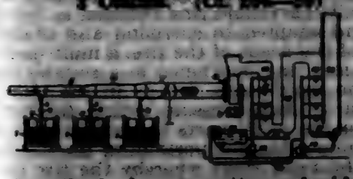
1. A refrigerating apparatus including a cabinet, means for cooling air adapted to flow thereover mounted in said cabinet, said cooling means having moisture dripping therefrom, means for collecting the drip-water from said cooling means, an electrical heating element for causing evaporation and removal of drip-water from said collecting means, means responsive to a predetermined accumulation of drip-water in said collecting means for initiating effectiveness of said heating element, and a portion of said last named means being constructed and arranged to cause the effectiveness of said heating element to be prolonged for a predetermined period of time after the drip-water in said collecting means has been diminished beyond the predetermined accumulation thereof for rendering the initiating means effective.

2,031,551
HEATER
Albert Sorensen, Washington, D. C.
Application August 24, 1934, Serial No. 741,301
6 Claims. (Cl. 122—256)



1. In a water heater, the combination of a casing including opposite upright parallel walls of fireclable heat insulating material, and at least two groups of water tubes, each group comprising a plurality of serpentine tubes arranged in side by side contact with each other throughout at least the greater portion of their length, the outermost of the tubes of each group in side contact with said walls of fireclable heat insulating material, and the groups of water tubes arranged with the greater portion of the length of the tubes of one group in spaced parallel relation to the similar portion of the tubes of the adjacent group whereby gases of combustion follow a tortuous course between the groups of water tubes and sweep the tubes longitudinally over their entire length.

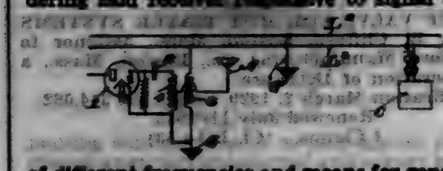
2,031,552
MEANS FOR LOCKING A DOOR
Mandel Sloane, Chicago, Ill.
Application February 19, 1934, Serial No. 711,625
5 Claims. (Cl. 292—283)



1. A device of the character described comprising a first anchor fixed to a door post, a second anchor fixed to the free edge of a door adjacent the first anchor, a flexible arm connected to and between said anchors, said flexible arm comprising a first relatively rigid link relatively rigidly and separably connected at one end to said first anchor and being formed with a hub through its opposite end, and a second relatively rigid link loosely slidable through said hole, one end of said second link being slidably connected to said second anchor for movement along said second anchor and the opposite end of said second link being provided with a stop to limit the sliding of the first link thereon in a direction away from said second anchor.

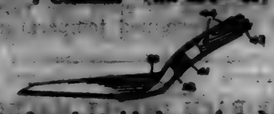
2,031,553
TANK FOR STORAGE OF LIQUIDS, ESPECIALLY HYDROCARBONS
Askan Willy Syndergaard, Copenhagen, Denmark
Application July 13, 1934, Serial No. 735,042
In Denmark January 8, 1934
6 Claims. (Cl. 220—1)

1. A fluid-tight storage tank, comprising a sheet metal receptacle, a layer of concrete on the outer surface of the receptacle, and a heat insulating cover on the outer surface of the said layer of concrete.



2,031,554
RECOVERY OF THE GASES AND DUST EVOLVED IN THE ELECTROLYTIC MANUFACTURE OF ALUMINIUM
Pierre Jean Michel Turchet, St. Jean de Maurienne, France, assignor to "Compagnie de Produits Chimiques et Electrometallurgiques Alais, Froges et Camargue", Paris, France, a corporation of France
Application April 4, 1934, Serial No. 718,401
In France April 5, 1933
7 Claims. (Cl. 204—67)

1. A method of recuperating valuable matters in the manufacture of aluminium by treatment in electrolytic tanks, of alumina dissolved in melted fluorides, which comprises, collecting all the gases accumulating above the surface of the bath in a space out of contact with the atmosphere, introducing into said space an air stream which mixes with said gases so as to cool the surface of the bath and to render these gases inexplosive, and washing this mixture of gases with a soda alkaline solution.

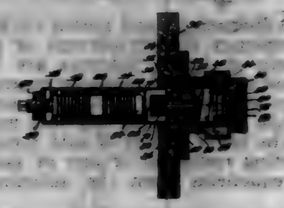


2,031,555
SYSTEM FOR REMOTELY CONTROLLING A RADIO RECEIVER
Albert S. Blattermann, Asbury Park, N. J.
Application April 20, 1931, Serial No. 531,000
6 Claims. (Cl. 250—20)

1. In a remotely controlled radio receiving system adapted to be controlled over an electric power supply line, the combination of a receiver having an antenna input circuit, and signal reproducing apparatus, control means for controlling said receiver, means for coupling said control means to the power supply line at a point remote from said receiving apparatus, said control means including means for generating high frequency currents of various frequencies for rendering said receiver responsive to signal energy

of different frequencies and means for generating a high frequency control current of fixed frequency, both of which currents are impressed on the power supply line, coupling means for connecting the signal input circuit of said receiver to an electric power supply line and means connected to the input circuit of said radio receiver for preventing radiation of any of said control current frequencies from the antenna of said receiver.

2,031,556
SHOVEL
Francis C. Brandenburg, Piqua, Ohio, assignor to The Wood Shovel & Tool Company, Piqua, Ohio, a corporation of Ohio
Application July 11, 1933, Serial No. 680,067
7 Claims. (Cl. 294—57)



1. In a shovel, a blade and a handle-socket formed from a single piece of sheet metal, the metal at the juncture of the blade and socket being bent to form a frog that rises from the front of the blade and evolves into the socket, leaving a deep depression in the back of the blade, which depression joins the hollow of the socket, the socket being an elongate extension of the frog, which extension is bent to a tubular form with its edges abutting, this abutting relationship continuing to a point near said recess, where the edges separate and by a curvilinear divergence join the shoulders of the blade, leaving a cleft in the lower end of the socket, and a cover for said recess, having a tongue that projects into the socket to serve as a cover for said cleft, the margins of the recess-cover being welded to the margins of the recess, and means within the socket to hold the tongue and socket in movable contact comprising a short driven plug separate from the handle and having such size and fit that the tongue and the socket are normally held in fixed relationship but capable of relative movement in contact when the shovel is deformed.

2,031,557
RESINOUS AMINO DERIVATIVES AND PROCESS OF PREPARING
Herman A. Brunen, Philadelphia, Pa., assignor to The Resinous Products & Chemical Co., Inc., Philadelphia, Pa.
No Drawing. Application December 8, 1933, Serial No. 701,823
20 Claims. (Cl. 260—4)

1. The process for preparing resinous amines which comprises reacting on a soluble, fusible

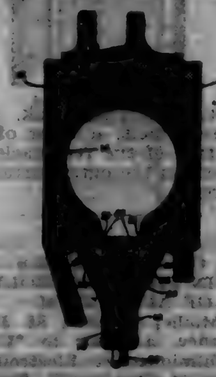
phenolic-formaldehyde resin with additional formaldehyde and a strongly basic, non-aromatic secondary amine, at least one mol of said secondary amine and at least one mol of additional formaldehyde being employed for each mol equivalent to said phenolic-formaldehyde resin.

2,031,858
RELIEF VALVE FOR HOT WATER SYSTEMS
Walter B. Clifford, Boston, Mass., assignor to Clifford Manufacturing Co., Boston, Mass., a corporation of Delaware
Application March 2, 1929, Serial No. 344,062
Renewed July 11, 1933
2 Claims. (Cl. 137—53)

1. A relief valve for hot water systems comprising a threaded plug, a tubular sleeve connected with the plug at its inner end, a separate valve ring within the plug, an inner member clamping the tubular sleeve and the valve ring within the plug, a valve loosely received within the ring and co-operating therewith, and a bellows thermostat supported within the tubular sleeve and operating to open the valve on attainment of predetermined temperatures.

2,031,859
LITHOGRAPH OFFSET MACHINE PLATE CLAMP
George F. Daminatis, Cleveland, Ohio
Application February 25, 1935, Serial No. 8,102
2 Claims. (Cl. 101—415.1)

1. In a device of the class described, a plate adapted to be wrapped around the surface of a roller, said plate having lapped ends, clamps at the ends of said plate, said lapped ends fitting in said clamps, and means to attach said clamps to said roller, said means comprising a set of eyelets at the sides of said clamps adapted to engage a set of hooks on said roller.

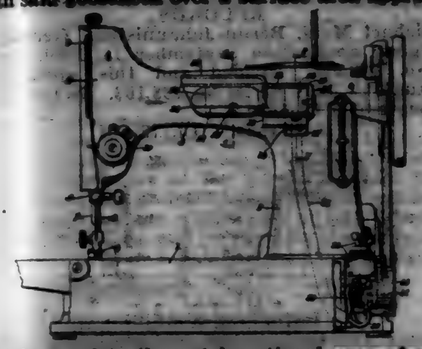


2,031,860
METHOD AND APPARATUS FOR TREATING RUBBER ARTICLES
Ralph B. Day, Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Application September 4, 1931, Serial No. 561,152
5 Claims. (Cl. 18—43)

1. An apparatus for vulcanizing a hollow rubber article containing fibrous material embedded therein comprising an inclosing mold, means for inflating the article by direct pressure of fluid against the inner surface thereof, and means co-operating with the mold and extending therethrough for puncturing the article into the fibrous

material to permit the escape of imprisoned fluid from within said material.

2,031,861
METHOD AND APPARATUS FOR TREATING RUBBER ARTICLES
Ralph B. Day, Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Application March 22, 1934, Serial No. 717,064
17 Claims. (Cl. 18—43)



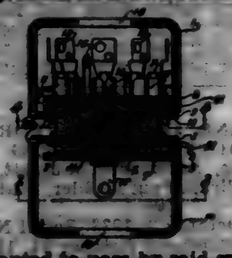
10. Apparatus for the production of tires without the use of airbags comprising cooperating mold halves for surrounding and shaping the exterior of the tread and sidewall portions of the tire, a multi-part mold ring received in the mold halves and adapted to surround and shape the exterior of the beads of the tire, a multi-part expandible mid ring positioned in a suitable channel in the mold rings, means in the mid ring controlled by fluid pressure within the tire for expanding the mold-parts thereof laterally and for clamping extending portions of the tire beads against the mold rings whereby the tire can be vulcanized without an airbag.

2,031,862
ELECTRICALLY LIGHTED SEWING MACHINE
Herbert J. Goodman, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application July 12, 1932, Serial No. 622,319
10 Claims. (Cl. 240—2.16)

10. The combination with a sewing machine having a bed and a goosneck with a relatively large heat-radiating surface, of an electric lighting device including a miniature electric lamp of at least 15 watts power consumption disposed entirely at one side of the central vertical plane of the goosneck and having a one-piece inverted trough-shaped metallic lamp-shade and tubular lamp-socket shell of relatively high heat con-

ductivity detachably seated in thermal contact with said goosneck over a surface area approxi-

mately equal to the axial sectional area of said lamp-bulb.

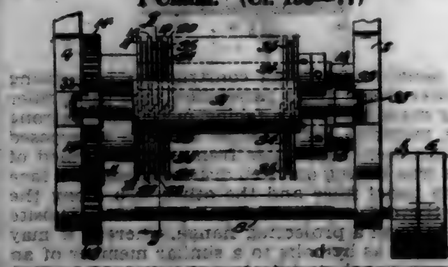


2,031,863
FASTENER INSTALLATION AND FASTENER FOR THE SAME
Walter I. Janes, Arlington, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application May 9, 1933, Serial No. 670,134
4 Claims. (Cl. 85—13)

1. A fastener installation of the class described comprising, in combination, a supporting structure, a covering structure having means providing an aperture at one face thereof and a snap fastener member securing the covering structure to the supporting structure, said snap fastener member having a base, a head and neck extending from said base, said head and neck portions located substantially in the center of said base, the base of the fastener member having a notch extending from one side thereof toward and past and at one side outwardly of the point where the neck portion joins the base, thereby to permit attachment of the fastener member to the covering structure by insertion of the base of said member through said aperture by rotation only, said aperture being of such size and shape in relation to the size and shape of the base of said fastener member that when said fastener member is attached to said covering structure at least one portion of said base will overlap the walls surrounding said aperture during any lateral movement of said fastener member whereby said base is prevented from slipping through said aperture.

2,031,864
SEPARABLE ELECTRICAL CONTACT DEVICE
Carl L. Knutson, Maywood, Ill., assignor to Cinch Manufacturing Corporation, Chicago, Ill., a corporation of Illinois
Application September 9, 1933, Serial No. 688,304
5 Claims. (Cl. 173—322)

1. A device of the class described including a contact-carrying plate structure having two superposed plates of insulating material yieldable away from each other adjacent to their peripheries, means between said plates to maintain them in spaced relation, one plate being smaller than the other and having cut away portions at its periphery, a cup-shaped housing for assembly with said contact-carrying plate structure and a plurality of inwardly extending shoulder-presenting projections on the wall of said cup-shaped



housing adapted to pass by said smaller plate at the cut away portions thereof and engage between said plates upon rotation of said housing relative to said plate structure.

2,031,865
POWER TRANSMITTING BELT
Edward D. Kramp, Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Application November 2, 1933, Serial No. 696,462
3 Claims. (Cl. 74—238)

2. A power-transmitting belt comprising a pulley-engaging, power-transmitting portion formed of a plurality of longitudinally extending, load-carrying rubberized cords in parallel arrangement, a belt-shifting portion formed of a plurality of plies of square-woven, bias-cut rubberized fabric, said belt-shifting portion being disposed at the outer side of said power-transmitting portion and being of greater width than the same so as to overhang a pulley in spaced relation thereto, and an outer envelope of square-woven, bias-cut rubberized fabric encasing both of said portions, and all vulcanized together to provide a unitary structure of T-shape in cross-section, the bias-cut fabric of said belt-shifting portion and said envelope presenting the ends of the warp and woof strands thereof to the wearing action of the belt-shifting mechanism.

2,031,866
CRINKLED TINSEL PRODUCING MACHINE
Philip Kranz, Philadelphia, and Adolph Hartmann, Elkins Park, Pa., assignors to Bernard Wilmsen, Philadelphia, Pa.
Application December 29, 1934, Serial No. 759,706
1 Claim. (Cl. 152—77)

A crinkled tinsel producing machine comprising a pair of juxtaposed shafts, a plurality of cutter disks rigidly mounted on said shafts in staggered cooperative relation to each other, a

plurality of spacer disks mounted on said shafts intermediate said cutter disks, said spacer disks being of considerably lesser diameter than the diameter of the cutter disks, and floating rings mounted loosely on said shafts whereby the bottom edges of said floating rings extend to and below the lower periphery of said cutter disks.

2,031,567
METHOD AND APPARATUS FOR MANUFACTURING PACKING

Wilhelm Liedle, Stuttgart-Cannstatt, Germany, assignor to Firma Paul Lechler, Stuttgart, Germany

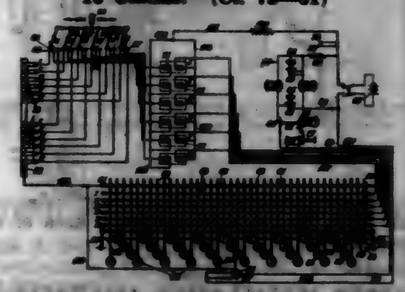
Application October 3, 1933, Serial No. 691,984
In Switzerland October 24, 1932
5 Claims. (Cl. 153—1)

1. The process of forming packing from soft, flexible fibrous core material and thin soft metal strip which comprises placing the longitudinal axis of an elongated body of soft, flexible fibrous core material substantially parallel with the longitudinal axis of a strip of thin soft metal, with the elongated body of core material substantially nearer one edge of the thin metal strip than the other edge and with the elongated body of core material in close relation with the thin metal strip, and while the said thin metal strip and body of fibrous core material are in said relative position, imparting lengthwise motion to them in the same direction, and during such motion, at a plurality of points along the length of the body of fibrous core material and thin metal strip, winding in stages the metal strip as an envelope a plurality of times about the body of fibrous core material with the width of the thin metal strip substantially perpendicular to the longitudinal axis of the body of fibrous core material, the winding at each of said aforementioned points only partially winding the said strip of metal about the body of fibrous core material, but winding at sufficient points being performed to wind the metal strip a plurality of times about the body of fibrous core material.

2,031,568
BUILDING CONSTRUCTION

William H. Masse, Laurel, Miss., assignor to Masonite Corporation, Laurel, Miss., a corporation of Delaware

Application November 28, 1933, Serial No. 700,632
1 Claim. (Cl. 189—34)

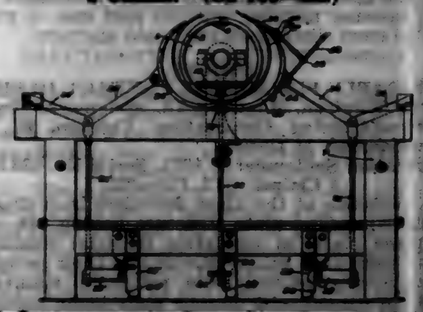


A panel for building construction comprising an outer frame and a panel filler, said panel filler being made up of two facing members of strong sheet material and a frame skeleton interposed therebetween, said outer frame being formed of angle iron having one web disposed against a face of the panel filler and the other web along the edge thereof and extending beyond the opposite face to form a projecting flange, whereby it may be secured as by bolts to a similar member of an adjacent panel, and fastening means extending through the first named web and through the facing sheets and skeleton frame members constituting the panel filler.

2,031,569
VERIFYING MACHINE FOR PERFORATED RECORDS

Michael Masi, Berlin-Johannisthal, Germany

Original application September 15, 1930, Serial No. 482,062. Divided and this application August 2, 1934, Serial No. 738,163. In Germany September 28, 1929
16 Claims. (Cl. 71—61)



1. A verifying machine for perforated record cards having a plurality of superpositioned record decks, each deck comprising a plurality of adjacent record columns, said machine including a set of verifier keys for a single record column adapted for verification of a record deck column by column and being common to said plurality of record decks, error detecting means under the joint control of said verifier keys and the record column under verification, and means for selecting any one of said plurality of record decks for verification by said common set of verifier keys for a single record column.

7. In a verifying machine for perforated record cards having a plurality of superpositioned record decks, each deck comprising a plurality of adjacent record columns, an individual set of analyzing means for each record deck, a set of verifier keys provided for a single record column and adapted to coact with said analyzing means in the verification operation column by column, error detecting means under the joint control of said analyzing means and said verifier keys, and shifting means common to all keys of said set of keys for selectively and operatively connecting said common set of keys to any one of said sets of analyzing means.

2,031,570
MACHINE FOR MAKING DRUMS, KEGS, AND THE LIKE

Robert Arthur Muller, Wellesley, Mass., assignor to Atlas Plywood Corporation, Boston, Mass., a corporation of Massachusetts

Application March 4, 1934, Serial No. 714,579
8 Claims. (Cl. 144—263)

1. In an apparatus for making drums and similar articles, the combination of a mandrel, means

for operatively supporting said mandrel horizontally, two forming members at opposite sides of said mandrel mounted for movement toward and from it and cooperating with the mandrel to bend a sheet of plywood, or the like, closely around said mandrel, means operable to move said members inwardly into cooperative relationship to said mandrel, the upper edges of said forming members being spaced apart by a substantial distance at the top of the mandrel when said members are at the inward limit of their movement, and an interrupted extension projecting from the upper edge of one of said members toward the other and overlapping a considerable part of the space separating said upper edges.

2,031,571
SEALED BEARING

Karl Gustav Valentin Nilsson, Goteborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden, a corporation of Sweden

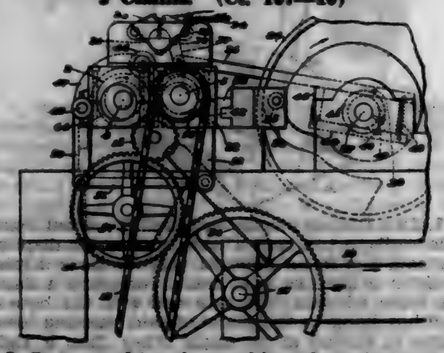
Application July 6, 1935, Serial No. 30,851
In France April 11, 1935
6 Claims. (Cl. 308—187)

1. An anti-friction bearing comprising an outer race ring, an inner race ring and rolling elements between the said race rings, there being a peripheral groove in the internal surface of the outer race ring laterally of the raceway, the said groove being wider at its mouth than at the bottom, and a closure member located in the groove, the said closure member being frictionally held between the side walls of the groove, free of the bottom of the groove.

2,031,573
COVER FEEDER FOR BOOK MATCH MACHINES

Lucian E. Parker, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a corporation of Ohio

Application April 15, 1935, Serial No. 16,531
3 Claims. (Cl. 271—14)

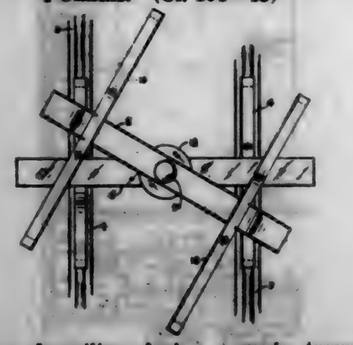


1. In a cover feeder for book match machines, means for positioning a plurality of cover blanks in juxtaposed relation, means for transporting said blanks successively to a match book assembling mechanism, means for displacing one end of each of said blanks successively from said plurality, means for successively withdrawing the thus displaced blanks, and oscillatable positioning means for successively positioning each of the blanks thus withdrawn in said transporting means, said positioning means lying in the path of movement of said withdrawing means and spanning same and acting to depress the withdrawn blanks into underlying parts of said transporting means.

2,031,573
MACHINE FOR USE IN THE MANUFACTURE OF CHEWING GUM

Conrad E. Petersen, Malden, Mass., assignor to De Long Gum Co., South Boston, Mass., a corporation of Massachusetts

Application October 3, 1931, Serial No. 691,972
3 Claims. (Cl. 107—10)



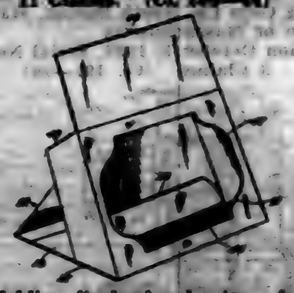
2. In a machine for making shaped pieces of chewing gum, the combination of two parallel horizontal forming rolls for acting simultaneously on opposite sides of an elongated body of chewing gum, mechanism for revolving said rolls, said rolls being shaped to work said body of gum into a plurality of pieces of approximately predetermined shape and dimensions, bearings for said rolls including eccentric bushings supporting the rolls for rotation and bearing members in which the bushings are mounted for independent rotary adjustment about the axes of the respective rolls, and mechanism for reciprocating one of said forming rolls toward and from its companion roll.

2,031,574
DERAILING DEVICE

Thomas J. Reagan, Scranton, Pa., assignor, by direct and mesne assignments, to The Railway Track-Work Co., Philadelphia, Pa., a corporation of Pennsylvania

Application April 5, 1935, Serial No. 14,803
4 Claims. (Cl. 104—45)

1. In a de-railing device, a main transverse frame comprising two frame members pivotally



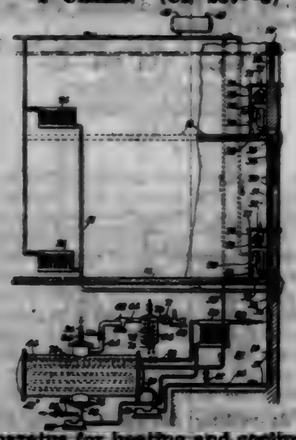
connected together one above the other, longitudinal side support members removably interlocked with the lower one of said frame members whereby to support said member on the rails of a railroad track, and a pair of track members removably interlocked with the other of said frame members and pivoting therewith.

2,031,575

FOLDING BOX

Frank L. Roe, Chicago, Ill., assignor to Pinkerton Folding Box Co., Chicago, Ill., a corporation of Illinois

Application September 4, 1934, Serial No. 742,569
11 Claims. (Cl. 206—44)



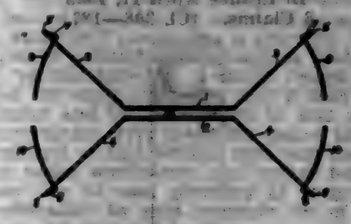
1. In a folding display box having a front, back, side walls, a top, and a base, means for displaying said box in an inclined position on a display counter or the like, said means including a slanting lower edge on each side wall with the base of said box lying in the plane of said slanting lower edges to extend at an angle other than a right angle with the front and rear of the box and adapted to engage said display counter surface over the entire face of the base, and an easel support at the back of the box for maintaining the same in said inclined position, said easel including a base portion extending rearwardly at the lower back edge of the box, and an integral upright extension having a wing portion folding in an upright plane crossing the plane of the upright extension portion.

2,031,576

HEATING AND COOLING UNIT FOR BUILDINGS

George W. Saathoff, South Orange, N. J., assignor to Doherty Research Company, New York, N. Y., a corporation of Delaware

Application October 24, 1934, Serial No. 750,845
2 Claims. (Cl. 257—8)



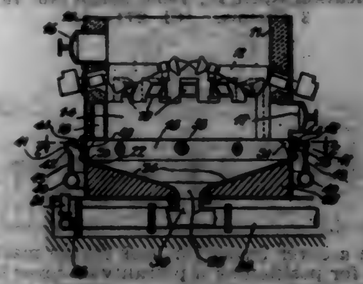
1. Apparatus for heating and cooling buildings comprising, an air conditioning chamber, a radiator mounted in said chamber in the path of air flowing therethrough, a heat exchanger having coils therein, water circulating tubes connecting the coils of said heat exchanger in closed circuit with said radiator and with a circulating pump, means for introducing a heating fluid into said heat exchanger around said coils, means for spraying water into said heat exchanger around said coils, and a vacuum pump having its inlet connected to said heat exchanger whereby water may be evaporated within said heat exchanger.

2,031,577

WIRE CLIP AND HANDLE

Carl A. Stevens, Carrollton, Ohio, assignor to The Carrollton Metal Products Company, a corporation of Ohio

Application July 19, 1935, Serial No. 32,218
6 Claims. (Cl. 220—4)



1. A one-piece wire clip consisting of a central part of spaced wire portions, wire portions diverging from the ends of the central wire portions, leg portions extending in a direction substantially perpendicular to the plane of the central part, inturned portions extending toward the center of the clip from the leg portions and including arcuate portions joining adjacent inturned portions said inturned portions being inclined from the leg portions toward the central part of the clip.

2,031,578

ASH DISPOSAL APPARATUS

Harold M. Wilgus, South Ozone Park, N. Y., assignor to Combustion Utilities Corporation, New York, N. Y., a corporation of Maine

Application December 27, 1933, Serial No. 704,121
5 Claims. (Cl. 262—15)

1. A chamber adapted for the accumulation of

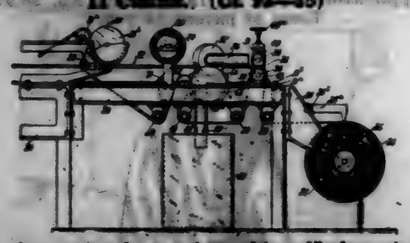
ashes and the like materials and provided with side walls and a central bottom outlet, a plurality of nozzles adapted to introduce a fluid under pressure within the said chamber upon the bottom surface thereof, said nozzles being arranged in the same horizontal plane at spaced intervals about the chamber walls, certain nozzles being directed obliquely inward tangentially to a circumference intermediate the bottom outlet and the chamber walls and other nozzles being directed obliquely inward tangentially to a second circumference, also intermediate the bottom outlet and the chamber walls, each of the said circumferences being concentric with the bottom outlet.

2,031,579

PREPARATION OF PHOSPHATES OF MANGANESE

Charles F. Booth, Anniston, Ala., assignor to Swann Research, Incorporated, a corporation of Alabama

No Drawing. Application April 13, 1933, Serial No. 665,964
9 Claims. (Cl. 23—105)



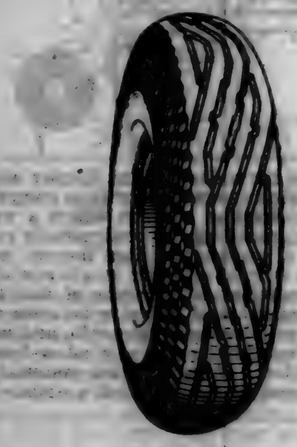
1. Process for the production of light colored manganese phosphates comprising first forming a soluble manganese compound in solution, treating said solution with an alkali carbonate to yield therein a pH of substantially 7.3 and to precipitate a basic carbonate of manganese, and then treating said carbonate precipitate directly with phosphoric acid in amount sufficient to form dry phosphates of manganese.

2,031,580

PROCEDURE AND APPARATUS FOR MAKING WINDOW BAGS AND WRAPPERS

Richard S. Grant and Alfred A. Schlegel, Akron, Ohio, assignors to The Jaite-Grant Display Bag Company, Cleveland, Ohio, a corporation of Ohio

Original application February 9, 1932, Serial No. 591,807. Divided and this application May 10, 1933, Serial No. 670,326
11 Claims. (Cl. 93—35)



1. Apparatus for use in making display window commodity-enclosing material or bags comprising cooperating rotary dies between which a web of bag-forming material may be continuously passed to cut a series of window openings therein, means for applying a strip of adhesive lengthwise of the bag-forming material at each side of said series of openings and strips of adhesive between adjacent openings in alignment therewith, and means for applying a continuous web of window-forming material to said web of bag-forming material over said openings and over said adhesive strips.

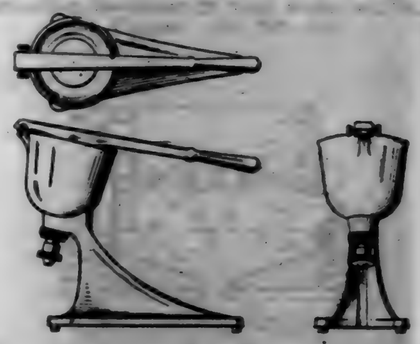
DESIGNS

FEBRUARY 18, 1936

98,568
DESIGN FOR A TIRE
George W. Anderson, Akron, Ohio
Application April 19, 1935, Serial No. 56,471
Term of patent 14 years

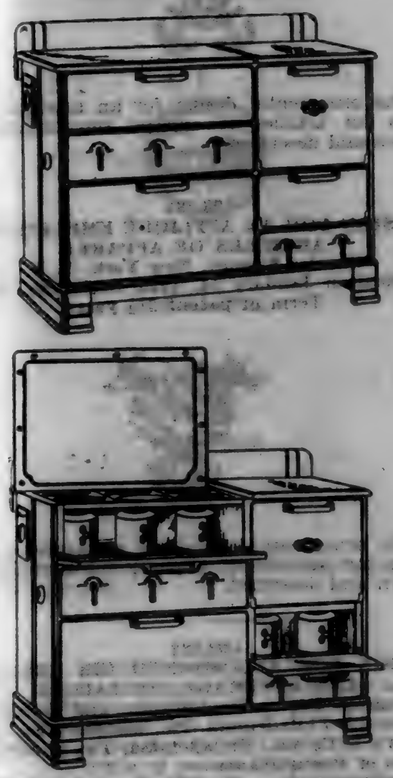
The ornamental design for a tire, as shown and described.

98,569
DESIGN FOR A SHOE
Thomas R. Atkins, Cliftondale, Mass., assignor to Cecilia and Leighton Shoe Company, Lynn, Mass., a corporation of Massachusetts
Application December 31, 1935, Serial No. 60,365
Term of patent 3½ years



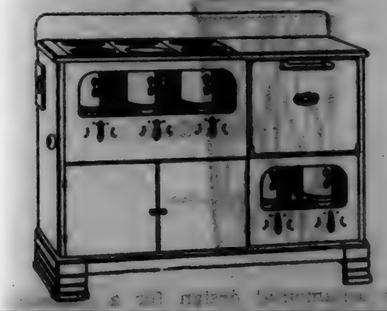
The ornamental design for a shoe, substantially as shown and described.

98,570
DESIGN FOR A SHOE
Thomas R. Atkins, Cliftondale, Mass., assignor to Farina Chaves Shoe Company, Lynn, Mass., a corporation of Massachusetts
Application January 11, 1936, Serial No. 60,529
Term of patent 3½ years



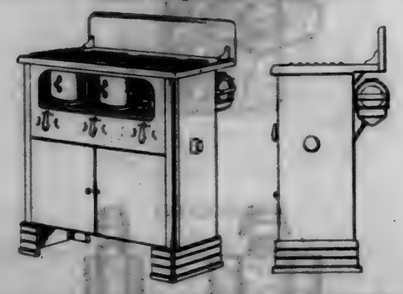
The ornamental design for a shoe substantially as shown and described.

98,571
DESIGN FOR AN EMULSIFYING MACHINE FRAME OR THE LIKE
Albert Richard Bannister, Sunbury-on-Thames, England, assignor to British Emulsifiers, Limited, Teddington, England, a corporation of Great Britain
Application October 28, 1935, Serial No. 49,259
Term of patent 3½ years



The ornamental design for an emulsifying machine frame or the like, as shown.

98,572
DESIGN FOR AN OIL BURNING COOK STOVE
William T. Bradbury, Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application February 25, 1935, Serial No. 55,593
Term of patent 7 years



The ornamental design for an oil burning cook stove substantially as shown and described.

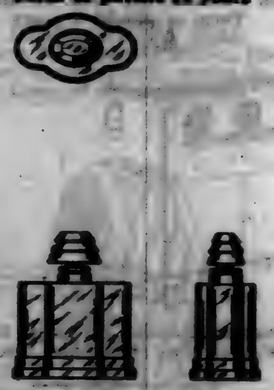
98,573
DESIGN FOR AN OIL BURNING COOK STOVE
William T. Bradbury, Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application February 25, 1935, Serial No. 55,595
Term of patent 7 years

The ornamental design for an oil burning cook stove substantially as shown and described.

98,574
DESIGN FOR AN OIL BURNING COOK STOVE
William T. Bradbury, Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application February 25, 1935, Serial No. 55,596
Term of patent 7 years

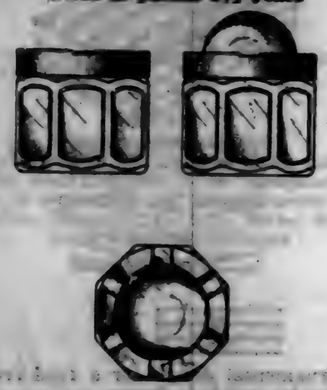
The ornamental design for an oil burning cook stove substantially as shown and described.

98,575
DESIGN FOR A FOOD RECEPTACLE UNIT OR SIMILAR ARTICLE
Pauline R. Cutler, Murray Hill, N. J.
Application July 5, 1935, Serial No. 57,535
Term of patent 3½ years



The ornamental design for a food receptacle unit or similar article as shown.

98,576
DESIGN FOR A BRASSIÈRE
Roger Emile Casalis de Pury, Earls Court, London, England, assignor to The Charnaux Patent Corset Company Limited, London, England
Application September 17, 1935, Serial No. 58,863
In Great Britain May 23, 1935
Term of patent 14 years

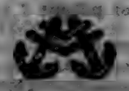


The ornamental design for a brassière, as shown.

88,577
DESIGN FOR A BOTTLE
René Durand, Paris, France, assignor to Lentheric, Incorporated, New York, N. Y., a corporation of New York
Application December 16, 1935, Serial No. 60,150
Term of patent 14 years

The ornamental design for a bottle substantially as shown.

88,578
DESIGN FOR AN ASH RECEIVER OR SIMILAR ARTICLE
George W. Emmert, Detroit, Mich.
Application December 5, 1935, Serial No. 59,915
Term of patent 3½ years



The ornamental design for an ash receiver or similar article, substantially as shown and described.

88,579
DESIGN FOR AN APPLIQUÉ EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Emmery, New York, N. Y.
Application December 23, 1935, Serial No. 60,127
Term of patent 3½ years

The ornamental design for an appliqué emblem or similar article for wearing apparel, substantially as shown and described.

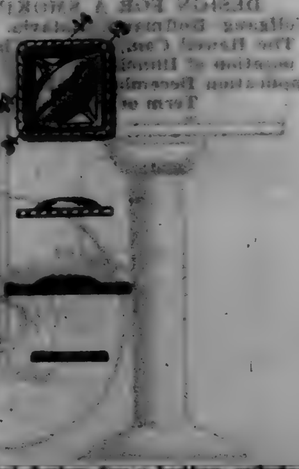
88,580
DESIGN FOR AN APPLIQUÉ EMBLEM FOR ARTICLES OF APPAREL
Charles Emmery, New York, N. Y.
Application January 14, 1936, Serial No. 60,538
Term of patent 3½ years

The ornamental design for an appliqué emblem for articles of apparel substantially as shown and described.

88,581
DESIGN FOR AN APPLIQUÉ EMBLEM FOR ARTICLES OF APPAREL
Charles Emmery, New York, N. Y.
Application January 14, 1936, Serial No. 60,571
Term of patent 3½ years

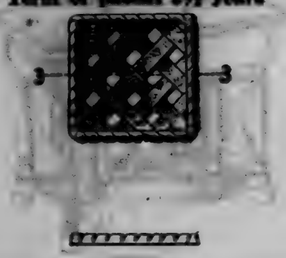
The ornamental design for an appliqué emblem for articles of apparel substantially as shown and described.

88,582
DESIGN FOR A COMBINED ICE CRUSHER AND BEVERAGE CONTAINER
Thomas J. Fegley, Doylestown, and George O. Leopold, Philadelphia, Pa., assignors to North Bro's Mfg Co., Philadelphia, Pa., a corporation of Pennsylvania
Application June 20, 1935, Serial No. 57,572
Term of patent 7 years



The ornamental design for a combined ice crusher and beverage container, substantially as shown and described.

88,583
DESIGN FOR A BUTTON
Fred. H. Fisher, Syracuse, N. Y., assignor to Merris W. Hall & Brothers, Inc., New York, N. Y., a corporation of New York
Application October 30, 1935, Serial No. 59,285
Term of patent 3½ years



The ornamental design for a button, substantially as shown.

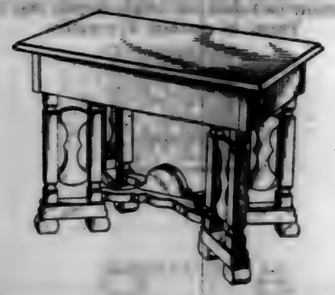
88,584
DESIGN FOR A BUTTON
Fred. H. Fisher, Syracuse, N. Y., assignor to Merris W. Hall & Brothers, Inc., New York, N. Y., a corporation of New York
Application October 30, 1935, Serial No. 59,286
Term of patent 3½ years

The ornamental design for a button, substantially as shown.

88,585
DESIGN FOR A BUTTON
Fred. H. Fisher, Syracuse, N. Y., assignor to Merris W. Hall & Brothers, Inc., New York, N. Y., a corporation of New York
Application October 30, 1935, Serial No. 59,287
Term of patent 3½ years

The ornamental design for a button, substantially as shown.

88,586
DESIGN FOR A BUCKLE
John B. Frerpinger, New Britain, Conn.
Application November 23, 1935, Serial No. 59,756
Term of patent 3½ years



The ornamental design for a buckle as shown.

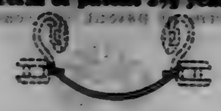
88,587
DESIGN FOR A BOX
Charles S. Gage, Cold Spring on Hudson, N. Y., assignor to Lentheric Incorporated, New York, N. Y., a corporation of New York
Application October 19, 1934, Serial No. 51,883
Term of patent 3½ years

The ornamental design for a box substantially as shown.

96,586
DESIGN FOR A BREAKFAST TABLE
Lewis Garshofsky, New York, N. Y.
Application November 7, 1935, Serial No. 59,416
Term of patent 3½ years

The ornamental design for a breakfast table, as shown.

96,589
DESIGN FOR A BREAKFAST TABLE
Lewis Garshofsky, New York, N. Y.
Application November 7, 1935, Serial No. 59,417
Term of patent 3½ years

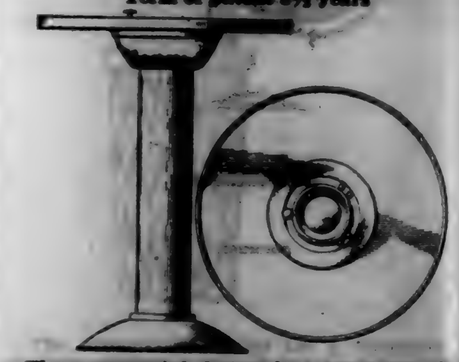


The ornamental design for a breakfast table, as shown.

96,596
DESIGN FOR A SHOE SOLE
Arthur Greenbaum, Beachmont, Mass., assignor to Panther-Panco Rubber Co. Inc., Chelsea, Mass., a corporation of Massachusetts
Application December 14, 1935, Serial No. 60,087
Term of patent 14 years

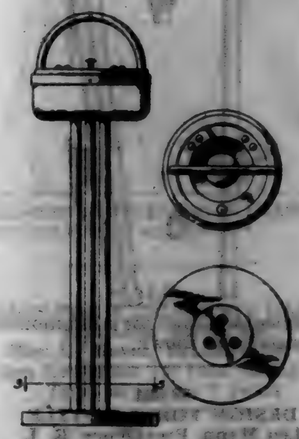
The ornamental design for a shoe sole substantially as shown.

96,591
DESIGN FOR A BRIDGE FOR EYEGLASSES
Henry W. Grum, Rochester, N. Y., assignor to Artcraft Optical Co., Rochester, N. Y.
Application December 16, 1935, Serial No. 60,000
Term of patent 3½ years



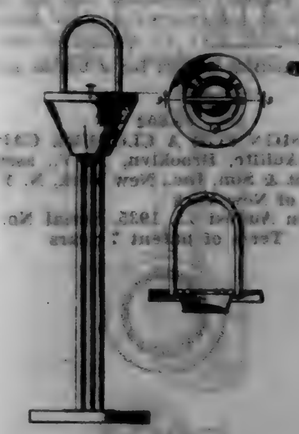
The ornamental design for a bridge for eyeglasses as shown and described.

96,592
DESIGN FOR A COAT
Edward Greenbaum, New York, N. Y.
Application January 18, 1936, Serial No. 60,513
Term of patent 3½ years



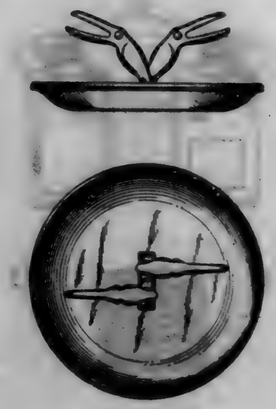
The ornamental design for a coat, substantially as shown.

96,593
DESIGN FOR A SMOKING STAND
Wolfgang Hoffmann, Batavia, Ill., assignor to The Howell Company, St. Charles, Ill., a corporation of Illinois
Application December 24, 1935, Serial No. 60,257
Term of patent 3½ years



The ornamental design for a smoking stand, as shown.

96,594
DESIGN FOR A SMOKING STAND
Wolfgang Hoffmann, Batavia, Ill., assignor to The Howell Company, St. Charles, Ill., a corporation of Illinois
Application December 24, 1935, Serial No. 60,260
Term of patent 3½ years



The ornamental design for a smoking stand, as shown.

96,595
DESIGN FOR A SMOKING STAND
Wolfgang Hoffmann, Batavia, Ill., assignor to The Howell Company, St. Charles, Ill., a corporation of Illinois
Application December 24, 1935, Serial No. 60,262
Term of patent 3½ years

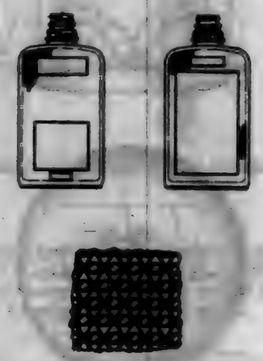
The ornamental design for a smoking stand, as shown.

96,598
DESIGN FOR AN ASH TRAY
Ray E. Hutchison, Kew Gardens, N. Y., assignor to Dicesters, Inc., New York, N. Y., a corporation of New York
Application December 16, 1935, Serial No. 60,021
Term of patent 7 years

The ornamental design for an ash tray, substantially as shown.

96,597
DESIGN FOR AN ENSEMBLE DRESS
William Karp, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y.
Application January 11, 1936, Serial No. 60,525
Term of patent 3½ years

The ornamental design for an ensemble dress, substantially as shown.



98,598

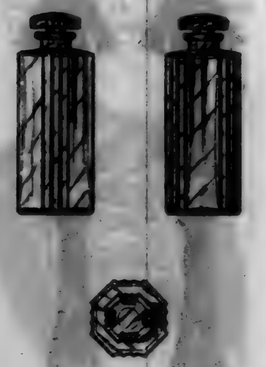
DESIGN FOR A GLASS BOTTLE

Lawrence J. Kihn, Pittsburgh, Pa., assignor to J. T. & A. Hamilton Company, a corporation of Pennsylvania

Application November 6, 1935, Serial No. 49,681

Term of patent 14 years

The ornamental design for a glass bottle, substantially as shown and described.



98,599

DESIGN FOR A BOTTLE

Yves Lanvin, Paris, France, assignor to Lanvin Parfums, Inc., Wilmington, Del., a corporation of Delaware

Application December 19, 1935, Serial No. 60,184

Term of patent 14 years

The ornamental design for a bottle, substantially as shown.

98,600

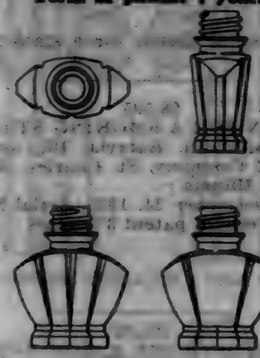
DESIGN FOR A LUMINOUS-ARM SIGNAL

Donald A. Lee, Oakland, Calif.

Application January 22, 1935, Serial No. 55,097

Term of patent 14 years

The ornamental design for a luminous-arm signal, substantially as shown.



98,601

DESIGN FOR A BOTTLE

Leo Mann, Providence, R. I.

Application January 2, 1936, Serial No. 60,376

Term of patent 7 years

The ornamental design for a bottle, as shown.

98,602

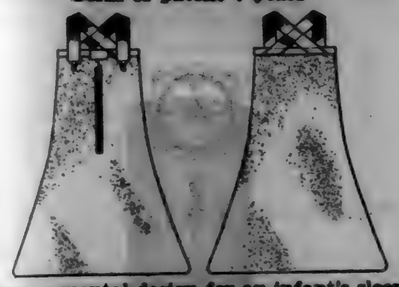
DESIGN FOR A CLOSURE CAP

Leo C. McAuliffe, Brooklyn, N. Y., assignor to L. Mandet & Son, Inc., New York, N. Y., a corporation of New York

Application August 15, 1935, Serial No. 58,134

Term of patent 7 years

The ornamental design for a closure cap, as shown and described.



98,603

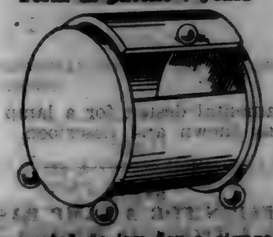
DESIGN FOR AN INFANT'S SLEEPING BAG OR SIMILAR ARTICLE

Ruth J. McCarter and William H. McCarter, Hanover, N. H.

Application June 8, 1935, Serial No. 57,304

Term of patent 7 years

The ornamental design for an infant's sleeping bag or similar article, as shown.



98,604

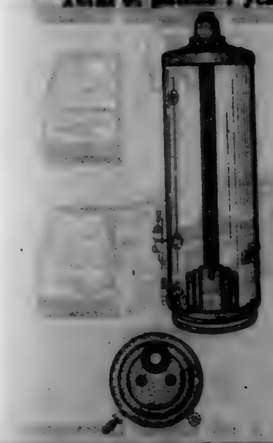
DESIGN FOR A CIGARETTE CASE OR SIMILAR ARTICLE

Max C. Meyer, Brooklyn, N. Y.

Application November 12, 1935, Serial No. 59,538

Term of patent 7 years

The ornamental design for a cigarette case or similar article, as shown.



98,605

DESIGN FOR A WATER HEATER

Clarence H. Morrow, Shaker Heights, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a corporation of Ohio

Application November 12, 1935, Serial No. 59,585

Term of patent 7 years

The ornamental design for a water heater, as shown and described.

98,606

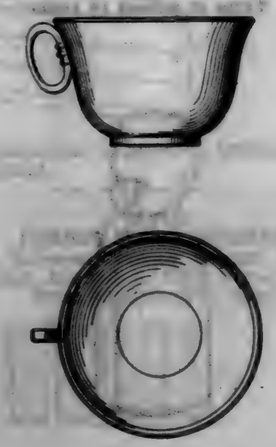
DESIGN FOR A CASSEROLE

Berthold Moser-Benedikt, Karlsbad, Czechoslovakia, assignor to R. H. Macy & Co., Inc., New York, N. Y., a corporation of New York

Application December 11, 1935, Serial No. 60,167

Term of patent 14 years

The ornamental design for a casserole, as shown.



98,607

DESIGN FOR A CUP

Berthold Moser-Benedikt, Karlsbad, Czechoslovakia, assignor to R. H. Macy & Co., Inc., New York, N. Y., a corporation of New York

Application December 11, 1935, Serial No. 60,368

Term of patent 14 years

The ornamental design for a cup, as shown.

98,608
DESIGN FOR A BLOUSE
Harry Nadler, New York, N. Y.
Application December 3, 1935, Serial No. 59,575
Term of patent 3½ years

The ornamental design for a blouse, substantially as shown.

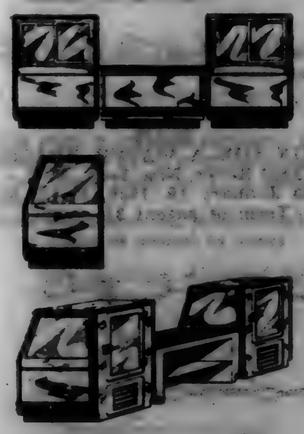
98,609
DESIGN FOR A MILK BOTTLE
Michael A. Pecora, West Hazleton, Pa., assignor to Pecora's Farm Dairy, West Hazleton, Pa., a partnership composed of Michael A. Pecora, Pasqua Pecora, and Salvador Pecora
Application December 2, 1935, Serial No. 59,381
Term of patent 14 years

The ornamental design for a milk bottle, as shown.

98,610
DESIGN FOR A LAMP BASE
Henry A. Perlmutter, Brooklyn, N. Y.
Application December 19, 1935, Serial No. 60,161
Term of patent 3½ years

The ornamental design for a lamp base, substantially as shown and described.

98,611
DESIGN FOR A LAMP BASE
Henry A. Perlmutter, Brooklyn, N. Y.
Application December 19, 1935, Serial No. 60,162
Term of patent 3½ years

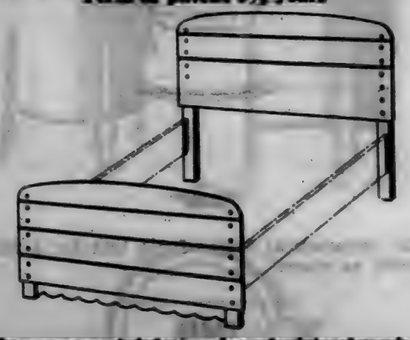


The ornamental design for a lamp base, substantially as shown and described.

98,612
DESIGN FOR A COSMETIC CONTAINER
Lucien A. Perona, Sausalito, Calif., assignor to Substance S. Products, Inc., San Francisco, Calif., a corporation of California.
Application July 24, 1935, Serial No. 57,788
Term of patent 3½ years

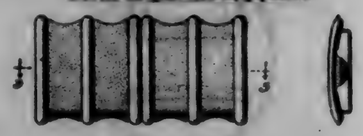
The ornamental design for a cosmetic container, as shown.

98,613
DESIGN FOR A COMBINED SALES AND DISPLAY COUNTER
Frank L. Pollard, Oakland, Calif.
Application December 26, 1935, Serial No. 60,288
Term of patent 3½ years



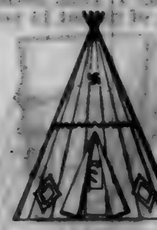
The ornamental design for a combined sales and display counter, substantially as shown and described.

98,614
DESIGN FOR A TUMBLER
Willis O. Prouty, Hermosa Beach, Calif., assignor to Motion Manufacturing Company, Manhattan Beach, Calif., a corporation of California
Application July 1, 1935, Serial No. 57,482
Term of patent 14 years



The ornamental design for a tumbler substantially as shown and described.

98,615
DESIGN FOR A BEDSTEAD
Marshall C. Pumphrey, Los Angeles, Calif., assignor to Barker Bros. Incorporated, Los Angeles, Calif.
Application November 12, 1935, Serial No. 59,507
Term of patent 3½ years



The ornamental design for a bedstead as shown and described.

98,616
DESIGN FOR A BUCKLE
Solomon Pulman, Newark, N. J.
Application January 4, 1936, Serial No. 60,414
Term of patent 3½ years

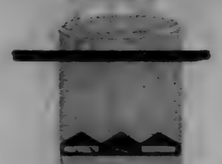
The ornamental design for a buckle as shown.

88,617
DESIGN FOR A BUILDING
Frank A. Bedford, Horse Cave, Ky.
Application December 17, 1935, Serial No. 66,152
Term of patent 14 years

The ornamental design for a building as shown.

88,618
DESIGN FOR A LINK FOR A WATCH BRACELET
Saul Ritter, New York, N. Y.
Application January 10, 1936, Serial No. 66,501
Term of patent 3½ years

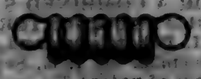
The ornamental design for a link for a watch bracelet as shown.



88,619
DESIGN FOR A LINK FOR A WATCH BRACELET
Saul Ritter, New York, N. Y.
Application January 10, 1936, Serial No. 66,502
Term of patent 3½ years

The ornamental design for a link for a watch bracelet as shown.

88,620
DESIGN FOR A WATCH BRACELET
Saul Ritter, New York, N. Y.
Application January 10, 1936, Serial No. 66,503
Term of patent 3½ years

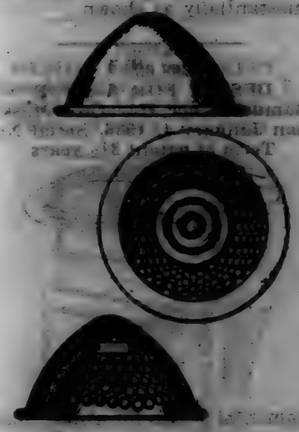


The ornamental design for a watch bracelet as shown.

88,621
DESIGN FOR A LINK FOR A WATCH BRACELET
Saul Ritter, New York, N. Y.
Application January 10, 1936, Serial No. 66,504
Term of patent 3½ years

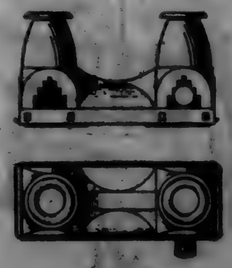
The ornamental design for a link for a watch bracelet as shown.

88,622
DESIGN FOR A WATCH BRACELET
Saul Ritter, New York, N. Y.
Application January 10, 1936, Serial No. 66,505
Term of patent 3½ years



The ornamental design for a watch bracelet as shown.

88,623
DESIGN FOR A WATCH BRACELET
Saul Ritter, New York, N. Y.
Application January 10, 1936, Serial No. 66,506
Term of patent 3½ years

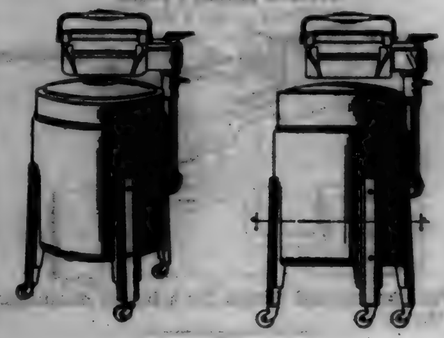


The ornamental design for a watch bracelet as shown.

88,624
DESIGN FOR A LENS FOR MOTOR VEHICLE LAMPS
Oliver C. Ritz-Weller, Chicago, Ill.
Application May 27, 1935, Serial No. 57,625
Term of patent 7 years

The ornamental design for a lens for motor vehicle lamps substantially as shown.

88,625
DESIGN FOR A STEREOSCOPIC VIEWER
Earl Rossman, New York, N. Y., assignor to Novelview, Inc., New York, N. Y., a corporation of New York
Application September 25, 1935, Serial No. 58,702
Term of patent 14 years

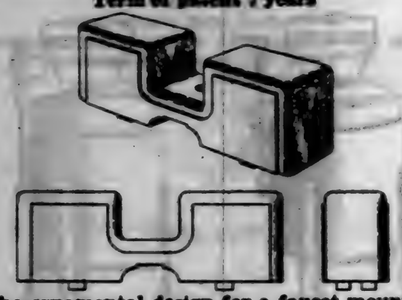


The ornamental design for a stereoscopic viewer, as shown.

88,626
DESIGN FOR A CLOSURE CAP OR SIMILAR ARTICLE
James Sterling B. Smith, New York, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a corporation of New York
Application August 5, 1935, Serial No. 57,949
Term of patent 14 years

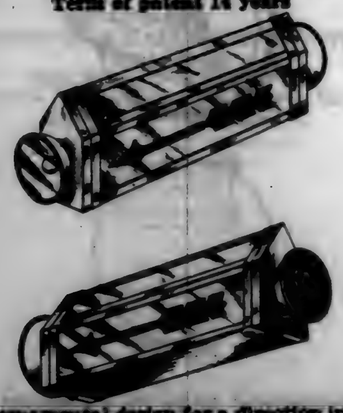
The ornamental design for a closure cap or similar article, substantially as shown.

88,627
DESIGN FOR A COMBINED WASHING MACHINE AND WRINGER
Jacques Stanita, Warren, Ohio, assignor to Prima Manufacturing Company, Inc., Sidney, Ohio, a corporation of Ohio
Application December 18, 1935, Serial No. 60,143
Term of patent 3½ years



The ornamental design for a combined washing machine and wringer substantially as shown.

98,628
DESIGN FOR A LUNCH COUNTER UNIT
Helen Stark and Florence Stark, New York, N. Y.
Application December 24, 1935, Serial No. 60,578
Term of patent 7 years



The ornamental design for a lunch counter unit substantially as shown.

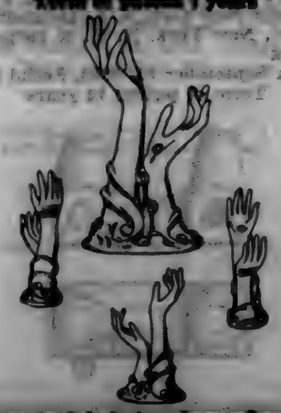
98,629
DESIGN FOR A FAUCET MOUNTING
Joseph C. Stellato, Chicago, Ill.
Application November 27, 1935, Serial No. 59,985
Term of patent 7 years

The ornamental design for a faucet mounting, as shown.

98,630
DESIGN FOR A DIRECTION INDICATOR FOR VEHICLES
August Wemig, Chicago, Ill.
Application November 25, 1935, Serial No. 59,788
Term of patent 14 years

The ornamental design for a direction indicator for vehicles, substantially as shown and described.

98,631
DESIGN FOR A WATER HEATER CABINET
Ellis E. Wilkinson, Pottstown, Pa.
Application June 22, 1935, Serial No. 57,412
Term of patent 14 years



The ornamental design for a water heater cabinet, substantially as shown.

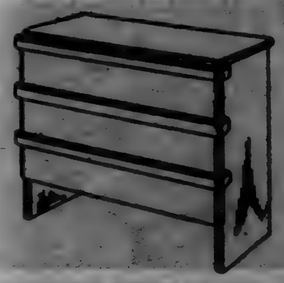
98,632
DESIGN FOR A SHOE
Samuel Winer, Haverhill, Mass.
Application January 4, 1936, Serial No. 60,411
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

98,633
DESIGN FOR A FLOWER VASE
Sigmund Leo Weiss, Chicago, Ill.
Application October 19, 1935, Serial No. 59,117
Term of patent 7 years

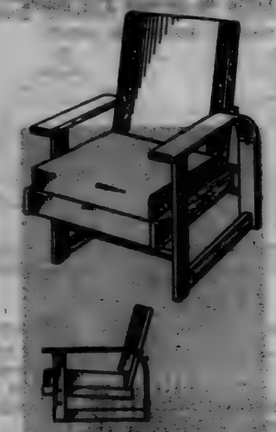
The ornamental design for a flower vase as shown.

98,626
DESIGN FOR A CABINET
Russel Wright, New York, N. Y.
Application August 10, 1935, Serial No. 58,672
Term of patent 3½ years



The ornamental design for a cabinet as shown.

98,625
DESIGN FOR A BUFFET
Russel Wright, New York, N. Y.
Application August 10, 1935, Serial No. 58,670
Term of patent 3½ years



The ornamental design for a buffet as shown.

98,626
DESIGN FOR A CHEST OF DRAWERS
Russel Wright, New York, N. Y.
Application August 10, 1935, Serial No. 58,669
Term of patent 3½ years

The ornamental design for a chest of drawers as shown.

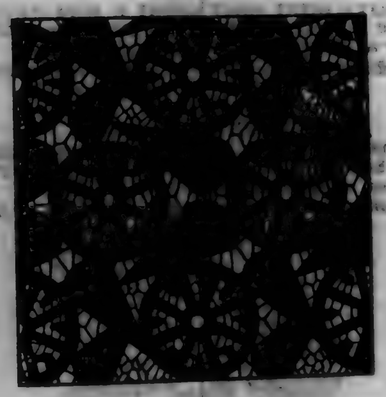
98,627
DESIGN FOR AN ADJUSTABLE CHAIR
Russel Wright, New York, N. Y.
Application August 10, 1935, Serial No. 58,682
Term of patent 3½ years

The ornamental design for an adjustable chair as shown and described.

98,628
DESIGN FOR A BUCKLE
Louis Alterson, New York, N. Y.
Application January 20, 1936, Serial No. 60,674
Term of patent 3½ years

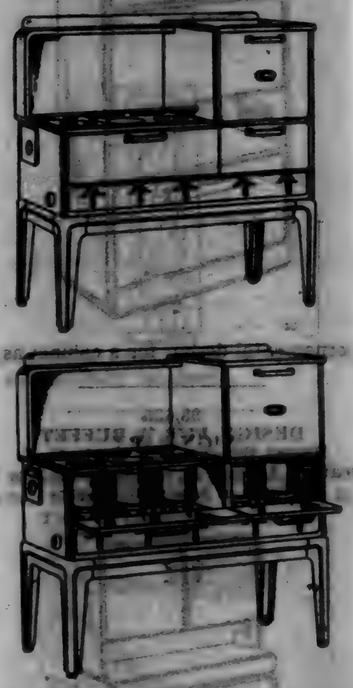
The ornamental design for a buckle substantially as shown.

98,629
DESIGN FOR A SHOE
Thomas E. Athins, Cliftondale, Mass., assignor to Schelnick Shoe Company, Jamaica Plain, Mass., a corporation of Massachusetts
Application January 6, 1936, Serial No. 60,435
Term of patent 3½ years



The ornamental design for a shoe substantially as shown and described.

98,640
DESIGN FOR AN EMBROIDERED TEXTILE FABRIC
George Bischof, New York, N. Y.
Application January 8, 1936, Serial No. 69,469
Term of patent 3½ years

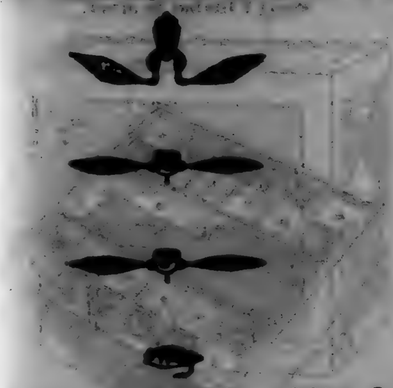


The ornamental design for an embroidered textile fabric, substantially as shown.

98,641
DESIGN FOR LACE
George D. Boyum, Philadelphia, Pa.
Application January 27, 1936, Serial No. 69,521
Term of patent 3½ years

The ornamental design for lace, substantially as shown.

98,642
DESIGN FOR AN OIL BURNING COOK STOVE
William T. Bradbury, Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application February 25, 1935, Serial No. 55,324
Term of patent 7 years



The ornamental design for an oil burning cook stove substantially as shown and described.

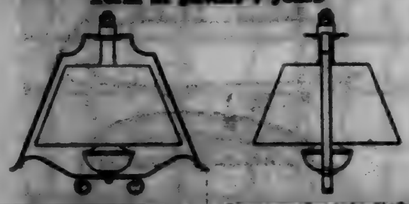
98,643
DESIGN FOR A COMBINED HANDBAG, WALLET, AND CIGARETTE CASE
Benjamin H. Bryan, New York, N. Y.
Application January 6, 1936, Serial No. 69,443
Term of patent 3½ years

The ornamental design for a combined handbag, wallet and cigarette case, as shown.

98,644
DESIGN FOR A FISHING FLY
Floyd O. Bunge, South Bend, Ind., assignor to South Bend Bait Company, South Bend, Ind.
Application October 12, 1935, Serial No. 59,116
Term of patent 14 years

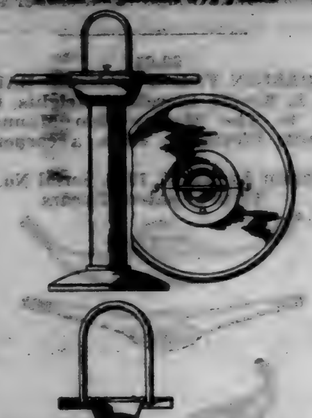
The ornamental design for a fishing fly as shown.

98,645
DESIGN FOR LACE
Jean Dognin, New York, N. Y.
Application January 27, 1936, Serial No. 69,522
Term of patent 3½ years



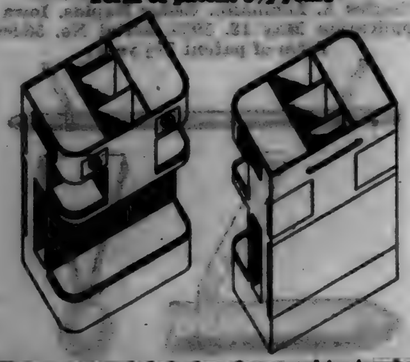
The ornamental design for lace, substantially as shown.

98,646
DESIGN FOR LACE
Bert Edson, Pawtucket, R. I.
Application January 24, 1936, Serial No. 69,757
Term of patent 3½ years



The ornamental design for lace, substantially as shown.

98,647
DESIGN FOR AN ELECTRIC LIGHTING FIXTURE
Harry D. Hein, Cleveland, Ohio, assignor to Railway Corporation, Cleveland, Ohio, a corporation of Ohio
Application October 26, 1935, Serial No. 58,246
Term of patent 7 years



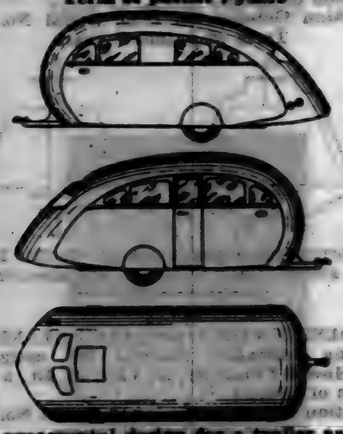
The ornamental design for an electric lighting fixture, substantially as shown and described.

98,648
DESIGN FOR A SMOKING STAND
Wolfgang Hoffmann, Batavia, Ill., assignor to The Howell Company, St. Charles, Ill., a corporation of Illinois
Application December 24, 1935, Serial No. 69,261
Term of patent 3½ years

The ornamental design for a smoking stand, as shown and described.

98,649
DESIGN FOR A CABINET
George McKay Jackson, Lake Bluff, Ill.
Application December 14, 1935, Serial No. 69,078
Term of patent 3½ years

The ornamental design for a cabinet substantially as shown.



96,650

DESIGN FOR A TRAILER

Fred E. Kazmits and Lester E. Kazmits, Bay City, Mich.

Application November 12, 1934, Serial No. 55,993

Term of patent 7 years

The ornamental design for a trailer as shown.

96,651

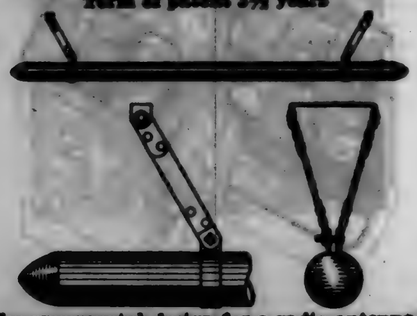
DESIGN FOR A HANDLE BAR

Herman L. Kraeft, Cleveland Heights, Ohio, assignor to The Murray-Ohio Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

Application August 24, 1935, Serial No. 58,276

Term of patent 7 years

The ornamental design for a handle bar substantially as shown.



96,652

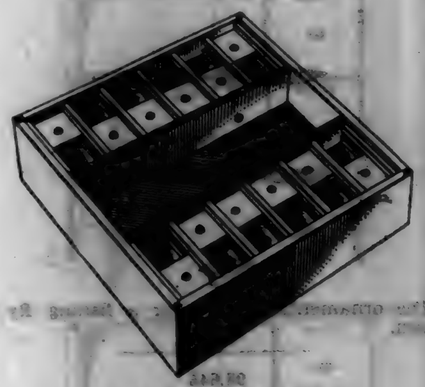
DESIGN FOR A RADIO ANTENNA

Charles A. Lehmann, Cedar Rapids, Iowa.

Application May 18, 1935, Serial No. 16,962

Term of patent 3½ years

The ornamental design for a radio antenna, as shown and described.



96,653

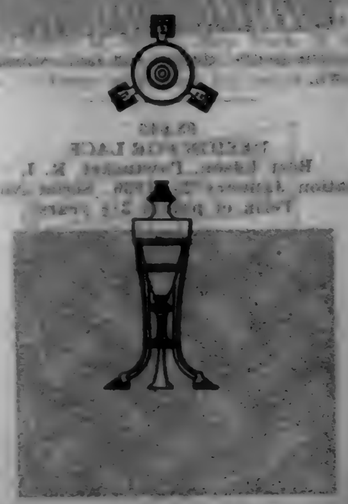
DESIGN FOR A GAME DEVICE

Walter A. Merrill, Los Angeles, Calif.

Application September 24, 1935, Serial No. 58,684

Term of patent 3½ years

The ornamental design for a game device, as shown.



96,654

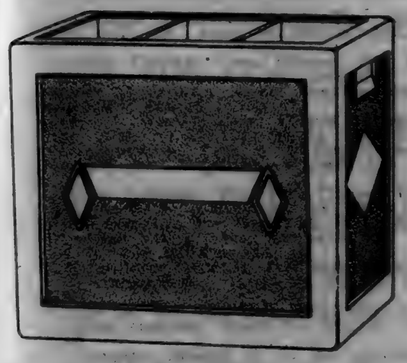
DESIGN FOR A LAMP BASE

Henry A. Parkmeier, Brooklyn, N. Y.

Application December 12, 1935, Serial No. 64,141

Term of patent 3½ years

The ornamental design for a lamp base substantially as shown and described.



96,655

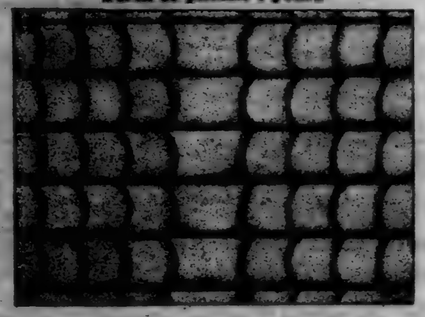
DESIGN FOR A STORAGE BATTERY CASE

Oliver C. Bieser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio

Application June 17, 1935, Serial No. 57,300

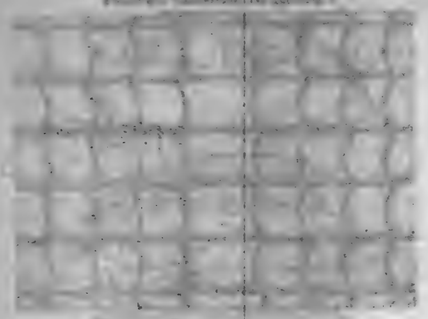
Term of patent 7 years

The ornamental design for a storage battery case, as shown and described.

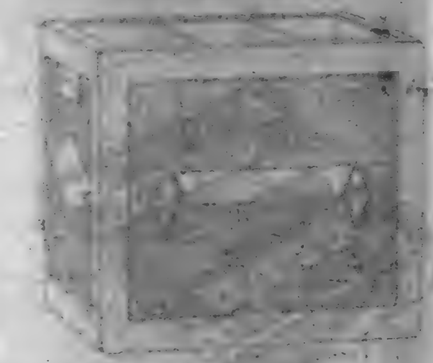


96,656

DESIGN FOR LEATHER OR SIMILAR ARTICLE



Morris White, New York, N. Y.



Application December 17, 1935, Serial No. 60,126

Term of patent 7 years

The ornamental design for leather or similar article, substantially as shown and described.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 3, 1907]

Adams Apple Products Corporation, Aspers, Pa. Apples, cider, vinegar, jelly, etc. Serial No. 370,747; Feb. 18. Class 46.

Amaya, Climerio, Mexico, D. F., Mexico. Bottle closure. 2,030,841; Feb. 18.

Anderson, Arvid E., Drexel Hill, Pa., assignor to General Electric Company. Automatic reclosing circuit breaker system. 2,031,447; Feb. 18.

Anderson, James L., Closter, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Apparatus for removing metal. 2,030,842; Feb. 18.

Anderson, John W., Gary, Ind. Windshield wiper. 2,031,297; Feb. 18.

Animal Trap Company of America. (See Kahn, J. D., and Lenz, assignors.)

Antioch Industrial Research Institute, Inc. (See Berdon, Albert E., assignor.)

Apex Tool & Cutter Company, The. (See Severson, Ole, assignor.)

Arcelon, John, Mount Vernon, N. Y. Circuit controller. 2,031,448; Feb. 18.

Arvidius, Svante P., Malmo, Sweden. Automatic Gramophone. 2,031,449; Feb. 18.

Atchison, Leonard W., Schenectady, N. Y., assignor to General Electric Company. Refrigerator. 2,031,450; Feb. 18.

Atkinson, Ralph L., Dorchester, assignor to Arthur D. Little, Incorporated, Cambridge, Mass. Process and apparatus for treating sausage casings. 2,030,843; Feb. 18.

Atlanta Harness and Reed Manufacturing Company. (See Floyd, Samuel R., assignor.)

Atlantic Refining Company, The. (See Henderson, Lawrence M., assignor.)

Atlas Plywood Corporation. (See Muller, Robert A., assignor.)

Atti, Raphael, Union City, N. J. Grinding machine. 2,030,850; Feb. 18.

Attwood, Stanley H., Wolverhampton, assignor to Simms Motor Units Limited, London, England. Valve operating mechanism for internal combustion engines. 2,030,844; Feb. 18.

Austin, Chester L. (See Austin, Harry C., assignor.)

Austin, Harry C., assignor to C. L. Austin, Kansas City, Mo. Exhaust silencer for internal combustion engines. 2,031,451; Feb. 18.

Automatic Electric Company. (See Ostline, John E., assignor.)

Automatic Electric Company Limited. (See Beins, F. T., and McClew, assignors.)

Automotion Pictures, Inc. (See Streyckmans, Hector J., assignor.)

Automotive Maintenance Machinery Co. (See Wishart, William W., assignor.)

Automotive Products Company Limited. (See Boughton, E. B., and Van Vestraut, assignors.)

Bachman Fred H. (See Bender, F. H., and Bachman.)

Baird Machine Company, The. (See Lewis, Arthur J., assignor.)

Baker & Company, et al. (See Weller, Charles A., assignor.)

Bany, Herman, Lansdowne, Pa., assignor to General Electric Company. Electrical regulating system. 2,031,452; Feb. 18.

Barker, Charles B., Aurora, Ill. Iron attachment. 2,031,026; Feb. 18.

Barker, Virgil D., Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Measuring apparatus. 2,030,956; Feb. 18.

Barnard, Earl W., assignor to Morris Paper Mills, Morris, Ill. Setting-up collapsible containers. 2,031,090; Feb. 18.

Barnett, Walter, and A. E. O'Key, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N.J. Dispensing apparatus. 2,030,908; Feb. 18.

Barnie, David A., Springfield, Mass. Air washing device. 2,031,027; Feb. 18.

Barok, George D., Columbus, Ohio. Indicator for game apparatus. 2,030,845; Feb. 18.

Barrett, Charles E., assignor to Alexander Smith & Sons Carpet Company, Yonkers, N. Y. Pile fabric. 2,030,851; Feb. 18.

Barrett, Harry B., Los Angeles, Calif. Combination precision grinder and calipers. 2,031,387; Feb. 18.

Bartholowsky, Johannes, Los Angeles, Calif. Apparatus for producing perspectives. 2,031,388; Feb. 18.

Bassick Company, The. (See Claud-Mantle, Arthur, assignor.)

Bauer Brothers Company, The. (See Woodruff, M. D., Mechlin, and Markley, assignors.)

Baugh, William H., et al. (See Robinson, William A., assignor.)

Baumann, Karl Urmston, and H. Sinclair, Surbiton Hill, England. Hydraulic coupling. 2,031,521; Feb. 18.

Bauer, Karl, Ludwigshafen-on-the-Rhine, Germany, assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Making products including aliphatic aldehydes. 2,031,200; Feb. 18.

Bauriedel, Gotthard. (See Hartman, A., and Bauriedel.)

Bausch & Lomb Optical Company. (See McCabe, Joseph J., assignor.)

Beardsley, Alling P. (See Berry, G. A., and Beardsley.)

Beardsley, Robert O., assignor to James & Lamson Machine Company, Springfield, Vt. Attachment for comparators. 2,031,201; Feb. 18.

Begg, Russell S., Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Hub cap and cover. 2,031,092; Feb. 18.

Belas, Francis T., and J. W. McClew, assignors to Automatic Electric Company Limited, Liverpool, England. Electric totalizator. 2,031,296; Feb. 18.

Benander, George B., Yalesville, assignor to Monowatt Electric Corporation, Bridgeport, Conn. Convenience outlet. 2,031,453; Feb. 18.

Bencowitz, Isaac, New York, N. Y., assignor to Texas Gulf Sulphur Company, Sulphur burner. 2,031,403; Feb. 18.

Bender, Frederic H., and F. H. Bachman, assignor to American Steel Foundries, Chicago, Ill. Wheel and axle assembly. 2,031,093; Feb. 18.

Bendix Aviation Corporation. (See Ketay, Morris F., assignor.)

Bener, Christian, Chur, assignor to Raduner & Co., A-G., Horn, Switzerland. Dressing fabrics. 2,031,245; Feb. 18.

Berdon, Albert E., assignor to Antioch Industrial Research Institute, Inc., Yellow Springs, Ohio. Recording device. 2,030,609; Feb. 18.

Berg, Nanstad, Cleveland Heights, assignor of one-half to J. H. Bruce, Shaker Heights, Ohio. Clothesline prop. 2,031,091; Feb. 18.

Berger, Adolph F. (See Williams, R. A., and Berger.)

Berry, George A., Bound Brook, and A. P. Beardsley, Plainfield, N. J., assignors to National Fuels Corporation, New York, N. Y. Distilling coal. 2,030,852; Feb. 18.

Bethenod, Joseph, Paris, and A. Claude, Nanterre, France, assignors to Société Anonyme pour les Applications de l'Electricité & des Gaz Rares Etablissements Claude-Paz & Silva. Electromagnetic apparatus. 2,030,857; Feb. 18.

Betterton, Jesse O., and G. H. Weis, Metuchen, N. J., assignors to American Smelting and Refining Company, New York, N. Y. Treating copper anode mud. 2,031,290; Feb. 18.

Betty, John, assignor to J. A. Betty, Corcoran, Calif. Toy gun. 2,031,359; Feb. 18.

Betty, John A. (See Betty, John, assignor.)

Bier, Leo E., Los Angeles, Calif. Signaling system. 2,031,202; Feb. 18.

Bigsert, Florence C., Jr., Crafton, assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Rotary shear blade clamp. 2,031,246; Feb. 18.

Biggs, Floyd E., Detroit, Mich. Ventilator. 2,031,404; Feb. 18.

Biglin, John T., Hastings, Nebr. Latch. 2,031,522; Feb. 18.

Bilde, Tord B. D., and A. Eriksson-Jons, Stockholm, Sweden, assignors to Electrolux Corporation, Dover, Del. Vacuum cleaner. 2,031,454; Feb. 18.

Biolite, Inc. (See Fiorovanti, Raffaele, assignor.)

Biolite, Inc. (See Kaufman, Alfonse, assignor.)

Birmingham Electric Furnaces Limited. (See Lobley, Alfred G., assignor.)

Bischof, Paul, Bronx, N. Y. Transmission. 2,031,247; Feb. 18.

Bishop, Stanley K., Binghamton, assignor to The Brewer-Titchener Corporation, Cortland, N. Y. Seat adjuster. 2,031,248; Feb. 18.

Bishton, Robert E., Herkimer, N. Y. Adjustable burnishing reamer. 2,030,846; Feb. 18.

Bitzer, Gottlob, West Reading, assignor to Textile Machine Works, Wyomissing, Pa. Knitting machine thread carrier actuating means. 2,031,300; Feb. 18.

Black & Decker Electric Company, The. (See Spielman, Milton H., assignor.)

Black, William H., New York, N. Y. Safety razor. 2,031,455; Feb. 18.

Blackmond, William C., Ranger, assignor of one-half to J. H. Reynolds, Cisco, Tex. Mixing machine. 2,030,847; Feb. 18.

Blain, W. M. (See Allen, John W., assignor.)

Blair, James H., Staten Island, assignor to Chayes Dental Instrument Corporation, New York, N. Y. Grinding wheel mandrel. 2,030,910; Feb. 18.

Blatterman, Albert S., Asbury Park, N. J. System for remotely controlling a radio receiver. 2,031,555; Feb. 18.

Blount, Arthur L., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Castor machine oils. 2,031,405; Feb. 18.

Blunt, Edmund H., Brooklyn, N. Y. Pump construction. 2,031,456; Feb. 18.

Bohn Aluminum & Brass Corporation. (See Schwerak, Joseph J., assignor.)

Bombly, Harold. (See Meunier, C. J., and Bomboy.)

Booth, Charles F., Anniston, Ala., assignor to Swann Research, Incorporated. Preparation of phosphates of manganese. 2,031,579; Feb. 18.

Borden, Charles R. C., Brookline, Mass. Washing and lathering sponge device. 2,030,811; Feb. 18.

Borg-Warner Corporation. (See Mauch, C. F., and Klipsch, assignors.)

Boughton, Edward B., London, and G. Van Vestraut, Leamington Spa, assignors to Automotive Products Company, Limited, London, England. Automotive brake. 2,030,843; Feb. 18.

Boughton, Edward B., assignor to Lockheed Hydraulic Brake Company, Limited, London, England. Hydraulically or liquid pressure operated brake. 2,031,309; Feb. 18.

Bovard, Floyd G., Akron, assignor to The Ohio Brass Company, Mansfield, Ohio. Cable clamp attachment. 2,031,203; Feb. 18.

Bowen, Lester W., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y. Projection apparatus. 2,031,361; Feb. 18.

Bowman, Oliver S., Colorado Springs, Colo. Waterproof and fireproof floor construction. 2,031,249; Feb. 18.

Boyce, Leonard D., Maplewood, Mo. Window control device for automobiles and other traveling vehicles. 2,030,849; Feb. 18.

Boyer, Clifford F., and G. W. Fouke, assignors to Kwick-Kut Manufacturing Co., Inc., St. Louis, Mo. Tire greaser. 2,031,629; Feb. 18.

Boyle Manufacturing Company. (See Rollason, Charles E., assignor.)

Brandenberg, Francis C., assignor to The Wood Shovel & Tool Company, Piqua, Ohio. Shovel. 2,031,556; Feb. 18.

Brandwood, Joseph, Southport, England. Impregnation of textile materials with rubber-containing liquids. 2,031,094; Feb. 18.

Braren, Waldo W., Pasadena, Calif. Automobile lock. 2,031,523; Feb. 18.

Bray, Ulric B., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Separating wax from oil. 2,031,095; Feb. 18.

Bray, Ulric B., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Producing lubricating oil. 2,031,096; Feb. 18.

Bray, Ulric B., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Producing lubricating oil. 2,031,504; Feb. 18.

Bray, Ulric B., Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Solvent extraction of oils. 2,031,206; Feb. 18.

Breivogel, Philip J., Glen Ridge, N. J. Preparing calcium salts of substituted quinoline carboxylic acids. 2,030,958; Feb. 18.

Bren, Bosetech C., Cedar Grove, N. J., assignor to DuPont Viscoloid Company, Wilmington, Del. Compound and compositions containing same. 2,031,206; Feb. 18.

Breneman, Hugh H., Glen Mills, Pa. Container. 2,031,020; Feb. 18.

Brett, George P. (See Wright, G. M., and Brett.)

Brewer-Titchener Corporation, The. (See Bishop, Stanley K., assignor.)

Bridgeport Brass Company. (See McMahon, Joseph J., assignor.)

Bridgeport Brass Company. (See Ward, Marshall H., assignor.)

Briggs & Stratton Corporation. (See Fitz Gerald, John W., assignor.)

Briggs & Stratton Corporation. (See Griffith, Raymond W., assignor.)

Brisard, Maxime J., San Francisco, Calif. Metallic coating recovering device. 2,031,086; Feb. 18.

Brown, Elmer W., Oberlin, Kans. Repair device for cream separator disks. 2,031,350; Feb. 18.

Brown, George R., Bridgeport, Conn., assignor to General Electric Company. Fuse. 2,031,457; Feb. 18.

Browning, Glenn H., Winchester, assignor to Doble Engineering Company, Medford, Mass. Compensated watt-meter. 2,031,307; Feb. 18.

Bruce, Joseph H. (See Berg, Nanstad, assignor.)

Brück, Walter, Mannheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Vat dyestuffs of the anthraquinone-2.1 (N) benzacridone series. 2,031,406; Feb. 18.

Bruson, Herman A., assignor to The Resinous Products & Chemical Co., Inc., Philadelphia, Pa. Resinous amine derivatives and process of preparing. 2,031,557; Feb. 18.

Buchbois, William C., assignor to Ackaband Knitting Co., Inc., Ballston Spa, N. Y. Knitted mitten and making the same. 2,030,969; Feb. 18.

Bucky, Gustav, New York, N. Y. Stand for X-ray apparatus and the like. 2,031,097; Feb. 18.

Budd, Edward G., Manufacturing Company. (See Engedale, Earl J. W., assignor.)

Budd, Harry, Old Charlton, London, England. Device for delivering measured quantities of liquids. 2,031,081; Feb. 18.

Budd Wheel Company. (See Begg, Russell S., assignor.)

Budwig, Gilbert G., Saratoga, assignor to Insect-O-Products Company, Burbank, Calif. Liquid spray apparatus. 2,030,853; Feb. 18.

Buffalo Forge Company. (See Criqui, Albert A., assignor.)

Burgard, Margaret A., South Williamsport, assignor to C. A. Reed Company, Williamsport, Pa. Lollipop holder. 2,031,208; Feb. 18.

Burns, Fred J., assignor to The Columbia Mills, Inc., Saginaw, Mich. Self-locking bracket. 2,030,956; Feb. 18.

Burton-Dixie Corporation. (See Putnam, H., and Pearce, assignor.)

Burton, Harry H., assignor to Slater Mills, Inc., Webster, Mass. Imitation linen fabric. 2,031,209; Feb. 18.

Bush, Ralph E., Manoa, Pa., assignor to General Electric Company. Operating mechanism. 2,031,458; Feb. 18.

Butler-Kuhn Corporation. (See Kuhn, George, assignor.)

Calloy Limited. (See Kirnsbom, Gustaf R., assignor.)

Calver, George W., U. S. Navy. Constant intensity illumination system. 2,030,854; Feb. 18.

Campbell, Stanley H., assignor to Germain Manufacturing Company, Saginaw, Mich. Fastener. 2,031,407; Feb. 18.

Canfield, Robert H., Washington, D. C. Testing materials. 2,030,855; Feb. 18.

Carpenter, Rupert R. H. (See Eckersley, P. P., and Carpenter.)

Carrollton Metal Products Company, The. (See Stevens, Carl A., assignor.)

Carter, Herman T., Brooklyn, N. Y., assignor to American Telephone and Telegraph Company. Operator's telephone circuit. 2,030,961; Feb. 18.

Caterpillar Tractor Co. (See Eberhard, Harmon S., assignor.)

Central United National Bank, trustee. (See Ohmer, John F., assignor.)

Cerf, Ervin W. (See Cerf, Sam P., and R. W.)

Cerf, Sam P., St. Louis, and R. W. Cerf, Clayton, Mo. Device for protecting concrete. 2,031,098; Feb. 18.

Chambless, Errol F. (See Fay, Joseph W., assignor.)

Chambless, Errol F., Chicago, assignor of one-half to J. W. Fay, Villa Park, Ill. Shade roller. 2,031,459; Feb. 18.

Chambless, Errol F., Chicago, assignor of one-half to J. W. Fay, Villa Park, Ill. Clothespole. 2,031,460; Feb. 18.

Chambless, Errol F., Chicago, assignor of one-half to J. W. Fay, Villa Park, Ill. Clothespole. 2,031,461; Feb. 18.

Champoux, Maurice, Quebec, Quebec, Canada. Tobacco smoking pipe. 2,031,524; Feb. 18.

Chapman, Walter, Palmers Green, London, assignor to Dufaycolor Limited, London, England. Mixing the color element images in multi-color screen photographic printing and projection. 2,031,032; Feb. 18.

Church, William H., Buffalo, W. L. Hyden, and J. C. Stemann, Kenmore, assignors to Du Pont Cellophane Company, Inc., New York, N. Y. Moistureproof material and making same. 2,030,962; Feb. 18.

Chayes Dental Instrument Corporation. (See Blair, James H., assignor.)

Chemical Works, formerly Sandoz. (See Kussmaul, Walter, assignor.)

Chicago Carton Company. (See Clarke, John D., assignor.)

Chicago Daily News, Inc., The. (See Sewick, Frank, assignor.)

Childress, William C., Oak Park, assignor to Acme Steel Company, Chicago, Ill. Strap stretching device. 2,031,462; Feb. 18.

Chitty, Albert H., et al. (See Rhodin, Brodde H. F., assignor.)

Choate, Roy R., and W. R. Rodler, assignors to La Plant-Choate Manufacturing Co., Inc., Cedar Rapids, Iowa. Earth moving device. 2,031,463; Feb. 18.

Christman, Peter J., Green Bay, Wis. Sheet-folding machine. 2,031,301; Feb. 18.

Ciba Products Corporation. (See Gams, A., Widmer, and Frey, assignors.)

Cinch Manufacturing Corporation. (See Knutson, Carl L., assignor.)

Clark, James R., assignor to Yawman & Erbe Mfg. Co., Rochester, N. Y. Drawer stop for cabinets and the like. 2,031,251; Feb. 18.

Clark, Wycliffe L., Jamestown, N. Y. Latch. 2,031,302; Feb. 18.

Clarke, John D., assignor to Chicago Carton Company, Chicago, Ill. Golf hole. 2,031,525; Feb. 18.

Claud-Mantle, Arthur, Trumbull, assignor to The Bassick Company, Bridgeport, Conn. Automobile robe support and bracket therefor. 2,031,408; Feb. 18.

Claude, André. (See Bethenod, J., and Claude.)

Claude, André, Nanterre, assignor to Société Anonyme pour les Applications de l'Electricité et des Gaz Rares Etablissements Claude-Paz & Silva, Paris, France. Discharge tube. 2,030,963; Feb. 18.

Clickner, Forest H., assignor to Kraft-Phenix Cheese Corporation, Chicago, Ill. Egg product and emulsifier therefor. 2,030,964; Feb. 18.

Clickner, Forest H., assignor to Kraft-Phenix Cheese Corporation, Chicago, Ill. Emulsifier. 2,030,965; Feb. 18.

Clifford Manufacturing Co. (See Clifford, Walter B., assignor.)

Clifford, Walter B., assignor to Clifford Manufacturing Co., Boston, Mass. Relief valve for hot water systems. 2,031,553; Feb. 18.

Cole, Fred H. (See Almker, A., and Cole.)

Coleman, Henry J. (See Mason, W. T., and Coleman.)

Columbia Mills, Inc., The. (See Burns, Fred J., assignor.)

Columbian Rope Company. (See Koon, Archie W., assignor.)

Columbian Rope Company. (See Reed, Leslie D., assignor.)

Combustion Utilities Corporation. (See Wilgus, Harold M., assignor.)

Compagnie de Produits Chimiques et Electrométallurgiques Alais, Froges et Camarque. (See Torchet, Pierre J. M., assignor.)

Continental Motors Corporation. (See Harris, William W., assignor.)

Continental Oil Company. (See Davis, Lloyd L., assignor.)

Corcoran, Leonard C., Cleveland Heights, Ohio. Feed dog recutting fixture. 2,031,464; Feb. 18.

Cottrell, McKenzie, Stratford, Conn., assignor to General Electric Company. Signaling system. 2,031,465; Feb. 18.

Crammond, Earle D. (See Gemeny, Blaine B., assignor.)

Crane, Edward J., Oak Park, Ill., and D. V. Waters, Cranford, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Variable pressure apparatus. 2,030,966; Feb. 18.

Criner, Harry J., Davenport, assignor, by mesne assignments, to The Micro Corporation, Bettendorf, Iowa. Slicing bread. 2,031,252; Feb. 18.

Criqui, Albert A., assignor to Buffalo Forge Company, Buffalo, N. Y. Fan. 2,031,466; Feb. 18.

Crosman, James H., 3d, Haverford, assignor to The Air Drill Corporation, Philadelphia, Pa. Aircraft. 2,030,967; Feb. 18.

Culbertson, Harvey W., et al. (See Lane, Herald D. R., assignor.)

Culver, Edward, and A. H. Emerson, assignors to United Kingdom Optical Company, Limited, London, England. Eyeglass lens. 2,030,968; Feb. 18.

Cushman, John K., assignor to York Ice Machinery Corporation, York, Pa. Scraper blade. 2,030,969; Feb. 18.

Dahlen, Miles A., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Azo dyes and their production. 2,030,970; Feb. 18.

Daminaitis, George P., Cleveland, Ohio. Lithograph offset machine plate clamp. 2,031,569; Feb. 18.

Davenport, Frank A. (See Willshaw, H., Smith, and Davenport.)

Davis, Lloyd L., Ponca City, assignor to Continental Oil Company, Ponca City, Okla. Oil testing device. 2,031,253; Feb. 18.

Day, Ralph B., Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Method and apparatus for treating rubber articles. 2,031,560; Feb. 18.

Day, Ralph B., Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Method and apparatus for treating rubber articles. 2,031,561; Feb. 18.

De Long Gum Co. (See Peterson, Conrad E., assignor.)

Delta-Star Electric Company, The. (See Alsaker, A., and Cole, assignors.)

Demuth, George, Green Bay, Wis. Link type hinge. 2,031,520; Feb. 18.

Denebeim, Morton W., St. Louis, assignor to Waxide Paper Company, Kansas City, Mo. Dispensing carton. 2,031,033; Feb. 18.

De Roymancour, Otto G. J. S., Breda, Netherlands. Device for continuous spinning and/or twisting of textile fibers. 2,031,467; Feb. 18.

Derr, Ralph B., Oakmont, assignor to Aluminum Company of America, Pittsburgh, Pa. Heat insulated food package. 2,031,254; Feb. 18.

Detroit Lubricator Company. (See Eggleston, Lewis W., assignor.)

Deubelbeiss, Hans S., Montreal, Quebec, Canada. Bathtub. 2,031,255; Feb. 18.

Dickinson, William N., Rockville Centre, N. Y. Signals and controls for passenger and freight elevators and for other purposes. 2,030,912; Feb. 18.

Diescher, August P., assignor to Diescher Tube Mills, Inc., Pittsburgh, Pa. Cross-roll apparatus. 2,031,099; Feb. 18.

Diescher Tube Mills, Inc. (See Diescher, August P., assignor.)

Dietze, Eginhard, Westfield, N. J., assignor to American Telephone and Telegraph Company. Operator's telephone circuit. 2,030,971; Feb. 18.

Dilling, Henry P., Pittsburgh, Pa. Plug connecter. 2,030,856; Feb. 18.

Dillon, Lyle, Los Angeles, and C. H. Swift, Glendale, assignors to Union Oil Company of California, Los Angeles, Calif. Process and apparatus for dewaxing oil. 2,031,210; Feb. 18.

Dingley, Edward N., Jr., Washington, D. C. Electrical circuit analyser. 2,030,857; Feb. 18.

Doble Engineering Company. (See Browning, Glenn H., assignor.)

Dobson, William A., Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,030,858; Feb. 18.

Dodge, Theodore, River Falls, Wis. Automatic watering device. 2,031,146; Feb. 18.

Dodson, Edward, Streatham, London, England. Controlling means for fuel injection engines. 2,031,527; Feb. 18.

Doherty Research Company. (See Snathoff, George W., assignor.)

Dole, Myron W., Belmont, Mass. Feed water heater for locomotives. 2,031,468; Feb. 18.

Doodchenko, Peter L. (See Pelipets, Michail G., assignor.)

Doolin, Charles R., San Antonio, Tex. Bag rack. 2,031,147; Feb. 18.

Dorsey, Claude R., Jr., Elba, Ala. Semiautomatic fifth wheel construction. 2,031,256; Feb. 18.

Dow Chemical Company, The. (See Reilly, John H., assignor.)
Dowding, George V., London, England, assignor to Radio Corporation of America. Fidelity control circuits. 2,031,034; Feb. 18.
Drake, Harcourt C., Hempstead, assignor to Sperry Products, Inc., Brooklyn, N. Y. Detecting flaws. 2,031,468; Feb. 18.
Drapal, Othmar, Cologne-Mulheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Textile assistants. 2,030,859; Feb. 18.
Dresser, S. R., Manufacturing Company. (See Norton, Charles H., assignor.)
Dreyfus, Henry, London, England. Apparatus for the production of artificial filaments and like materials. 2,030,972; Feb. 18.
Dreymann, Carl G., Pittsburgh, Pa., assignor to Grant Paper Box Company. Making moistureproof paperboard and the like. 2,031,035; Feb. 18.
Dreymann, Carl G., Pittsburgh, Pa., assignor to Grant Paper Box Company. Composition of matter and its production. 2,031,036; Feb. 18.
Du Bois, Horace. (See John, H., Le Febvre, and Du Bois.)
Duesel, Bernard F. (See Renshaw, R. R., Tissa, and Duesel.)
Dufaycolor Limited. (See Chapman, Walter, assignor.)
Dumke, Willy, assignor to Utah Radio Products Company, Chicago, Ill. Electrical resistance device. 2,031,311; Feb. 18.
Dunham, C. A., Company. (See Powell, Ellis G., assignor.)
Dunlop Rubber Company Limited. (See Goodyear, E. F., Wright, and Trevaskis, assignors.)
Dunlop Tire and Rubber Corporation. (See Willshaw H., Smith, and Davenport, assignors.)
Dunn, George E. (See Ketcham, F., and Dunn.)
Duplate Corporation. (See Kamerer, J. W., and Whitmire.)
Du Pont Cellophane Company. (See Church, W. H., Hyden, and Siemann, assignors.)
Du Pont, E. I., de Nemours & Company. (See Dahlen, Miles A., assignor.)
Du Pont, E. I., de Nemours & Company. (See Johnson, Frank W., assignor.)
Du Pont, E. I., de Nemours & Company. (See Jordan, Henry, assignor.)
Du Pont, E. I., de Nemours & Company. (See Marvel, Carl S., assignor.)
Du Pont Viscoloid Company. (See Bren, Boestech C., assignor.)
Du Pont Viscoloid Company. (See Strain, Daniel E., assignor.)
Durst, Henry, Denver, Colo. Trolley. 2,031,148; Feb. 18.
Duston, Merle, Detroit, Mich. Method of and apparatus for electrically recording and reproducing sound or other vibrations. 2,030,973; Feb. 18.
Dwofsky, Bernard, New York, N. Y. Printing pad. 2,031,212; Feb. 18.
Eastman Kodak Company. (See Fallesen, G. E., and Staud, assignors.)
Eastman Kodak Company. (See Malm, Carl J., assignor.)
Easy Washing Machine Corporation. (See Papworth, Walter A., assignor.)
Eberhard, Harmon S., Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Tractor. 2,031,303; Feb. 18.
Eck, Herbert P., I. B. Rosenberg, and H. M. Rosenberg, Port Chester, and I. Fleer, New York, N. Y. Safety cutting tool. 2,031,470; Feb. 18.
Eckersley, Peter P., Chelsea, London, and R. E. H. Carpenter, London, England. Wire broadcasting system 2,031,528; Feb. 18.
Eckersley, Thomas L. (See Smith, S. B., and Eckersley.)
Eclipse Aviation Corporation. (See Havill, Clinton H., assignor.)
Eclipse Machine Company. (See Lansing, Raymond P., assignor.)
Edwards, Charles E., New Britain, Conn. Stroking holder for razor blades. 2,031,471; Feb. 18.
Eggleston, Lewis W., assignor to Detroit Lubricator Company, Detroit, Mich. Control device. 2,031,408; Feb. 18.
Einstein, David G. (See Goldman, Ralph H., assignor.)
Eirich, Joseph. (See Eirich, Ludwig, and J.)
Eirich, Ludwig, and J., Hardheim, Baden, Germany. Edge runner-like mixing and kneading machine. 2,031,149; Feb. 18.
Eibel, Eberhard, and A. Kirstahler, assignors to Henkel & Cie., Gesellschaft mit beschränkter Haftung, Dusseldorf, Germany. Preparation of mercaptans. 2,031,539; Feb. 18.
Electric Storage Battery Company, The. (See Wallace, Curtis C., assignor.)
Electrolux Corporation. (See Bilde, T. E. D., and Eriksen-Jons, assignors.)
Elgin National Watch Company. (See Gabriel, William A., assignor.)
Eller, Arthur L., assignor to E. B. Lutkins, Olathe, Kans. Illuminated folding table. 2,031,304; Feb. 18.
Elliott, Harold F., Palo Alto, Calif. Detecting and amplifying system. 2,030,913; Feb. 18.
Ellis, Carleton, Montclair, N. J., assignor to Ellis-Foster Company. Water-resistant sandpaper and other abrasive papers and making same. 2,031,262; Feb. 18.
Ellis-Foster Company. (See Ellis, Carleton, assignor.)
Emerson, Alfred H. (See Culver, H., and Emerson.)
End, Gotthard, and J. Gastel, Schaffhausen, assignor to Schweizerische Industrie-Gesellschaft, Neuhausen, Switzerland. Automatic firearm. 2,031,305; Feb. 18.
Engel, Francis H., New York, N. Y., assignor to Radio Corporation of America. Oscillation generator. 2,031,109; Feb. 18.
Eriksen, Emil M., Bogstrud, near Oslo, Norway. Ski edge protector. 2,031,150; Feb. 18.
Eriksen, Erik E., North Canton, Ohio. Combination vanity case. 2,031,329; Feb. 18.
Eriksen-Jons, Anders. (See Bilde, T. E. D., and Eriksen-Jons.)
Eresphe, Inc. (See Peschl, Frank A., assignor.)
Errig, William F., Philadelphia, and G. M. Pfundt, Churchville, assignors to Poco Manufacturing Corporation, Philadelphia, Pa. Hand tire-groover. 2,031,472; Feb. 18.
Esick, Charles R., assignor to Pennsylvania Optical Co., Reading Pa. Mounting for rimless lenses. 2,031,360; Feb. 18.
Esiberg, Adam J., Sunburst, Mont. Valve. 2,031,151; Feb. 18.
Eureka Photo Mechanical Equipment, Inc. (See Marocco, Dante V., assignor.)
Evans, Llewellyn W., assignor to Rheem Manufacturing Company, Richmond, Calif. Steel container fitting. 2,031,350; Feb. 18.
Evans, Merlin H., and J. H. Woodhouse, assignors to Evanwood Corporation, Elmira, N. Y. Brake testing apparatus. 2,030,914; Feb. 18.
Evanwood Corporation. (See Evans, M. H., and Woodhouse, assignors.)
Everedy Company, The. (See Lebbers, Harry J., assignor.)
Everitt, Raymond, Toronto, Ontario, Canada. Bracelet, or the like, structures. 2,030,974; Feb. 18.
Excel Auto Radiator Company. (See Sperry, Philmore F., assignor.)
Fairchild, Edwin S., New York, N. Y. Mixture measure. 2,030,975; Feb. 18.
Fairfield, Walter B., LaGrange, and R. Jeanjetit, Hinsdale, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Safety guard and control system. 2,030,976; Feb. 18.
Fallesen, George E., and C. J. Staud, assignors to Eastman Kodak Company, Rochester, N. Y. Print-out emulsion. 2,030,860; Feb. 18.
Farmer, Clyde C., Pittsburgh, assignor to Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,031,213; Feb. 18.
Farrington, Franklin. (See Parker, C. S., Wall, and Farrington.)
Fay, Joseph W. (See Chambless, Bruyl F., assignor.)
Fay, Joseph W., Villa Park, assignor of one-half to B. F. Chambless, Chicago, Ill. Shade roller. 2,031,473; Feb. 18.
Federal Telegraph Company. (See Koister, Frederick A., assignor.)
Feild, Alexander L., assignor, by mesne assignments, to Rustless Iron and Steel Corporation of America, Baltimore, Md. Manufacture of alloys of iron, chromium, nickel, and copper. 2,031,152; Feb. 18.
Fessenden, Robert G., Townsend, Mass. Cover for kegs, barrels, or like containers. 2,031,168; Feb. 18.
Fettweisky, Eduard, and H. Lux, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Arrangement adapted to generate ultra short electromagnetic waves. 2,031,191; Feb. 18.
Fiess, Frank, North Platte, Nebr. Jar closure. 2,031,531; Feb. 18.
Flake, Henry J., Jr., Etna, Pa. Emergency wheel. 2,031,257; Feb. 18.
Fish, Sidney J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Pad for applying pressure to shoe bottoms. 2,030,915; Feb. 18.
Fioravanti, Raffaele, Milan, Italy, assignor, by mesne assignments, to Biolite, Inc., New York, N. Y. Display device. 2,031,409; Feb. 18.
Fiorani, Walter. (See Moser, W., and Fiorani.)
Fisher, Harmon F., assignor to Union Oil Company of California, Los Angeles, Calif. Process and apparatus for dewaxing oil. 2,031,214; Feb. 18.
Fisher, Martin M., Seattle, Wash. Tire retreading mold. 2,030,861; Feb. 18.
Fitch, Benjamin F., Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y. Positioning freight on vehicles. 2,030,962; Feb. 18.
Fitch, Benjamin F., Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y. Load lifting cradle. 2,030,963; Feb. 18.
Fitz Gerald, John W., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock. 2,031,155; Feb. 18.
Flake Products Corporation. (See McCallum, Arthur, assignor.)
Fleer, Isaac. (See Eck, H. P., I. B., and H. M. Rosenberg, and Fleer.)
Fleyd, Samuel E., assignor to Atlanta Harness and Rod Manufacturing Company, Atlanta, Ga. Mail eye clinching device and forming cotter harness having metal eyes. 2,030,917; Feb. 18.

Foley, Fenwick D., St. John County, New Brunswick, Canada. Mold for the manufacture of teapots and the like. 2,031,299; Feb. 18.
Foley, Louis D., Louisville, Ky. Hydraulic gear shift. 2,031,364; Feb. 18.
Fortier, Byron P., and F. A. Miller, Springfield, assignors to L. R. Hildreth, Columbus, Ohio. Bumper. 2,030,978; Feb. 18.
Foster Wheeler Corporation. (See Keenan, Walter F., Jr., assignor.)
Foster Wheeler Corporation. (See Malmed, J. S., Welsh, and Keenan, assignors.)
Fouke, George W. (See Boyer, C. F., and Fouke.)
Fox, Clark A., Nashville, Tenn. Electric cooking utensil. 2,031,259; Feb. 18.
Frank, Joseph, Brooklyn, N. Y., assignor to Gemloid Corporation, New York, N. Y. Decorative product and making the same. 2,031,474; Feb. 18.
Fraser, Joseph T. W., Baltimore, Md. Oxidizing catalysts. 2,031,475; Feb. 18.
French, Charles A., Riverside, Ill. Liquid fuel vaporizer and burner. 2,031,306; Feb. 18.
French, Ralph W., Junction City, Kans. Tagging machine. 2,031,476; Feb. 18.
Frey, Karl. (See Gams, A., Widmer, and Frey.)
Freydberg Bros. Inc. (See Lamstozzy, Stephen, assignor.)
Friedman, Abraham I. (See Gianninoto, F. A., and Friedman.)
Fuchs, Fred, St. Paul, Minn. License plate holder for automobiles. 2,031,154; Feb. 18.
Fulk, Murl M. (See Shattuck, O. M., and Fulk.)
Fuller, Collins F., Chicago, Ill. Egg box. 2,030,979; Feb. 18.
Fulweiler, Walter H., Wallingford, assignor to The United Gas Improvement Company, Philadelphia, Pa. Purification of gas from oxides of nitrogen. 2,031,410; Feb. 18.
Fury, William M., Philadelphia, Pa. Rectifier. 2,031,411; Feb. 18.
Gabriel, William A., Elgin, assignor to Elgin National Watch Company, Chicago, Ill. Self-winding timepiece. 2,030,980; Feb. 18.
Gastel, Jakob. (See End, G., and Gastel.)
Gams, Alphonse, G. Widmer, and K. Frey, Basel, Switzerland, assignors, by mesne assignments, to Ciba Products Corporation, Dover, Del. Infusible synthetic resins and making same. 2,031,220; Feb. 18.
Gard, James C., Bloomington, Ill. Door fastener. 2,030,916; Feb. 18.
Gartin, Elmer G., Claremont, N. H., assignor to Sullivan Machinery Company. Rock drill. 2,030,981; Feb. 18.
Gasoline Antioxidant Company. (See Rogers, T. H., and Voorhees, assignors.)
Gefecken, Heinrich, and H. Richter, Leipzig, Germany, assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y. Photoelectric tube. 2,031,102; Feb. 18.
Gemeny, Blaine B., Washington, D. C., assignor of one-third to E. D. Crammond, Washington, D. C. Automatic variable pitch propeller. 2,030,958; Feb. 18.
Gemloid Corporation. (See Frank, Joseph, assignor.)
General Aniline Works, Inc. (See Brock, Walter, assignor.)
General Aniline Works, Inc. (See Drapal, Othmar, assignor.)
General Aniline Works, Inc. (See Niemann, Georg, assignor.)
General Aniline Works, Inc. (See Wolfram, A., and Hausdörfer, assignors.)
General Electric Company. (See Anderson, Arvid E., assignor.)
General Electric Company. (See Atchison, Leonard W., assignor.)
General Electric Company. (See Bany, Herman, assignor.)
General Electric Company. (See Brown, George E., assignor.)
General Electric Company. (See Bush, Ralph E., assignor.)
General Electric Company. (See Cottrell, McKenzie, assignor.)
General Electric Company. (See Gray, William T., assignor.)
General Electric Company. (See Hamada, Seitoku, assignor.)
General Electric Company. (See Hankins, Caryl P., assignor.)
General Electric Company. (See Moore, Chester H., assignor.)
General Electric Company. (See Seeley, Harold T., assignor.)
General Electric Company. (See Thumim, Carl, assignor.)
General Electric Company. (See Tritle, John F., assignor.)
General Electric Company. (See Warner, John C., assignor.)
General Electric Company Limited, The. (See Thompson, William G., assignor.)
General Motors Corporation. (See King, Jesse G., assignor.)
General Motors Corporation. (See Smiltack, Jacob, assignor.)
General Motors Corporation. (See Van Deventer, Harry E., assignor.)
General Tire & Rubber Company, The. (See Kraft, Herman T., assignor.)
George, Ralph W., Riverhead, N. Y., assignor to Radio Corporation of America. Ultra short wave receiver. 2,031,196; Feb. 18.
Gerland, Harry A., Baltimore, Md. Machine for making pretzels. 2,031,365; Feb. 18.
Germain Manufacturing Company. (See Campbell, Stanley E., assignor.)
Geyer, Ernest H. (See Kerr, John W., assignor.)
Giannineto, Frank A., Yonkers, and A. I. Friedman, Brooklyn, N. Y. Collapsible drawing table. 2,031,477; Feb. 18.
Gielow, Harry C., Elgin, Ill., assignor to The L. S. Starrett Company, Athol, Mass. Inside micrometer centering device. 2,030,864; Feb. 18.
Gillett, Frank L., Los Angeles, and J. S. Morgan, Jr., Inglewood, Calif., assignors, by mesne assignments, to The National Superior Company, Toledo, Ohio. Honing tool. 2,031,156; Feb. 18.
Gilpin, Nan, Riverside, Ill. Hand knitting. 2,031,104; Feb. 18.
Gilson, Lucian E., Marshfield, Wis. Shade for greenhouses. 2,031,157; Feb. 18.
Gloekler, John E., Pittsburgh, Pa. Meat holder. 2,031,307; Feb. 18.
Goder, Max, Neuss, Germany, assignor to United States Envelope Company, Springfield, Mass. Seal-flap gumming and drying in envelope machines. 2,031,261; Feb. 18.
Goldman, Ralph H., Chicago, assignor of one-half to D. G. Einstein, Chicago, Ill. Electric pencil. 2,031,532; Feb. 18.
Gollwitzer, Walter T., Cleveland, Ohio, assignor to Addressograph Company, Wilmington, Del. Address plate. 2,030,865; Feb. 18.
Gomberer, Estelle W. (See Williams, Villor P., assignor.)
Goodhue, Julian G., Evanston, assignor to Security Grinding Wheel Co., Chicago, Ill., a trust estate as trustees. Machine for making grinding wheels. 2,031,158; Feb. 18.
Goodman Manufacturing Company. (See Lindgren, Frank A., assignor.)
Goodyear, Ernest F., Moxhall Park, Wibaw, and J. Wright, Stoke Park, Coventry, and H. Trevaskis, Keresley, Coventry, assignors to Dunlop Rubber Company Limited, London, England. Aircraft brake control mechanism. 2,031,412; Feb. 18.
Goosman, Herbert J., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Electrically lighted sewing machine. 2,031,562; Feb. 18.
Gorse, William F., Altrincham, and R. H. Scott, Enfield, assignors to Linotype and Machinery Limited, London, England. Typographical slug casting machine. 1,031,844; Feb. 18.
Gossard, H. W., Company, The. (See Wipperman, Hildegard, assignor.)
Graenacher, Charles, Basel, and F. Ackermann, Binningen, near Basel, assignors to the firm of Society of Chemical Industry in Basle, Basel, Switzerland. Manufacture of benzimidazoles having higher alkyl-groups at the n-carbon atom. 2,031,037; Feb. 18.
Graham, Samuel J., New York, N. Y., assignor to Individual Drinking Cup Company, Inc., Easton, Pa. Display device. 2,031,367; Feb. 18.
Grant Paper Box Company. (See Dreymann, Carl G., assignor.)
Grant, Richard S., and A. A. Schlegel, Akron, assignors to The Jaite-Grant Display Bag Company, Cleveland, Ohio. Procedure and apparatus for making window bags and wrappers. 2,031,580; Feb. 18.
Grasselli Chemical Company, The. (See Lemmerman, Paul C., assignor.)
Gray, James W., New York, N. Y. Column level gauge. 2,031,533; Feb. 18.
Gray, William T., Altrincham, England, assignor to General Electric Company. Fluid control means. 2,031,478; Feb. 18.
Green, Ernest. (See Wells, N., and Green.)
Grettie, Donald B. (See Richardson, W. D., Grettie and Newton.)
Griffith, Raymond W., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Assembly tool for lock cylinders. 2,031,159; Feb. 18.
Grimes, Lucius H. (See McKinney, Robert, assignor.)
Grossenbacher, Ernest, Fajardo, Puerto Rico. Tramp iron collector. 2,030,982; Feb. 18.
Grullemans, John J., Painesville, assignor to The Wayside Gardens Company, Mentor, Ohio. Bed material for flower bulbs. 2,031,308; Feb. 18.
Guildford, Joseph R., Regina, Saskatchewan, Canada. Multiple joint extension union. 2,030,917; Feb. 18.
Gyr, Walter. (See Paul, M., and Gyr.)
Haas, Otto R., North Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe sewing machine. 2,031,479; Feb. 18.
Habirshaw Cable and Wire Corporation. (See Staples, Horace A., assignor.)

Hagedorn, Max, Dessau in Anhalt, and P. Müller, Dessau-Ziebigk, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y. Treatment of films and foils of organic cellulose esters. 2,030,983; Feb. 18.

Hahn, Otto W., San Francisco, Calif. Valve. 2,031,309; Feb. 18.

Hall, Elisha W., Scituate, Mass. Buffing wheel. 2,031,105; Feb. 18.

Hall, James E. L., assignor to C. Martin, Chicago, Ill. Flight apparatus. 2,031,310; Feb. 18.

Hall, Louis M., Fort Thomas, Ky., assignor to The Monarch Tool & Manufacturing Company, Cincinnati, Ohio. Slug-rejecting coin slide. 2,031,160; Feb. 18.

Halpin, Harry J., Camden, and L. S. Henwood, Merchantville, assignors to C. H. Hunt Pen Company, Camden, N. J. Making a pen point. 2,030,918; Feb. 18.

Hamada, Seitoku, Tokyo, Japan, assignor to General Electric Company. Ballast resistance. 2,031,480; Feb. 18.

Hamel, Otto W., Chicago, Ill. Handgrip member. 2,031,161; Feb. 18.

Handy & Harman. (See Leach, Robert H., assignor.)

Hannon, Albert H., Springfield, Ohio. Automatic electroplating machine. 2,030,984; Feb. 18.

Hansen, Morton. (See Young, W. G., Hansen, and Pollen.)

Hardin, Robert H., Bakersfield, Calif. Air cooling device. 2,031,534; Feb. 18.

Harding, John W., Brockway, Pa. Glass feeding device. 2,031,413; Feb. 18.

Harding, Robert, Jr., Elmsford, N. Y., assignor to Sirian Lamp Company, Newark, N. J. Device for creating an illusion. 2,030,919; Feb. 18.

Harrigan, Floyd T., Hobart, Ind. Lawn mower attachment. 2,031,038; Feb. 18.

Harris, Elmer M., San Diego, Calif. Closed car wind deflector. 2,030,806; Feb. 18.

Harris, William W., assignor to Continental Motors Corporation, Detroit, Mich. Clutch. 2,031,311; Feb. 18.

Hart, Charles, Chester, Pa., assignor of one-half to P. Shields, Washington, D. C. Removing metals as volatile chlorides from ores and other matters containing the same. 2,030,867; Feb. 18.

Hart, Charles, Chester, Pa., assignor of one-half to P. Shields, Washington, D. C. Removing metals as volatile chlorides from ores and other matters containing the same. 2,030,868; Feb. 18.

Hartmann, Adolph. (See Kranz, F., and Hartmann.)

Hartmann, August and G. Baurledel, Barmen, Germany, assignors to American Bemberg Corporation, New York, N. Y. Producing artificial silk. 2,030,985; Feb. 18.

Haseltine, Stacy B., assignor to W. H. Miner, Inc., Chicago, Ill. Refrigerator car door. 2,031,039; Feb. 18.

Haseltine, Stacy B., assignor to W. H. Miner, Inc., Chicago, Ill. Refrigerator car door. 2,031,040; Feb. 18.

Haskins, Caryl P., Schenectady, N. Y., assignor to General Electric Company. Synthetic resin and method of preparation. 2,031,481; Feb. 18.

Hasson, Paul R. (See Storey, N. C., and Hasson.)

Hausdörfer, Emil. (See Wolfram, A., and Hausdörfer.)

Haven, Charles D., Milwaukee, Wis., assignor to The Thermopane Company, Toledo, Ohio. Multi-ply glass sheet glazing unit. 2,030,869; Feb. 18.

Havill, Clinton H., South Orange, assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J. Automatic airplane pilot. 2,030,886; Feb. 18.

Hedburg, Harry W., Fresno, Calif. Motor vehicle air conditioner. 2,031,041; Feb. 18.

Heegner, Kurt, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany. Production of oscillations. 2,031,106; Feb. 18.

Henderson, Lawrence M., Narberth, assignor to The Atlantic Refining Company, Philadelphia, Pa. Hydrocarbon oil treatment. 2,030,870; Feb. 18.

Henkel & Cie., Gesellschaft mit beschränkter Haftung. (See Eibel, E., and Kirstahler, assignors.)

Hensel, William M., Chicago, Ill. Color engraving process. 2,030,920; Feb. 18.

Henwood, Lloyd S. (See Halpin, H. J., and Henwood.)

Heraeus-Vacuumschmelze, A. G. (See Hessenbruch, Werner, assignor.)

Herckmans, Alfred, New York, N. Y., assignor to American Telephone and Telegraph Company. Oscillation control device. 2,030,987; Feb. 18.

Herrington, Ralph J., Minneapolis, Minn. Internal combustion engine. 2,031,042; Feb. 18.

Hessenbruch, Werner, Hanau-on-the-Main, assignor to Heraeus-Vacuumschmelze, A. G., Hanau-on-the-Main, Germany. Copper-beryllium alloys. 2,030,921; Feb. 18.

Heywood Paper Box & Manufacturing Company. (See Johnson, Carl W., assignor.)

Hickman, Albert F., assignor to Hickman Pneumatic Seat Co., Inc., Eden, N. Y. Vehicle spring suspension. 2,031,482; Feb. 18.

Hickman Pneumatic Seat Co. (See Hickman, Albert F., assignor.)

Higgins, Gilbert H., Mountain Lakes, N. J., and W. F. Huck, Richmond Hill, assignors to R. Hoe & Co., Inc., New York, N. Y., Irving Trust Company, permanent trustee. Chase. 2,030,871; Feb. 18.

Hildreth, Louis R. (See Fortier, B. F., and Miller, assignors.)

Hill, George H., Jr., Parkersburg, W. Va. Distributing apparatus. 2,031,262; Feb. 18.

Hirth, Richard R., Milwaukee, Wis. Capacitor. 2,030,922; Feb. 18.

Hi-Way Service Corporation. (See Kerber, Joseph H., assignor.)

Hobbs, Howard F., Leamington Spa, England. Power transmission mechanism. 2,031,414; Feb. 18.

Hobbs, Thadeus, Paris, France, assignor to the firm Hydro Nitro S. A., Geneva, Switzerland. Utilizing the heat in the oxidation of ammonia to nitric acid under pressure. 2,031,215; Feb. 18.

Hodson, Walter D., Chicago, Ill. Lubrication and lubricant therefor. 2,031,368; Feb. 18.

Hoe, R., & Co. (See Higgins, G. H., and Huck, assignors.)

Hofstetter, Robert, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Coil winding machine. 2,030,988; Feb. 18.

Hofstetter, Robert, Downers Grove, and J. W. Sager, Oak Park, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Coil winding machine. 2,030,989; Feb. 18.

Holbeck, Austin A., Long Lake, Mich. Feeding apparatus. 2,031,369; Feb. 18.

Hollmann, Hans E., assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Ultra-short wave receiver. 2,030,872; Feb. 18.

Holtzman, John, New York, N. Y. Cigarette package holder. 2,030,990; Feb. 18.

Hood Rubber Company. (See White, Douglas L., assignor.)

Hookless Fastener Company. (See Quisling, Sverre, assignor.)

Hoover, Cecil E., Scandinavia, Wis. Ice cream service container. 2,031,162; Feb. 18.

Hopkins, George J., assignor to McCray Refrigerator Company, Kendallville, Ind. Display refrigerator accessory. 2,030,923; Feb. 18.

Hopper, Basil, San Pedro, assignor to Union Oil Company of California, Los Angeles, Calif. Separating oil from wax cakes. 2,031,107; Feb. 18.

Hopper, Basil, Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Removing wax from oil. 2,031,108; Feb. 18.

Horlick, William, Jr., Racine, Wis. Container and closure therefor. 2,031,312; Feb. 18.

Horowitz, Alexandre, and J. Vissman, Eindhoven, Netherlands, assignors to Radio Corporation of America. Tube base and socket. 2,031,313; Feb. 18.

Hotchkiss, E. H., Company, The. (See Koch, Charles F., Jr., assignor.)

Howse, William D. (See Robinson, R. E., and Rick, assignors.)

Huck, William F. (See Higgins, G. H., and Huck.)

Hughes-Mitchell Processes, Incorporated. (See Mitchell, T. A., and Semmes, assignors.)

Hughey, Howard G., Irvington, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Method and torch for burning liquid fuel. 2,031,163; Feb. 18.

Hungerford, Daniel C., Corning, N. Y., assignor to J. Ward Ogden Company, East Orange, N. J. Spring balanced door. 2,030,873; Feb. 18.

Hunt, C. Howard, Pen Company. (See Halpin, H. J., and Henwood, assignors.)

Hunter, Louis N., assignor to National Radiator Corporation, Johnstown, Pa. Draft hood. 2,031,314; Feb. 18.

Hunter, Lytle G., Flushing, N. Y. Mounting for panels. 2,030,874; Feb. 18.

Hyden, William L. (See Church, W. H., Hyden, and Hermann.)

Hydro Nitro S. A. (See Hobler, Theodor, assignor.)

Hyman, Henry. (See Rothenberg, Harry, assignor.)

Hymans, Frederick, Larchmont, assignor to Otis Elevator Company, New York, N. Y. Elevator safety device. 2,031,043; Feb. 18.

Ideal Aeroplane & Supply Co. (See Kramer, William, assignor.)

Imperial Chemical Industries Limited. (See Williams, Vernon H., assignor.)

Imperial Chemical Industries Limited. (See Wyler, Max, assignor.)

Indian Territory Illuminating Oil Company. (See Elser, Carey O., assignor.)

Individual Drinking Cup Company. (See Graham, Samuel J., assignor.)

Ingersoll Milling Machine Company, The. (See Morgan, Everette K., assignor.)

Ingersoll Milling Machine Company. (See Oberhuber, Alexander, assignor.)

Insect-O Products Company. (See DeOwig, Gilbert G., assignor.)

International Engineering, Inc. (See Langenkamp, A. G., and McElroy, assignors.)

International Harvester Company. (See Johnston, Edward A., assignor.)

International Harvester Company. (See Muench, William F., assignor.)

International Harvester Company. (See Roming, Adolph, and A. G., assignors.)

International Motor Company. (See Loedler, Bruno, assignor.)

Interrante, Frank, Brooklyn, N. Y. Hairpin clasp. 2,031,483; Feb. 18.

Interrante, Frank, Brooklyn, N. Y. Hairpin clasp. 2,031,484; Feb. 18.

Irving Trust Company, permanent trustee. (See Higgins, G. H., and Huck, assignors.)

Jaite-Grant Display Bag Company, The. (See Grant, R. S., and Schlegel, assignors.)

Jenkinson, George R. (See Mouveaux, Emile R., assignor.)

Jennings, Chester S., assignor to The Lamson Company, Syracuse, N. Y. Conveyer. 2,031,368; Feb. 18.

Jennison Herbert C., Bridgeport, assignor to The American Brass Company, Waterbury, Conn. Copper base alloy. 2,031,315; Feb. 18.

Jennison, Herbert C., Bridgeport, Conn. Copper base alloy. 2,031,316; Feb. 18.

Jensen, Lars and B. Sherman, Lincoln, Nebr. Safety pike. 2,031,044; Feb. 18.

Jensen, Louis, assignor to United Autographic Register Co., Chicago, Ill. Autographic register. 2,031,370; Feb. 18.

John, Hans and C. C. Le Febvre, Appleton, and H. Du Bois, Neenah, assignors to Paper Patents Company, Neenah, Wis. Bleaching pulp. 2,031,485; Feb. 18.

Johns-Manville Corporation. (See Mayer, Carl W., assignor.)

Johnson, Arthur, Springfield, Mass. Fishing apparatus. 2,030,875; Feb. 18.

Johnson, Carl W., assignor to Heywood Paper Box & Manufacturing Company, Minneapolis, Minn. Air purifying device. 2,031,164; Feb. 18.

Johnson, Clarence A. E., Minneapolis, Minn. Milk strainer. 2,031,165; Feb. 18.

Johnson, Frank W., Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Compounds of the N-dihydro-1,2,2',1'-anthraquinone azine series and the production thereof. 2,030,876; Feb. 18.

Johnson, Frank W., Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company Wilmington, Del. Production of derivatives of N-dihydro-1,2,2',1'-anthraquinone azine. 2,030,877; Feb. 18.

Johnston, Edward A., Chicago, Ill., assignor to International Harvester Company. Tractor. 2,031,317; Feb. 18.

Jones & Lamson Machine Company. (See Beardsley, Robert O., assignor.)

Jones, Walter I., Arlington, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Fastener installation and fastener for the same. 2,031,563; Feb. 18.

Jongedyk, Ralph. (See Fairfield, W. E., and Jongedyk.)

Jordan, Henry, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Azo dyes and their preparation. 2,030,991; Feb. 18.

Junkers, Hugo, assignor to firm Junkers-Motorenbau G. m. b. H., Dessau, Germany. Engine. 2,031,318; Feb. 18.

Junkers-Motorenbau G. m. b. H. (See Junkers, Hugo, assignor.)

Kahn, Jacob K., Chicago, Ill. Belt drive. 2,031,319; Feb. 18.

Kalbach, Samuel R., assignor to Textile Machine Works, Wyomissing, Pa. Textile working device. 2,031,216; Feb. 18.

Kali-Chemie Aktiengesellschaft. (See Rüsberg, Friedrich, assignor.)

Kamerer, James W., New Kensington, and LeR. S. Whitmire, Natrona Heights, Pa., assignors to Duplate Corporation. Safety glass. 2,030,878; Feb. 18.

Katz, Willy, New York, N. Y. Safety device for gas ranges, gas boilers, etc. 2,031,415; Feb. 18.

Kaufman, Alfonso, Long Beach, assignor, by mesne assignments, to Biolite, Inc., New York, N. Y. Display device. 2,031,416; Feb. 18.

Keenan, Walter F., Jr. (See Maissel, J. S., Welsh, and Keenan.)

Keenan, Walter F., Jr., Pelham Manor, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y. Power plant. 2,031,423; Feb. 18.

Keller, Joseph P., New York, N. Y. Flexible closure for containers and the like. 2,030,992; Feb. 18.

Kemmerer, Ralph E., assignor to The Union Switch & Signal Company, Swissvale, Pa. Signaling system. 2,030,924; Feb. 18.

Kennebeck, Eugene G., Denver, Colo. Device for sacking sliced bread and the like. 2,031,264; Feb. 18.

Kerber, Joseph H., assignor to Hi-Way Service Corporation, Milwaukee, Wis. Hydraulic apparatus. 2,031,166; Feb. 18.

Kernspecht, Otto, assignor to Variety Machine & Stamping Company, Cleveland, Ohio. Guard for automotive vehicle bumpers. 2,031,217; Feb. 18.

Kerr, John W., Chicago, Ill., assignor to H. H. Geyer, Milwaukee, Wis. Longitudinal joint reenforcement system for concrete roads. 2,031,371; Feb. 18.

Kersten, Jacob, Kalamazoo, Mich. Adjustable seat. 2,031,109; Feb. 18.

Keseling, Herman G., Cuero, Tex. Reenforcement supporting chair. 2,031,265; Feb. 18.

Ketay, Morris F., Brooklyn, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Annunciator unit. 2,031,266; Feb. 18.

Ketcham, Frank, Dearborn, and G. E. Dunn, Detroit, Mich., assignors to The Universal Products Co., Inc. Roller bearing assembling machine. 2,031,417; Feb. 18.

Kiecksee, Ernst, Leipzig, assignor, by mesne assignments to Meco-Brennkraft-Maschinen G. m. b. H., Frankfort-on-the-Main, Germany. Ram. 2,031,535; Feb. 18.

Kiesel, John S., Williamsport, Pa. Gate valve. 2,031,372; Feb. 18.

Kilpela, Ano E. (See Rauen, C. F., and Kilpela.)

King, Clifford G., Barrington, R. I. Multiple ring bracelet. 2,031,110; Feb. 18.

King, Jesse G., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,031,536; Feb. 18.

Kirsebom, Gustaf N., Oslo Norway, assignor to Calloy Limited, London, England. Production of alloys of the alkaline earth metals with lead or other metals. 2,031,486; Feb. 18.

Kirsebom, Gustaf N., Oslo, Norway, assignor to Calloy Limited, London, England. Production of alloys of the alkaline earth metals with cadmium. 2,031,487; Feb. 18.

Kirstahler, Alfred. (See Eibel, E., and Kirstahler.)

Klein, Adolf, New York, N. Y. Check for piano actions. 2,031,488; Feb. 18.

Kleineberg, Paul E., Easton, Pa., assignor to T. W. & C. B. Sheridan Company, New York, N. Y. Wrapping machine. 2,030,879; Feb. 18.

Kleineberg, Paul E., Easton, Pa., assignor to T. W. & C. B. Sheridan Company, New York, N. Y. Wrapping machine. 2,030,880; Feb. 18.

Kliwer, Arthur G. (See Ponting, L. C., and Kliwer.)

Kletz, Jacob H., Bronx, N. Y. Handbag. 2,031,218; Feb. 18.

Knight, Herbert M., Montclair, N. J. Vessel. 2,030,881; Feb. 18.

Knox, George N., Alliance, Ohio. Spring axle. 2,031,537; Feb. 18.

Knutson, Carl L., Maywood, assignor to Cinch Manufacturing Corporation, Chicago, Ill. Separable electrical contact device. 2,031,564; Feb. 18.

Koch, Edwin A., River Edge, N. J. Vehicle wheel inclosure. 2,031,219; Feb. 18.

Koenigsberger, Frans, assignor to Parfumerie St. Denis, New York, N. Y. Stable depilatory. 2,031,489; Feb. 18.

Kolster, Frederick A., New York, N. Y., assignor to Federal Telegraph Company, Newark, N. J. High frequency circuit. 2,031,490; Feb. 18.

Kondolf, Henry, assignor to Southern Kraft Corporation, New York, N. Y. Carton and blank for forming the same. 2,031,111. Feb. 18.

Koon, Archie W., assignor to Columbian Rope Company, Auburn, N. Y. Preservative means for ropes and the like. 2,031,267; Feb. 18.

Kraft, Herman T., assignor to The General Tire & Rubber Company, Akron, Ohio. Apparatus for making containers. 2,031,418; Feb. 18.

Kraft-Phenix Cheese Corporation. (See Clickner, Forest H., assignor.)

Kramer, William, Richmond Hill, assignor to Ideal Aeroplane & Supply Co., Inc., New York, N. Y. Toy airplane. 2,031,419; Feb. 18.

Kramp, Edward D., Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Power transmitting belt. 2,031,565; Feb. 18.

Kranz, Philip, Philadelphia, and A. Hartmann, Elkins Park, assignors to B. Wilmsen, Philadelphia, Pa. Crinkled tinsel producing machine. 2,031,566; Feb. 18.

Krosman, Laudie E., Scio, Oreg. Wire splicer. 2,031,167; Feb. 18.

Kuch, Charles F., Jr., assignor to The E. H. Hotchkiss Company, Norwalk, Conn. Staple driving machine. 2,031,320; Feb. 18.

Kühle, Wilhelm E., assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Power tube. 2,031,112; Feb. 18.

Kuhn, George, Takoma Park, Md., assignor to Butler-Kuhn Corporation, Washington, D. C. Illuminating apparatus. 2,031,168; Feb. 18.

Künstel, Fritz. (See von Forster, H., and Künstel.)

Küppenbender, Heinz, Dresden, Germany. Photographic camera. 2,031,321; Feb. 18.

Kussmaul, Walter, assignor to the firm of Chemical Works Formerly Sandoz, Basel, Switzerland. Manufacture of new stable antimony compounds. 2,031,268; Feb. 18.

Kwick-Kut Manufacturing Co. (See Boyer, C. F., and Fouke, assignors.)

Lamson Company, The. (See Jennings, Chester S., assignor.)

Lancaster, John T., Newton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sole attaching apparatus. 2,031,491; Feb. 18.

Land, Edwin H., Wellesley Farms, Mass., assignor to Sheet Polarizer Company, Inc., Union City, N. J. Avoiding glare from automobile headlights. 2,031,045; Feb. 18.

Landolt Albert, Basel, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Prevention of the bleeding on white animal fibers. 2,031,046; Feb. 18.

Lane, Herald D. R., Derby, assignor of one-third to H. W. Culberston, one-third to K. M. Lane, and one-third to W. H. Nickels, Gate City, Va. Self-locking motor control. 2,031,322; Feb. 18.

Lane Kenith M., et al. (See Lane, Herald D. R., assignor.)

Langenkamp, Albert G., and R. H. McElroy, assignors to International Engineering, Inc., Dayton, Ohio. Fan. 2,030,993; Feb. 18.

Lansing, Raymond P., Montclair, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y. Engine starting apparatus. 2,030,882; Feb. 18.

Lansing, Raymond P., Montclair, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y. Engine starter. 2,031,269; Feb. 18.
Le Plant-Choate Manufacturing Co. Inc. (See Choate, R. E., and Rodier, assignors.)
Larsen, Hans B. (See Stern, J. N., and Larsen.)
Lashar, Walter B., Jr. (See Lewis, D., Walsh, and Lashar.)
Lasstocay, Stephen, Bergenfield, N. J., assignor to Freydberg Bros. Inc., New York, N. Y. Feed reversing mechanism for sewing machines. 2,031,323; Feb. 18.
Laymon, Gilbert D., Miami, Fla. Removing stains from teeth. 2,031,169; Feb. 18.
Lea, Dudley L., assignor to Self Lifting Piano Truck Company, Findlay, Ohio. Portable truck. 2,030,926; Feb. 18.
Leach, Robert H., Fairfield, Conn., assignor to Handy & Harman, New York, N. Y. Alloys. 2,031,113; Feb. 18.
Lebel, Louis, Sherbrooke, Quebec, Canada, assignor to J. J. Rosenthal, New York, N. Y. Demountable wheel. 2,031,114; Feb. 18.
Lebbers, Harry J., assignor to The Everedy Company, Frederick, Md. Device for opening jars. 2,031,420; Feb. 18.
Lechler, Firma Paul. (See Liedle, Wilhelm, assignor.)
Lee, Harry S., Detroit, Mich. Apparatus for manufacturing, treating, and cooling cement clinkers. 2,031,047; Feb. 18.
Lee, Harry S., Detroit, Mich. Fuel feed burner. 2,031,048; Feb. 18.
Lee, Harry S., Detroit, Mich. Apparatus for manufacturing and treating cement clinkers. 2,031,049; Feb. 18.
Leeds, Morris E., assignor to Leeds & Northrup Company, Philadelphia, Pa. Measuring system. 2,031,060; Feb. 18.
Leeds & Northrup Company. (See Leeds, Morris E., assignor.)
Le Febvre, Clarence C. (See John, H., Le Febvre, and Du Bois.)
Lehn, Charles J., Oak Park, Ill. Humidifying system. 2,031,220; Feb. 18.
Lehn, John U. (See Zahm, J. D. and Lehn.)
Leighton, John W., Port Huron, Mich. Shackle support. 2,031,492; Feb. 18.
Leighton, John W., Port Huron, Mich. Spring bolt assembly. 2,031,493; Feb. 18.
Lemmerman, Paul C., Cleveland Heights, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Metal casting. 2,031,538; Feb. 18.
Lemmerman, Paul C., East Cleveland, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Welding rod coating. 2,031,494; Feb. 18.
Lenmart Company. (See Stephenson, Arlington W., assignor.)
Lester, James C., Pulaski, Tenn. Vehicle indicating lamp. 2,031,170; Feb. 18.
Lewellen, Chester L., assignor to Motor Products Corporation, Detroit, Mich. Radiator grille. 2,031,324; Feb. 18.
Lewis, Arthur J., Stratford, assignor to The Baird Machine Company, Bridgeport, Conn. Automatic chucking machine. 2,031,051; Feb. 18.
Lewis, Dartrey, Boston, Mass., W. L. Walsh, Stratford, and W. B. Lashar, Jr., Fairfield, Conn., assignors to American Chain Company, Inc., Bridgeport, Conn. Abrasive cutting machine and method. 2,031,052; Feb. 18.
Lewis Invisible Stitch Machine Company. (See Moulton, Harley C., assignor.)
Lewis, Joseph. (See Lindsay, Myrtle E., assignor.)
Lexow, Edward F., Minneapolis, Minn. Loose leaf binder. 2,031,373; Feb. 18.
Liedle, Wilhelm, Stuttgart-Cannstatt, assignor to Firma Paul Lechler, Stuttgart, Germany. Method and apparatus for manufacturing packing. 2,031,567; Feb. 18.
Liedtke, Raymond C., Hankinson, and C. O. Wolen, Northgate, N. Dak. Dust mop cleaner and receptacle. 2,031,374; Feb. 18.
Lilley, Samuel C., Hamden, assignor to The American Mills Company, Hamden, Conn. Noncreep elastic strands for elastic fabrics. 2,031,375; Feb. 18.
Lindbloom, Charles V., and L. W. Lindbloom, Cranford, N. J. Sanitary toothbrush holder. 2,031,115; Feb. 18.
Lindbloom, Lily W. (See Lindbloom, Charles V. and L. W.)
Lindgren, Frank A., Western Springs, assignor to Goodman Manufacturing Company, Chicago, Ill. Kerf-cutting machine. 2,030,926; Feb. 18.
Lindgren, Frank A., Western Springs, assignor to Goodman Manufacturing Company, Chicago, Ill. Mining machine. 2,031,376; Feb. 18.
Lindsay, Myrtle E., assignor to J. Lewis, Los Angeles, Calif. Hair curling device. 2,031,377; Feb. 18.
Linotype and Machinery Limited. (See Gorse, W. F., and Scott, assignors.)
Linsell, Harry K., Oak Park, Ill., assignor to United States Gypsum Company, Chicago, Ill. Mastic floor topping. 2,031,171; Feb. 18.
Lisius, Henry, Havelock, N. Dak. Cultivator. 2,030,994; Feb. 18.
Little, Arthur D., Incorporated. (See Atkinson, Ralph I., assignor.)
Lobley, Alfred G., Erdington, Birmingham, assignor of one-half to Birmingham Electric Furnaces Limited, Birmingham, England. Annealing and other heat-treatment furnaces. 2,031,270; Feb. 18.
Lockhead Hydraulic Brake Company. (See Boughton, Edward E., assignor.)
Loeffler, Bruno, Plainfield, N. J., assignor to International Motor Company, New York, N. Y. Welded steel engine. 2,030,995; Feb. 18.
Logan, William A., Kinghorn, Fife, Scotland. Attachment for mining machines. 2,031,431; Feb. 18.
Lombella, August, deceased, Westfield, Mass., J. L. Lombella, executor. Halter. 2,031,271; Feb. 18.
Lombella, John L., executor. (See Lombella, August.)
Lorso, Francis J. (See Loree, George S., assignor.)
Loree, George S., Hornell, N. Y., assignor to F. J. Loree, Hornell, N. Y. Milk bottle receptacle. 2,031,272; Feb. 18.
Lorimer, Henry W., Cleveland Heights, assignor to Willard Storage Battery Company, Cleveland, Ohio. Battery terminal post. 2,031,378; Feb. 18.
Lounsberry and Harris. (See Wirick, Kirk G., assignor.)
Ludeman, Clifford G. (See Powers, H. F., and Ludeman.)
Lustig, Ruben B., Kansas City, Mo. Display apparatus. 2,030,996; Feb. 18.
Luttina, Ruth E. (See Miles, Arthur L., assignor.)
Lux, Heinz. (See Fetterowsky, E., and Lux.)
Macaulay, Joseph A., De Soto, Wis. Broadcast seeder. 2,031,540; Feb. 18.
MacClain, Albert L., Manchester, Conn., assignor, by mesne assignments, to United Aircraft Corporation. Engine cooling system. 2,031,541; Feb. 18.
Macklanburg, Louis A., Oklahoma City, Okla. Apparatus for and method of loading guns for dispensing viscid or semi-liquid materials. 2,031,496; Feb. 18.
Macomic Corporation. (See White, George H., assignor.)
Madison, Louis, Brooklyn, N. Y. Collar clasp. 2,030,997; Feb. 18.
Malley, Nelson F., Brooklyn, N. Y., assignor to Aluminum Alloys Welding Corporation. Spot-welding aluminum and aluminum alloys. 2,030,906; Feb. 18.
Malm, Carl J., assignor to Eastman Kodak Company, Rochester, N. Y. Precipitation of mixed esters of cellulose. 2,030,588; Feb. 18.
Maloney, George J., Long Beach, Calif. Beverage dispensing bottle. 2,031,173; Feb. 18.
Malseed, James R., Brooklyn, N. Y., J. T. Welsh, Ridgeway, Pa., and W. F. Keenan, Jr., Pelham Manor, assignors to Foster Wheeler Corporation, New York, N. Y. Power plant. 2,031,422; Feb. 18.
Manchester, Paul, Pawtucket, R. I. Extended electrical outlet. 2,031,542; Feb. 18.
Mann, William D., Highland Park, Ill. Building construction. 2,030,998; Feb. 18.
Marien, Charles A., assignor to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo. Piston packing ring. 2,030,927; Feb. 18.
Markley, Jonathan. (See Woodruff, M. D., Mechlin, and Markley.)
Marschalk, Frederick F., Augusta, Ga. Dental instrument. 2,031,273; Feb. 18.
Martin, Cecil. (See Hall, James E. L., assignor.)
Marvel, Carl S., Urbana, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Fuel. 2,031,497; Feb. 18.
Mason, William H., assignor to Masonite Corporation, Laurel, Miss. Building construction. 2,031,568; Feb. 18.
Mason, William T., and H. J. Coleman, LaSalle, Ill., said Coleman assignor to said Mason. Bottle cap and sealing same. 2,030,884; Feb. 18.
Masonite Corporation. (See Mason, William H., assignor.)
Massini, Alvin A., Wheeling, W. Va. Apparatus for forming, folding, and banding paper stripe. 2,031,068; Feb. 18.
Mathieu, Eugene, Neuilly-sur-Seine, France. Carburetor. 2,031,379; Feb. 18.
Maul, Michael, Berlin-Johannisthal, Germany. Verifying machine for perforated records. 2,031,569; Feb. 18.
Maxim, Myles S., Somerville, Mass. Apparatus for burning sulphur. 2,030,885; Feb. 18.
Mazzocco, Dante V., assignor to Eureka Photo Mechanical Equipment, Inc., New York, N. Y. Registering apparatus. 2,031,221; Feb. 18.
Mazzocco, Dante V., assignor to Eureka Photo Mechanical Equipment, Inc., New York, N. Y. Machine for transferring designs. 2,031,222; Feb. 18.
McBurney, Willard B., Atlanta, Ga. Safety outlet closure for conveyers. 2,031,116; Feb. 18.
McCaa, David G., Philadelphia, Pa. Reducing electrical disturbances. 2,031,539; Feb. 18.
McCabe, Joseph J., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Lens blocking device. 2,031,880; Feb. 18.
McCallum, Arthur, assignor to Fluko Products Corporation, New Brunswick, N. J. Composite packing. 2,031,381; Feb. 18.
McCarthy, Timothy F., Indiana, Pa. Sectional conveyer. 2,031,064; Feb. 18.
McClew, John W. (See Bates, F. T., and McClew.)
McCord Radiator & Mfg. Co. (See Tinkham, Guy L., assignor.)
McCray Refrigerator Company. (See Hopkins, George J., assignor.)

McDonald, Frank H., Pittsburgh, Pa. Electrical advertising sign. 2,030,886; Feb. 18.
McElroy, Roy H. (See Langenkamp, A. G., and McElroy.)
McKay, Robert C., Swampscott, Mass. Apparatus for cooling warm milk. 2,031,274; Feb. 18.
McKinney, Robert, Highland Park, assignor of one-third to L. H. Grimes, Highland Park, Mich. Air conditioning and refrigerating device. 2,031,055; Feb. 18.
McKissick, William H., Tulsa, Okla. Tubing catcher. 2,031,056; Feb. 18.
McLaughlin, Lawrence, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Ink. 2,030,999; Feb. 18.
McLaurin, William W., deceased, Brookfield, by Old Colony Trust Company, executor, Boston, Mass. Adhesively coated sheet material. 2,031,275; Feb. 18.
McMahon, Joseph J., assignor to Bridgeport Brass Company, Bridgeport, Conn. Flexible internal stop. 2,031,424; Feb. 18.
McQueen, Malcolm J., Toronto, Ontario, Canada. Stock-car partition. 2,031,382; Feb. 18.
Mechlin, William H. (See Woodruff, M. D., Mechlin, and Markley.)
Meco-Brenukraft-Maschinen G. m. b. H. (See Klockner, Ernst, assignor.)
Mellen, Joseph F., Providence, R. I. Safety razor. 2,031,223; Feb. 18.
Mendoza, Rafael, Mexico, D. F., Mexico. Machine gun bolt mechanism. 2,031,383; Feb. 18.
Mercier, Jean, Neuilly-sur-Seine, France. Damping device. 2,031,000; Feb. 18.
Merrill, David R., Long Beach, and P. Subkow, Los Angeles, assignors to Union Oil Company of California, Los Angeles, Calif. Dewaxing oil. 2,031,117; Feb. 18.
Merrill, David R., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Process and apparatus for dewaxing oils. 2,031,118; Feb. 18.
Merryweather, James. (See Weber, G. G., and Merryweather.)
Mesner, Arthur J., et al. (See Stillwell, Charles W., assignor.)
Meunier, Christian J., and H. Bomboy, New Orleans, La. Bank protecting device. 2,031,543; Feb. 18.
Meyer, Carl W., assignor to Johns-Manville Corporation, New York, N. Y. Eyelet assembly. 2,031,325; Feb. 18.
Micro Corporation, The. (See Crimer, Harry J., assignor.)
Middaugh, John B., assignor, by mesne assignments, to Oppenheimer Casing Co., Chicago, Ill. Hydraulic press. 2,030,928; Feb. 18.
Midland Steel Products Company, The. (See Speed, John, assignor.)
Miles, Prentice M. (See Paul, M., and Gyr, assignors.)
Milk Processes, Inc. (See Wendt, Herman D., assignor.)
Miller, Durando, Pelham Manor, N. Y. Mortar mixer. 2,031,326; Feb. 18.
Miller, Fredrick A. (See Fortier, B. F., and Miller.)
Miller, Ray A., assignor to Simplicity Manufacturing Company, Port Washington, Wis. Boring machine. 2,031,173; Feb. 18.
Miller, William R., Passaic, N. J., assignor to R. F. Van Seggern, Maplewood, N. J. Heating unit. 2,031,498; Feb. 18.
Mills, George, Gordon, near Sydney, New South Wales, Australia. Gas pressure regulator. 2,031,174; Feb. 18.
Miner, W. H., Inc. (See Hasseltine, Stacy B., assignor.)
Mining Engineering Company, The. (See Moore, Matthew S., assignor.)
Mitchell, Robert W., Westmount, Quebec, Canada. Composite pipe and like structure. 2,031,057; Feb. 18.
Mitchell, Thomas A., Inglewood, and R. L. Sessions, Los Angeles, Calif., assignors, by mesne assignments, to Hughes-Mitchell Processes, Incorporated, Denver, Colo. Making sodium and zinc sulphides. 2,030,887; Feb. 18.
Miyashita, Yoshiro, Seattle, Wash. Stool and auxiliary pedal for pianos. 2,030,929; Feb. 18.
Mock, Hugo, New York, N. Y. Combination grid and cover for ice trays. 2,031,276; Feb. 18.
Möller, Paul. (See Hagedorn, M., and Möller.)
Monarch Tool & Manufacturing Company, The. (See Hall, Louis M., assignor.)
Monowatt Electric Corporation. (See Bamander, George B., assignor.)
Moore, Anne M., Lancaster, S. C. Hair drying device. 2,031,001; Feb. 18.
Moore Drop Forging Company. (See Abbe, Earl C., assignor.)
Moore, Lee C., Tulsa, Okla. Oil field derrick post. 2,031,002; Feb. 18.
Moore, Matthew S., Malvern, assignor of one-half to The Mining Engineering Company, Limited, Worcester, England. Loading device for mining machines. 2,031,544; Feb. 18.
Moore, Ninian R., Du Bois, Pa. Grave covering apparatus. 2,031,175; Feb. 18.
Moreland, Robert E., Galveston, Tex. Combination stool and carrier. 2,031,119; Feb. 18.
Morgan, Everette K., assignor to The Ingersoll Milling Machine Company, Rockford, Ill. Machine tool. 2,030,888; Feb. 18.
Morgan, John S., Jr. (See Gillett, F. L., and Morgan.)
Morral, Samuel E., and W. W. Morral, Morral, Ohio. Corn husking machine. 2,031,277; Feb. 18.
Morral, William W. (See Morral, Samuel E. and W. W.)
Morris Paper Mills. (See Barnard, Earl W., assignor.)
Morton, Harold S., assignor to The Stott Stoker Company, St. Paul, Minn. Stoker controlling device. 2,031,120; Feb. 18.
Moser, Wilhelm, Riehen, and W. Floroni, Binningen, Switzerland, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Vat-dyestuffs of the anthraquinone series and making the same. 2,031,053; Feb. 15.
Motor Products Corporation. (See Lewellen, Chester L., assignor.)
Motor Terminals Company. (See Fitch, Benjamin F., assignor.)
Moullin, Eric B., Oxford, England, assignor to Radio Corporation of America. Thermionic oscillation generator. 2,031,324; Feb. 18.
Moulton, Harley C., Maplewood, assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo. Combined seaming and pinking machine. 2,031,545; Feb. 18.
Mousseau, Emile S., Ottawa, assignor to G. B. Jenkinson, Prescott, Ontario, Canada. Hose support. 2,031,378; Feb. 18.
Mueller, Ervin H., Detroit, Mich. Valve structure. 2,031,121; Feb. 18.
Mueller, Wilhelm, Gleiwitz, Germany. Furnace for roasting sulphurous ores. 2,031,122; Feb. 18.
Muench, William F., Chicago, Ill., assignor to International Harvester Company. Oil filter base. 2,031,327; Feb. 18.
Muhleisen, Karl, assignor to Schutte & Koerting Company, Philadelphia, Pa. Heat exchanger. 2,031,425; Feb. 18.
Mulford, Logan W., Long Island City, N. Y. Concealed skylight ventilation. 2,031,328; Feb. 18.
Muller, Robert A., Wellesley, Mass., assignor to Atlas Plywood Corporation, Boston, Mass. Machine for making drums, kegs, and the like. 2,031,570; Feb. 18.
Munroe, David, et al. (See Rhodin, Brodde E. F., assignor.)
Mutchler, Maurice E., Buffalo, N. Y. Head for internal combustion engines. 2,031,123; Feb. 18.
Natella, Matteo, Salerno, Italy. Transmission mechanism. 2,031,050; Feb. 18.
National Bearing Metals Corporation. (See Vigne, Albert, assignor.)
National Fuels Corporation. (See Berry, G. A., and Beardsley, assignors.)
National Pneumatic Company. (See Parvin, Edward G., assignor.)
National Radiator Corporation. (See Hunter, Louis N., assignor.)
National Superior Company, The. (See Gillett, F. L., and Morgan, assignors.)
National Superior Company, The. (See Spalding, John D., assignor.)
National Washboard Company. (See Oppermann, Kurt P., assignor.)
Negrotto, Sidney H., U. S. Army, Fort Benning, Ga. Mount for machine guns. 2,030,889; Feb. 18.
Neptune, John M., Rich Hill, Mo. Wire line drilling clamp. 2,031,003; Feb. 18.
Newman, William J., Chicago, Ill. Excavating machine. 2,031,279; Feb. 18.
News Projection Corporation. (See Spencer, James A., assignor.)
Newton, Roy C. (See Richardson, W. D., Grettie, and Newton.)
New York Air Brake Company, The. (See Silicox, Lewis K., assignor.)
Nicholson, Frederick. (See Peterman, T. A., and Nicholson.)
Nicholson, Lewis C., et al. (See Robinson, William A., assignor.)
Nickels, Will H., et al. (See Lane, Herald D. R., assignor.)
Niemann, Georg, Ludwigshafen-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Dimaso dyestuff. 2,031,426; Feb. 18.
Nilsson, Karl G. V., assignor to Aktiebolaget Svenska Kullagerfabriken, Gotoborg, Sweden. Sealed bearing. 2,031,571; Feb. 18.
Ninekirk, Chester P., Berkeley, Calif. Child's play vehicle. 2,031,176; Feb. 18.
Northrop Corporation, The. (See Northrop, John K., assignor.)
Northrop, John K., Los Angeles, assignor to The Northrop Corporation, Inglewood, Calif. Aircraft speed control. 2,031,177; Feb. 18.
Norton, Charles B., assignor to S. B. Dresser Manufacturing Company, Bradford, Pa. Adjustable repair clamp for bell and spigot joints. 2,031,499; Feb. 18.
Oberhoffken, Alexander, assignor to Ingersoll Milling Machine Company, Rockford, Ill. Control mechanism for machine tools and the like. 2,030,890; Feb. 18.
O'Donnell, Stella A., Brooklyn, N. Y. Finishing stencil. 2,031,125; Feb. 18.
Ogden, J. Edward, Company. (See Hungerford, Daniel C., assignor.)
Ohio Brass Company, The. (See Bovard, Floyd G., assignor.)

Ohio Brass Company, The. (See Taylor, John J., assignor.)
Ohio Match Company, The. (See Parker, Lucian E., assignor.)
Ohmer, John F., Dayton, assignor, by mesne assignments, to Central United National Bank, Cleveland, Ohio, as trustee. Printing odometer. 2,031,060; Feb. 18.
O'Key, Alfred R. (See Barnett, W., and O'Key.)
Old Colony Trust Company, executor. (See McLaurin, William W.)
Oliver, William B. J., Westmount, Quebec, Canada. Ski pole. 2,031,394; Feb. 18.
Olney, Benjamin, Brighton, assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Sound reproducing system. 2,031,500; Feb. 18.
Omnichrome Corporation. See von Fraunhofer, Hans, assignor.)
Oppenheimer Casing Co. (See Middaugh, John B., assignor.)
Oppermann, Kurt P., Saginaw, Mich., assignor to National Washboard Company, Chicago, Ill. Washboard. 2,031,178; Feb. 18.
Outline, John E., Berwyn, Ill., assignor to Automatic Electric Company, Limited, Liverpool, England. Automatic telephone system. 2,031,329; Feb. 18.
Otis Elevator Company. (See Hyman, Frederick, assignor.)
Packard Motor Car Company. (See Vincent, Jesse G., assignor.)
Padelford, Lester E., and W. H. Rudolph, Buffalo, N. Y. Broiler or the like. 2,031,320; Feb. 18.
Page, Fred'k, Contracting Co., The. (See Vincent, Thomas C., Jr.)
Paper Patents Company. (See John, H., Le Febvre, and Du Bois.)
Papworth, Walter A., Grand Rapids, Mich., assignor, by mesne assignments, to Easy Washing Machine Corporation, Syracuse, N. Y. Centrifugal clothes drier. 2,031,427; Feb. 18.
Parfumerie St. Denis. (See Koenigsberger, Frans, assignor.)
Parker, Charles S., C. L. Wall, and F. Farrington, Bolton, England. Resist effects with azo dyestuffs. 2,031,546; Feb. 18.
Parker, Henry W., assignor to Rogers Radio Tubes, Limited, Toronto, Ontario, Canada. Electron discharge device. 2,030,930; Feb. 18.
Parker, Henry W., assignor to Rogers Radio Tubes, Ltd., Toronto, Ontario, Canada. Electron coupled thermionic oscillator. 2,030,931; Feb. 18.
Parker, Lucian E., assignor to The Ohio Match Company, Wadsworth, Ohio. Cover feeder for book match machines. 2,031,572; Feb. 18.
Parker Pen Company, The. (See Tefft, Ivan D., assignor.)
Parks, Paul B. (See Smith, W. M., Parks, and Russell.)
Parvin, Edward G., Roselle, assignor to National Pneumatic Company, Rahway, N. J. Door operator. 2,031,220; Feb. 18.
Paul, Max, and W. Gyr, assignor of one-third to P. M. Miles, Stockton, Calif. Fluid control valve for vacuum brake systems. 2,031,061; Feb. 18.
Payne, William H., assignor to The American Rolling Mill Company, Middletown, Ohio. Rolling mill roll, making same, and product of such roll. 2,030,891; Feb. 18.
Peabody, Charles G., and R. W. Roberts, Portland, Oreg. Automatic parking brake. 2,031,062; Feb. 18.
Pearce, Charles F., Jr. (See Perlese, H., and Pearce.)
Peco Manufacturing Corporation. (See Errig, W. F., and Pfundt, assignors.)
Pelipets, Michail G., assignor of one-half to P. I. Doodchenko, New York, N. Y. Match manufacturing. 2,030,892; Feb. 18.
Penn Electric Switch Co. (See Persons, Lawrence M., assignor.)
Penn Electric Switch Co. (See Rubel, Abraham L., assignor.)
Pennebaker, Robert H., New Orleans, La. Cylinder head. 2,030,893; Feb. 18.
Pennebaker, Robert H., New Orleans, La. Cylinder head. 2,030,894; Feb. 18.
Penning, Frans M., Eindhoven, Netherlands, assignor to Radio Corporation of America. Photoelectric tube. 2,031,331; Feb. 18.
Pennsylvania Optical Co. (See Essick, Charles R., assignor.)
Perlese, Hugo, Chicago, and C. F. Pearce, Jr., Glencoe, assignors to Burton-Dixie Corporation, Chicago, Ill. Chaise longue. 2,031,124; Feb. 18.
Persons, Lawrence M., assignor to Penn Electric Switch Co., Des Moines, Iowa. Control device. 2,030,932; Feb. 18.
Persons, Lawrence M., assignor to Penn Electric Switch Co., Des Moines, Iowa. Magnet switch. 2,030,933; Feb. 18.
Persons, Lawrence M., assignor to Penn Electric Switch Co., Des Moines, Iowa. Spraying device. 2,030,934; Feb. 18.
Peschl, Frank A., Jackson Heights, assignor to Erospha, Inc., New York, N. Y. Spherical machine. 2,031,125; Feb. 18.
Peschl, Frank A., Jackson Heights, assignor to Erospha, Inc., New York, N. Y. Spherical machine. 2,031,126; Feb. 18.
Pessi, Thomas, Raritan, N. J. Continuous machine for printing floor and wall coverings. 2,031,066; Feb. 18.
Peterman, Theodore A., and F. Nicholson, Tacoma, Wash., said Nicholson assignor to said Peterman. Panel chamfering machine. 2,031,358; Feb. 18.
Peterson, Conrad E., Malden, Mass., assignor to De Long Gum Co., Boston, Mass. Machine for use in the manufacture of chewing gum. 2,031,578; Feb. 18.
Pevere, Ernest F., Beacon, and C. G. Ludeman, Fishkill, assignors to The Texas Company, New York, N. Y. Lubricating oils. 2,031,227; Feb. 18.
Peycke, Armand H., Kenilworth, assignor to American Steel Foundries, Chicago, Ill. Brake head arrangement. 2,031,127; Feb. 18.
Pfaff, Georg, Breslau, Germany, assignor to Vereinigte Zünder-und Kabelwerke A.-G., Meissen/Sachsen, Germany. Electric power transmission system. 2,030,938; Feb. 18.
Pfundt, George M. (See Errig, W. F., and Pfundt.)
Pickop, George B., New Haven, Conn. Vibrator. 2,030,938; Feb. 18.
Pinkerton Folding Box Co. (See Roe, Frank L., assignor.)
Pneumercator Company. (See Thomas, William, assignor.)
Pollack, Joseph O., Chicago, Ill. Cravat holder. 2,031,004; Feb. 18.
Pollon, Joseph F. (See Young, W. G., Hansen, and Pollon.)
Ponting, Leonard C., and A. G. Kliwer, Abilene, Kans. Elevator bucket. 2,031,064; Feb. 18.
Porter, Kenneth E., Shaker Heights, Ohio. Reel. 2,031,501; Feb. 18.
Posthumus, Klaas, and B. van der Pol, Eindhoven, Netherlands, assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y. Antenna. 2,031,065; Feb. 18.
Powdereo Inc. (See Van Law, Dustin, assignor.)
Powell, Ellis G., Michigan City, Ind., assignor to C. A. Dunham Company, Marshalltown, Iowa. Electrical controller. 2,031,502; Feb. 18.
Premier Bed & Spring Company. (See Smith, Arthur M., assignor.)
Pyridium Corporation, The. (See Renshaw, R. R., Tims, and Ducsel, assignors.)
Quisling, Sverre, Madison, Wis., assignor to Hookless Fastener Company, Meadville, Pa. Making slide fasteners. 2,030,895; Feb. 18.
Radio Corporation of America. (See Dowding, George V., assignor.)
Radio Corporation of America. (See Engel, Francis E., assignor.)
Radio Corporation of America. (See Geffcken, H., and Richter, assignors.)
Radio Corporation of America. (See George, Ralph W., assignor.)
Radio Corporation of America. (See Horowitz, A., and Visman, assignors.)
Radio Corporation of America. (See Mcullin, Eric B., assignor.)
Radio Corporation of America. (See Penning, Frans M., assignor.)
Radio Corporation of America. (See Posthumus, K., and van der Pol, assignors.)
Radio Corporation of America. (See Shore, Henry, assignor.)
Radio Corporation of America. (See Smith, S. B., and Eckersley, assignors.)
Radio Corporation of America. (See Straub, Anthony A., assignor.)
Radio Corporation of America. (See Thompson, Leland E., assignor.)
Radio Corporation of America. (See Wells, N., and Green, assignors.)
Radio Corporation of America. (See Wright, G. M., and Brett, assignors.)
Raduner & Co. A.-G. (See Bener, Christian, assignor.)
Ragsdale, Earl J. W., Norristown, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Boat hull structure. 2,031,428; Feb. 18.
Railway Track-work Co., The. (See Reagan, Thomas J., assignor.)
Raines, Arnold, Brooklyn, N. Y. Electrolytic condenser and making the same. 2,031,128; Feb. 18.
Rainey, Alexander G., London, England. Light-sensitive cell control mechanism. 2,031,503; Feb. 18.
Ramsdell, Thomas S., Great Barrington, Mass. Automatic lap doffer. 2,031,065; Feb. 18.
Ramsey Accessories Manufacturing Corporation. (See Marien, Charles A., assignor.)
Rapisarda, Edward D., Arawam, Mass. Printing and depositing mechanism. 2,031,396; Feb. 18.
Raschig, Dr. F., G. m. b. H. (See Raschig, Klaus, assignor.)
Raschig, Klaus, assignor to Dr. F. Raschig G. m. b. H., Ludwigshafen-on-the-Rhine, Germany. Evaporating aqueous hydrochloric acid. 2,031,179; Feb. 18.
Rauen, Carl F., Grosse Pointe, and A. M. Kilpela, Detroit, Mich., assignors, by mesne assignments, to Borg-Warner Corporation. Automatic transmission. 2,031,087; Feb. 18.
Reagan, Thomas J., Scranton, assignor to The Railway Track-work Co., Philadelphia, Pa. Derailing device. 2,031,574; Feb. 18.
Reed, C. A., Company. (See Burgard, Margaret A., assignor.)
Reed, Leslie D., assignor to Columbian Rope Company, Auburn, N. Y. Abrasive supporting pad and making the same. 2,031,230; Feb. 18.
Rehling, Clifford A., assignor to Seeger Refrigerator Company, St. Paul, Minn. Refrigerator door. 2,031,068; Feb. 18.
Reichmann, Reinhold, Berlin, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Incandescent igniter. 2,030,937; Feb. 18.
Reichmann, Reinhold, Berlin, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Making shaped bodies of semiplastic metallic oxides. 2,031,129; Feb. 18.
Reilly, John H., assignor to The Dow Chemical Company, Midland, Mich. Production of alkyl halides. 2,031,721; Feb. 18.
Reiter, Herman, Brooklyn, N. Y. Ryelet socket. 2,031,429; Feb. 18.
Renfroe, Daniel J., Thomasville, Ga. Machine for inserting bottles, etc., into tight fitting bags. 2,031,006; Feb. 18.
Renshaw, Rasmus R., New York, and R. T. Tims, and B. F. Ducsel, Yonkers, assignors to The Pyridium Corporation, Nepera Park, N. Y. Medicinal amo compounds. 2,030,894; Feb. 18.
Renshaw, Rasmus R., New York, and R. T. Tims, and B. F. Ducsel, Yonkers, assignors to The Pyridium Corporation, Nepera Park, N. Y. Medicinal manoano compounds. 2,030,897; Feb. 18.
Resinous Products & Chemical Co., The. (See Brusen, Herman A., assignor.)
Reuther, John, East Aurora, N. Y. Potato planter. 2,013,547; Feb. 18.
Reynolds, Joseph H. (See Blackwood, William C., assignor.)
Rheem Manufacturing Company. (See Evans, Llewellyn W., assignor.)
Rheem Manufacturing Company. (See Rheem, Richard K., assignor.)
Rheem, Richard K., Oakland, Calif., assignor to Rheem Manufacturing Company, Container fitting. 2,031,351; Feb. 18.
Rhodin, Brodde B. F., Caldwell, N. J., assignor of one-half to A. H. Chitty, Sault Ste. Marie, Ontario, Canada, and one-half to D. Munroe, Belleville, N. J. Manufacture of sulphur dioxide. 2,031,504; Feb. 18.
Rich, Ronald U., Teaneck, N. J., assignor to American Car and Foundry Company, New York, N. Y. Mine car. 2,030,933; Feb. 18.
Richardson, William D., D. P. Grattie, and R. C. Newton, assignors to Swift & Company, Chicago, Ill. Stabilization of oils and fats. 2,031,009; Feb. 18.
Richter, Hans. (See Geffcken, H., and Richter.)
Rick, Edward L. (See Robinson, R. R., and Rick.)
Riise, John, Doylestown, Ohio. Gaseous fuel mixing valve. 2,031,332; Feb. 18.
Rison, Carey O., Oklahoma City, assignor of one-half to Indian Territory Illuminating Oil Company, Bartlesville, Okla. Container for explosives. 2,031,505; Feb. 18.
Ritter, Harry V., New York, N. Y. Handbag. 2,031,506; Feb. 18.
Roberts, James A., Douglas, Ga. Automobile door locking mechanism. 2,031,251; Feb. 18.
Roberts, Richard W. (See Peabody, C. G., and Roberts.)
Robinson, Joseph, New York, N. Y. Vaporizer. 2,030,888; Feb. 18.
Robinson, Robert R., and E. L. Rick; said Rick assignor to W. D. Howe, Los Angeles, Calif. Metal coated article and manufacture thereof. 2,031,070; Feb. 18.
Robinson, William A., Oakland City, assignor of fifty-one per cent to L. C. Michelson, J. O. Boeshaum, Indianapolis, W. W. Rogers, H. C. VanHook, Princeton, and W. H. Baugh, Terre Haute, Ind. Internal combustion engine and automatic control therefor. 2,030,889; Feb. 18.
Rockwell, Edward A., Chicago, Ill. Fuel feeding system. 2,031,282; Feb. 18.
Rodier, Waldo E. (See Cheate, R. H., and Rodier.)
Roe, Frank L., assignor to Pinkerton Folding Box Co., Chicago, Ill. Folding box. 2,031,575; Feb. 18.
Roehrl, Bruno C., assignor to Agfa Ansco Corporation, Binghamton, N. Y. Photographic copying apparatus 2,031,071; Feb. 18.
Rogers, Edmund. (See Werder, John F., assignor.)
Rogers Radio Tubes, Ltd. (See Parker, Henry W., assignor.)
Rogers, Thomas H., and V. Voorhees, Hammond, Ind., assignor, by mesne assignments, to Gasoline Antioxidant Company, Wilmington, Del. Motor fuel products. 2,030,940; Feb. 18.
Rogers, William W., et al. (See Robinson, William A., assignor.)
Rohnfeld, Johannes, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Short wave-long wave receiver. 2,031,130; Feb. 18.
Rollason, Charles H., assignor to Boyle Manufacturing Company, Inc., Los Angeles, Calif. Paper pail. 2,031,096; Feb. 18.
Romine, John A. (See Romine, John A., and J. M.)
Romine, John A., and J. M. Romine, Etna Green, Ind. Plowshare. 2,031,548; Feb. 18.
Ronning, Adolph, and A. G. Ronning, deceased, by A. and J. A. Ronning, executors, Minneapolis, Minn., assignors to International Harvester Company. Tractor axle extension. 2,031,333; Feb. 18.
Ronning, Andreas G. (See Ronning, Adolph, and A. G.)
Ronning, Jacob A., et al., executors. (See Ronning, and A. G.)
Rosebaum, John O., et al. (See Robinson, William A., assignor.)
Rosenberg, Harry M. (See Eck, H. P., I. B., and H. M. Rosenberg, and Fleer.)
Rosenberg, Harry M. (See Eck, H. P., I. B., and H. M. Rosenberg, and Fleer.)
Rosenstein, Hans O., assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Signaling. 2,031,072; Feb. 18.
Rosenthal, Joseph J. (See Lebel, Louis, assignor.)
Roth, Herman, Larchmont, N. Y. Tag. 2,031,229; Feb. 18.
Rothenberg, Harry, West Norwood, N. J., assignor to H. Hyman, Brooklyn, N. Y. Electric candle. 2,031,507; Feb. 18.
Rubel, Abraham L., assignor to Penn Electric Switch Co., Des Moines, Iowa. Electric control apparatus for fuel burners. 2,030,941; Feb. 18.
Rudolph, Walter H. (See Padelford, L. E., and Rudolph.)
Ruff, Seymour W., Baltimore, Md. Crane. 2,031,549; Feb. 18.
Rüsberg, Friedrich, Berlin-Niederschoneweide, assignor to Kali-Chemie Aktiengesellschaft, Berlin, Germany. Making water soluble barium salts and hydrogen peroxide. 2,031,180; Feb. 18.
Russell, Edward A. (See Smith, W. M., Parks, and Russell.)
Rustless Iron and Steel Corporation of America. (See Felid, Alexander L., assignor.)
Rystrom, Charles H. (See Wahlmark, Gunnar A., assignor.)
Saathoff, George W., South Orange, N. J., assignor to Doherty Research Company, New York, N. Y. Heating and cooling unit for buildings. 2,031,576; Feb. 18.
Safford, Truman S., Harrison, N. Y. Refrigeration apparatus. 2,030,942; Feb. 18.
Sager, John W. (See Hofstetter, R., and Sager.)
Schädlein, Karl, Bern, Switzerland. Driving device for a machine for casting stereotype plates. 2,031,131; Feb. 18.
Schädlein, Karl, Bern, Switzerland. Machine for casting stereotype plates and the like. 2,031,132; Feb 18.
Scharian, Hans, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Direction finder compensator for direct reading of true bearings. 2,031,073; Feb. 18.
Scheibell, Gordon B., Newark, N. J. Automatic program system. 2,031,074; Feb. 18.
Scheibell, Gordon B., New York, N. Y. Selective program system. 2,031,075; Feb. 18.
Schlegel, Alfred A. (See Grant, R. S., and Schlegel.)
Schlette, Richard, North Wales, Pa. Thread tensioning attachment for textile machines. 2,031,480; Feb. 18.
Schmidt, Paul, assignor to Textile Machine Works, Wyomissing, Pa. Fabric take-off mechanism for knitting machines. 2,030,944; Feb. 18.
Schrottke, Franz, Berlin-Charlottenburg, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany. Pressure compensator for oil- or compound-filled cables. 2,030,943; Feb. 18.
Schuls, Walter F., assignor to Truscon Steel Company, Youngstown, Ohio. Grid or grating. 2,031,007; Feb. 18.
Schumacher, Elmer L., et al. (See Stillwell, Charles W., assignor.)
Schümann, Robert, Düsseldorf, Germany. Electric hand tool. 2,031,132; Feb. 18.
Schutte & Koerting Company. (See Muhleisen, Karl, assignee.)
Schwarz, Arthur, Berlin, Germany. Nozzle. 2,031,387; Feb. 18.
Schweizerische Industrie-Gesellschaft. (See End, G., and Gaehr, assignors.)
Schwerak, Joseph J., assignor to Bohm Aluminum & Brass Corporation, Detroit, Mich. Apparatus for extruding metal. 2,031,008; Feb. 18.
Scofield, Theodore J., assignor to The Sparks-Withington Company, Jackson, Mich. Refrigerator. 2,031,283; Feb. 18.
Scott, Elmo C., St. Louis, Mo. Battery holder. 2,031,508; Feb. 18.
Scott, Richard H. (See Gorse, W. F., and Scott.)
Scurlock, Lewis H., Chicago, Ill. Food container unit. 2,030,890; Feb. 18.
Security Grinding Wheel Co. (See Goodhue, Julian G., assignor.)
Seeger Refrigerator Company. (See Rehling, Clifford A., assignor.)
Seeley, Harold T., Lansdowne, Pa., assignor to General Electric Company. Electric control means. 2,031,509; Feb. 18.
Self Lifting Piano Truck Company. (See Lea, Dudley L., assignor.)
Senabar, Jacob R., Chicago, Ill. Dredging apparatus. 2,031,388; Feb. 18.

Seraphin, Theophilus A., Philadelphia, Pa. Field standard for testing liquid measuring devices. 2,031,230; Feb. 18.
Sessions, Royal L. (See Mitchell, T. A., and Sessions.)
Severson, Ole, Shelton, Conn., assignor to The Apex Tool & Cutter Company, Inc. Offset side supported tool holder. 2,031,334; Feb. 18.
Sewick, Frank, assignor to The Chicago Daily News, Inc., Chicago, Ill. Controlling delivery fan. 2,031,156; Feb. 18.
Shagrin, Seymour. (See Stewart, R. M., and Shagrin.)
Shattuck, Owen M., and M. E. Fulk, Piqua, Ohio, said Shattuck, assignor to said Fulk. Electric oscillator. 2,031,076; Feb. 18.
Sheet Polarizer Company. (See Land, Edwin H., assignor.)
Shepherd, George C., Jr., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Quenching oils. 2,031,431; Feb. 18.
Sheridan, T. W. & C. E., Company. (See Kleinberg, Paul E., assignor.)
Sherman, Ray. (See Jensen, L., and Sherman.)
Shields, Peter. (See Hart, Charles, assignor.)
Shoe Lace Company. (See Titcomb, William S., assignor.)
Shookhoff, Leah. (See Stern, L., and Shookhoff.)
Shore, Henry, Elizabeth, N. J., assignor to Radio Corporation of America. Facsimile system. 2,031,134; Feb. 18.
Sickerdot, Dietz, Philadelphia, Pa. Hosiery toe fabric. 2,031,442; Feb. 18.
Siemann, John C. (See Church, W. H., Hyman, and Siemann.)
Siemens & Halske, Aktiengesellschaft. (See Reichmann, Reinhold, assignor.)
Siemens-Schuckertwerke Aktiengesellschaft. (See Schrottke, Franz, assignor.)
Silcox, Lewis E., Watertown, N. Y., assignor to The New York Air Brake Company, Sander. 2,031,000; Feb. 18.
Simjian, Luther G., New Haven, Conn. Automatic positive paper developing apparatus. 2,031,010; Feb. 18.
Simms Motor Units Limited. (See Attwood, Stanley H., assignor.)
Simplex Heating Specialty Company. (See Wiley, Edgar C., assignor.)
Simplicity Manufacturing Company. (See Miller, Ray A., assignor.)
Sinclair, Harold. (See Baumann, K., and Sinclair.)
Singer Manufacturing Company, The. (See Goodman, Herbert J., assignor.)
Sirian Lamp Company. (See Harding, Robert, Jr., assignor.)
Slater Mills, Inc. (See Burton, Harry H., assignor.)
Sloyan, Jerome J., Red Bank, N. J. Control for heat generators. 2,031,335; Feb. 18.
Smilack, Jacob, assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,031,550; Feb. 18.
Smith, Alexander, & Sons Carpet Company. (See Barrett, Charles R., assignor.)
Smith, Arthur D., Park Ridge, Ill. Cracking treatment of hydrocarbons. 2,031,336; Feb. 18.
Smith, Arthur M., Oakland, assignor to Premier Bed and Spring Company, Inc., San Francisco, Calif. Adjustable drop-side for cribs. 2,031,284; Feb. 18.
Smith, Charles W., Grand Rapids, Mich. Lathe. 2,031,125; Feb. 18.
Smith, Francis M., Ashland, Ohio. Truck. 2,031,181; Feb. 18.
Smith, Grover C., Los Angeles, Calif. Packed, flexible, conduit joint. 2,031,389; Feb. 18.
Smith, Harold. (See Willshaw, H., Smith, and Davenport.)
Smith, John H., Camp Hill, Pa. Incandescent lamp. 2,031,182; Feb. 18.
Smith, Manville D., New York, N. Y. Collapsible wire article. 2,031,231; Feb. 18.
Smith, Sidney B., Chelmsford, and T. L. Eckersley, Weathcroak, Danbury, England, assignors to Radio Corporation of America. Wireless direction finding, bearing finding, and similar system. 2,031,077; Feb. 18.
Smith, William M., Chicago, P. B. Parks, Oak Park, and E. A. Russell, Chicago, assignors to Vapor Car Heating Company, Inc., Chicago, Ill. Control switch mechanism. 2,030,945; Feb. 18.
Sneed John, Grosse Pointe Shores, Mich., assignor to The Midland Steel Products Company, Cleveland, Ohio, trustee for Steeldraulic Brake Corporation, Detroit, Mich. Brake. 2,031,390; Feb. 18.
Société Anonyme pour les Applications de l'Electricite & des Gaz Rares Etablissements Claude-Paz & Silva. (See Bethenod, J., and Claude, assignors.)
Société Anonyme pour les Applications de l'Electricité et des Gaz Rares Etablissements Claude-Paz & Silva. (See Claude, André, assignor.)
Society of Chemical Industry in Basle. (See Ackermann, Frans, assignor.)
Society of Chemical Industry in Basle. (See Graenacher, C., and Ackermann, assignors.)
Society of Chemical Industry in Basle. (See Landolt, Albert, assignor.)
Society of Chemical Industry in Basle. (See Moser, W., and Fioroni, assignors.)
Solomon, Nathan L., Brooklyn, N. Y. Hair curler. 2,031,283; Feb. 18.
Solon, Edwin M., Chicago, Ill. Package of matches. 2,031,011; Feb. 18.
Sonnenburg, Clarence N., Baltimore, Md. Putty-box. 2,031,163; Feb. 18.
Sorensen, Albert, Washington, D. C. Heater. 2,031,551; Feb. 18.
Sosso, Giulio, Turin, Italy. Ammunition loading device with chain conveyer for small-arms. 2,031,443; Feb. 18.
Southern Kraft Corporation. (See Kendell, Henry, assignor.)
Spalding, John D., Los Angeles, Calif., assignor, by mesne assignments, to The National Superior Company, Toledo, Ohio. Rotary swivel. 2,031,287; Feb. 18.
Sparks-Withington Company, The. (See Scofield, Theodore J., assignor.)
Spellmeyer, Erwin F., East Orange, N. J. Aging alcoholic beverages. 2,031,282; Feb. 18.
Spencer, James A., Teaneck, N. J., assignor to Mess Projection Corporation, New York, N. Y. Quotation projecting or analogous apparatus. 2,030,900; Feb. 11.
Sperry, Philmore F., Chicago, Ill., assignor to Elicel Auto Radiator Company, East orchange apparatus. 2,031,512; Feb. 18.
Sperry Products, Inc. (See Drake, Harcourt C., assignor.)
Spielman, Milton H., Cuyahoga Falls, assignor to The Black & Decker Electric Company, East, Ohio. Hat gun. 2,031,501; Feb. 18.
Spiess, Georg, Leipzig, Germany. Sheet separating and feeding device. 2,031,078; Feb. 18.
Spiller, George A., Columbus, Ohio. Brake lost. 2,031,184; Feb. 18.
Standard Oil Company (Indiana). (See Yeatz, Merril A., assignor.)
Standish, John C., Rensselaer, N. Y. Blanket. 2,031,003; Feb. 18.
Staples, Horace A., Plainfield, N. J., assignor to Habirshaw Cable and Wire Corporation, New York, N. Y. Machine for making electrical cables. 2,031,014; Feb. 18.
Starrett, L. S., Company, The. (See Gislow, Harry C., assignor.)
Stand, Cyril J. (See Fallows, G. E., and Stand.)
Steeldraulic Brake Corporation. (See Sneed, John.)
Steimel, Karl, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Electron discharge tube and circuit arrangement. 2,031,127; Feb. 18.
Stephenson, Arlington W., assignor, by mesne assignments to Lennart Company, San Francisco, Calif. Planographic printing plate and process. 2,031,135; Feb. 18.
Stern, Isaac, and L. Shookhoff, Brooklyn, N. Y., said Shookhoff assignor to said Stern. Conductor reel. 2,031,496; Feb. 18.
Stern, Joel N., Alsten, and H. R. Larson, Amal, Sweden. Planet wheel gearing. 2,031,286; Feb. 18.
Stevens, Carl A., Carrollton, Ohio, assignor to The Carrollton Metal Products Company. Wire clip and handle. 2,031,577; Feb. 18.
Stevenson, James H., Los Angeles, Calif. Child's wheeled vehicle. 2,031,015; Feb. 18.
Stewart, Earl M., and S. Shagrin, Youngstown, Ohio. Arc hand heel support. 2,031,516; Feb. 18.
Still, Andrew L., Los Angeles, Calif. Automatic brake. 2,031,186; Feb. 18.
Stillwell, Charles W., Framingham, Mass., assignor to A. J. Messmer, Rochester, N. Y., and R. L. Schumacher, Southbridge, Mass. Container. 2,031,288; Feb. 18.
Stokes, George, Long Beach, Calif. Time switch mechanism. 2,031,187; Feb. 18.
Stoltenburg, Louis, Oakland, Calif. Window sash. 2,031,338; Feb. 18.
Stone, Mandel, Chicago, Ill. Locking a door. 2,031,502; Feb. 18.
Stone, Sam, Seattle, Wash. Propelling pleasure boats. 2,031,389; Feb. 18.
Storey, Norman C., and F. R. Hassee, Hunslet, Leeds, England. Rotary tilling machine. 2,031,186; Feb. 18.
Stott Stoker Company, The. (See Morton, Harold S., assignor.)
Strain, Daniel E., assignor to Du Pont Viscoloid Company, Wilmington, Del. Depolymerizing alpha substituted acrylic acid esters. 2,030,901; Feb. 18.
Strand, Harold P. (See Walker, H. A., and Strand.)
Straub, Anthony A., St. Mary's, Pa., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Cathode heating element for thermionic tubes. 2,031,240; Feb. 18.
Streychmans, Hector J., New York, assignor, by mesne assignments, to Automotion Pictures, Inc., New York, N. Y. Device for the rewinding of photographic film. 2,031,079; Feb. 18.
Stromberg-Carlson Telephone Manufacturing Company, The. (See Olney, Benjamin, assignor.)
Stromberg, Martin L., Marshfield, Oreg. Nutcracker. 2,031,189; Feb. 18.
Stumpf, John H., West Forrest Hills, N. Y., assignor to Wilkening Manufacturing Company, Philadelphia, Pa. Piston ring. 2,031,341; Feb. 18.
Subkow, Philip. (See Merrill, D. R., and Subkow.)
Sullivan Machinery Company. (See Gartin, Elmer S., assignor.)
Sullivan, Peter E., Randolph, Mass. Shoe heel. 2,031,511; Feb. 18.

Sutherland, Daniel M., Jr., Morrisville, Pa. Manufacture of fiber products. 2,030,946; Feb. 18.
Sutherland, William F., and G. G. Waite, Toronto, Ontario, Canada. Meter for indicating ratio of fluid fuel consumption to engine speed. 2,031,192; Feb. 18.
Swann Research, Incorporated. (See Booth, Charles F., assignor.)
Swanson, Ralph W., Mount Pleasant, Mich. Wall table. 2,031,287; Feb. 18.
Swedeland, Adolf, Toledo, Ohio. Tin cutter. 2,031,190; Feb. 18.
Swedeland, Adolf, Chicago, Ill. Paring knife. 2,031,191; Feb. 18.
Swift, Claude E. (See Dillon, L., and Swift.)
Swift, Claude E., Glendale, assignor to Union Oil Company of California, Los Angeles, Calif. Fractionation of mineral oil. 2,031,254; Feb. 18.
Swift & Company. (See Richardson, W. D., Grettie, and Newton, assignors.)
Swift, George W., Jr., Bordentown, assignor to George W. Swift, Jr., Inc., Bordentown, N. J. Cut-off machine. 2,031,512; Feb. 18.
Swift, George W., Jr., Inc. (See Swift, George W., Jr., assignor.)
Syndergaard, Anton W., Copenhagen, Denmark. Tank for storage of liquids, especially hydrocarbons. 2,031,553; Feb. 18.
Taborsky, Frank G., Bellwood, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for testing electrical devices. 2,031,016; Feb. 18.
Tarbox, Leslie E., North Reading, Mass. Lighting device for automobiles. 2,031,543; Feb. 18.
Taylor, Edward H., Oak Park, Ill. Welding. 2,031,138; Feb. 18.
Taylor, Eugene S., Chicago, Ill. Parking apparatus. 2,031,292; Feb. 18.
Taylor, John J., Barberton, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio. Support for conductors. 2,031,535; Feb. 18.
Taylor, John J., Wadsworth, assignor to The Ohio Brass Company, Mansfield, Ohio. Cable clamp. 2,031,296; Feb. 18.
Tefft, Ivan D., assignor to The Parker Pen Company, Janesville, Wis. Fountain pen. 2,031,543; Feb. 18.
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Futterewsky, B., and Lax, assignors.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Hoegner, Kurt, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Hollmann, Hans E., assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Kühle, Wilhelm E., assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Rohnfeld, Johannes, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Roosenstein, Hans O., assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Scharlau, Hans, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Steimel, Karl, assignor.)
Terry, Matson C., Detroit, Mich., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Refrigeration apparatus. 2,031,237; Feb. 18.
Tevis, Robert, New York, N. Y. Keyboard. 2,031,017; Feb. 18.
Texas Company, The. (See Powers, E. F., and Ludeman, assignors.)
Texas Gulf Sulphur Company. (See Bencowitz, Isaac, assignor.)
Textile Machine Works. (See Bitzer, Gottlob, assignor.)
Textile Machine Works. (See Kalbach, Samuel E., assignor.)
Textile Machine Works. (See Schmidt, Paul, assignor.)
Thermopane Company, The. (See Haven, Charles D., assignor.)
Thomas, William, Bogota, N. J., assignor to Pneumercator Company, New York, N. Y. Viscosity regulator. 2,031,018; Feb. 18.
Thomasma, Harry, Grand Rapids, Mich. Doorlock. 2,031,344; Feb. 18.
Thompson, Charles S., Elmhurst, assignor to Union Special Machine Company, Chicago, Ill. Felling machine for seaming fabric sections. 2,031,193; Feb. 18.
Thompson, Howard E., San Francisco, Calif. Building block. 2,031,194; Feb. 18.
Thompson, Howard E., San Francisco, Calif. Toy locomotive, train, and track. 2,031,195; Feb. 18.
Thompson, Leland R., Audubon, N. J., assignor to Radio Corporation of America. Automatic volume control arrangement. 2,031,238; Feb. 18.
Thompson, William G., Wembley, assignor to The General Electric Company Limited, London, England. Electrode arrangement for controlling electric arcs. 2,031,435; Feb. 18.
Thomsen, Alfred M., San Francisco, Calif. Utilization of sugarcane bagasse. 2,031,536; Feb. 18.
Thormeyer, Hans, Berlin, Germany. Turbine-driven vessel. 2,031,486; Feb. 18.
Thorn, Charles C., Camden, N. J. Railway switch mechanism. 2,031,513; Feb. 18.
Thumim, Carl, Philadelphia, Pa., assignor to General Electric Company. Electric circuit interrupter. 2,031,514; Feb. 18.
Tinkham, Guy L., assignor to McCord Radiator & Mfg. Co., Detroit, Mich. Tray making apparatus. 2,031,345; Feb. 18.
Tinkham, Guy L., assignor to McCord Radiator & Mfg. Co., Detroit, Mich. Ice tray. 2,031,515; Feb. 18.
Tirabasso, Michial A., Cleveland, Ohio. Vehicle jack. 2,031,393; Feb. 18.
Tims, Edmond T. (See Renshaw, R. R., Tims, and Ducmel.)
Titcomb, William S., Andover, assignor to Shoe Lace Company, Boston, Mass. Braid. 2,030,947; Feb. 18.
Toledo Scale Manufacturing Company. (See Walix, Foster V., assignor.)
Torchet, Pierre J. M., St. Jean de Maurienne, assignor to "Compagnie de Produits Chimiques et Electro-métallurgiques Alais, Froges et Camarque", Paris, France. Recovery of the gases and dust evolved in the electrolytic manufacture of aluminium. 2,031,554; Feb. 18.
Trans-Lux Daylight Picture Screen Corporation. (See Bowen, Lester W., assignor.)
Trevaskis, Henry. (See Goodyear, E. F., Wright, and Trevaskis.)
Tripp, John P., Montreal, Quebec, Canada. Electric arc welding apparatus. 2,031,288; Feb. 18.
Tritle, John F., Erie, Pa., assignor to General Electric Company. Circuit controller. 2,031,516; Feb. 18.
Truscon Steel Company. (See Schula, Walter F., assignor.)
Underwood Elliott Fisher Company. (See Dobson, William A., assignor.)
Union Carbide and Carbon Corporation. (See Baur, Karl, assignor.)
Union Oil Company of California. (See Blount, Arthur L., assignor.)
Union Oil Company of California. (See Bray, Ulric B., assignor.)
Union Oil Company of California. (See Dillon, L., and Swift, assignors.)
Union Oil Company of California. (See Fisher, Harmon F., assignor.)
Union Oil Company of California. (See Hopper, Basil, assignor.)
Union Oil Company of California. (See Merrill, David R., assignor.)
Union Oil Company of California. (See Merrill, D. R., and Subkow, assignors.)
Union Oil Company of California. (See Shepherd, George C., Jr., assignor.)
Union Oil Company of California. (See Swift, Claude E., assignor.)
Union Special Machine Company. (See Thompson, Charles S., assignor.)
Union Switch & Signal Company. (See Kemmerer, Ralph E., assignor.)
United Aircraft Corporation. (See MacClain, Albert L., assignor.)
United Autographic Register Co. (See Jensen, Louis, assignor.)
United-Carr Fastener Corporation. (See Jones, Walter I., assignor.)
United Engineering & Foundry Company. (See Biggert, Florence C., Jr., assignor.)
United Gas Improvement Company. (See Fulweiler, Walter H., assignor.)
United Kingdom Optical Company. (See Culver, E., and Emerson, assignors.)
United Shoe Machinery Corporation. (See Barnett, W., and O'Key, assignors.)
United Shoe Machinery Corporation. (See Finn, Sidney J., assignor.)
United Shoe Machinery Corporation. (See Haas, Otto R., assignor.)
United Shoe Machinery Corporation. (See Lancaster, John T., assignor.)
United Shoe Machinery Corporation. (See Williams, E. A., and Berger, assignors.)
United States Envelope Company. (See Goder, Max, assignor.)
United States Gypsum Company. (See Linsell, Harry K., assignor.)
Universal Products Co., The. (See Ketcham, F., and Dunn, assignors.)
Ury, Matthew, Bronx, N. Y. Controlling apparatus for automobile engines. 2,031,139; Feb. 18.
Utah Radio Products Company. (See Dumke, Willy, assignor.)
Van Brunt, Harry D., Los Angeles, Calif. Brake. 2,031,517; Feb. 18.
Van Deest, Walter J., Los Angeles, Calif. Toy. 2,031,240; Feb. 18.
Vander Kraats, Nicholas C., New Brunswick, N. J. Plant marker. 2,031,394; Feb. 18.
Van der Pol, Balthasar. (See Posthumus, K., and van der Pol.)
Van Deventer, Harry R., New York, N. Y., assignor, by mesne assignments, to General Motors Corporation. Motor pump and condensing unit. 2,031,080; Feb. 18.
Van Hook, Byron C., et al. (See Robinson, William A., assignor.)
Van Law, Durbin, assignor, by mesne assignments, to Powderco Inc., Denver, Colo. Grinding mill. 2,031,289; Feb. 18.
Van Seggern, Ray F. (See Miller, William R., assignor.)

Van Vestraut, Geoffrey. (See Boughton, R. B., and Van Vestraut.)
Vapor Car Heating Company. (See Smith, W. M., Parks, and Rumell, assignors.)
Variety Machine & Stamping Company. (See Kerkspecht, Otto, assignor.)
Vaughn, Harold G., Warren, Ohio, assignor, by mesne assignments, to Wilson & Bennett Manufacturing Company, Chicago, Ill. Open head drum. 2,031,296; Feb. 18.
Vereinigte Blinker-und Kabelwerke A.-G. (See Pfaff, Georg, assignor.)
Vickers, Harry F., Detroit, Mich. Hydraulic steering gear. 2,030,909; Feb. 18.
Vigne, Albert, Webster Groves, assignor to National Bearing Metals Corporation, St. Louis, Mo. Electric current collector. 2,031,081; Feb. 18.
Vincent, Jesse G., assignor to Packard Motor Car Company, Detroit, Mich. Internal combustion engine. 2,031,296; Feb. 18.
Vincent, Thomas C., Jr., New Canaan, Conn., assignor to The Fred'k Page Contracting Co., New York, N. Y. Gas washer. 2,031,427; Feb. 18.
Vincente, Francisco, Habana, Cuba. Shoe sole. 2,031,196; Feb. 18.
Vitman, Jean. (See Herowitz, A., and Vitman.)
Voight, August L., Lakewood, Ohio. Traffic marker. 2,031,396; Feb. 18.
Voight, August L., Lakewood, Ohio. Beer cooler. 2,031,397; Feb. 18.
Von Forster, Hermann, and F. Künstel, Frankfort-on-the-Main, Germany, assignors to American Largi Corporation, New York, N. Y. Producing copper having high electrical conductivity and being free from oxygen. 2,031,518; Feb. 18.
Von Fraunhofer, Hans, assignor to Omnichrome Corporation, New York, N. Y. Photographic film of the mosaic type adapted for color photography. 2,030,903; Feb. 18.
Von Fraunhofer, Hans, assignor to Omnichrome Corporation, New York, N. Y. Photographic film of the mosaic type adapted for color photography. 2,030,904; Feb. 18.
Von Henke, Edmund J., assignor to American Electric Fusion Corporation, Chicago, Ill. Welding machine. 2,031,082; Feb. 18.
Voorhees, Vanderveer. (See Rogers, T. H., and Voorhees.)
Wagoner, Arthur F., Excelsior Springs, Mo. Table top extension clamp. 2,031,396; Feb. 18.
Wahlin, Eric W., Magna, Utah. Steering device. 2,031,291; Feb. 18.
Wahlmark, Gunnar A., assignor of one-half to C. H. Rystrom, Rockford, Ill. Fuel injection pump. 2,031,346; Feb. 18.
Waite, Griffin G. (See Sutherland, W. F., and Waite.)
Walker, Harry A., Somerville, and H. P. Strand, Malden, Mass. Test tube heater. 2,031,019; Feb. 18.
Wall, Charles L. (See Parker, C. S., Wall, and Farrington.)
Wallace, Curtis C., assignor to The Electric Storage Battery Company, Philadelphia, Pa. Glass jar and cover for storage battery cells. 2,031,428; Feb. 18.
Walsh, Wilfrid L. (See Lewis, D., Walsh, and Lasbar.)
Walters, Herbert H., Syracuse, N. Y. Lead pencil pointer. 2,031,292; Feb. 18.
Waltz, Foster V., Toledo, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing scale. 2,031,429; Feb. 18.
Wamelink, Eugene C., Cleveland Heights, Ohio. Ignition device. 2,031,298; Feb. 18.
Wappler, Frederick C., New York, N. Y. Surgical endoscopic instrument. 2,031,020; Feb. 18.
Ward, Charles J., Staten Island, N. Y. Ship chart cabinet and display case. 2,031,241; Feb. 18.
Ward, Marshall H., Fairfield, assignor to Bridgeport Brass Company, Bridgeport, Conn. Bellows thermostat with flexible connecting means. 2,031,440; Feb. 18.
Warner, John C., assignor to General Electric Company, Schenectady, N. Y. Radio signaling apparatus. 2,031,441; Feb. 18.
Waters, Daniel V. (See Crane, E. J., and Waters.)
Watling Scale Company. (See Watling, Thomas W. B., assignor.)
Watling, Thomas W. B., assignor to Watling Scale Company, Chicago, Ill. Coin head for coin controlled devices. 2,031,247; Feb. 18.
Wayside Paper Company. (See Danebeim, Morton W., assignor.)
Wayside Gardens Company, The. (See Grullemans, John J., assignor.)
Weaver, Harriett H., Yonkers, N. Y. Hot water bag cover and stand. 2,031,197; Feb. 18.
Weber, Alphons, Syracuse, N. Y. Adjustable handle. 2,031,442; Feb. 18.
Weber, George G., and J. Merryweather, Greencastle, Ind. Harvester thresher canvas. 2,031,921; Feb. 18.
Weis, George H. (See Betterton, J. O., and Weis.)
Weller, Charles A., Bloomfield, N. J., assignor of one-half to Baker & Company, Inc., Newark, N. J., and one-half to Westinghouse Electric and Manufacturing Company. Guide or support for molten glass. 2,031,083; Feb. 18.
Wells, Norman, Shoon, London, and R. Green, Chelmsford, England, assignors to Radio Corporation of America. Wireless aerial for use on short waves. 2,031,140; Feb. 18.
Welsh, John T. (See Maynard, J. S., Welsh, and Keenan.)
Wendt, Herman D., West Chester, assignor to Milk Processes, Inc., Philadelphia, Pa. Producing creamery products. 2,031,448; Feb. 18.
Werder, John F., Lakewood, assignor of one-half to E. Rogers, South Euclid, Ohio. Forming metal containers. 2,031,065; Feb. 18.
Western Electric Company. (See Barker, Virgil D., assignor.)
Western Electric Company. (See Crane, E. J., and Waters, assignors.)
Western Electric Company. (See Fairfield, W. B., and Jongedyk, assignors.)
Western Electric Company. (See Hofstetter, Robert, assignor.)
Western Electric Company. (See Hofstetter, R., and Sager, assignors.)
Western Electric Company. (See McLaughlin, Lawrence, assignor.)
Western Electric Company. (See Taborsky, Frank G., assignor.)
Westinghouse Air Brake Company, The. (See Aikman, Burton S., assignor.)
Westinghouse Air Brake Company, The. (See Farmer, Clyde C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Terry, Matson C., assignor.)
Westinghouse Electric and Manufacturing Company, et al. (See Weller, Charles A., assignor.)
Weston, John L., East Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y. Control circuit. 2,030,948; Feb. 18.
White, Douglas L., assignor to Hood Rubber Company, Inc., Watertown, Mass. Mixing mill. 2,030,949; Feb. 18.
White, George H., Hartford, Conn., assignor, by mesne assignments, to Masonite Corporation. Pattern selecting mechanism. 2,031,249; Feb. 18.
White, Hollee N., Cameron, Mo. Automobile power take-off mechanism. 2,031,199; Feb. 18.
Whiting, Arthur C., Mount Vernon, N. Y. Cutting machine. 2,031,444; Feb. 18.
Whitmire, LeRoy S. (See Kamerer, J. W., and Whitmire.)
Widmer, Gustave. (See Gama, A., Widmer, and Frey.)
Wilcox & Bennett Manufacturing Company. (See Vaughn, Harold G., assignor.)
Wilcox Company, The. (See Wilcox, Joseph R., assignor.)
Wilcox, Joseph R., assignor to The Wilcox Company, Athol, Mass. Apparatus for making combs. 2,031,400; Feb. 18.
Wiley, Edgar C., assignor to Hayden Heating Specialty Company, Inc., Lynchburg, Va. Automatic regulating apparatus for steam heating systems. 2,031,445; Feb. 18.
Wilcox, Harold M., South Ozone Park, N. Y., assignor to Combustion Utilities Corporation, New York, N. Y. Ash disposal apparatus. 2,031,676; Feb. 18.
Wilkening Manufacturing Company. (See Krampf, John H., assignor.)
Willard Storage Battery Company. (See Altmayer, Frank, assignor.)
Willard Storage Battery Company. (See Lorenz, Henry W., assignor.)
Williams, Ernest A., Cincinnati, and A. F. Berger, Columbus, Ohio, assignors to United Shoe Machinery Corporation, Paterson, N. J. Skiving machine. 2,030,959; Feb. 18.
Williams, Vernon H., Ardrossan, Scotland, assignor to Imperial Chemical Industries Limited. Tinning assembly. 2,031,264; Feb. 18.
Williams, Villez P., assignor to E. W. Gomborov, Baltimore, Md. Bumper. 2,031,249; Feb. 18.
Willshaw, Harry, Wylde Green, H. Smith and F. A. Davenport, Birmingham, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y. Apparatus for severing bias cut fabric. 2,031,401; Feb. 18.
Wilmers, Bernard. (See Kraus, F., and Herrmann, assignors.)
Wilson, Raymond N., Cleveland, Ohio. Method and apparatus for handling slag. 2,031,302; Feb. 18.
Winans, Daniel M., Binghamton, N. Y. Shaving device and the like. 2,031,819; Feb. 18.
Wingfoot Corporation. (See Day, Ralph E., assignor.)
Wingfoot Corporation. (See Kramp, Edward D., assignor.)
Winslow, Charles A., Oakland, Calif. Engine. 2,031,262; Feb. 18.
Winton, Lewis E., Greenwich, Conn., assignor to Amerikan Sealcone Corporation, New York, N. Y. Receptacle filling apparatus. 2,030,961; Feb. 18.
Winzler, Daniel W., Montpelier, Ohio. Fastening and handle. 2,031,341; Feb. 18.
Winzler, Daniel W., Montpelier, Ohio. Fastening for the handles of tools. 2,031,342; Feb. 18.
Wippermann, Hildegard, assignor to The H. W. Gossard Company, Chicago, Ill. Combination garment. 2,031,022; Feb. 18.
Wired Radio, Inc. (See Weston, John L., assignor.)

Wirick, Kirk G., Glendale, assignor to Lounsberry and Harris, Los Angeles, Calif. Hat house. 2,031,402; Feb. 18.
Wishart, William W., assignor of one-half to Automotive Maintenance Machinery Co., Chicago, Ill. Rotary pump or compressor. 2,030,953; Feb. 18.
Wolen, Carl O. (See Liedtke, R. C., and Wolen.)
Wolf, Eduard J., Hamburg, Germany. Treatment of organic cellular materials. 2,031,243; Feb. 18.
Wolfe, Raymond M., Louisville, Ky. Tie holder. 2,030,905; Feb. 18.
Wolfram, Arthur, and R. Haussdörfer, Frankfort-on-the-Main-Hoechst, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Ortho-(aminoaroyl)-benzoic acids and inner anhydrides thereof and preparing them. 2,031,163; Feb. 18.
Wood Shovel & Tool Company, The. (See Brandenburg, Francis C., assignor.)
Woodhouse, James H. (See Evans, M. H., and Woodhouse.)
Woodruff, Harvey E., Corpus Christi, Tex. Underreamer. 2,031,353; Feb. 18.
Woodruff, Maurice D., W. H. Mechlin, and J. Markley, Springfield, assignors to The Bauer Brothers Company, Springfield, Ohio. Roasting apparatus. 2,031,086; Feb. 18.
Wright, George M., Chelmsford, and G. F. Brett, Leeds, England, assignors to Radio Corporation of America. Photophone. 2,031,198; Feb. 18.
Wright, Joseph. (See Goodyear, H. F., Wright, and Trevaskis.)
Wright, Richard H., Cleveland, Ohio. Venetian blind filler. 2,031,354; Feb. 18.
Wyler, Max, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Rhodamine coloring matters and preparing the same. 2,031,023; Feb. 18.
Yawman & Erbe Mfg. Co. (See Clark, James R., assignor.)
York Ice Machinery Corporation. (See Cushman, John K., assignor.)
Young, William G., and M. Hansen, Los Angeles, and J. F. Pelton, Glendale, Calif. Egg breaking and separating machine. 2,031,294; Feb. 18.
Youts, Merrill A., Green Bay, Wis., assignor to Standard Oil Company, Chicago, Ill. Nonflammable cleaning solvent. 2,031,145; Feb. 18.
Youts, Merrill A., Hammond, Ind., assignor to Standard Oil Company (Indiana), Chicago, Ill. Nonflammable cleaning solvent. 2,031,144; Feb. 18.
Zachry, Walter H., Atlanta, Ga. Broom and making same. 2,030,954; Feb. 18.
Zahm, Joseph D., and J. U. Lehn, assignor to Animal Trap Company of America, Lititz, Pa. Trap. 2,031,520; Feb. 18.
Zellhoefer, Glenn F., Bloomington, Ill. Refrigerant mixture. 2,031,067; Feb. 18.
Zerk, Oscar U., Chicago, Ill. Wheel and wheel cover. 2,031,355; Feb. 18.
Zublin, John A., Bel Air, Calif. Method and apparatus for fusing metals. 2,031,088; Feb. 18.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 18TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Bell ringer. A. L. Bridgham. 19,853; Feb. 18.
Carrier wave receiver. P. O. Farnham. 19,857; Feb. 18.
Oil burning furnace. F. A. Heath. 19,860; Feb. 18.
Ornamental device, Illuminated. E. J. Graf. 19,859; Feb. 18.
Pulp articles, Method of and machine for making. R. W. Chapman. 19,856; Feb. 18.
Radio aerial system, Duplex. R. V. Amy and J. G. Aceves. 19,854; Feb. 18.
Refrigerating apparatus. J. R. Fehr. 19,858; Feb. 18.
Stereotype platemaking machine. J. J. Walser. 19,861; Feb. 18.

LIST OF PLANT INVENTIONS

Lily, Regal. C. N. Moore. 165; Feb. 18.
Peach. W. C. Elliott. 166; Feb. 18.

LIST OF DESIGN INVENTIONS

Antenna, Radio. C. A. Lehmann. 98,552; Feb. 18.
Ash receiver or similar article. G. W. Emmert. 98,578; Feb. 18.
Ash tray. R. B. Hutcheson. 98,586; Feb. 18.
Bar, Handle. H. L. Kraeft. 98,551; Feb. 18.
Bag or similar article, Infant's sleeping. R. J. and W. H. McCarter. 98,603; Feb. 18.
Bedstead. M. C. Pemphrey. 98,615; Feb. 18.
Blouse. H. Nadler. 98,608; Feb. 18.
Bottle. R. Durand. 98,577; Feb. 18.
Bottle. Y. Lauvin. 98,590; Feb. 18.
Bottle. L. Mann. 98,601; Feb. 18.
Bottle, Glass. L. J. Kiba. 98,598; Feb. 18.
Bottle, Milk. M. A. Pecora. 98,609; Feb. 18.
Box. C. S. Gage. 98,587; Feb. 18.
Bracelet, Watch. S. Ritter. 98,620; Feb. 18.
Bracelet, Watch. S. Ritter. 98,622–3; Feb. 18.
Brassière. R. E. C. de Pury. 98,576; Feb. 18.
Bridge for eyeglasses. H. W. Grom. 98,591; Feb. 18.
Buckle. L. Alterson. 98,628; Feb. 18.
Buckle. J. B. Freysinger. 98,596; Feb. 18.
Buckle. S. Putman. 98,616; Feb. 18.
Buffet. R. Wright. 98,635; Feb. 18.
Building. F. A. Redford. 98,617; Feb. 18.
Button. F. H. Fisher. 98,582–5; Feb. 18.
Cabinet. G. M. Jackson. 98,649; Feb. 18.
Cabinet. R. Wright. 98,634; Feb. 18.
Cabinet, Water heater. R. H. Wilkinson. 98,631; Feb. 18.
Cap, Closure. L. C. McAuliffe. 98,602; Feb. 18.
Cap or similar article, Closure. J. S. B. Smith. 98,626; Feb. 18.
Case or similar article, Cigarette. M. C. Meyer. 98,604; Feb. 18.
Case, Storage battery. O. O. Rieger. 98,655; Feb. 18.
Casserole. E. Moser-Benedikt. 98,606; Feb. 18.
Chair, Adjustable. R. Wright. 98,637; Feb. 18.
Chest of drawers. R. Wright. 98,636; Feb. 18.
Coat. R. Grossman. 98,592; Feb. 18.
Container, Cosmetic. L. A. Perona. 98,612; Feb. 18.
Counter, Combined sales and display. F. L. Pollard. 98,618; Feb. 18.
Counter unit, Lunch. H. and F. Stark. 98,628; Feb. 18.
Cup. E. Moser-Benedikt. 98,607; Feb. 18.
Dress, Ensemble. W. Karp. 98,597; Feb. 18.
Electric lighting fixture. H. D. Hain. 98,647; Feb. 18.
Emblem for articles of apparel, Appliqué. C. Emmey. 98,580–1; Feb. 18.
Emblem or similar article for wearing apparel, Appliqué. C. Emmey. 98,579; Feb. 18.
Fabric, Embroidered textile. G. Bischof. 98,640; Feb. 18.
Faucet mounting. J. C. Steinger. 98,629; Feb. 18.
Fly, Fishing. F. O. Burge. 98,644; Feb. 18.
Food receptacle unit or similar article. F. R. Cutler. 98,575; Feb. 18.
Frame or the like, Emulsifying machine. A. R. Bannister. 98,571; Feb. 18.
Game device. W. A. Merrill. 98,653; Feb. 18.
Handbag, wallet, and cigarette case, Combined. B. H. Bryon. 98,643; Feb. 18.
Heater, Water. C. H. Morrow. 98,605; Feb. 18.
Ice crusher and beverage container, Combined. T. J. Fegley and G. O. Leopold. 98,582; Feb. 18.
Indicator for vehicles, Direction. A. Wenig. 98,639; Feb. 18.
Lace. G. D. Boyson. 98,641; Feb. 18.
Lace. J. Dognin. 98,645; Feb. 18.
Lace. B. Edson. 98,646; Feb. 18.
Lamp base. H. A. Perlmutter. 98,610–11; Feb. 18.
Lamp base. H. A. Perlmutter. 98,654; Feb. 18.
Leather or similar article. M. White. 98,656; Feb. 18.
Lens for motor vehicle lamps. O. C. Ritz-Wolber. 98,634; Feb. 18.
Link for a watch bracelet. S. Ritter. 98,618–19; Feb. 18.
Link for a watch bracelet. S. Ritter. 98,621; Feb. 18.
Shoe. T. R. Atkins. 98,569–70; Feb. 18.
Shoe. T. R. Atkins. 98,639; Feb. 18.
Shoe. S. Winer. 98,632; Feb. 18.
Shoe sole. A. Greenbaum. 98,560; Feb. 18.
Signal, Luminous-arm. D. A. Lee. 98,600; Feb. 18.
Stand, Smoking. W. Hoffmann. 98,593–5; Feb. 18.
Stand, Smoking. W. Hoffmann. 98,648; Feb. 18.
Stereoscopic viewer. B. Rossman. 98,626; Feb. 18.
Stove, Oil burning cook. W. T. Bradbury. 98,572–4; Feb. 18.
Stove, Oil burning cook. W. T. Bradbury. 98,642; Feb. 18.
Table, Breakfast. L. Garshofsky. 98,585–9; Feb. 18.
Tire. G. W. Anderson. 98,568; Feb. 18.
Trailer. F. B. and L. E. Kaunitz. 98,650; Feb. 18.
Tumbler. W. O. Prouty. 98,614; Feb. 18.
Vase, Flower. S. L. Wolfe. 98,633; Feb. 18.
Washing machine and wringer, Combined. J. Stanik. 98,627; Feb. 18.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 18TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive cutting machine and method. D. Lewis, W. L. Walsh, and W. B. Lasher, Jr. 2,031,052; Feb. 18.
Acid esters, Depolymerizing alpha substituted acrylic. D. E. Strain. 2,030,901; Feb. 18.
Acid, Evaporating aqueous hydrochloric. E. Raschig. 2,031,179; Feb. 18.
Acids and inner anhydrides thereof and preparing them, Ortho-(aminoaroyl)-benzoic. A. Wolfram and E. Hansdorfer. 2,031,143; Feb. 18.
Address plate. W. T. Gollwitzer. 2,030,865; Feb. 18.
Adjustable handle. A. Weber. 2,031,443; Feb. 18.
Adjustable seat. J. Kersten. 2,031,109; Feb. 18.
Aerial for use on short waves, Wireless. N. Wells and E. Green. 2,031,140; Feb. 18.
Air conditioner, Motor vehicle. H. W. Hedburg. 2,031,041; Feb. 18.
Air conditioning and refrigerating device. R. McKinney. 2,031,055; Feb. 18.
Air cooling device. E. H. Hardin. 2,031,584; Feb. 18.
Aircraft. J. H. Crossman, 2d. 2,030,967; Feb. 18.
Aircraft speed control. J. K. Northrop. 2,031,177; Feb. 18.
Airplane pilot, Automatic. C. H. Havill. 2,030,896; Feb. 18.
Air purifying device. C. W. Johnson. 2,031,164; Feb. 18.
Air washing device. D. A. Barnie. 2,031,027; Feb. 18.
Alkyl halides, Production of. J. H. Reilly. 2,031,328; Feb. 18.
Alloys. R. H. Leach. 2,031,113; Feb. 18.
Alloys of iron, chromium, nickel, and copper, Manufacture of. A. L. Feild. 2,031,152; Feb. 18.
Alloys of the alkaline earth metals with cadmium, Production of. G. N. Kirsebom. 2,031,487; Feb. 18.
Alloys of the alkaline earth metals with lead or other metals, Production of. G. N. Kirsebom. 2,031,486; Feb. 18.
Aluminum and aluminum alloys, Spot-welding. N. F. Malley. 2,030,906; Feb. 18.
Amino derivatives and process of preparing, Resinous. H. A. Bruson. 2,031,557; Feb. 18.
Ammunition loading device with chain conveyer for small-arms. G. Sosso. 2,031,438; Feb. 18.
Annunciator unit. M. F. Ketay. 2,031,206; Feb. 18.
Antenna. E. Posthumus and B. van der Pol. 2,031,065; Feb. 18.
Antimony compounds, Manufacture of new stable. W. Kussmaul. 2,031,268; Feb. 18.
Arch and heel support. E. M. Stewart and S. Shagria. 2,031,510; Feb. 18.
Article and manufacture thereof, Metal coated. R. R. Robinson and R. L. Rick. 2,031,070; Feb. 18.
Ash disposal apparatus. H. M. Wilgus. 2,031,578; Feb. 18.
Automatic brake. A. L. Still. 2,031,186; Feb. 18.
Automatic parking brake. C. G. Peabody and E. W. Roberts. 2,031,062; Feb. 18.
Automobile lock. W. W. Brares. 2,031,522; Feb. 18.
Automobile power take-off mechanism. H. N. White. 2,031,390; Feb. 18.
Axle extension, Tractor. A. Rossing and A. G. Rossing. 2,031,383; Feb. 18.
Axle, Spring. G. N. Knox. 2,031,537; Feb. 18.
Bag cover and stand, Hot water. H. E. Weaver. 2,031,197; Feb. 18.
Bag rack. C. E. Doolin. 2,031,147; Feb. 18.
Bags and wrappers, Procedure and apparatus for making window. E. S. Grant and A. A. Schlegel. 2,031,580; Feb. 18.
Ballast resistance. S. Hamada. 2,031,480; Feb. 18.
Bank protecting device. C. J. Meunier and H. Bomboy. 2,031,542; Feb. 18.
Barium salts and hydrogen peroxide, Making water soluble. F. Rüsberg. 2,031,190; Feb. 18.
Bathtub. H. S. Deubelbeiss. 2,031,255; Feb. 18.
Battery holder. E. C. Scott. 2,031,506; Feb. 18.
Battery terminal post. H. W. Lorimor. 2,031,578; Feb. 18.
Bearing; *See*—
Sealed bearing.
Bearing assembling machine, Roller. F. Ketchum and G. E. Dunn. 2,031,417; Feb. 18.
Bed material for dower bulbs. J. J. Grullemans. 2,031,306; Feb. 18.
Beer cooler. A. L. Voight. 2,031,397; Feb. 18.
Belt drive. J. K. Kahn. 2,031,310; Feb. 18.
Belt, Power transmitting. E. D. Kramp. 2,031,060; Feb. 18.
Benzimidazoles having higher alkyl-groups at the 5-carbon atoms, Manufacture of. C. Grammaccioni and F. Ackermann. 2,031,037; Feb. 18.
Beverages, Aging alcoholic. E. F. Spellmeyer. 2,031,232; Feb. 18.
Binder, Loose leaf. E. F. Lexow. 2,031,378; Feb. 18.
Blanket. J. C. Standish. 2,031,013; Feb. 18.
Blasting assembly. V. H. Williams. 2,031,084; Feb. 18.
Bleeding on white animal fibers, Prevention of the. A. Landolt. 2,031,046; Feb. 18.
Blind tilter, Venetian. R. H. Wright. 2,031,354; Feb. 18.
Block; *See*—
Building block.
Boat hull structure. E. J. W. Ragsdale. 2,031,428; Feb. 18.
Boats, Propelling pleasure. S. Stone. 2,031,329; Feb. 18.
Boring machine. R. A. Miller. 2,031,173; Feb. 18.
Bottle, Beverage dispensing. G. J. Maloney. 2,031,172; Feb. 18.
Bottle cap and making same. W. T. Mason and H. J. Coleman. 2,030,884; Feb. 18.
Bottle closure. C. Anaya. 2,030,841; Feb. 18.
Bottle receptacle, Milk. G. S. Loree. 2,031,272; Feb. 18.
Box; *See*—
Egg box.
Folding box.
Bracelet, Multiple ring. C. G. King. 2,031,110; Feb. 18.
Bracelet, or the like, structures. R. Everitt. 2,030,974; Feb. 18.
Bracket; *See*—
Self-locking bracket.
Braid. W. S. Titcomb. 2,030,947; Feb. 18.
Brake; *See*—
Automatic brake.
Fluid pressure brake.
Automatic parking brake.
Brake. E. B. Boughton and G. Van Vestraut. 2,030,848; Feb. 18.
Brake. J. Saeed. 2,031,390; Feb. 18.
Brake. H. D. Van Brunt. 2,031,517; Feb. 18.
Brake control mechanism, Aircraft. E. F. Goodyear, J. Wright, and H. Trevaskis. 2,031,412; Feb. 18.
Brake head. G. A. Spiller. 2,031,184; Feb. 18.
Brake head arrangement. A. H. Peyche. 2,031,127; Feb. 18.
Brake system. B. S. Aikman. 2,030,955; Feb. 18.
Brake testing apparatus. M. H. Evans and J. H. Woodhouse. 2,030,914; Feb. 18.
Bread and the like, Device for sacking sliced. E. G. Kennebeck. 2,031,264; Feb. 18.
Bread, Slicing. H. J. Critner. 2,031,282; Feb. 18.
Broiler or the like. L. E. Padelford and W. H. Rudolph. 2,031,399; Feb. 18.
Broom and making same. W. H. Zachry. 2,030,954; Feb. 18.
Bucket, Elevator. L. C. Ponting and A. G. Kliwer. 2,031,064; Feb. 18.
Buffing wheel. E. W. Hall. 2,031,105; Feb. 18.
Building block. H. E. Thompson. 2,031,194; Feb. 18.
Building construction. W. D. Mann. 2,030,998; Feb. 18.
Building construction. W. H. Mason. 2,031,568; Feb. 18.
Bumper. B. F. Fortier and F. A. Miller. 2,030,978; Feb. 18.
Bumper. V. P. Williams. 2,031,340; Feb. 18.
Burner; *See*—
Coal burner.
Sulphur burner.
Fuel feed burner.
Cabinet and display case, Ship chart. C. J. Ward. 2,031,241; Feb. 18.
Cable clamp. J. J. Taylor. 2,031,236; Feb. 18.
Cable clamp attachment. F. G. Bovard. 2,031,303; Feb. 18.
Calcium salts of substituted quinoline carboxylic acids, Preparing. P. J. Breivogel. 2,030,958; Feb. 18.
Cam generating machine. H. Alfaro. 2,030,907; Feb. 18.
Camera, Photographic. H. Küppenbender. 2,031,321; Feb. 18.
Candle, Electric. H. Rothenberg. 2,031,507; Feb. 18.
Canvas, Harvester thresher. G. G. Weber and J. Merryweather. 2,031,021; Feb. 18.
Car, Mine. D. U. Rich. 2,030,938; Feb. 18.
Carburetor. R. B. Hirth. 2,030,922; Feb. 18.
Carburetor. E. Mathieu. 2,031,379; Feb. 18.
Carton and blank for forming the same. H. Kondolf. 2,031,111; Feb. 18.
Carton, Dispensing. M. W. Deneheim. 2,031,033; Feb. 18.
Case; *See*—
Combination vanity case.
Casings, Process and apparatus for treating sausage. R. L. Atkinson. 2,030,843; Feb. 18.
Catalysts, Oxidizing. J. C. W. Frazer. 2,031,475; Feb. 18.
Cathode heating element for thermionic tubes. A. A. Straub. 2,031,340; Feb. 18.

Cellulose esters and cellulose ethers, Dyeing or coloring. F. Ackermann. 2,031,356; Feb. 18.
Cement clinkers, Apparatus for manufacturing and treating. H. S. Lee. 2,031,049; Feb. 18.
Cement clinkers, Apparatus for manufacturing, treating, and cooling. H. S. Lee. 2,031,047; Feb. 18.
Centrifugal clothes drier. W. A. Papworth. 2,031,427; Feb. 18.
Chair: *See*—
Reinforcement supporting chair.
Chaise longue. H. Perless and C. F. Pearce, Jr. 2,031,124; Feb. 18.
Chase. G. H. Higgins and W. F. Huck. 2,030,871; Feb. 18.
Check for piano actions. A. Klein. 2,031,488; Feb. 18.
Chucking machine, Automatic. A. J. Lewis. 2,031,051; Feb. 18.
Cigarette package holder. J. Haltzman. 2,030,990; Feb. 18.
Circuit analyzer, Electrical. E. N. Dingley, Jr. 2,030,857; Feb. 18.
Circuit breaker system, Automatic reclosing. A. E. Anderson. 2,031,447; Feb. 18.
Circuit, Control. J. L. Weston. 2,030,948; Feb. 18.
Circuit controller. J. Arcelon. 2,031,448; Feb. 18.
Circuit controller. J. F. Tritle. 2,031,516; Feb. 18.
Circuit, High frequency. F. A. Kolster. 2,031,490; Feb. 18.
Circuit interrupter, Electric. C. Thumim. 2,031,514; Feb. 18.
Circuits, Fidelity control. G. V. Dowding. 2,031,034; Feb. 18.
Clamp: *See*—
Cable clamp.
Machine plate clamp. Table top extension clamp.
Shear blade clamp. Wire line drilling clamp.
Clamp for bell and spigot joints, Adjustable repair. C. E. Norton. 2,031,499; Feb. 18.
Clasp, Collar. L. Madison. 2,030,997; Feb. 18.
Clasp, Hairpin. F. Interrante. 2,031,483-4; Feb. 18.
Cleaner: *See*—
Vacuum cleaner.
Clip and handle, Wire. C. A. Stevens. 2,031,577; Feb. 18.
Closure for containers and the like, Flexible. J. F. Keller. 2,030,902; Feb. 18.
Closure for conveyers, Safety outlet. W. B. McBurney. 2,031,116; Feb. 18.
Clothespole. E. F. Chambless. 2,031,460-1; Feb. 18.
Clutch. W. W. Harris. 2,031,511; Feb. 18.
Coal burner. A. Adrianeff. 2,031,199; Feb. 18.
Coal, Distilling. G. A. Berry and A. P. Beardsley. 2,030,852; Feb. 18.
Coating, Welding rod. P. C. Lemmerman. 2,031,494; Feb. 18.
Coil winding machine. R. Hofstetter. 2,030,988; Feb. 18.
Coil winding machine. R. Hofstetter and J. W. Sager. 2,030,989; Feb. 18.
Coin head for coin controlled devices. T. W. B. Watling. 2,031,247; Feb. 18.
Coin slide, Slug-rejecting. L. M. Hall. 2,031,180; Feb. 18.
Collapsible drawing table. F. A. Giannineto and A. I. Friedman. 2,031,477; Feb. 18.
Color element images in multi-color screen photographic printing and projection, Mixing the. W. Chapman. 2,031,052; Feb. 18.
Color engraving process. W. M. Hensel. 2,030,920; Feb. 18.
Column level gauge. J. W. Gray. 2,031,533; Feb. 18.
Combination vanity case. E. R. Erikson. 2,031,368; Feb. 18.
Combs, Apparatus for making. J. S. Wilcox. 2,031,400; Feb. 18.
Comparators, Attachment for. R. O. Beardsley. 2,031,201; Feb. 18.
Composite package. A. McCallum. 2,031,381; Feb. 18.
Composition of matter and its production. C. G. Dreymann. 2,031,026; Feb. 18.
Compound and compositions containing same. B. C. Bren. 2,031,208; Feb. 18.
Compounds of the N-dihydro-1,2,2',1'-anthraquinone azine series and the production thereof. F. W. Johnson. 2,030,878; Feb. 18.
Concrete, Device for protecting. S. P. and E. W. Cerf. 2,031,098; Feb. 18.
Condenser and making the same, Electrolytic. A. Raines. 2,031,128; Feb. 18.
Conductor reel. I. Stern and L. Shookhoff. 2,031,434; Feb. 18.
Connecter: *See*—
Plug connecter.
Container: *See*—
Ice cream service container.
Container. H. H. Breneman. 2,031,020; Feb. 18.
Container. C. W. Stillwell. 2,031,233; Feb. 18.
Container and closure therefor. W. Hortick, Jr. 2,031,312; Feb. 18.
Container fitting. R. S. Rheem. 2,031,351; Feb. 18.
Container fitting, Steel. L. W. Evans. 2,031,350; Feb. 18.
Container for explosives. C. O. Rison. 2,031,895; Feb. 18.
Container unit, Food. L. H. Scurlock. 2,030,890; Feb. 18.
Containers, Apparatus for making. H. T. Kraft. 2,031,419; Feb. 18.
Containers, Forming metal. J. F. Werder. 2,031,065; Feb. 18.
Containers, Setting-up collapsible. R. W. Barnard. 2,031,080; Feb. 18.
Continuous machine for printing floor and wall coverings. T. Pesci. 2,031,063; Feb. 18.
Control device. S. W. Eggleston. 2,031,405; Feb. 18.
Control device. L. M. Persons. 2,030,932; Feb. 18.
Control for heat generators. J. J. Kloyan. 2,031,335; Feb. 18.
Control mechanism for machine tools and the like. A. Oberhoffken. 2,030,890; Feb. 18.
Controlling apparatus for automobile engines. M. Ury. 2,031,130; Feb. 18.
Controlling means for fuel injection engines. E. Dodman. 2,031,537; Feb. 18.
Conveyer. C. S. Jennings. 2,031,253; Feb. 18.
Conveyer, Sectional. T. T. McCarthy. 2,031,054; Feb. 18.
Cooler: *See*—
Beer cooler.
Copper anode mud, Treating. J. O. Betterton and G. H. Weis. 2,031,290; Feb. 18.
Copper base alloy. H. C. Jennison. 2,031,315-6; Feb. 18.
Copper-beryllium alloys. W. Hessenbruch. 2,030,921; Feb. 18.
Copper having high electrical conductivity and being free from oxygen, Producing. H. von Forster and F. Kinzel. 2,031,518; Feb. 18.
Corn husking machine. S. E. and W. W. Morral. 2,031,277; Feb. 18.
Coupling: *See*—
Hydraulic coupling.
Cover feeder for book match machines. L. B. Parker. 2,031,572; Feb. 18.
Cover for kegs, barrels, or like containers. E. G. Fessenden. 2,031,188; Feb. 18.
Cradle, Lead lifting. B. F. Fitch. 2,030,863; Feb. 18.
Crane. S. W. Ruff. 2,031,549; Feb. 18.
Cravat holder. J. O. Polinck. 2,031,004; Feb. 18.
Creamery products, Producing. H. D. Wendt. 2,031,449; Feb. 18.
Cribs, Adjustable drop-side for. A. M. Smith. 2,031,234; Feb. 18.
Cross-roll apparatus. A. P. Dischar. 2,031,009; Feb. 18.
Cultivator. H. Lisius. 2,030,904; Feb. 18.
Current collector, Electric. A. Vigue. 2,031,031; Feb. 18.
Cut-off machine. G. W. Swift, Jr. 2,031,513; Feb. 18.
Cutter: *See*—
Tin cutter.
Cutting machine. A. C. Whiting. 2,031,444; Feb. 18.
Cylinder head. R. H. Pennebaker. 2,030,998-4; Feb. 18.
Damping device. J. Mercier. 2,031,060; Feb. 18.
Decorative product and making the same. J. Frank. 2,031,474; Feb. 18.
Deflector, Closed car wind. R. M. Harris. 2,030,886; Feb. 18.
Demountable wheel. L. Label. 2,031,114; Feb. 18.
Dental instrument. F. F. Marschalk. 2,031,276; Feb. 18.
Depilatory, Stable. F. Koenigsberger. 2,031,490; Feb. 18.
Derailing device. T. J. Rearns. 2,031,576; Feb. 18.
Derivatives of N-dihydro-1,2,2',1'-anthraquinone azine, Production of. F. W. Johnson. 2,030,877; Feb. 18.
Derrick post, Oil field. L. C. Moore. 2,031,062; Feb. 18.
Detecting and amplifying system. H. F. Elliott. 2,030,913; Feb. 18.
Device for creating an illusion. R. Harding, Jr. 2,030,919; Feb. 18.
Device for opening jars. H. J. Lobmeyr. 2,031,420; Feb. 18.
Direction finder compensator for direct reading of true bearings. H. Scharlau. 2,031,073; Feb. 18.
Discharge tube. A. Claude. 2,030,963; Feb. 18.
Dispensing apparatus. W. Barnett and A. R. O'Kay. 2,030,939; Feb. 18.
Display apparatus. R. B. Lustig. 2,030,966; Feb. 18.
Display device. R. Fioravanti. 2,031,409; Feb. 18.
Display device. S. J. Graham. 2,031,367; Feb. 18.
Display device. A. Kaufman. 2,031,410; Feb. 18.
Distributing apparatus. G. H. Hill, Jr. 2,031,362; Feb. 18.
Door fastener. J. C. Gard. 2,030,916; Feb. 18.
Doorlock. H. Thomasma. 2,031,244; Feb. 18.
Door, Locking a. M. Stone. 2,031,552; Feb. 18.
Door locking mechanism, Automobile. J. A. Roberts. 2,031,231; Feb. 18.
Door operator. E. G. Parris. 2,031,220; Feb. 18.
Door, Refrigerator. C. A. Rehling. 2,031,065; Feb. 18.
Door, Refrigerator car. S. B. Haseltine. 2,031,039-40; Feb. 18.
Door, Spring balanced. D. C. Hungerford. 2,030,893; Feb. 18.
Draft hood. L. N. Hunter. 2,031,314; Feb. 18.
Drawer stop for cabinets and the like. J. E. Clark. 2,031,251; Feb. 18.
Dredging apparatus. J. B. Scandlan. 2,031,388; Feb. 18.
Drier: *See*—
Centrifugal clothes drier.
Drill: *See*—
Rock drill.
Driving device for a machine for casting shoestype plates. K. Schäfein. 2,031,131; Feb. 18.

Drum, Open head. H. G. Vaughn. 2,031,290; Feb. 18.
Dyes and their preparation, Azo. H. Fierlen. 2,030,921; Feb. 18.
Dyes and their production, Azo. M. A. Dahlen. 2,030,970; Feb. 18.
Dyestuff, Diazo. G. Niemann. 2,031,426; Feb. 18.
Dyestuffs of the anthraquinone-2,1 (N) benzacridone series, Vat. W. Bruck. 2,031,406; Feb. 18.
Earth moving device. R. E. Cheate and W. R. Redler. 2,031,463; Feb. 18.
Edge runner-like mixing and kneading machine. L. and J. Eirich. 2,031,149; Feb. 18.
Egg box. C. F. Fuller. 2,030,979; Feb. 18.
Egg breaking and separating machine. W. G. Young, M. Hansen, and J. F. Pollon. 2,031,294; Feb. 18.
Egg product and emulsifier therefor. F. H. Clickner. 2,030,964; Feb. 18.
Elastic strands for elastic fabrics, Noncreep. S. C. Lilley. 2,031,375; Feb. 18.
Electric control apparatus for fuel burners. A. L. Rubel. 2,030,941; Feb. 18.
Electric control means. H. T. Seeley. 2,031,509; Feb. 18.
Electric hand tool. R. Schümann. 2,031,133; Feb. 18.
Electrical advertising sign. F. H. McDonald. 2,030,886; Feb. 18.
Electrical contact device, Separable. C. L. Knutson. 2,031,544; Feb. 18.
Electrical controller. K. G. Powell. 2,031,502; Feb. 18.
Electrical devices, Method of and apparatus for testing. F. G. Taborsky. 2,031,016; Feb. 18.
Electrical disturbances, Reducing. D. G. McCaa. 2,031,539; Feb. 18.
Electrical outlet, Extended. P. Manchester. 2,031,542; Feb. 18.
Electrical regulating system. H. Bany. 2,031,452; Feb. 18.
Electrical resistance device. W. Dunkle. 2,031,211; Feb. 18.
Electrode arrangement for controlling electric arcs. W. G. Thompson. 2,031,435; Feb. 18.
Electromagnetic apparatus. J. Bethenod and A. Claude. 2,030,957; Feb. 18.
Electromagnetic waves, Arrangement adapted to generate ultra short. M. Potterowsky and H. Lax. 2,031,101; Feb. 18.
Electron discharge device. H. W. Parker. 2,030,980; Feb. 18.
Electron discharge tube and circuit arrangement. K. Steimel. 2,031,187; Feb. 18.
Electroplating machine, Automatic. A. H. Hannon. 2,030,984; Feb. 18.
Elevator safety device. F. Hymans. 2,031,042; Feb. 18.
Emergency wheel. H. J. Finke, Jr. 2,031,297; Feb. 18.
Emulsifier. F. H. Clickner. 2,030,965; Feb. 18.
Emulsion, Print-out. G. K. Fallesen and C. J. Staud. 2,030,860; Feb. 18.
Engine: *See*—
Internal combustion engine. Welded steel engine.
Engine. H. Junkers. 2,031,318; Feb. 18.
Engine. C. A. Winslow. 2,031,242; Feb. 18.
Engine and automatic control therefor, Internal combustion. W. A. Robinson. 2,030,939; Feb. 18.
Engine cooling system. A. L. MacClain. 2,031,541; Feb. 18.
Engine starting apparatus. R. P. Lansing. 2,030,882; Feb. 18.
Esters of cellulose, Precipitation of mixed. C. J. Malm. 2,030,883; Feb. 18.
Excavating machine. W. J. Newman. 2,031,319; Feb. 18.
Exhaust silencer for internal combustion engines. H. C. Austin. 2,031,451; Feb. 18.
Eyeglass lens. E. Culver and A. H. Emerson. 2,030,968; Feb. 18.
Eyelet assembly. C. W. Meyer. 2,031,235; Feb. 18.
Eyelet socket. H. Reiter. 2,031,429; Feb. 18.
Fabric: *See*—
Hosiery toe fabric. Pile fabric.
Imitation linen fabric.
Fabric, Apparatus for severing bias cut. H. Willshaw, H. Smith, and F. A. Davenport. 2,031,401; Feb. 18.
Fabric take-off mechanism for knitting machines. P. Schmidt. 2,030,944; Feb. 18.
Fabrics, Dressing. C. Benez. 2,031,245; Feb. 18.
Facsimile system. H. Shore. 2,031,124; Feb. 18.
Fan. A. A. Criqui. 2,031,466; Feb. 18.
Fan. A. G. Langenkamp and R. H. McElroy. 2,030,923; Feb. 18.
Fan, Controlling delivery. F. Sewick. 2,031,138; Feb. 18.
Fastener: *See*—
Door fastener.
Fastener. S. B. Campbell. 2,031,407; Feb. 18.
Fastener installation and fastener for the same. W. I. Jones. 2,031,563; Feb. 18.
Fasteners, Making slide. S. Quisling. 2,030,895; Feb. 18.
Fastening for the handles of tools. D. W. Wiessler. 2,031,142; Feb. 18.
Feed dog recutting fixture. L. C. Corcoran. 2,031,464; Feb. 18.
Feeding apparatus. A. A. Holbeck. 2,031,360; Feb. 18.
Felling machine for gramme fabric sections. C. E. Thompson. 2,031,196; Feb. 18.
Fiber products, Manufacture of. D. M. Sutherland, Jr. 2,030,948; Feb. 18.
Field standard for testing liquid measuring devices. T. A. Seraphin. 2,031,220; Feb. 18.
Filaments and like materials, Apparatus for the production of artificial. H. Dreyfus. 2,030,972; Feb. 18.
Film of the monopack type adapted for color photography, Photographic. H. von Fraunhofer. 2,030,908-4; Feb. 18.
Films and foils of organic cellulose esters, Treatment of. M. Hagedorn and P. Müller. 2,030,983; Feb. 18.
Films, Device for the rewinding of photographic. H. J. Streyckmans. 2,031,079; Feb. 18.
Filter base, Oil. W. F. Muench. 2,031,427; Feb. 18.
Firearm, Automatic. G. End and J. Gastel. 2,031,305; Feb. 18.
Fishing apparatus. A. Johnson. 2,030,875; Feb. 18.
Flaws, Detecting. H. C. Drake. 2,031,469; Feb. 18.
Flight apparatus. J. E. L. Hall. 2,031,310; Feb. 18.
Floor construction, Waterproof and fireproof. O. S. Bowman. 2,031,249; Feb. 18.
Fluid control means. W. T. Gray. 2,031,478; Feb. 18.
Fluid pressure brake. C. C. Farmer. 2,031,213; Feb. 18.
Folding box. F. L. Roe. 2,031,575; Feb. 18.
Food package, Heat insulated. R. B. Derr. 2,031,254; Feb. 18.
Freight on vehicles, Positioning. B. F. Fitch. 2,030,862; Feb. 18.
Fuel. C. S. Marvel. 2,031,497; Feb. 18.
Fuel feed burner. H. S. Lee. 2,031,048; Feb. 18.
Fuel feeding system. E. A. Rockwell. 2,031,282; Feb. 18.
Fuel injection pump. G. A. Wahlmark. 2,031,546; Feb. 18.
Fuel, Method and torch for burning liquid. H. G. Hughey. 2,031,168; Feb. 18.
Fuel mixing valve, Gaseous. J. Elias. 2,031,332; Feb. 18.
Fuel products, Motor. T. H. Rogers and V. Voorhees. 2,030,940; Feb. 18.
Fuel vaporizer and burner, Liquid. C. A. French. 2,031,506; Feb. 18.
Furnace: *See*—
Oil burning furnace.
Furnace for roasting sulphurous ores. W. Mueller. 2,031,122; Feb. 18.
Furnaces, Annealing and other heat-treatment. A. G. Lebly. 2,031,270; Feb. 18.
Fuse. G. E. Brown. 2,031,457; Feb. 18.
Garment, Combination. H. Wipperman. 2,031,622; Feb. 18.
Gas from oxides of nitrogen, Purification of. W. H. Fulweiler. 2,031,410; Feb. 18.
Gas pressure regulator. G. Mills. 2,031,174; Feb. 18.
Gas washer. T. C. Vincent, Jr. 2,031,437; Feb. 18.
Gases and dust evolved in the electrolytic manufacture of aluminium, Recovery of the. P. J. M. Torchet. 2,031,554; Feb. 18.
Gate valve. J. S. Kiesel. 2,031,372; Feb. 18.
Gauge: *See*—
Column level gauge.

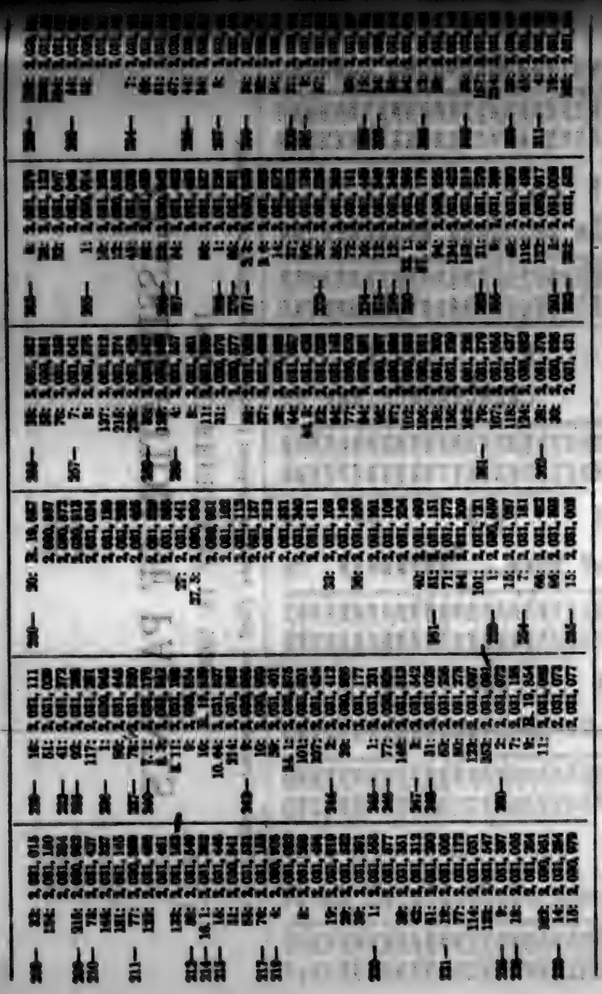
Lock: *See*—
Automobile lock. Oscillation-type lock.
Lock. J. W. Fitz Gerald. 2,031,155; Feb. 18.
Lollipop figure. M. A. Burgard. 2,031,208; Feb. 18.
Lubrication and lubricant therefor. W. D. Hoden. 2,031,368; Feb. 18.
Machine for casting stereotype plates and the like. A. Schaffein. 2,031,132; Feb. 18.
Machine for inserting bottles, etc., into tight fitting tops. D. J. Renfroe. 2,031,005; Feb. 18.
Machine for making drums, bags, and the like. E. A. Muller. 2,031,570; Feb. 18.
Machine for making electrical cables. H. A. Staples. 2,031,014; Feb. 18.
Machine for making grinding wheels. J. G. Goodine. 2,031,158; Feb. 18.
Machine for making pretzels. H. A. Gerland. 2,031,365; Feb. 18.
Machine for transferring designs. D. V. Marocco. 2,031,223; Feb. 18.
Machine for use in the manufacture of chewing gum. C. E. Peterson. 2,031,573; Feb. 18.
Machine plate clamp, Lithograph offset. G. P. Dominaitis. 2,031,353; Feb. 18.
Machine tool. E. K. Morgan. 2,030,888; Feb. 18.
Magnet switch. L. M. Parsons. 2,030,959; Feb. 18.
Mail eye clinching device and method of forming cotton harness having metal eyes. S. E. Floyd. 2,030,977; Feb. 18.
Mandrel, Grinding wheel. J. H. Blair. 2,030,910; Feb. 18.
Marker, Plant. N. C. Vander Kraats. 2,031,394; Feb. 18.
Marker, Traffic. A. L. Voight. 2,031,296; Feb. 18.
Mastic floor topping. H. K. Linnell. 2,031,171; Feb. 18.
Match manufacturing. M. G. Pellpetz. 2,030,892; Feb. 18.
Material, Adhesively coated sheet. W. W. McLaurin. 2,031,275; Feb. 18.
Materials, Testing. R. H. Canfield. 2,030,855; Feb. 18.
Measuring apparatus. V. D. Barker. 2,030,956; Feb. 18.
Measuring system. M. E. Leeds. 2,031,050; Feb. 18.
Meat holder. J. E. Gleekler. 2,031,307; Feb. 18.
Medicinal ase compounds. R. R. Renshaw, E. T. Tisse, and E. F. Ducsel. 2,030,896; Feb. 18.
Medicinal monoase compounds. R. R. Renshaw, E. T. Tisse, and E. F. Ducsel. 2,030,897; Feb. 18.
Mercaptans, Preparation of. E. Bibel and A. Kirstahler. 2,031,529; Feb. 18.
Metal, Apparatus for extruding. J. J. Schwenk. 2,031,006; Feb. 18.
Metal, Apparatus for removing. J. L. Anderson. 2,030,841; Feb. 18.
Metal casting, Process for. P. C. Lemmerman. 2,031,531; Feb. 18.
Metallic coating recovering device. M. J. Briard. 2,031,080; Feb. 18.
Metals as volatile chlorides from ores and other matter containing the same, Removing. C. Hart. 2,030,867-8; Feb. 18.
Metals, Method and apparatus for fusing. J. A. Zublin. 2,031,068; Feb. 18.
Meter for indicating ratio of fluid fuel consumption to engine speed. W. F. Sutherland and G. G. Walz. 2,031,192; Feb. 18.
Micrometer centering device, Inside. H. C. Glaiw. 2,030,864; Feb. 18.
Milk, Apparatus for cooling warm. R. C. McKay. 2,031,274; Feb. 18.
Mill: *See*—
Grinding mill. Mixing mill.
Mill roll, making same, and product of such roll, Rolling. W. H. Payne. 2,030,891; Feb. 18.
Mining machine. F. A. Lindgren. 2,031,376; Feb. 18.
Mining machines, Attachment for. W. A. Logan. 2,031,421; Feb. 18.
Mitten and making the same, Knitted. W. C. Buchholz. 2,030,959; Feb. 18.
Mixer: *See*—
Mortar mixer.
Mixing machine. W. C. Blackmond. 2,030,847; Feb. 18.
Mixing mill. D. L. White. 2,030,949; Feb. 18.
Mixture measurer. E. B. Fairchild. 2,030,976; Feb. 18.
Moistureproof material and making same. W. H. Church, W. L. Hydes, and J. C. Siemann. 2,030,962; Feb. 18.
Mold: *See*—
Tire retreading mold.
Mold for the manufacture of teapots and the like. F. D. Foley. 2,031,258; Feb. 18.
Mop cleaner and receptacle, Dust. H. C. Liedtke and C. O. Wolen. 2,031,574; Feb. 18.
Mortar mixer. D. Miller. 2,031,326; Feb. 18.
Motor control, Self-locking. H. D. R. Lane. 2,031,521; Feb. 18.
Mount for machine guns. S. H. Negnette. 2,030,869; Feb. 18.
Mounting for panels. L. G. Hunter. 2,030,874; Feb. 18.
Mounting for rimless lenses. C. E. Eaddy. 2,031,359; Feb. 18.
Mower attachment, Lawn. F. T. Harrigan. 2,031,493; Feb. 18.
Nozzle. A. Schwarz. 2,031,537; Feb. 18.
Nutcracker. M. L. Stromberg. 2,031,189; Feb. 18.

Odometer, Printing. J. F. Ohmer. 2,031,060; Feb. 18.
Oil, Dewaxing. D. R. Merrill and P. Subkow. 2,031,117; Feb. 18.
Oil, Fractionation of mineral. C. E. Swift. 2,031,284; Feb. 18.
Oil from wax cakes, Separating. B. Hopper. 2,031,107; Feb. 18.
Oil, Process and apparatus for dewaxing. L. Dillon and C. E. Swift. 2,031,210; Feb. 18.
Oil, Process and apparatus for dewaxing. H. F. Fisher. 2,031,214; Feb. 18.
Oil, Producing lubricating. U. B. Bray. 2,031,696; Feb. 18.
Oil, Producing lubricating. U. B. Bray. 2,031,294; Feb. 18.
Oil testing device. L. L. Davis. 2,031,283; Feb. 18.
Oil treatment, Hydrocarbon. L. M. Henderson. 2,030,870; Feb. 18.
Oils and fats, Stabilization of. W. D. Richardson, D. F. Grettie, and R. C. Newton. 2,031,069; Feb. 18.
Oils, Castor machine. A. L. Blount. 2,031,405; Feb. 18.
Oils, Lubricating. E. F. Fevere and C. G. Ludeman. 2,031,227; Feb. 18.
Oils, Process and apparatus for dewaxing. D. R. Merrill. 2,031,118; Feb. 18.
Oils, Quenching. G. C. Shepherd, Jr. 2,031,431; Feb. 18.
Oils, Solvent extraction of. U. B. Bray. 2,031,205; Feb. 18.
Operating mechanism. R. R. Bush. 2,031,458; Feb. 18.
Organic cellular materials, Treatment of. H. J. Wolf. 2,031,243; Feb. 18.
Oscillation control device. A. Herckmans. 2,030,967; Feb. 18.
Oscillation generator. F. H. Engel. 2,031,100; Feb. 18.
Oscillation-type lock. J. L. Adams, Jr. 2,031,009; Feb. 18.
Oscillations, Production of. K. Hoegner. 2,031,106; Feb. 18.
Oscillator, Electric. O. M. Shattuck and M. E. Fultz. 2,031,076; Feb. 18.
Oscillator, Electron coupled thermionic. H. W. Parker. 2,030,931; Feb. 18.
Outlet, Convenience. G. B. Benander. 2,031,453; Feb. 18.
Package of matches. E. M. Solon. 2,031,011; Feb. 18.
Packed, flexible, conduit joint. G. C. Smith. 2,031,389; Feb. 18.
Packing, Method and apparatus for manufacturing. W. Liedle. 2,031,567; Feb. 18.
Pad: *See*—
Printing pad.
Pad and making the same, Abrasive supporting. L. D. Reed. 2,031,280; Feb. 18.
Pad for applying pressure to shoe bottoms. S. J. Finn. 2,030,915; Feb. 18.
Pail, Pour. C. H. Rollason. 2,031,006; Feb. 18.
Painter, Smokestack. J. W. Allen. 2,030,840; Feb. 18.
Panel chamfering machine. T. A. Peterman and F. Nicholson. 2,031,385; Feb. 18.
Paperboard and the like, Making moistureproof. C. G. Dreymann. 2,031,688; Feb. 18.
Paper developing apparatus, Automatic positive. L. G. Simjian. 2,031,010; Feb. 18.
Paper strips, Apparatus for forming, folding, and banding. A. A. Massini. 2,031,063; Feb. 18.
Parking apparatus. R. S. Taylor. 2,031,392; Feb. 18.
Partition, Stock-car. M. J. McQueen. 2,031,262; Feb. 18.
Pattern selecting mechanism. G. H. White. 2,031,346; Feb. 18.
Patty-hoe. C. N. Sonnenberg. 2,031,133; Feb. 18.
Pen, Fountain. I. D. Taft. 2,031,343; Feb. 18.
Pen point, Making a. H. J. Halpin and L. S. Henwood. 2,030,918; Feb. 18.
Pencil, Electric. R. H. Goldman. 2,031,533; Feb. 18.
Pencil pointer, Lead. H. H. Walters. 2,031,292; Feb. 18.
Perspectives, Apparatus for producing. J. Bartholomsky. 2,031,358; Feb. 18.
Phosphates of manganese, Preparation of. C. F. Booth. 2,031,579; Feb. 18.
Photoelectric tube. H. Geffcken and H. Richter. 2,031,102; Feb. 18.
Photoelectric tube. H. Geffcken and H. Richter. 2,031,102; Feb. 18.
Photographic copying apparatus. B. C. Roehri. 2,031,071; Feb. 18.
Photophone. G. M. Wright and G. F. Brett. 2,031,196; Feb. 18.
Pike, Safety. L. Jensen and R. Sherman. 2,031,044; Feb. 18.
Pile fabric. C. E. Barrett. 2,030,851; Feb. 18.
Pipe: *See*—
Tobacco smoking pipe.
Pipe and like structure, Composite. R. W. Mitchell. 2,031,057; Feb. 18.
Piston packing ring. C. A. Marion. 2,030,937; Feb. 18.
Piston ring. J. H. Stumpf. 2,031,341; Feb. 18.
Pitcher propeller, Automatic variable. R. B. Gomeny. 2,030,953; Feb. 18.
Planographic printing plate and process. A. W. Stephenson. 2,031,185; Feb. 18.
Planter, Potato. J. Reether. 2,031,547; Feb. 18.
Plowshare. J. A. and J. M. Romine. 2,031,546; Feb. 18.
Plug and receptacle, Disconnect. A. Alsaker and F. H. Cole. 2,031,296; Feb. 18.
Plug connecter. H. P. Dilly. 2,030,856; Feb. 18.
Pole, Ski. W. R. J. Oliver. 2,031,284; Feb. 18.
Post: *See*—
Battery terminal post. Derrick post.
Power plant. W. F. Keenan, Jr. 2,031,423; Feb. 18.
Power plant. J. S. Malseed, J. T. Welsh, and W. F. Keenan, Jr. 2,031,422; Feb. 18.
Power transmission mechanism. H. F. Hobbs. 2,031,414; Feb. 18.
Power transmission system, Electric. G. Pfaff. 2,030,935; Feb. 18.
Power tube. W. H. Kühle. 2,031,112; Feb. 18.
Preservative means for ropes and the like. A. W. Koon. 2,031,267; Feb. 18.
Press: *See*—
Hydraulic press.
Pressure apparatus, Variable. E. J. Crane and D. V. Waters. 2,030,966; Feb. 18.
Pressure compensator for oil- or compound-filled cables. F. Schrottke. 2,030,943; Feb. 18.
Printing and depositing mechanism. E. D. Rapisarda. 2,031,386; Feb. 18.
Printing pad. B. Dwofsky. 2,031,212; Feb. 18.
Products including aliphatic aldehydes, Making. K. Baur. 2,031,200; Feb. 18.
Program system, Automatic. G. B. Scheibell. 2,031,074; Feb. 18.
Program system, Selective. G. B. Scheibell. 2,031,075; Feb. 18.
Projection apparatus. L. W. Bowen. 2,031,361; Feb. 18.
Prop, Clothesline. N. Berg. 2,031,091; Feb. 18.
Protector: *See*—
Ski edge protector.
Pulp, Bleaching. H. John, C. C. LeFebvre, and H. Du Bois. 2,031,485; Feb. 18.
Pump: *See*—
Fuel injection pump.
Pump and condensing unit, Motor. H. R. Van Deventer. 2,031,080; Feb. 18.
Pump construction. E. H. Blunt. 2,031,456; Feb. 18.
Pump or compressor, Rotary. W. W. Wishart. 2,030,952; Feb. 18.
Punch. G. R. Ahlquist. 2,031,024; Feb. 18.
Quotation projecting or analogous apparatus. J. A. Spencer. 2,030,900; Feb. 18.
Rack: *See*—
Bag rack.
Radiator grille. C. L. Lewellen. 2,031,324; Feb. 18.
Radio receiver, System for remotely controlling a. A. S. Blatterman. 2,031,555; Feb. 18.
Radio signaling apparatus. J. C. Warner. 2,031,441; Feb. 18.
Ram. E. Kiecksee. 2,031,535; Feb. 18.
Razor, Safety. W. H. Black. 2,031,455; Feb. 18.
Razor, Safety. J. F. Mellen. 2,031,223; Feb. 18.
Reamer, Adjustable burnishing. R. R. Bishton. 2,030,843; Feb. 18.
Receptacle: *See*—
Bottle receptacle.
Receptacle filling apparatus. L. B. Winton. 2,030,951; Feb. 18.
Recording device. A. E. Berdon. 2,030,909; Feb. 18.
Rectifier. W. M. Fury. 2,031,411; Feb. 18.
Reel: *See*—
Conductor reel.
Reel. K. B. Porter. 2,031,501; Feb. 18.
Reenforcement supporting chair. H. G. Kessling. 2,031,286; Feb. 18.
Refrigerant mixture. G. F. Zellhoefer. 2,031,087; Feb. 18.
Refrigerating apparatus. J. G. King. 2,031,536; Feb. 18.
Refrigerating apparatus. J. Smilack. 2,031,550; Feb. 18.
Refrigeration apparatus. T. S. Safford. 2,030,942; Feb. 18.
Refrigeration apparatus. M. C. Terry. 2,031,237; Feb. 18.
Refrigerator. L. W. Atchison. 2,031,450; Feb. 18.
Refrigerator. T. J. Scofield. 2,031,283; Feb. 18.
Refrigerator accessory, Display. G. J. Hopkins. 2,030,923; Feb. 18.
Register, Autographic. L. Jensen. 2,031,370; Feb. 18.
Registering apparatus. D. V. Marocco. 2,031,221; Feb. 18.
Regulating apparatus for steam heating systems, Automatic. E. C. Wiley. 2,031,445; Feb. 18.
Regulator: *See*—
Gas pressure regulator. Viscosity regulator.
Repair device for cream separator disks. E. W. Brown. 2,031,250; Feb. 18.
Resin and preparation, Synthetic. C. P. Haskins. 2,031,481; Feb. 18.
Resins and making same, Infusible synthetic. A. Gams, G. Widmer, and K. Frey. 2,031,240; Feb. 18.
Resist effects with azo dyestuffs. C. S. Parker, C. L. Wall, and F. Farrington. 2,031,546; Feb. 18.
Rhodamine coloring matters and preparing the same. M. Wyler. 2,031,023; Feb. 18.
Ring: *See*—
Piston ring.
Piston packing ring.
Roasting apparatus. M. D. Woodruff, W. H. Meehlin, and J. Markley. 2,031,086; Feb. 18.
Robe support and bracket therefor, Automobile. A. Claudmantle. 2,031,496; Feb. 18.



Rock drill. R. G. Gartin. 2,030,981; Feb. 18.
Roller: *See*—
Shade roller.
Rubber articles, Method and apparatus for treating. R. B. Day. 2,031,560–1; Feb. 18.
Safety cutting tool. H. P. Eck, I. B. and H. M. Rosenberg, and I. Fleer. 2,031,470; Feb. 18.
Safety device for gas ranges, gas boilers, etc. W. Katz. 2,031,415; Feb. 18.
Sandpaper and other abrasive papers and making same, Water-resistant. C. Ellis. 2,031,362; Feb. 18.
Sander. L. K. Silleox. 2,031,009; Feb. 18.
Sash, Window. L. Stoltenburg. 2,031,338; Feb. 18.
Scale, Weighing. F. V. Waltz. 2,031,489; Feb. 18.
Scoring device. E. W. Wahlin. 2,031,291; Feb. 18.
Scraper blade. J. K. Cushman. 2,030,969; Feb. 18.
Seal-flap gumming and drying in envelope machines. M. Goder. 2,031,281; Feb. 18.
Sealed bearing. K. G. V. Nilsson. 2,031,571; Feb. 18.
Seaming and pinking machine, Combined. H. C. Moulton. 2,031,545; Feb. 18.
Seat: *See*—
Adjustable seat.
Seat adjuster. S. K. Bishop. 2,031,248; Feb. 18.
Seeder, Broadcast. J. A. Macaulay. 2,031,540; Feb. 18.
Self-locking bracket. F. J. Burns. 2,030,960; Feb. 18.
Sewing machine, Electrically lighted. H. J. Goosman. 2,031,562; Feb. 18.
Sewing machine, Shoe. O. R. Haas. 2,031,479; Feb. 18.
Sewing machines, Feed reversing mechanism for. S. Laszlocsy. 2,031,323; Feb. 18.
Shackle support. J. W. Leighton. 2,031,492; Feb. 18.
Shade for greenhouses. L. H. Gilson. 2,031,157; Feb. 18.
Shade roller. H. F. Chambless. 2,031,459; Feb. 18.
Shade roller. J. W. Fay. 2,031,473; Feb. 18.
Shaped bodies of nonplastic metallic oxides, Making. R. Reichmann. 2,031,129; Feb. 18.
Shaving device and the like. D. M. Winans. 2,031,519; Feb. 18.
Shear blade clamp, Rotary. F. C. Biggert. 2,031,246; Feb. 18.
Sheet-folding machine. P. J. Christman. 2,031,301; Feb. 18.
Sheet separating and feeding device. G. Spiess. 2,031,078; Feb. 18.
Shoe heel. P. B. Sullivan. 2,031,511; Feb. 18.
Shoe sole. F. Vicente. 2,031,196; Feb. 18.
Short wave-long wave receiver. J. Rohnfeld. 2,031,130; Feb. 18.
Short wave receiver, Ultra. R. W. George. 2,031,103; Feb. 18.
Shovel. F. C. Brandenburg. 2,031,556; Feb. 18.
Sign: *See*—
Electrical advertising sign.
Signaling. H. O. Roosenstein. 2,031,072; Feb. 18.
Signaling system. E. E. Bier. 2,031,302; Feb. 18.
Signaling system. M. Cottrell. 2,031,465; Feb. 18.
Signaling system. R. R. Kemmerer. 2,030,924; Feb. 18.
Signals and controls for passenger and freight elevators and for other purposes. W. N. Dickinson. 2,030,912; Feb. 18.
Silk, Producing artificial. A. Hartmann and G. Bauriedel. 2,030,883; Feb. 18.
Ski edge protector. E. M. Eriksen. 2,031,150; Feb. 18.
Skiving machine. E. A. Williams and A. F. Berger. 2,030,950; Feb. 18.
Slag, Method and apparatus for handling. R. N. Wilson. 2,031,352; Feb. 18.
Slug casting machine, Typographical. W. F. Gerse and E. H. Scott. 2,031,306; Feb. 18.
Sodium and zinc sulphides, Making. T. A. Mitchell and R. L. Sessions. 2,030,887; Feb. 18.
Sole attaching apparatus. J. T. Lancaster. 2,031,491; Feb. 18.
Solvent, Nonflammable cleaning. M. A. Youtz. 2,031,144–6; Feb. 18.
Sound or other vibrations, Method of and apparatus for electrically recording and reproducing. M. Dunton. 2,030,973; Feb. 18.
Sound reproducing system. B. Olney. 2,031,560; Feb. 18.
Spherical machine. F. A. Peschl. 2,031,125–6; Feb. 18.
Sponge device, Washing and lathering. C. H. C. Borden. 2,030,911; Feb. 18.
Spraying device. L. M. Persons. 2,030,924; Feb. 18.
Spring bolt assembly. J. W. Leighton. 2,031,493; Feb. 18.
Stains from teeth, Removing. G. D. Laymon. 2,031,160; Feb. 18.
Stand for X-ray apparatus and the like. G. Bucky. 2,031,097; Feb. 18.
Staple driving machine. C. F. Kuch, Jr. 2,031,230; Feb. 18.
Starter, Engine. R. P. Lansing. 2,031,269; Feb. 18.
Steering gear, Hydraulic. H. F. Vickers. 2,030,902; Feb. 18.
Stencil, Finishing. S. A. O'Donnell. 2,031,225; Feb. 18.
Stoker controlling device. H. S. Morton. 2,031,130; Feb. 18.
Stool and auxiliary pedal for pianos. Y. Miyashita. 2,030,929; Feb. 18.
Stool and carrier, Combination. R. R. Moreland. 2,031,119; Feb. 18.
Stop, Flexible internal. J. J. McMahon. 2,031,424; Feb. 18.
Stopper, Nonrefillable bottle and container. L. Amari. 2,031,446; Feb. 18.
Strainer, Milk. C. A. E. Johnson. 2,031,165; Feb. 18.
Strap stretching device. W. C. Childress. 2,031,422; Feb. 18.
Sugarcane bagasse, Utilization of. A. M. Thomas. 2,031,230; Feb. 18.
Sulphur, Apparatus for burning. M. S. Maxim. 2,030,888; Feb. 18.
Sulphur burner. I. Bencowitz. 2,031,403; Feb. 18.
Sulphur dioxide, Manufacture of. E. E. V. Rhodin. 2,031,504; Feb. 18.
Support: *See*—
Arch and heel support. Shackle support.
Hose support.
Support for conductors. J. J. Taylor. 2,031,225; Feb. 18.
Surgical endoscopic instrument. F. C. Wappler. 2,031,020; Feb. 18.
Switch: *See*—
Magnet switch.
Switch mechanism, Control. W. M. Smith, P. B. Parks, and E. A. Russell. 2,030,945; Feb. 18.
Switch mechanism, Railway. C. C. Thorn. 2,031,513; Feb. 18.
Swivel, Rotary. J. D. Spalding. 2,031,537; Feb. 18.
Syringe, Hydrometer. F. Altmayer. 2,031,025; Feb. 18.
Table: *See*—
Collapsible drawing table. Illuminated folding table.
Hall table.
Table top extension clamp. A. F. Wagoner. 2,031,331; Feb. 18.
Tag. H. Roth. 2,031,229; Feb. 18.
Tagging machine. R. W. French. 2,031,476; Feb. 18.
Tank for storage of liquids, especially hydrocarbons. A. W. Syndergaard. 2,031,553; Feb. 18.
Telephone circuit, Operator's. H. T. Carter. 2,030,961; Feb. 18.
Telephone circuit, Operator's. E. Distas. 2,030,971; Feb. 18.
Telephone system, Automatic. J. E. Outline. 2,031,329; Feb. 18.
Test tube heater. H. A. Walker and H. P. Strand. 2,031,019; Feb. 18.
Textile assistants. O. Drapal. 2,030,830; Feb. 18.
Textile fibers, Device for continuous spinning and/or twisting of. O. G. J. S. de Roymancour. 2,031,467; Feb. 18.
Textile materials with rubber-containing liquids, Impregnation of. J. Brandwood. 2,031,094; Feb. 18.
Textile working device. S. E. Kalbach. 2,031,216; Feb. 18.
Thermionic oscillation generator. E. B. Moullin. 2,031,224; Feb. 18.
Thermostat with flexible connecting means, Bellows. M. H. Ward. 2,031,440; Feb. 18.
Thread tensioning attachment for textile machines. R. Schletter. 2,031,430; Feb. 18.
Tie holder. R. M. Wolfe. 2,030,905; Feb. 18.
Tilling machine, Rotary. N. C. Storey and F. R. Hasse. 2,031,189; Feb. 18.
Timepiece, Self-winding. W. A. Gabriel. 2,030,900; Feb. 18.
Time switch mechanism. C. Stokes. 2,031,187; Feb. 18.
Tin cutter. A. Swedeland. 2,031,190; Feb. 18.
Tinsel producing machine, Crinkled. P. Krans and A. Hartmann. 2,031,585; Feb. 18.
Tire groover. C. F. Boyer and G. W. Funke. 2,031,016; Feb. 18.
Tire-groover, Hand. W. F. Krig and G. M. Pfund. 2,031,472; Feb. 18.
Tire retreading mold. M. M. Fisher. 2,030,881; Feb. 18.
Tobacco smoking pipe. M. Champoux. 2,031,524; Feb. 18.
Tool: *See*—
Electric hand tool. Machine tool.
Honing tool. Safety cutting tool.
Tool for lock cylinders, Assembly. R. W. Griffith. 2,031,150; Feb. 18.
Tool handle, Fastening. D. W. Wisseler. 2,031,141; Feb. 18.
Tool holder, Offset side supported. O. Severns. 2,031,234; Feb. 18.
Toothbrush holder, Sanitary. C. V. and L. W. Lindblom. 2,031,115; Feb. 18.
Totalizer, Electric. F. T. Bolas and J. W. McClew. 2,031,284; Feb. 18.
Toy. W. J. Van Deest. 2,031,240; Feb. 18.
Toy airplane. W. Kramer. 2,031,419; Feb. 18.
Toy gun. J. Betty. 2,031,350; Feb. 18.
Toy locomotive, train and track. H. E. Thompson. 2,031,105; Feb. 18.
Tractor. H. S. Eberhard. 2,031,303; Feb. 18.
Tractor. E. A. Johnson. 2,031,317; Feb. 18.
Transmission. P. Blachof. 2,031,247; Feb. 18.
Transmission, Automatic. C. F. Bevan and A. E. Kilpatrick. 2,031,067; Feb. 18.
Transmission mechanism. M. Natalis. 2,031,089; Feb. 18.
Trap. J. D. Zahm and J. U. Lehr. 2,031,330; Feb. 18.
Tray, Ice. G. L. Tinkham. 2,031,515; Feb. 18.
Tray making apparatus. G. L. Tinkham. 2,031,516; Feb. 18.
Trolley. H. Durst. 2,031,148; Feb. 18.
Truck. F. M. Smith. 2,031,191; Feb. 18.

Truck, Portable. D. L. Lea. 2,030,925; Feb. 18.
Tube: *See*—
Discharge tube. Power tube.
Photoelectric tube.
Tube base and socket. A. Horewitz and J. Vizman. 2,031,313; Feb. 18.
Tubing catcher. W. H. McKissick. 2,031,056; Feb. 18.
Tuning indicator. A. Agricola. 2,031,295; Feb. 18.
Typewriting machine. W. A. Dobson. 2,030,858; Feb. 18.
Ultra-short wave receiver. H. E. Hollmann. 2,030,872; Feb. 18.
Underreamer. H. E. Woodruff. 2,031,353; Feb. 18.
Utensil, Electric cooking. C. A. Fox. 2,031,250; Feb. 18.
Vacuum cleaner. T. E. D. Bilde and A. Eriksson-Jons. 2,031,454; Feb. 18.
Valve: *See*—
Fuel mixing valve. Gate valve.
Valve. A. J. Eulberg. 2,031,151; Feb. 18.
Valve. O. W. Hahn. 2,031,309; Feb. 18.
Valve for hot water systems, Relief. W. B. Clifford. 2,031,558; Feb. 18.
Valve for vacuum brake systems, Fluid control. M. Paul and W. Gyr. 2,031,061; Feb. 18.
Valve operating mechanism for internal combustion engines. S. H. Attwood. 2,030,844; Feb. 18.
Valve structure. E. H. Mueller. 2,031,121; Feb. 18.
Vaporizer. J. Robinson. 2,030,896; Feb. 18.
Vat-dyestuffs of the anthraquinone series and making the same. W. Moser and W. Floroni. 2,031,068; Feb. 18.
Vehicle, Child's play. C. P. Nisehirk. 2,031,176; Feb. 18.
Vehicle, Child's wheeled. J. E. Stevenson. 2,031,015; Feb. 18.
Vehicle indicating lamp. J. C. Lester. 2,031,170; Feb. 18.
Vehicle jack. M. A. Tirabasso. 2,031,393; Feb. 18.
Vehicle spring suspension. A. F. Hickman. 2,031,482; Feb. 18.
Ventilation, Concealed skylight. L. W. Mulford. 2,031,328; Feb. 18.
Ventilator. F. E. Biggs. 2,031,404; Feb. 18.
Verifying machine for perforated records. M. Maul. 2,031,569; Feb. 18.
Vessel. H. M. Knight. 2,030,831; Feb. 18.
Vessel, Turbine-driven. H. Thormeyer. 2,031,436; Feb. 18.
Vibrator. G. B. Pickop. 2,030,936; Feb. 18.
Viscosity regulator. W. Thomas. 2,031,018; Feb. 18.
Volume control arrangement, Automatic. L. E. Thompson. 2,031,238; Feb. 18.
Wall table. E. W. Swanson. 2,031,287; Feb. 18.
Washboard. K. P. Oppermann. 2,031,178; Feb. 18.
Washer: *See*—
Gas washer.
Watering device, Automatic. T. Dodge. 2,031,146; Feb. 18.
Wattmeter, Compensated. G. H. Browning. 2,031,207; Feb. 18.
Wax from oil, Removing. B. Hopper. 2,031,109; Feb. 18.
Wax from oil, Separating. U. B. Bray. 2,031,095; Feb. 18.
Welded steel engine. B. Loeffler. 2,030,995; Feb. 18.
Welding. E. H. Taylor. 2,031,188; Feb. 18.
Welding apparatus, Electric arc. J. P. Tripp. 2,031,288; Feb. 18.
Welding machine. E. J. von Henke. 2,031,082; Feb. 18.
Wheel: *See*—
Buffing wheel. Emergency wheel.
Demountable wheel.
Wheel and axle assembly. F. H. Bender and F. E. Bachman. 2,031,093; Feb. 18.
Wheel and wheel cover. O. U. Zerk. 2,031,355; Feb. 18.
Wheel construction, Semiautomatic fifth. C. E. Dorsey, Jr. 2,031,256; Feb. 18.
Wheel inclosure, Vehicle. E. A. Koch. 2,031,219; Feb. 18.
Window control device for automobiles and other traveling vehicles. L. D. Boyce. 2,030,840; Feb. 18.
Wiper, Windshield. J. W. Anderson. 2,031,297; Feb. 18.
Wire article, Collapsible. M. D. Smith. 2,031,231; Feb. 18.
Wire broadcasting system. P. P. Eckersley and R. E. H. Carpenter. 2,031,528; Feb. 18.
Wire line drilling clamp. J. E. Neptune. 2,031,003; Feb. 18.
Wire splicer. L. E. Krouman. 2,031,167; Feb. 18.
Wireless direction finding, bearing finding, and similar system. S. E. Smith and T. L. Eckersley. 2,031,077; Feb. 18.
Wrapping machine. P. E. Kleineberg. 2,030,879–80; Feb. 18.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 18, 1936

NOTE.—First number—class, second number—subclass, third number—patent number

THE OFFICIAL GAZETTE
OF THE
United States Patent Office

Vol. 462—No. 4 TUESDAY, FEBRUARY 25, 1936 Price—$16 per year

The OFFICIAL GAZETTE is issued under the direction of the Superintendent of Documents, Government Printing Office, to whom all communications should be made; provide cash; all communications regarding the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum, including annual index; $10.75; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For that letter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notices of Cancellation

U. S. PATENT OFFICE, Washington, Jan. 31, 1936.

Mexican American Habanero Corporation, its assigns or legal representatives take notice:

An application for cancellation having been filed in this Office by C. F. Hernandez, S. en C., 24 Calle de Cuahutemotzin Number 90, Mexico, D. F., to effect the cancellation of trade-mark registration of Mexican American Habanero Corporation, 32 East 40th Street, New York, N. Y., No. 319,899, dated December 5, 1933, and the notice of such proceeding sent by registered mail to the said Mexican American Habanero Corporation at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mexican American Habanero Corporation, its assigns or legal representatives, shall enter an appearance within thirty days from the first publication of this notice the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

U. S. PATENT OFFICE, Washington, Jan. 31, 1936.

Robischon Corporation, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Sears, Roebuck and Co., 925 South Homan Avenue, Chicago, Ill., to effect the cancellation of trade-mark registration No. 174,210, issued October 3, 1923, to Robischon Corporation, 213 Fifth Avenue, New York, N. Y., and a notice of such proceeding sent by registered mail to said Robischon Corporation at said address having been returned by the post office as undeliverable, notice is hereby given that unless said Robischon Corporation, its assigns or legal representatives shall enter an appearance within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

U. S. PATENT OFFICE, Washington, Feb. 6, 1936.

Hungrafi Janos Corporation, its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Andreas Szelehner, Andrassyut 2 (2 Andrassy Avenue), Budapest, Hungary, to effect the cancellation of trade-mark registration No. 14,252, issued April 5, 1927, to Andreas Szelehner, Buda-Pesth, Hungary, and renewed April 5, 1917. The records of this Office show that Hungrafi Janos Corporation, 120 Fulton Street, New York, N. Y., is the assignee of said registrant. A notice of such proceeding sent by registered mail to said Hungrafi Janos Corporation having been returned by the post office as undeliverable, notice is hereby given that unless said Hungrafi Janos Corporation, its assigns or legal representatives shall enter an appearance within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

LESLIE FRAZER,
Assistant Commissioner.

U. S. PATENT OFFICE, Washington, Feb. 6, 1936.

Hungrafi Janos Corporation, its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Andreas Szelehner, Andrassyut 2 (2 Andrassy Avenue), Budapest, Hungary, to effect the cancellation of trade-mark registration No. 14,252, issued April 5, 1927, to Andreas Szelehner, Buda-Pesth, Hungary, and renewed April 5, 1917. The records of this Office show that Hungrafi Janos Corporation, 120 Fulton Street, New York, N. Y., is the assignee of said registrant. A notice of such proceeding sent by registered mail to said Hungrafi Janos Corporation having been returned by the post office as undeliverable, notice is hereby given that unless said Hungrafi Janos Corporation, its assigns or legal representatives shall enter an appearance within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

LESLIE FRAZER,
Assistant Commissioner.

Condition of Applications Under Examination at Close of Business February 8, 1926

(Total number of applications awaiting action, excluding Trade-Mark Division, 23,867; Trade-Mark Division, 1,508. Oldest new case, October 11, 1923; oldest amended, October 8, 1923. The dates given are 1925 except where † indicates 1926.)

Room No.	Divisions, Examiners, and Subjects of Inventions	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action
6634	1. LOEFFLER, F. A., Baths and Closets; Sewerage; Domestic Cooking Vessels; Cleaners Operators; Pedals; Gates; Tillage.	Oct. 9	Dec. 29	388
6708	2. HERRMANN, D., Fishing and Trapping; Dairy, Animal Husbandry; Fences; Tobacco; Velocipedes; Butchering; Bee Culture.	Oct. 21	Oct. 31	722
6080	3. LINDSEY, A., Heating; Metal Founding; Metallurgy; Metal Treatment; Electric Furnaces	Nov. 9	Nov. 8	466
7083	4. DONNELLY, A. E. (Act.), Conveyors; Hoists; Handling Apparatus and Implements; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Stairs Service; Pneumatic Despatch; Fluid Pressure Brakes.	Nov. 14	Nov. 11	429
6626	5. MACNAB, J. F., Harvesters; Music; Acoustics; Sound Recording; Knotters; Buckles, Buttons, Etc.	Nov. 13	Nov. 13	466
4626 C	6. LEWERS, A. M., Carbon Chemistry	Nov. 13	Nov. 11	168
6735	7. JARBOE, C. G., Optics; Photography	Dec. 4	Dec. 4	158
3589	8. ADAMS, F. L., Beds; Chairs; Kitchen and Table Articles; Racks and Cabinets	Nov. 5	Nov. 13	199
4624	9. ADAMS, R. E., Pumps; Fluid and Fluid-Current Motors	†Jan. 4	†Jan. 4	187
6812	10. HUNTER, O. P., Land Vehicles—Animal Draft Appliances, Bodies and Tops; Vehicle Fenders	Dec. 12	Dec. 18	338
5207 D	11. BENHAM, E. V., Boots, Shoes, and Leggings; Buttons, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus; Hides, Skins, and Leather	Nov. 13	Nov. 11	466
7701	12. HENRY, C. C., Machine Elements; Cylinders and Pistons; Mechanical Starters; Stop Mechanisms	Nov. 6	Nov. 6	452
6099	12. BORLIK, F. J., Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning; Boring and Drilling	Dec. 2	Dec. 2	268
6907	14. BRUMBAUGH, N. J., Furriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Wire Fabrics; Wire Working; Metal Working, Blanks and Processes	Nov. 4	Nov. 1	387
4807	15. WORRELL, I. W., Glass; Plastic Block and Earthenware Apparatus; Plastics	Nov. 20	Nov. 20	643
5012	16. SPENCER, C. J., Telegraphy; Telephony	Nov. 11	Nov. 11	311
5701	17. ARMSTRONG, H., Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Assembling or Folding; Sheet or Web Feeding; Type Setting	Nov. 13	Nov. 13	339
6612	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Nov. 7	Nov. 4	288
6096	19. KENNEDY, A. R., Furnaces and Stoves; Fuel Burners	Nov. 13	Nov. 13	468
6613	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks; Latches; Safes; Undertaking	Nov. 7	Nov. 2	248
7726	21. THOMPSON, T. L., Textiles; Cloth Finishing	Nov. 13	Nov. 20	573
5726	22. RINGLE, D., Aeronautics; Firearms, Ordnance, and Explosive Devices; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion	Nov. 12	Nov. 11	388
7624	23. BUTTNER, W. J. (Act.), Coin Handling; Recorders; Registers	Oct. 11	Oct. 2	421
6505	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Nov. 22	Nov. 13	333
5709	25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters; and Comminutors	Nov. 9	Nov. 8	543
6908	26. ADAMS, W. M., Electricity, Generation; Motive Power	Dec. 4	Dec. 2	288
5708	27. CLARK, W. N., Brushing, Scrubbing, and Cleaning; Washing Apparatus	Nov. 12	Nov. 11	467
4626	28. BENSON, A. E., Internal-Combustion Engines	Dec. 3	Nov. 26	265
6662	29. SHKLARIN, J. B. (Act.), Woodworking; Tools; Compound Tools, Furniture, Metal Working; Cloth, Leather, and Rubber Receptacles; Bagging; Package and Article Carriers; Deposit and Collection Receptacles; Supports, Tables	Dec. 4	Dec. 3	211
4671	30. SHIPMAN, J. L., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Thermostats and Humidostats	Nov. 9	Nov. 9	427
6714	31. DUNCOMBE, C. S. (Act.), Gas, Heating and Illuminating; Mineral Oils	Nov. 9	Nov. 8	388
4626	32. BARTHOLOMEW, J. A., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation	Dec. 3	Dec. 3	263
6699	33. WYMAN, W. L., Bridges; Masonry, Concrete, Metallic, and Wooden Structures; Roads; Roads and Pavements	Nov. 15	Nov. 15	388
6626	34. SAPERSTEIN, S., Electricity, Transmission to Vehicles; Railways, Rolling Stock; Switches, and Signals; Track Gauges	Nov. 13	Nov. 8	462
5650	35. REYNOLDS, E. C., Card and Sign Exhibiting; Signals; Dispensing; Filling and Closing Portable Receptacles	Nov. 9	Nov. 8	823
7609	36. McFADYEN, A. D., Measuring Instruments; Force Measuring; Automatic Weighers	Dec. 9	Dec. 9	263
4626 B	37. WEAVER, M. E., Electricity, Circuit Makers and Breakers; Light-Sensitive Circuits	Nov. 5	Nov. 13	331
7510	38. KRAFFT, C. F., Earth Boring; Hydraulic and Earth Engineering; Mining and Quarrying; Stoneworking; Wells; Plastic Compositions	Nov. 18	Nov. 20	371
6672	39. WHITNEY, F. J., Fluid-Pressure Regulators; Multiple Valves; Valves; Water Distribution	Dec. 10	Dec. 9	327
7580	40. OBERLIN, J. J., Metallic, Wood, Paper, and Special Receptacles	Feb. 1	Nov. 2	388
6082	41. WHITNEY, M. L., Railway and Land Vehicles, Wheels and Axles; Resilient Tires and Wheels; Wheel Substitutes; Railway Draft Appliances; Springs; Devices; Typewriting Machines	Nov. 25	Dec. 3	444
5662	42. CUTTING, H. C., Electric Signaling	Nov. 13	Nov. 6	353
4626 D	43. KLINGE, E. F., Medicines, Poisons and Cosmetics; Bleaching and Dyeing; Explosive Compositions; Sugar and Starch	Nov. 14	Nov. 13	387
4627 D	44. SHAFFER, C. H., Refrigeration; Dispensing Beverages	Oct. 21	Oct. 21	388
7697	45. HILL, H. D., Pulleys and Shafting; Lubrication; Bearings and Gudgeon; Motors; Valve-Operating Mechanism; Engine Cooling	Dec. 14	Dec. 11	267
4618	46. TAYLOR, M., Evaporators; Fluid Sprinkling; Fire Extinguishers; Boilers; Heating Systems; Cooling Implements	Nov. 11	Nov. 11	388
7630	47. BARKER, H., Clutches; Brakes	Dec. 2	Dec. 2	467
6731	48. ROEPKE, O. B., Electricity, General Applications; Igniters	Nov. 9	Nov. 9	668
7736	49. SHEFFIELD, E. L., Check-Controlled Apparatus; Ventilating; Driers; Liquid Purification	Dec. 5	Dec. 7	425
4701	50. BLAKE, C. L., Varnish; Coating Processes; Carbohydrate and Condensation Products; Cellulose; Rubber	Nov. 4	Nov. 4	324
5628	51. BACKUS, G. D., Radiant Energy	Dec. 5	Dec. 5	325
7709	52. KNOTTS, M. F., Supports; Climate; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Mains and Pipes; Conduits and Housings; Laminated Packing	Nov. 10	Nov. 13	544
6947	53. PECK, M. E., Books; Manifolding; Printed Matter; Stationery; Education; Paper Files and Binders; Tents, Canopies, Umbrellas, and Canes; Curtains, Shades, and Screens; Toilet; Label Pasting and Paper Hanging	Nov. 11	Nov. 9	611
5674	54. WAITE, W. E., Electric Lamps; Vapor Electric Devices; Space Discharge Tubes; Electricity, Medical and Surgical	Nov. 6	Nov. 5	439
6957	55. BOWEN, S. T., Cutlery; Assisted Body Members; Dentistry; Surgery	Nov. 15	Nov. 11	576
4715	56. PORTER, F. J., Electrochemistry; Laminated Fabrics; Paper Making; Substance Preparation	Nov. 11	Nov. 5	768
3635	57. NICOLSON, G. D. C., Cutting and Punching; Bolt, Nut, Rivet, Nail Screw, Chain, and Horseshoe Making; Drives and Screw Fastenings; Jewelry; Nut and Bolt Locks; Tags; Executing Devices	Nov. 26	Dec. 15	220
6665	58. DOWELL, R. F., Abrading; Bottles and Jars	Nov. 1	Nov. 8	397
4709	59. RICHARD, V. I., Chemistry; Fertilizers	Nov. 14	Nov. 12	529
6663	60. GLASS, S. L., Electricity, Heating, and Welding; Batteries; Resistance and Electrolytic Primary Power Devices	Dec. 9	Dec. 7	289

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

VICK CHEMICAL COMPANY v. THOMAS KERFOOT & CO., LIMITED

No. 3,332. Decided November 27, 1925

1. TRADE-MARKS—SIMILARITY—"VAPEX", AND "VICKS" AND "VAPORUB".

Trade-mark "Vapex" *Held* not confusingly similar to either of the marks "Vicks" or "Vaporub".

2. SAME—CANCELLATION PROCEEDING—PETITIONER NOT DAMAGED WHERE MARKS ARE NOT CONFUSINGLY SIMILAR.

Contention of petitioner for cancellation of a trade-mark registration, that registrant was not using same at time petition for cancellation was filed *Held* not material in cancellation proceeding since, in view of lack of confusing similarity between registrant's mark and those of petitioner, the latter was not damaged by the registration.

APPEAL from the Patent Office. Affirmed.

Mr. Edward S. Rogers, Mr. James F. Hoge, Mr. L. B. Stroughton, Mr. Francis L. Browne, and *Mr. Thomas L. Meade, Jr.*, for Vick Chemical Co.

Mr. Asher Blum, Mr. Hugo Mock, Mr. Walter L. Post, and *Mr. Charles E. Allen* for Thomas Kerfoot & Co., Ltd.

LENROOT, *J.*:

This is an appeal from a decision of the Commissioner of Patents, affirming a decision of the Examiner of Interferences which dismissed appellant's petition to cancel trade-mark registration No. 181,250, dated March 18, 1924, issued to appellee, for the word "Vapex." The said mark was registered for use upon an "inhalant for the relief of cold in the head and the like." The proceeding is under section 13 of the Trade-Mark Act of February 20, 1905, which section reads as follows:

SEC. 13. That whenever any person shall deem himself injured by the registration of a trade-mark in the Patent Office he may at any time apply to the Commissioner of Patents to cancel the registration thereof. The Commissioner shall refer such application to the Examiner in charge of interferences, who is empowered to hear and determine this question and who shall give notice thereof to the registrant. If it appear after a hearing before the Examiner that the registrant was not entitled on the use of the mark at the date of his application for registration thereof, or that the mark is not used by the registrant, or has been abandoned, and the Examiner shall so decide, the Commissioner shall cancel the registration. Appeal may be taken to the Commissioner in person from the decision of the Examiner of Interferences.

Appellant in its petition for cancellation alleges that, since prior to 1894, it has used the word "Vicks" as a trade-mark applied to various medicinal, pharmaceutical and chemical preparations, naming a number of such preparations, including "salve," and that

"At the present time the trade-mark VICKS is applied to liver pills, cough drops, nose and throat drops, and a sufficient salve used in the treatment of colds."

that said mark was duly registered on November 10, 1918, registration No. 122,007; that since about 1911 petitioner (appellant) has also used as a trade-mark for said salve the word "Vaporub," and that said last-named mark, together with the mark "Vicks," has since 1911 been conspicuously applied to packages containing said salve; that the said mark "Vaporub" was registered on April 6, 1915, registration No. 103,001. Petitioner alleges that the goods upon which its marks are used and the goods upon which the said mark "Vapex" is used are of the same descriptive properties; that the word "Vapex" so nearly resembles both of petitioner's registered marks, "Vicks" and "Vaporub," as to be likely to cause confusion in the mind of the public and to deceive purchasers, and that said mark "Vapex" has in fact caused such confusion.

The petition for cancellation further alleges that said mark "Vapex"

"is not now used, and for several years preceding this time has not been used in inter-state commerce in the United States by the registrant, Thos. Kerfoot & Co., Limited, but is used by some firm or person other than said registrant."

The petition further sets out the usual allegations of injury and damage.

The answer of appellee denies that the goods to which the mark "Vapex" is applied are of the same descriptive properties as are the goods to which appellant's marks are applied, denies the allegation of the petition with regard to the similarity of the respective marks, and alleges that there never has been any confusion in the mind of the public growing out of the use of the said marks by the respective parties; denies that it was not using or had not used the said mark "Vapex" for several years preceding the filing of appellant's petition; alleges that it is the present owner of said mark, and denies petitioner's allegations of injury and damage.

Both sides took voluminous testimony. Appellee objected to certain letters offered by appellant as incompetent and hearsay and not duly authenticated, to which reference will be made hereinafter. Appellee also objected to certain rebuttal testimony offered by appellant upon the ground that such testimony should have been part of appellant's case in chief and was not proper rebuttal. This also we shall advert to later herein.

Most of the testimony offered by appellant was in support of its claim of actual confusion in the mind of the public respecting the marks "Vapex," "Vicks," and "Vaporub," and most of the testimony offered by appellee was in support of its contention that no such confusion existed.

The Examiner of Interferences held that, from an inspection of the marks as a whole, confusion in trade was not likely, and that the evidence in the case, apparently including the letters to which appellee had objected as aforesaid, did not possess sufficient probative force to change or vary his conclusion arrived at from an inspection of the marks. The Examiner of Interferences declined to consider the evidence produced by appellant in rebuttal relating to confusion in trade, holding that such evidence was a part of the case in chief for appellant.

It appears also that it was contended before the Examiner of Interferences that the question of con-

fusion was *res adjudicata* by reason of a previous opposition proceeding in the Patent Office between the parties hereto, wherein appellee sought the registration of the word "Vapex" inclosed within a triangle, which application for registration was opposed by appellant, setting up the marks "Vicks" and "Vaporub" and a triangle. In said proceeding the opposition of appellant was sustained and the application of appellee for said registration refused. The Examiner of Interference held that the decision in said proceeding was not *res adjudicata* upon the question here involved for the reason that the marks there involved were not the same as are the marks in issue here.

Appellant apparently did not press this contention before the Commissioner, and in this court makes no claim that the decision in said former proceeding is *res adjudicata* of the issue here involved.

Upon appeal to the Commissioner the decision of the Examiner of Interferences was affirmed, whereupon appellant took the appeal now before us.

The Commissioner in his decision, while holding that the letters hereinbefore referred to were not competent evidence, and affirming the holding of the Examiner that appellant's evidence in rebuttal was improper, stated that, even considering all the foregoing as proper evidence, and all the other evidence in the record, he was of the opinion that confusing similarity between the marks of the respective parties had not been established. He also held that appellant's contention that appellee was not using the mark "Vapex" had not been established, stating that the statute is "not susceptible to the narrow interpretation contended for."

Before us appellant makes two contentions, as follows:

[1] That the record establishes that the mark "Vapex" is confusingly similar to the marks "Vicks" and "Vaporub," when applied to the goods of the respective parties, or at least there is such doubt upon this question that, under the familiar rule, it should be resolved against the newcomer.

[2] That the record establishes that the mark "Vapex" was not used by appellee at the time this proceeding was initiated.

That the goods of the respective parties are of the same descriptive properties, and that appellant's use of the marks "Vicks" and "Vaporub" and registration of the same were prior to the use and registration of the mark "Vapex" by appellee, is conceded.

It appears from the testimony that appellant's goods to which the marks "Vicks" and "Vaporub" are applied are widely distributed throughout the entire United States. The vice president of appellant testified that, during the five year period from 1927 to 1932, an annual average of between 15 and 20 million families in the United States had been purchasers of "Vicks Vaporub," and that in 1933 over 26 million jars of this article were sold.

Likewise sales of goods to which the mark "Vapex" is applied are extensive, the testimony showing that such sales amount to approximately 1,000,000 bottles annually.

Appellant relies not only upon the claim of confusing similarity between its marks "Vicks" and "Vaporub" and appellee's mark "Vapex," which it claims is apparent from an inspection of the marks, but it contends that the evidence produced by it establishes actual confusion in commerce in the use of said marks by the respective parties, particularly as relating to the origin of the goods to which the marks are applied.

We are in agreement with the views of the Commissioner and the Examiner of Interferences that an inspection of the marks themselves fails to reveal a confusing similarity between the mark "Vapex" and either of the marks "Vicks" and "Vaporub." As observed by the Commissioner, "Vicks" and "Vapex"

"have only the initial letter in common, and while the spoken words terminate with the same sound, even then they are clearly distinguishable in that the first has only one syllable while the latter has two."

We do not think that the ordinary purchaser would be likely to be confused or mistaken either as to goods or origin by the slight similarity between the marks "Vapex" and "Vicks."

With respect to the similarity between the marks "Vapex" and "Vaporub," the Commissioner in his decision said:

* * *. As between "Vaporub" and "Vapex" the only similarity, either when written or spoken, is the first syllable, "Vap"; and in view of the obvious differences it is difficult to comprehend how this one syllable in common could result in confusion. * * *

We would also observe in this connection that it is the well settled rule that, in determining the question of confusing similarity between marks, such marks must not be dissected but must be considered as a whole. *Vick Chemical Co.* v. *Maurice H. Cordry*, 19 C. C. P. A. (Patents) 828, 54 F.(2d) 428, 417 O. G. 271.

We are clear that an inspection of the marks in issue does not reveal a confusing similarity between the mark "Vapex" and appellant's marks "Vicks" and "Vaporub."

However, appellant's counsel contends that actual confusion between said marks has been established to such an extent that it should be held that the use of the word "Vapex" upon the goods to which it is applied so nearly resembles appellant's marks as to be likely to cause confusion or mistake in the mind of the public. In support of this contention appellant introduced the testimony of 19 witnesses, and certain documents and letters. Appellee, in support of its contention that there was no confusing similarity between said marks, introduced the testimony of 69 witnesses, and certain documents.

The Examiner of Interferences considered all of the evidence in the record except the testimony offered by appellant in rebuttal, which he declined to consider upon the ground that such testimony was not proper rebuttal, but related only to appellant's case in chief. With respect to the evidence considered by the Examiner, as aforestaid, we find the following in his decision:

The testimony of both parties has been carefully considered by the Examiner. It is believed that the testimony of the petitioner, for reasons that will more fully hereinafter appear, possesses much less probative force than is claimed for it by the petitioner. No attempt is made herein to determine its value relative to that offered by the respondent. It suffices to state that, giving the maximum probative force to which the testimony of the petitioner is believed to be entitled, it does not change, or vary, substantially, the conclusion which the Examiner has reached from an inspection of the marks themselves considered as a whole and which the parties actually use in trade. This conclusion is that confusion in trade is not likely. Otherwise stated, the Examiner is not willing to here surrender his own judgment on this matter by reason of the testimony produced by the petitioner. * * *

The Commissioner in his decision, after analyzing certain of the testimony offered in behalf of appellant, stated as follows:

In determining the weight and effect to be given the evidence just referred to, and similar testimony of other witnesses, I have necessarily been influenced to some extent by the enormous volume of petitioner's sales. Its vice-president, Mr. Allen T. Preyer, testified that during the five year period from 1927 to 1932, an annual average of between fifteen and twenty million families in the United States had been purchasers of "Vicks Vaporub"; and the record discloses that of this item alone over 26,000,000 jars were sold in 1933. It is not surprising, therefore, if occasional instances of confusion occurred; for as observed by the Court in the case of *Parfumerie Roger & Gallet* v. *M. C. M. Co.*, (C. C. A. 2d Cir.) 24 Fed. (2d) 696, "Some buyers will be confused by the most remote similarities."

Petitioner also offered in evidence about 80 letters, post cards, and other communications claimed to have been received by it from various unidentified firms and individuals, which would tend to indicate that the purported senders had confused "Vapex" with one or another of petitioner's products, or believed it was manufactured by petitioner. No foundation was laid for the introduction of any of these communications, save that of Mrs. Patrelis, whose testimony has already been referred to; and I am therefore clearly of the opinion that they are not competent evidence. Subject to certain exceptions which have no application here the rule is fundamental that before any document may properly be received in evidence there must be some proof of its authenticity. *Consolidated Grocery Co.* v. *Hammond* (C. C. A. 9th Cir.) 173 Fed. 641; *Varley Co.* v. *Gottheimer* (C. C. A. 2d Cir.) 182 Fed. 668; *Jones* v. *Wemple* (C. C. A. 8th Cir.) 238 Fed. 890; *Henry Homeike, Inc.*, v. *Albert Homeike & Co., Inc.*, 167 N. Y. S. 235, 179 App. Div. 718 (Aff. 227 N. Y. 561).

Petitioner insists that the communications referred to were admissible, without authentication, to show confusion in the public mind, and cites as authority for this proposition the case of *Parfumerie Roger & Gallet* v. *M. C. M. Co., Inc.*, supra. It was there held that certain letters received by plaintiff had been improperly excluded "on the ground that they were self-serving declarations." The Court said: "That of course they are not, and moreover they seem to us, all things considered, to have been enough authenticated to be competent." Here, however, the ground of objection was that the proffered exhibits were "incompetent and hearsay," and they were read into the record without any pretense of authentication, so that obviously the case cited can have no application.

But even if all these communications were properly before me I would be unable to find from the whole record that the claimed confusion had been established. Throughout the period covered by this correspondence petitioner was receiving in excess of five hundred pieces of mail per day. And as may readily be expected this huge mass of correspondence included references not only to "Vapex" but to such utterly dissimilar marks and names as Musterole, Mentholatum and Lander's Cough Drops. Mr. W. A. Smith, an employe of petitioner, stated in his testimony:

"We received mail for Vapex. We received mail for Strohmeier's Cough Drops, and others too numerous to remember."

In view of the large amount of mail received errors of this kind were bound to and did occur, regardless of whether petitioner's marks were or were not similar to those of other manufacturers. Under such circumstances evidence of this character is unimpressive. *Standard Accident Insurance Co.* v. *Standard Surety & Casualty Co.*, 58 Fed. (2d) 119.

With respect to the testimony offered by appellant in rebuttal the Commissioner stated:

Complaint is made because the Examiner of Interferences declined to consider certain evidence introduced by petitioner on rebuttal. Without going into detail it is sufficient to say that all this evidence, in so far as it is competent for any purpose, is merely cumulative of petitioner's evidence in chief, and the Examiner of Interferences was therefore fully justified in the ruling complained of. In reaching the conclusions above outlined, however, I have given this evidence the same consideration as that offered in chief.

It will be observed from the foregoing that the Commissioner held that certain evidence offered by appellant was inadmissible for the reasons stated by him, but that, assuming the same to be admissible, it would not change his conclusion that the confusion claimed by appellant had not been established.

We do not find it necessary to pass upon the admissibility of the evidence referred to by the Commissioner because, assuming that it was admissible, and giving to it all the weight to which it is entitled, we are in agreement with the Commissioner that the record fails to establish that the mark "Vapex," as used by appellee, so nearly resembles the marks "Vicks" and "Vaporub," as used by appellant, as to be likely to cause confusion or mistake in the mind of the public.

We think the views expressed in the case of *P. Lorillard Co.* v. *Peper*, 86 Fed. 956, are applicable to the facts in the case at bar. The court there said:

* * *. It may well be that, where many sales were made, some individuals, not particularly attentive, may have purchased the defendant's, supposing they were purchasing the plaintiff's, package. Such things will happen in the ordinary course of business, no matter how great the differences; and the fact that they do happen, while it is not to be ignored, is not to outweigh the evidence which comes from a personal inspection of the packages and labels.

[1] We do not deem it necessary to analyze the voluminous testimony in the record, and content ourselves with stating that, assuming, without deciding, that all of the evidence offered by appellant was admissible, it does not outweigh the evidence which comes from an inspection of the respective marks in issue. We are clearly of the opinion, from such inspection, that there is no confusing similarity between them.

[2] Appellant makes another contention, viz., that it is shown by the record that the mark "Vapex" was not used by appellee at the time appellant filed its petition for cancellation of the mark. It is not necessary for us to set out the facts upon which appellant bases this contention because, even if such contention were established, appellant would not be entitled to a cancellation of appellee's registration of the mark "Vapex", for the reason that, since said mark is not confusingly similar to appellant's marks here involved, it, appellant, could not be damaged by the registration of the mark "Vapex" by appellee.

It is well established that in cancellation proceedings damage must be shown in order to sustain the cancellation of a mark. *American Cyanamid Co.* v. *Synthetic Nitrogen Products Corp.*, 19 C. C. P. A. (Patents) 1235, 58 F.(2d) 534, 423 O. G. 299; *Model Brassiere Co., Inc.*, v. *Bromley-Shepard Co., Inc.*, 18 C. C. P. A. (Patents) 1294, 49 F.(2d) 492, 411 O. G. 893. In the last cited case we said:

* * * He (the petitioner for cancellation) would have no right to complain about the registration of the offending mark if, at the time he filed his petition, he was not injured by it. * * *

In the case of *United Shoe Machinery Corp.* v. *Compo Shoe Machinery Corp.*, 19 C. C. P. A. (Patents) 1009, 56 F.(2d) 292, 421 O. G. 4, we said:

The statute gives any person who believes he would be damaged the right to oppose, and any person who shall deem himself injured the right to petition for cancellation. These provisions are very broad and should be broadly construed. Of course, Congress did not mean to grant these rights to a mere intermeddler, to one who had no interest in the sale of the term, and thereby authorize such a person to interfere in the affairs of others and in the business of the Patent Office. Certainly the person seeking

to cancel a registration or oppose an application for registration must have a greater interest than a member of the general public who by such registration suffers no invasion of his rights and privileges. It is well understood in the application of equitable remedies that one who seeks such application be bound to show an interest in a suit personal to himself and not such an interest as he has only by virtue of being a citizen. *Tyler v. Judges of the Court of Registration*, 179 U. S. 405, 408; *Massachusetts v. Mellon*, 262 U. S. 447, 488. We know of no reason why this rule does not apply here.

Inasmuch as we have held that the marks here in issue are not confusingly similar, appellant could not be damaged by the registration of the mark "Vapex" by appellee, within the meaning of section 13 of said Trade-Mark Act of February 20, 1905.

It appears that, after the original certification of the transcript of record by the Commissioner of Patents, appellee suggested a diminution of the record and proceedings in said cause, whereupon this court issued a writ of certiorari, pursuant to which certain additions to the record were certified to the court by the Commissioner of Patents and printed. The court, in issuing the writ, ruled that the assessment of costs for the printing of such additions to the record should await the final determination of the case. We find that the matters certified, pursuant to our order, should have been originally included in the record by appellant. Therefore, the costs of printing such additions to the record, which are found on pages 920, 921, 922, and 923 of the record, are assessed against the appellant.

For the reasons stated herein, the decision of the Commissioner of Patents is affirmed.

Affirmed.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,879,760, J. E. Green, Luminous tube, decided November 30, 1935, claims 4 and 9.

Pat. 1,992,526, W. T. Powell, Remotely controlled radio receiving system, decided January 17, 1936, claims 1, 2, 3, 4, and 5.

Pat. 2,002,444, H. A. Woodruff, Refrigerator evaporator, decided January 13, 1936, claim 1.

Disclaimers

1,713,628.—*Richard H. Schleifer*, Philadelphia, Pa. ATTACHMENT FOR FLAT-KNITTING MACHINES. Patent dated May 21, 1929. Disclaimer filed January 18, 1936, by the assignee, *Textile Machine Works*.

Hereby enters this disclaimer to claim 10 of said Letters Patent.

1,863,302.—*Ralph A. Goleniman*, Wilkinsburg, Pa. REGULATOR SYSTEM. Patent dated June 14, 1932. Disclaimer filed January 22, 1936, by the assignee, *Westinghouse Electric & Manufacturing Company*.

Hereby enters this disclaimer to claims 2 and 4 of the patent specification.

1,982,774.—*Joseph Louis Finck*, Washington, D. C. MEANS FOR INSULATING BUILDINGS AND LIKE STRUCTURES. Patent dated October 16, 1934. Disclaimer filed February 8, 1936, by the patentee and the assignee, *I. Richard Paris*.

Hereby disclaim claim 13 of said patent except such wall structures as defined in said claim 13 wherein the flexible sheet material set forth in said claim 13 is non-metallic flexible sheet material and wherein the metallic surface set forth in said claim 13 is in the form of a thin metallic coating.

1,899,451.—*Frank W. Andrews*, Dayton, Ohio. REFRIGERATING APPARATUS. Patent dated December 13, 1932. Disclaimer filed January 24, 1936, by the assignee, *General Motors Corporation*.

Hereby enters this disclaimer to that part of the specification which is claim 5.

2,002,444.—*Henry K. Woodruff*, Schenectady, N. Y. REFRIGERATOR EVAPORATOR. Patent dated May 21, 1935. Disclaimer filed February 6, 1936, by the assignee, *General Electric Company*.

Hereby enters this disclaimer of claim 1 of said patent.

2,023,752.—*Gustave E. Landt*, Norristown, Pa. BENDABLE LAMINATED PRODUCT. Patent dated June 4, 1935. Disclaimer filed February 5, 1936, by the assignee, *Ohio Products Corporation*.

Hereby enters this disclaimer to claims 1, 2, 5, and 6 in said patent.

Changes in Classification

Order No. 3,843, February 6, 1936, directs:

In *class 31, Dairy* (Division 2), abolish the following subclass, with its definition:

Processes
- 56 Cheese.

The patents formerly contained in this subclass have been placed for the most part in class 195, Chemistry, Fermentation, established in this order, and in class 99, Foods and Beverages.

In *class 86, Paper Making and Fiber Liberation* (Division 56), abolish the following subclass, with its definition:

Stock treatment
- Fiber
  - 5 Bacteria.

The patents formerly contained in this subclass have been placed for the most part in class 195, Chemistry, Fermentation, established in this order.

In *class 127, Sugar, Starch, and Carbohydrates* (Division 48), abolish the following subclass, with its definition:

Processes
- Carbohydrate manufacture and refining
  - 35 Biochemical treatments.

The patents formerly contained in this subclass have been placed for the most part in class 195, Chemistry, Fermentation, established in this order.

In *class 203, Distillation* (Division 64), abolish the following subclass, with its definition:

Processes
- Separatory
  - With distillant treatment
    - 58 Hydrolysis and fermentation.

The patents formerly contained in this subclass have been placed for the most part in class 195, Chemistry, Fermentation, established in this order.

In *class 260, Chemistry, Carbon Compounds* (Division 6), abolish the following subclasses, with their definitions:

Carbohydrate acids
- Aliphatic
  - 135 Fermentation.

Ketones
- Aliphatic
  - 135 Fermentation.

The patents formerly contained in these subclasses have been placed for the most part in class 195, Chemistry, Fermentation, established in this order.

In class 99, Foods and Beverages (Division 53), establish the following subclasses and definitions:

Apparatus
- 275 Beverage
- 276 Primary-alcoholic fermentations with subsequent and/or prior operations.
- 277 Post-primary-alcoholic fermentation operations.
- 278 Hopping, wort-making or ante-primary-alcoholic fermentation operations.

275. Apparatus under subclass 234 which is adapted and designed for making beverages or beverage intermediates and not provided for below.

Search Classes—
- 195—CHEMISTRY, FERMENTATION, for apparatus that includes means for carrying out propagations of yeasts, or other living ferments, or diastatic mashings or other fermentations, or germinating seeds, or preparing malt, or preserving or treating, or containing yeasts or other living ferments, or treating products of fermentations, or preparing materials for use in propagating yeasts or other living ferments, or for use in fermentations.
- 204—ELECTROCHEMISTRY, subclasses 24–26, for apparatus for electrical treatments of alcoholic or other beverages or alcoholic or other liquids.
- 216—DISPENSING APPARATUS, for apparatus for dispensing or handling alcoholic and other beverages.
- 261—GAS AND LIQUID CONTACT APPARATUS, for apparatus for carbonating beverages.

276. Apparatus under subclass 275 which includes means that is adapted and designed for carrying out primary (first) ethyl alcoholic fermentations, combined with means for preparation of the material or treatment of the product to make a beverage or combined with both material preparation and product treatment to form a beverage or beverage intermediate.

Search Class—
- 195—CHEMISTRY, FERMENTATION, subclasses 128, 132 and 133, and indented subclasses, for apparatus directed to fermentation and prior or subsequent steps.

277. Apparatus under subclass 275 which includes means for treating products of primary (first) ethyl alcoholic fermentations for the purpose of making beverages, or beverage intermediates, therefrom.

Search this class, subclass 276.

Search Classes—
- 195—CHEMISTRY, FERMENTATION, subclasses 128, 132, 136 and indented subclasses.
- 202—DISTILLATION, for apparatus for subjecting alcoholic materials to distillation.
- 204—ELECTROCHEMISTRY, subclasses 24–26, for apparatus for electrical treatments of alcoholic or other beverages or alcoholic or other liquids.
- 210—LIQUID SEPARATION AND PURIFICATION, subclass 1, for beer chips or shavings or means for collecting sediment, and other subclasses for means for separating sediment, or other solid matter, from liquids.

278. Apparatus under subclass 275 which includes means for hopping, or preparing hop-extracts, or making or purifying worts, or otherwise preparing materials for primary (first) ethyl alcoholic fermentations.

Search this class, subclass 276.

Search Class—
- 195—CHEMISTRY, FERMENTATION, subclasses 128–131 and 135, for apparatus for carrying out diastatic mashings or other operations that involve, or are subsequent or prior to, fermentations of any kind.

The patents contained in these subclasses have been taken for the most part from various apparatus subclasses in class 195, Alcohol, abolished in this order.

In class 99, Alcohol (Division 54), change the title of the class to read 195, Chemistry, Fermentation, abolish the existing subclass titles, and establish in lieu thereof the subclasses indicated in the new lines now being published for insertion in the Manual of Classification, and definitions which will appear in Bulletin No. 78.

(Note.—Lists of subclass titles, and the definitions, may be seen in the Search Room and in the Classification Division, Room 2016, pending publication.)

Changes in Classification

Order No. 3,966, February 11, 1928, directs:

In class 93, Paper Manufactures (Division 17), establish the following subclasses and definitions:

- 1.1 Paper fastening.
- 1.2 Seal tape machines.
- 1.3 Disc closures.
- Box machines.
- 26.01 Lining forming and inserting.
- 26.02 Cups, non-circular cross-section.
- 26.1 Conical former
- 26.2 Rotary.
- 26.3 Presses.
- 26.4 Pasters or gluers.
- 26.5 Edge crimping and spinning.
- 26.6 Box blank covering.
- 26.7 Applying bails.
- 26.8 Cups or tubes, folded over end.
- 26.9 Taping devices.
- Folding and setting-up
- 29.1 Tube and end closing
- 29.2 Turret form carrier
- 29.3 Frustro-conical form.
- Folding and covering
- 40.1 Rotary banding.
- Folding and stapling
- 43.1 Metallic stay.
- Endless mandrel carrier
- 44.1 Turret mandrel carrier.
- Folding
- Plunger and die
- 51.1 Clamshaling mandrel.
- Covering
- 54.1 Rotary support.
- 54.2 Reciprocating support.
- 54.3 Stationary support.
- Setting-up
- 55.1 Applying end closure.
- Cutting and scoring
- 58.1 Rotary scorers.
- 58.2 Rotary cutters and scorers.
- 58.3 Reciprocating cutters and scorers.
- 58.4 Cutters
- 58.5 Thumbhole or peephole cutters.

1.1. Apparatus or processes for interlocking paper sheets by crimping or cutting or folding corners or edges together.

Note.—Stapling, sewing, and gluing are not included unless subjunctive to the essential operation.

1.2. Machines and methods for inclosing seeds spaced apart within a paper tape.

1.3. Machines and processes for making or die cutting paper closures for receptacles, which may be formed of laminated material, coated, and provided with tabs or wires for handles. May include printing and assorting, and hanging of the discs.

Note.—See this class, subclass 60, for skirted closures.

26.01. Machines, apparatus and methods for inserting linings in boxes, which may include the forming of the lining.

26.05. The molding of paper cups of non-circular cross-section.

Note.—See this class, subclasses 26.1 and 26.2, for conical cups, and subclasses 29.1, 29.2 and 29.3, for cylindrical or frustoconical cups.

26.1. Machines having a conical forming member for shaping the box.

Search this class, subclasses 8 and 79.

26.2. The former is rotatable.

26.3. Apparatus that holds a box in proper form while the paste dries.

Search this class, subclasses 66 and 69.

26.4. Apparatus for applying paste or glue to box parts.

Note.—For pasting and pressing, see this class, subclass 26.2.

Note.—For pasters of general use, see class 91, COATING, subclass 10, and indented subclasses.

26.5. Machines for finishing the edges of a cup, box or tube, or for uniting a closure thereto by rolling, crimping or spinning.

Search this class, subclasses 29.1, 29.2, 29.3, and 55.1, for placing closures in tubes and securing them thereto.

26.6. Apparatus for applying covering paper to a box blank before the box is formed.

26.7. Machines for forming bands and applying bails thereto.

26.8. Machines for sealing a cup, tube or box with the tube end folded in to form a closure.

26.9. Machines for inserting bands with cords or tapes applied when the tape is not a cord.

Note.—For stapling, see this class, subclasses 43 and 58.

29.1. Machines under subclass 29 that form a tubular container with an end closure.

39.2. Machines under subclass 39.1 in which a plurality of forms are mounted on a turret.

39.3. Machines under subclass 39.2 in which the forms are frustroconical in shape.

40.1. Machines under subclass 40 for folding and covering a box by rotating it about an axis.

41.1. Box forming machines under subclass 41 with means for applying metal stays.

44.1. Machines under subclass 44, the mandrels being mounted on a turret.

Search this class, subclasses 39.2 and 39.3.

51.1. Machines under subclass 51 wherein a block or mandrel moves in a continuous path and carries the blank through a die.

Search this class, subclasses 44 and 44.1.

54.1. Devices under subclass 54 in which the box is supported on a rotary member, the cover being wound around it.

54.2. Devices under subclass 54 in which the box is on a reciprocating support.

Note.—For general plunger and die structure, search this class, subclasses 47 and 51.

54.3. Devices under subclass 54 in which the box support is stationary and the wrapping elements move.

55.1. Machines under subclass 55 for applying closures to boxes previously made.

Search this class, subclass 29, et seq., for folding and setting-up.

58.1. Machines under subclass 58 having rotary elements for scoring fold lines.

58.2. Machines under subclass 58 having rotary cutters and scorers.

58.3. Machines under subclass 58 for cutting and scoring or creasing box blanks having reciprocating cutters or scorers.

Search Class—
- 164—CUTTING AND PUNCHING SHEETS AND BARS, for cutters or scorers of general use.

58.4. Machines under subclass 58 limited to cutting box blanks.

Note.—See class 164, CUTTING AND PUNCHING SHEETS AND BARS, for cutters of more general use.

58.5. Devices under subclass 58.4 for cutting thumbholes or peepholes in blanks.

The patents constituted in these subclasses have been taken for the most part from various subclasses in class 93, Paper Manufactures.

In class 93, Paper Manufactures (Division 17), change the title of subclass 53 to read as follows:

Box machines
- 53 Refolding and/or opening

and cancel the existing definition of this subclass and establish in lieu thereof the following definition:

53. Machines for refolding or breaking on alternate edges previously made boxes rectangular in form or tubes from which such boxes are made, so that the finished boxes will be equally flexible at all corners, and machines for opening collapsed cartons.

Interference Notice

U. S. PATENT OFFICE, Washington, Jan. 30, 1928.

Bake-Rite Oven Manufacturing Company, its assignee or legal representatives, take notice:

An interference has been declared by this Office between the application of The Moore Corporation, 505 Benton Street, Joliet, Ill., for registration of a trade-mark, and trade-marks Nos. 119,228 and 119,229, registered July 26, 1921, and No. 119,231, registered September 6, 1921, to Bake-Rite Oven Manufacturing Company, 608–604–605 Hearst Building, San Francisco, Calif., and Reno, Nev. A notice of such proceeding sent by registered mail to said Bake-Rite Oven Manufacturing Company at each of said addresses, earlier been returned by the post office as undeliverable, notice is hereby given that unless said Bake-Rite Oven Manufacturing Company, its assignee or legal representatives shall enter an appearance within 30 days from the first publication of this order, the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD RUPPICH,
First Assistant Commissioner.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS, LABELS, AND PRINTS

RENDERED DURING JANUARY, 1936

In A. M. & J. Solari Limited v. Royal Products, Inc., Opposition No. 14,223, decision rendered January 3, 1936, (159 Ms. Dec. 542), *First Assistant Commissioner Spencer* held that Royal Products, Inc., of New Orleans, La., is not entitled to register the words "La Louisiane" as a trade-mark for distilled alcoholic liquors since these words are merely geographical. He further held that the opposition filed by the A. M. & J. Solari Limited, of New Orleans, La., was properly dismissed on the ground that it was informal.

In his decision the First Assistant Commissioner, after stating that words which are merely descriptive of a place where an article is manufactured or produced cannot be monopolized, and that foreign words and phrases, merely descriptive of the goods, are not registrable, quoting from the decision in *Walgreen Company v. Godefroy Manufacturing Company*, (C. C. P. A.) 74 F.(2d) 127, 24 U. S. Pat. Q. 77, said:

"In view of that decision, it is equally clear that a geographical expression is nonetheless so if it be written in French. That the State of Louisiana is ordinarily and properly referred to, in French, as 'La Louisiane' may be seen from the following excerpt taken from 'Nouveau Larousse Illustre,' Tome 5, Pl. 768: 'La Louisiane, colonisée par les Français, surtout dans la seconde moitié du XVIII siecle, puis, et très peu, par les Espagnols, possesseurs temporaires, fut cédée aux Etats-Unis, en 1803, par la France au prix de 80 millions de francs'."

In Kroger Grocery & Baking Company v. Blue Earth Canning Company, Opposition No. 12,589, decision rendered January 7, 1936, (159 Ms. Dec. 544), *Assistant Commissioner Fraser* held that Blue Earth Canning Company, of Blue Earth, Minn., is entitled to register, as a trade-mark for canned vegetables, the words "Country Klst", notwithstanding the prior adoption and use by Kroger Grocery & Baking Company, of Cincinnati, Ohio, of the words "Country Club" for the same goods.

In his decision, after noting applicant's argument that the word "Country" has been so widely used as a part of trade-marks for canned foods that it is public property, the Assistant Commissioner said:

"In the view I take of the case it is not deemed necessary to discuss this point, other than to observe that the marks must be considered in their entireties and may not be dissected for the purpose of comparison. This rule has been so frequently announced by the Court of Customs and Patent Appeals that it is no longer open to argument."

He then, with reference to the marks, said:

"Both are of such a nature that the whole of each must be read or pronounced in order to convey any definite meaning. 'Country Club,' in the abstract, describes a particular type of club, and connotes sophistication, exclusiveness and smartness. 'Country Klst,' on the other hand, suggests rural freshness and native simplicity. In other words, the mental pictures associated with the two expressions are almost exactly opposite. Moreover, the appearance and the sound of the marks as a whole are, in my opinion, sufficiently different to insure against any reasonable likelihood of confusion."

In American Brewing Company, Inc., v. Hercules Products & Distilling Corporation, Opposition No. 13,491, decision rendered January 7, 1936, (159 Ms. Dec. 543), *Assistant Commissioner Fraser* held that Hercules Products & Distilling Corporation, of Brooklyn, N. Y., is not entitled to register, as a trade-mark for gin, a mark consisting of a pictorial representation of the Statue of Liberty, in combination with the notation "Okay America," in view of the prior adoption and use by American Brewing Company, Inc., of Rochester, N. Y., of the mark containing a picture of the same statue and the word "American", as a trade-mark for beer.

In his decision, the Assistant Commissioner said:

"I am in entire agreement with the Examiner of Trade Mark Interferences that the goods of the parties, namely, gin and beer, are of the same descriptive properties, and that the trade-marks here involved are confusingly similar."

In Ex parte G. Fava Fruit Company, Inc., Serial No. 356,073, decision rendered January 8, 1936, (159 Ms. Dec. 545), *First Assistant Commissioner Spencer* held that G. Fava Fruit Company, Inc., of Baltimore, Md., is not entitled to register, under the Act of 1905, the name "Savoia" displayed in association with a coat of arms, as a trade-mark for wines, in view of the prior registration by another (No. 328,810) of a mark for the same goods in which the name is displayed on a rectangular background.

In his decision, after referring to applicant's argument that the names in the two cases were differently written and noting the decision of the Court of Customs and Patent Appeals in which it was held that so far as the question of confusion is concerned names distinctively displayed must be adjudged in exactly the same manner as are other words or notations, the First Assistant Commissioner said:

"I find that the predominant part of both marks is the term 'Savoia' and am forced to conclude that the notations are therefore confusingly similar. The applicant stresses the presence in its notation of the shield-like border and the coat of arms but I am never moved by such points of distinction. The buyer purchases by name and not by border and remembers by name and not by background. The names in the two notations here involved being identical and constituting clearly the predominating part of each mark, registration must be and therefore accordingly is denied. By this decision it is not meant to imply that a second party can never register the same name. Undoubtedly there are and will be instances wherein the name itself is submerged in the distinctiveness of the display in such a manner as to avoid anticipation but such is not the case here."

In Barton Manufacturing Company v. Paper Makers Chemical Corporation, Opposition No. 13,695, decision rendered January 10, 1936 (159 Ms. Dec. 547), *First Assistant Commissioner Spencer* held that Paper Makers Chemical Corporation, of Wilmington, Del., is entitled to register the word "DISHINE" as a trade-mark for a cleaning compound for dishes, crockery, and the like, notwithstanding the prior adoption and use by Barton Manufacturing Company, of St. Louis, Mo., of the word "DYANSHINE" as a trade-mark for polish for leather goods.

The ground of the decision is that the goods of the parties are not of the same descriptive properties.

With respect to the marks the Assistant Commissioner said:

"I am of the opinion that the marks are confusingly similar. In sound, appearance, and meaning they resemble one another. The applicant contends that its mark is pronounced 'DISH'INE' and therefore could not be confused in sound or in significance with the opposer's mark 'DYANSHINE' but I am not at all sure that the casual purchaser would correctly pronounce the applicant's mark. As it happens, I had very definite misgivings about its pronunciation until I heard counsel for applicant repeatedly refer to it as 'DISH'INE' and even yet I have some difficulty in pronouncing it with the same liquid facility that was his. I feel that any one familiar with the opposer's mark would, upon viewing the applicant's ascribe to it an almost identical pronunciation."

With respect to the goods, he said:

"The applicant's product is primarily a cleansing compound or, as the applicant describes it, a washing compound and water softener that is adapted for use only when dissolved in water for the washing of dishes, glassware, bottles, cutlery, and other articles customarily washed in dish washing machines. It is true, and this fact the opposer stresses with great emphasis, that the applicant's advertising circular (Applicant's Exhibit No. 2) states that the product is adapted for 'polishing dishes' and is a 'powerful silverware polish.' Fundamentally or primarily, however, the product is a compound for washing dishes and the like, and if it has any polishing qualities they are merely secondary and incidental. The opposer's product, on the other hand, is primarily and mainly a polish for leather goods and any cleansing properties it may have are purely secondary and incidental to its main function.

* * * * * * *

"I do not believe that these goods are properly capable of a general definition. At least they are not when their main properties rather than their incidental ones are given attention, nor do I believe that a purchaser would be led to believe that a manufacturer engaged in making one would naturally be led to make the other."

In Ford Motor Company v. Windsor-Lloyd Products, Inc., Opposition No. 13,708, decision rendered January 10, 1936 (159 Ms. Dec. 546), *First Assistant Commissioner Spencer* held that Windsor-Lloyd Products, Inc., of Wilmington, Del., is not entitled to register, as a trade-mark for automobile rear-view mirrors, the notation "StanFord", in view of the ownership of the Ford Motor Company, of Dearborn, Michigan, of the mark "Ford" as applied to the same goods.

With reference to the similarity of the marks, the First Assistant Commissioner said:

"In my opinion they are, although it is only proper to say that in arriving at this conclusion I have been influenced largely by the capitalization of the letter 'F' in the applicant's notation. At first glance at the applicant's package, the word 'Ford' seemed to stand out from the balance of the notation and it still seems to. I am accordingly of the opinion that as long as the applicant continues to capitalize and emphasize the letter 'F' in the body of its notation the opposition must be sustained and registration refused. On the other hand, I am frank to say that I see but little similarity between the word 'Stanford' normally written and the word 'Ford'."

With reference to the question whether applicant's mark comprises a personal name not distinctively displayed, he said:

"That the surname 'Stanford' written in distorted block type such as may be found in many signs and advertisements is not registrable is believed to be established by such cases as the following (citing decisions)."

In Old Time Distillers, Inc., v. Lem Motlow, Opposition No. 13,922, decision rendered January 13, 1936 (159 Ms. Dec. 552), *First Assistant Commissioner Spencer* held that Lem Motlow, of Lynchburg, Tenn., is not entitled to register, as a trade-mark for whiskey, the notation "Old Time Distillery."

In his decision the First Assistant Commissioner stated that the opposer had contended that the applicant's mark comprised its corporate name and that applicant was not using the mark in commerce at the time he filed his application.

Then, after noting that the date of incorporation of the opposer is subsequent to the date of filing of the application here involved, he said:

"To my mind this fact is clearly sufficient to defeat the right of the opposer to object to the registration on the ground that the applicant is seeking to appropriate its corporate name. In other words, it would appear too clear to permit of reasonable argument, that in order for an opposer to defeat registration of its corporate name it must so in existence at the time the application is filed. To hold otherwise would be to approve *ex post facto* oppositions."

With reference to the second ground of opposition, after noting that the applicant adopted its mark in 1905, stopped using it when prohibition was passed and had not commenced to use it at the time it filed its application for registration of the mark he said:

"Furthermore, at the time the instant application was filed the applicant had not again commenced the manufacture or sale of whiskey. It was, however, in contemplation of so doing that the application was filed. Here again, I consider it too clear to permit of reasonable argument that the mark must be in actual use at the time the registration is filed in order for registration to be granted. One cannot register an intention to use the mark at some future date.

* * * * * * *

Suffice to say that the goods were not being made and the mark was not being used. To my mind this is sufficient regardless of the cause."

In Ex parte Dow Jones & Co., Inc., Serial No. 361,800, decision rendered January 13, 1936, (159 Ms. Dec. 550), *First Assistant Commissioner Spencer* held that Dow Jones & Co., Inc., of New York, N. Y., is not entitled to register, under the act of 1905, as a trade-mark for a section of a daily publication, the words "DOW JONES STOCK AVERAGES."

The ground of the decision is that these words are not used as a trade-mark in commerce.

In his decision, after stating that the applicant is engaged in rendering a service consisting in publishing through brokerage houses, etc., a series of averages showing stock changes, the First Assistant Commissioner said:

"These averages appear under the heading of the notation here sought to be registered. The Examiner has refused registration on the ground that the mark does not have any trade-mark significance but merely designates the particular information appearing thereunder."

Then, after citing the case of *Funk & Wagnalls Co. v. The Timely Films, Inc.*, 339 O. G. 722; 55 App. D. C. 192; 3 F.(2d) 98, he said:

"In accordance with this case, and for the reason that I do not believe the applicant is engaged in commerce within the meaning of the Trade-Mark Act, I am forced to hold that the registration must be refused."

In EX PARTE LLOYD A. MYERS, JR., Serial No. 348,306, decision rendered January 13, 1936, (159 Ms. Dec. 551), *First Assistant Commissioner Spencer* held that Lloyd A. Myers, Jr., of Bristol, Va., is not entitled to register, under the act of 1905, as a trade-mark for truck trailers, the notation "Black Diamond" written on a white background which extends across a black diamond-shaped figure, in view of certain prior registrations of a trade-mark for trucks, consisting of the pictorial representation of a diamond and the notation "Diamond T" written within a diamond outline.

With reference to the goods, he said:

"Despite applicant's contention otherwise, I am of the opinion that motor trucks and trailers are goods of the same descriptive properties. They are purchased by the same class; they have many common physical properties; they are generally manufactured by the same manufacturers; whenever a trailer of the kind here involved is used it is in conjunction with a truck; they are used for the same purpose, namely, hauling; and are in fact so similar that, to my mind, the question admits of no possible doubt."

Then, with respect to the marks themselves, he said:

"In my opinion the applicant cannot be permitted to appropriate the word 'Diamond' from the prior registrations and by adding to it the prefix 'Black' avoid the holding that the marks are confusingly similar. The conclusion that the notations 'Diamond' and 'Black Diamond' as employed by the applicant and the prior registrant bear confusing similarity is emphasized by the fact that the applicant likewise employs the diamond-shaped symbol in conjunction with its mark and that the prior registrant has separately registered the same symbol."

In WHITE HORSE DISTILLERS, LIMITED *v.* DISTILLERS DISTRIBUTING CORPORATION, Opposition No. 13,837, decision rendered January 14, 1936, (159 Ms. Dec. 554), *First Assistant Commissioner Spencer* held that Distillers Distributing Corporation, of San Francisco, Calif., is entitled to register, as a trade-mark for whiskey, a mark consisting of the words "Old Cellar", notwithstanding the prior adoption and use by White Horse Distillers, Limited, of London, England and Glasgow, Scotland, of a trade-mark for the same goods consisting of the representation of a horse with the notation "The White Horse Cellar" appearing thereabove.

The ground of the decision is that the marks are not confusingly similar.

In his decision the First Assistant Commissioner said:

"In appearance the marks are so dissimilar that the mark of the applicant is lost in obscurity in the opposer's mark. In sound the marks are so unlike that by no stretch of the imagination can I conceive of a prospective purchaser asking for the opposer's goods by any name that would result in confusion. Although the opposer contends that they are similar in suggestive meaning, such similarity is remote. The points of difference overwhelm those of similarity, and I am constrained to hold that the marks are not confusingly similar and that the applicant therefore is entitled to the registration which it seeks."

In SEARS, ROEBUCK AND CO. *v.* THE GENERAL TIRE & RUBBER COMPANY, Opposition No. 13,899, decision rendered January 15, 1936, (159 Ms. Dec. 555), *First Assistant Commissioner Spencer* held that the opposition by Sears, Roebuck and Co., of Chicago, Ill., to the registration of a trade-mark by The General Tire & Rubber Company, of Akron, Ohio, was properly dismissed but that the applicant is not entitled to the registration sought because the application does not include the entire mark.

In his decision, after stating that applicant sought to register the notation "ALLGRIP" and that the opposer relied upon the prior adoption and use of the mark "ALLSTATE", the First Assistant Commissioner said:

"In meaning, appearance, and sound the predominant parts are different and distinct. True, the prefix is the same, but the remainders of the marks, which comprise the predominant part of each, are entirely different."

and then, after referring to decisions in which the words "ADDRESSELLOTT" and "ADDRESSOGRAPH" and the words "POWERINE" and "POWERMAX" were held respectively to be confusingly similar, he said:

"In both of these cases, however, the prefix portions which were identical, comprised the major portion of the marks involved, whereas, in the case here at bar, the prefix is the minor portion."

Then, with reference to the refusal to register applicant's mark, he said:

"The mark sought to be registered consists of the notation 'ALLGRIP', whereas, in the specimens submitted, the mark appears as 'POWERFUL ALLGRIP', the two words being printed in the same style and size of type and displayed with equal prominence. There are many cases that refuse to permit registration of fractional or mutilated parts of the marks as used, and here it must be held that the applicant seeks to do this very thing. Therefore, as stated, registration must be refused for the reason that the mark applied for is not the same as the mark shown to have been actually used."

In HANDY-ANDY SPECIALTY CO., INC., *v.* THE STA-BRITE PRODUCTS CORP., Opposition No. 13,853, decision rendered January 15, 1936, (159 Ms. Dec. 556), *First Assistant Commissioner Spencer* held that The Sta-Brite Products Corp., of New Haven, Conn., is not entitled to register the words "STA-BRITE HANDY ANDY", as a trade-mark for cutting and kitchen knives, in view of the prior adoption and use by Handy-Andy Specialty Co., Inc., of Long Island City, N. Y., of the term "Handy-Andy" as a trade-mark for lunch kits and fruit juice extractors.

With reference to the goods, the First Assistant Commissioner said:

"To be held to be of the same descriptive properties it is no longer necessary that the goods possess physical similarities formerly insisted upon by the courts. Today, it is sufficient if the ordinary purchaser would conclude that the goods of both parties emanate from a single source. Following the line of reasoning recently adopted by the United States District Court, S. D. New York, in *Pro-Phy-Lac-Tic Brush Co. v. Abrahams & Straus, Inc.*, 11 Fed. Supp. 668, it is clear that the goods, though physically different, belong to the same general class of merchandise. They are sold over the same counter to the same class of purchasers and are used together in the kitchen and elsewhere; they are so closely associated in the minds of the public that, if they should bear similar trade-marks, consumers would be justified in concluding that they have the same origin."

He then said:

"Also, the law is well settled that no applicant has no right to appropriate the mark of another as an essential feature of its mark. A microscopic examination of the marks is not necessary, nor would it be permitted; a mere glance at the marks here under consideration shows that the mark of the opposer is emphasized and prominently displayed as an essential feature of the mark sought to be registered."

Then, after stating that having sustained the opposition it was not necessary to further consider the applicant's *ex parte* right to registration, he said:

"Suffice it to say that I do not agree with that part of the opinion which refused registration on the ground that the mark disclosed in the drawing of the applicant is a mere evasion of the descriptiveness clause of Section 5 of the statute. Considering the mark in its entirety, as it must be, I can not agree that it is merely descriptive or even evasively approaches such a definition. The word 'STA-BRITE' is disclaimed apart from the mark as shown in the drawing. Regardless of any admission by the applicant that the word 'STA-BRITE' is the dominating feature of its mark, it is evident that the notation 'HANDY ANDY' is displayed with equal prominence as an essential feature and may not be disregarded on any theory."

In EX PARTE THE FIRESTONE TIRE & RUBBER COMPANY, Serial No. 64,925, decision rendered January 16, 1936, (159 Ms. Dec. 563), *Assistant Commissioner Fraser* held that The Firestone Tire & Rubber Company, of Akron, Ohio, is not entitled to register a label for tires bearing the following notation:

"Firestone High Speed Type 4 Fly 5-50-17 For Flat Base or American Drop Center Rim Made in U. S. A."

The ground of the decision is that this label does not comply with the rules since it fails to indicate the article manufactured and does not definitely describe such an article.

In his decision, the Assistant Commissioner said:

"I am in entire agreement with the conclusion reached by the examiner. The only descriptive matter disclosed by the label consists in the terms 'high speed type' and '4 ply'; and while these expressions are in a sense descriptive of tires, they are equally descriptive of many other articles of manufacture and therefore cannot be said to 'indicate' the particular item to which applicant's label is applied."

In EX PARTE PEDIGO-LAKE SHOE COMPANY, Serial No. 359,440, decision rendered January 16, 1936, (159 Ms. Dec. 562), *Assistant Commissioner Fraser* held that Pedigo-Lake Shoe Company, of St. Louis, Mo., is not entitled to register, under the Act of 1905, as a trade-mark for shoes, the word "Plasticon", in view of the prior registration by another of the word "Plastic", as applied to the same goods.

In his decision, after stating the argument of the applicant that the word "Plastic" is descriptive of shoes and therefore this prior registration cannot be held to preclude the registration of applicant's composite mark, the Assistant Commissioner said:

"As pointed out by the Examiner, this is a question which may not properly be considered in an *ex parte* proceeding, and I absolutely refrain from expressing an opinion upon the merits of applicant's contention. *In re Wilcox & Co.*, 36 App. D. C. 107.

"Viewing the two marks in their entireties, and considering the fact that they are applied to identical goods, it seems obvious to me that their concurrent use would probably result in confusion, and that the Examiner committed no error in so holding."

In THE FIRESTONE SERVICED MFR. CO. *v.* EMERSON RADIO & PHONOGRAPH CORPORATION, Opposition No. 13,308, decision rendered January 16, 1936, (159 Ms. Dec. 558), *Assistant Commissioner Fraser* held that Emerson Radio & Phonograph Corporation, of New York, N. Y., is entitled to register the term "Emerson" in association with a musical symbol, as a trade-mark for radio receiving sets and parts thereof, namely, tubes, eliminators, etc., notwithstanding the prior adoption and use by The Emerson Electric Mfg. Co., of St. Louis, Mo., of the term "Emerson" as a trade-mark for electric motors, electric fans, furnace blowers, etc.

In his decision, after stating that he concurred in the view of the Examiner that the marks were confusingly similar as applied to the same goods, but was unable to agree that the goods were of the same descriptive properties in view of the decision of the Court of Customs and Patent Appeals, in *All-American Mohawk Corporation v. Rollinson*, 77 F.(2d) 626, where it was held that complete electric refrigerators were not of the same descriptive properties as relays and thermostats, the First Assistant Commissioner said:

"It seems to me the goods involved in the instant proceeding are as different as were those disclosed in either of the cited cases. It is to be noted that applicant's description of goods is quite specific, and that the only 'parts' of its various receiving sets to which its mark is applied are tubes, eliminators and loud speakers. Probably opposer's 'radio "B" power units' could properly be called radio parts, though the record is somewhat hazy in that regard; but it is fairly apparent that their manufacture was only temporary, that it occurred after applicant's established use of its mark on the goods described in the application, and that it had been permanently discontinued before the application was filed."

Then, after stating that the record showed use by the applicant of the mark since 1923, he said:

"During all this time applicant's mark and opposer's have been in concurrent use upon their respective goods, and yet the chairman of opposer's board of directors, when asked if there had been any instances of actual confusion resulting from the use of the marks of the parties, was only able to say that mail intended for one party had occasionally been received by the other. It seems a fair inference from this testimony that opposer was unable to produce any evidence of actual confusion between the marks; and absence of confusion for a period of ten years is quite convincing that its future occurrence is unlikely."

In THE BUCKEYE BREWING COMPANY *v.* THE BURGER BROS. COMPANY, Opposition No. 12,870, decision rendered January 17, 1936, (159 Ms. Dec. 564), *First Assistant Commissioner Spencer* held that The Burger Bros. Company, of Cincinnati, Ohio, is not entitled to register the term "Buckeye" as a trade-mark for malt syrup for beverage making and food purposes, in view of the prior adoption and use by The Buckeye Brewing Company, of Toledo, Ohio, of that mark as used upon beer.

In his decision the First Assistant Commissioner stated that the question whether the goods were of the same descriptive properties had been decided in another case involving other parties, and it is deemed that the conclusion that they were of the same descriptive properties was correct.

He then discussed the testimony as to the use by the opposer of its corporate name and the claim of the applicant to have derived title from an earlier user, and stated with reference to the latter:

"It does not appear that any physical property of any kind passed to the applicant as a result of this alleged assignment; the instrument being a mere naked or purported transfer of an alleged trade-mark right and goodwill without the appertaining business. Such an instrument is ineffectual for any purpose except to be evidence of an abandonment of the mark by the assignor."

He then said:

"The opposer having been incorporated in 1886 under the name of 'The Buckeye Brewing Company', the notation 'Buckeye', as used by the applicant in connection with the goods described in its application, is deemed to be an appropriation of the distinguishing part of the opposer's

corporate name; the resemblance being so close as to be likely to produce confusion, registration is also refused under the same clause of Section 5 of the statute."

IN CHAMPION SPARK PLUG COMPANY v. GLOBE-UNION MFG. CO., Opposition No. 13,309, decision rendered January 17, 1936, (159 Ms. Dec. 567), *First Assistant Commissioner Spencer* held that Globe-Union Mfg. Co., of Milwaukee, Wis., is entitled to register, as a trade-mark for spark plugs, the mark consisting of the word "GLOBE" associated with the words "Full Spark", which latter words have been disclaimed, notwithstanding the prior adoption and use by Champion Spark Plug Company, of Toledo, Ohio, of the representation of a globe of the world with the word "CHAMPION" thereacross, as a trade-mark for the same goods.

In his decision, the First Assistant Commissioner said:

"While the word 'GLOBE' may be more or less suggestive of the terrestrial globe, I am nevertheless of the opinion that there is no confusing similarity between the marks here involved. Purchasers buying the opposer's product would call for it by the designation 'CHAMPION' whereas the applicant's customers would employ the appellation 'GLOBE'. In appearance, sound, and significance these two terms are distinct from one another. The only possibility of confusion is between the background of the opposer's mark, namely, a pictorial representation of a terrestrial globe and the applicant's name 'GLOBE', but, in my opinion, any confusion brought about by the simultaneous use of these two devices would be so remote and conjectural that it cannot be given consideration."

IN EX PARTE VIVID, INCORPORATED, Serial No. 331,519, decision rendered January 22, 1936, (159 Ms. Dec. 569), *Assistant Commissioner Frazer* held that Vivid, Incorporated, of Chicago, Ill., is not entitled to register, under the Act of 1905, the word "Vivid" as a trade-mark for hectograph ink ribbons, since it is merely descriptive of the goods.

In his decision, after quoting definitions of the word "vivid", the Assistant Commissioner said:

"It would seem to follow that an inspection of applicant's label may quite naturally lead one to the conclusion that its 'vivid' ribbons are so designated because of their bright, brilliant, or intense purple color, and are so made for the purpose of insuring 'brighter copies'. In this sense I think the term is clearly descriptive, and that any manufacturer of hectograph ink ribbons has the same right as applicant to its unrestricted use in describing his product."

IN WILLIAMS OIL-O-MATIC HEATING CORPORATION v. UNITED FURNACE ENGINEERING COMPANY, INC., Opposition No. 13,160, decision rendered January 28, 1936, (159 Ms. Dec. 581), *Assistant Commissioner Frazer* held that United Furnace Engineering Company, Inc., of New York, N. Y., is entitled to register the word "Meltemat" as a trade-mark for melting, metallurgical and heating furnaces and liquid fuel burning devices therefor, notwithstanding the use by Williams Oil-O-Matic Heating Corporation, of Bloomington, Ill., of the term "Oil-O-Matic" as a trade-mark for liquid fuel burning devices.

In his decision the First Assistant Commissioner called attention to the decision of the Court of Customs and Patent Appeals in *Williams Oil-O-Matic Heating Corporation v. Bliss* (C. C. P. A.), 54 F.(2d) 480, and said:

"In the cited case it was held that there was no likelihood of confusion between the marks 'Oil-O-Matic' and 'Thermatic' applied to goods of the same class. In my opinion the marks here involved are at least as dissimilar as were those. Here as there we have two syllables in common and there the resemblance ends, not only in spelling but in sound, appearance and suggested meaning. Upon the authority of that case, with which I am in entire agreement, I am constrained to hold that there is no reasonable likelihood of confusion between the marks 'Oil-O-Matic' and 'Meltemat'."

IN UNITED METAL BOX CO., INC., v. UNITED BATTERY MANUFACTURING COMPANY, LTD., Opposition No. 13,736, decision rendered January 30, 1936, (159 Ms. Dec. 588), *Assistant Commissioner Frazer* held that United Battery Manufacturing Company, Ltd., of Los Angeles, Calif., is not entitled to register, as a trade-mark for storage batteries, the word "United" in association with certain embellishments including the representation of a shield and an eagle, in view of the prior use by United Metal Box Co., Inc., of New York, N. Y., of the word "United" enclosed in a panel, as a trade-mark for switch boxes, motor inclosures and safety switches.

The ground of the decision is that the marks as used on the goods of the respective parties are confusingly similar.

With reference to the marks, the Assistant Commissioner said:

"There are many differences in the two marks viewed in their entireties, but it seems obvious that the word 'United' is the feature of each which would most likely be retained in the mind of the purchaser, and I agree with opposer's counsel that the goods of both parties would naturally be known by that word. It is therefore my opinion that the marks are confusingly similar if applied to merchandise of the same descriptive properties."

And then, after discussing certain testimony as to the use of the various devices and stating that decisions had been cited by both parties in support of their respective contentions, he said:

"I have carefully examined all the cases referred to in the briefs and in the Examiner's decision, together with a number not cited, with the result that I am constrained to hold applicant's storage batteries and opposer's safety switches to be 'of the same descriptive properties' in the light of the construction placed upon that phrase by the Court of Customs and Patent Appeals. The question is not entirely free from doubt, but such doubt must be resolved against the newcomer. *Kaufman & Kassner, v. Kayser-Ayer Bros. Co.*, 56 App. D. C. 169."

IN BAKELITE CORPORATION v. BECK, KOLLER & COMPANY, INC., Opposition No. 12,545, decided January 31, 1936, (159 Ms. Dec. 574), *First Assistant Commissioner Spencer* held that Beck, Koller & Company, Inc., of Detroit, Mich., is not entitled to register the term "BECKACITE" as a trade-mark for synthetic resins, in view of the prior adoption and use by Bakelite Corporation, of New York, N. Y., of the term "BAKELITE" as a trade-mark for varnish and for synthetic resin.

In his decision the First Assistant Commissioner, after quoting from the decision of the Examiner as to the facts of the case and stating that the opposer had used his mark prior to 1924, said:

"The answer to the applicant's question as to whether the opposer possessed the right to enter the specific field previously occupied by the applicant depends upon the determination of whether or not the goods of the opposer at the time the applicant entered the field, and prior thereto, possessed the same descriptive properties as the goods of the applicant. If the goods of the respective parties possessed the same descriptive properties at that time, and I am constrained to agree with the Examiner that such was the case, then it is well settled that the opposer possessed the right to later extend its business to include goods which, although specifically different in some characteristics, are nevertheless of the same class and may be said to possess the same descriptive properties."

He further said:

"Notwithstanding the distinctive differences between the synthetic resins of the opposer and the applicant in 1924, as far as the air-drying varnish trade is concerned, because of their relation and association, they do possess the same descriptive properties; they are derivatives of phenol and susceptible of the common definition 'synthetic resins'."

With reference to the marks, he said:

"Turning now to consideration of the marks, they are believed to be confusingly similar in both sound and appearance. Minute differences may be cited, but when the marks are considered in their entireties, as they must be, they are believed to be so similar that confusion in trade is more than likely to result from the simultaneous use of the marks upon the goods here involved. Such a view is supported by the following cases." (Citing decisions.)

IN BAKELITE CORPORATION v. BECK, KOLLER & COMPANY, INC., Opposition No. 12,584, decision rendered January 31, 1936 (159 Ms. Dec. 580), *First Assistant Commissioner Spencer* held that Beck, Koller & Company, Inc., of Detroit, Mich., is not entitled to register the notation "BECK-O-LAC" as a trade-mark for dry, paste, and ready mixed paints, varnishes and lacquers, in view of the prior use by Bakelite Corporation, of New York, N. Y., of the notation "BAKELITE" on a phenol resin varnish.

The reasons for the decision are the same as those given in proceeding No. 12,545.

IN BAKELITE CORPORATION v. REICHHOLD, Cancellation No. 2,591, decision rendered January 31, 1936 (159 Ms. Dec. 571), *First Assistant Commissioner Spencer* held that Helmuth Reichhold (Beck, Koller & Company, Inc., assignee, substituted), of Detroit, Mich., was not entitled to register the term "BECKACITE" as a trade-mark for dry, paste, and ready mixed paints, varnishes and lacquers, and the registration which it had obtained should be cancelled in view of the prior use by Bakelite Corporation, of New York, N. Y., of the term "BAKELITE" on phenol resin varnish.

The reasons for the decision are the same as those given in proceeding No. 12,545.

IN BAKELITE CORPORATION v. BECK, KOLLER & COMPANY, INC., Opposition No. 12,582, decision rendered January 31, 1936 (159 Ms. Dec. 579), *First Assistant Commissioner Spencer* held that Beck, Koller & Company, Inc., of Detroit, Mich., is not entitled to register the word "BECKOLLOID" as a trade-mark for synthetic resins, plastic resins, etc., in view of the prior adoption and use by Bakelite Corporation, of New York, N. Y., of the term "BAKELITE" as a trade-mark for lacquers and varnish.

The reasons for the decision are the same as those given in proceeding No. 12,545.

IN BAKELITE CORPORATION v. BECK, KOLLER & COMPANY, INC., Cancellation No. 2,611, decision rendered January 31, 1936 (159 Ms. Dec. 572), *First Assistant Commissioner Spencer* held that Beck, Koller & Company, Inc., of Detroit, Mich., was entitled to register the term "BECKOSOL" as a trade-mark for dry, paste, and ready mixed paints, notwithstanding the prior adoption and use by Bakelite Corporation, of New York, N. Y., of the word "BAKELITE" as a trade-mark on phenol resin varnish.

In his decision, after stating that the goods were deemed to be of the same descriptive properties for the reasons stated in proceeding No. 12,545, the First Assistant Commissioner said:

"However, the marks here involved are not believed to be confusingly similar in sound, appearance, or spelling, and there is no similarity of suggestive meaning."

IN BAKELITE CORPORATION v. BECK, KOLLER & COMPANY, INC., Cancellation No. 2,612, decision rendered January 31, 1936 (159 Ms. Dec. 573), *First Assistant Commissioner Spencer* held that Beck, Koller & Company, Inc., of Detroit, Mich., was entitled to register the term "BECKOSOL" superimposed upon a disc as a trade-mark for plastic synthetic resins, notwithstanding the prior use by Bakelite Corporation, of New York, N. Y., of the term "BAKELITE" as a trade-mark for varnish and synthetic resins, since it was deemed that the marks were not confusingly similar.

IN BAKELITE CORPORATION v. BECK, KOLLER & COMPANY, INC., Opposition No. 12,581, decision rendered January 31, 1936, (159 Ms. Dec. 578), *First Assistant Commissioner Spencer* held that Beck, Koller & Company, Inc., of Detroit, Mich., was not entitled to register the notation "BECK-O-LAC" as a trade-mark for synthetic resins, and that the registration which it had obtained should be cancelled in view of the prior use by the Bakelite Corporation, of New York, N. Y., of the term "BAKELITE".

The reasons for the decision are the same as those given in proceeding No. 12,584.

IN BAKELITE CORPORATION v. REICHHOLD, Cancellation No. 2,590, decision rendered January 31, 1936, (159 Ms. Dec. 570), *First Assistant Commissioner Spencer* held that Helmuth Reichhold (Beck, Koller & Company, Inc., assignee, substituted), of Detroit, Mich., was not entitled to register a trade-mark for dry, paste and ready mixed paints in view of the prior adoption and use by the Bakelite Corporation, of New York, N. Y., of a similar mark upon goods of the same descriptive properties, and the registration which it had obtained should be cancelled.

In his decision, after stating that the goods of the parties were of the same descriptive properties, the First Assistant Commissioner said:

"The mark relied upon by the applicant comprises a trefoil border enclosing the capital letter 'B' in the single upper lobe and the conventional sign of infinity in the two lower lobes. The mark of the respondent comprises a slightly ornate trefoil border having a single lobe lowermost and enclosing the capital letters 'B', 'K', and 'C', symmetrically arranged, each within one of the lobes of the trefoil. The similarity of the marks, if not obvious from this description, is immediately ap-

parent upon an inspection of the marks themselves. The letter 'B' is prominently displayed in each mark, and the trefoil border, common to both marks, is similarly represented in each. I am persuaded that confusion in trade would be likely to result from the simultaneous use of the marks here involved upon the goods of the opposing parties. Any doubt on this issue must be resolved in favor of the prior user which is here the applicant for cancellation."

In BAKELITE CORPORATION *v.* REICHHOLD, Cancellation No. 2,582, decision rendered January 31, 1936, (159 Ms. Dec. 571), *First Assistant Commissioner Spencer* held that Helmuth Reichhold (Beck, Koller & Company, Inc., assignee, substituted), of Detroit, Mich., was not entitled to register the word "BECKOLLOID" as a trade-mark for paint and that the registration which it had obtained should be cancelled in view of the prior use by Bakelite Company, of New York, N. Y., of the term "BAKELITE" on goods of the same descriptive properties.

In his decision the First Assistant Commissioner said:

"In my opinion the two words 'BAKELITE' and 'BECKOLLOID' are confusingly similar. In meaning they have little, if any, significance and therefore similarity in meaning is of little or no importance. On the other hand, in sound the two words strike me as being very much the same. They have the same number of syllables and when pronounced in the perfectly normal way the only difference between the marks is found to reside in the suffixes. For all other practical purposes, so far as sound is concerned, the remaining portions of the marks might as well be identical. Even the suffixes comprise a single syllable beginning with the same letter, namely, 'L'. For this reason and in view of the similarity in appearance of the marks I am of the opinion that they are confusingly similar."

In AKTIENGESELLSCHAFT FÜR FEINMECHANIK VORMALS JETTER & SCHEURER *v.* KNY-SCHEERER CORPORATION, Opposition No. 11,704, decision rendered January 31, 1936 (159 Ms. Dec. 582), *First Assistant Commissioner Spencer* held that Kny-Scheerer Corporation, of New York, N. Y., is entitled to register, as a trade-mark for surgical instruments, a mark described as consisting of the pictorial representation of a staff and a crown above it, with a serpent coiled in the form of the letter "S" about the staff.

In his decision, after referring to the prior proceeding between the same parties, and pointing out that the question involved depends upon the title obtained by the applicant from the Alien Property Custodian, the First Assistant Commissioner said:

"While the testimony taken by the parties relates to the seizure of the marks by the Alien Property Custodian, the notice of opposition contains no allegation of fact which puts in issue here the validity of such seizure; moreover, for substantially the reasons pointed out by the United States Court of Customs and Patent Appeals in the companion proceeding, Cancellation No. 2238, it is believed that such seizure was valid."

Then, after stating that the notice of opposition failed to provide any basis for the argument that the applicant, after the seizure by the Alien Property Custodian, divested itself of any right which it might have had to the exclusive use of the mark, he said:

"It may be stated in passing, however, that the supporting testimony presented is deemed to be insufficient to establish a transfer of the legal right to the exclusive use of the mark in issue. In so far as such testimony may establish equitable rights in the opposer, if it does, such equities may not be utilized in an opposition proceeding, and will not work a forfeiture of any legal (statutory) right possessed by the applicant."

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 25, 1936

[VOL. 468. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 359,838. WEST VIRGINIA PULP & PAPER COMPANY, New York, N. Y. Filed Dec. 23, 1934.

SUPERKRAFT

For Wood-Pulp and Paper-Pulp.

109,183. COMPRESSED GASES—TO WIT, OXYGEN, HYDROGEN, NITROGEN, ARGON, COAL-GAS, AND AIR. Registered March 28, 1916. THE LINDE AIR PRODUCTS COMPANY, New York, N. Y., a corporation of Ohio. Renewed March 28, 1936.

109,247. PRETZELS. Registered March 28, 1916. YORK PRETZEL BAKERY, York, Pa. Renewed March 28, 1936, to National Biscuit Company, New York, N. Y., a corporation of New Jersey, assignee.

109,260. DRY AND READY-MIXED PAINTS, WALL-PAINTS, LACS, STAINS, ENAMELS, VARNISHES, AND FILLERS. Registered March 28, 1916. THE PATTERSON-SARGENT COMPANY, as assignee of Davies & Meacham. Renewed March 28, 1936, to The Patterson-Sargent Company, Cleveland, Ohio, a corporation of Ohio, assignee.

109,306. STEEL. Registered March 28, 1916. AMERICAN MANGANESE STEEL COMPANY, Chicago, Ill. Renewed March 28, 1936, to American Manganese Steel Company, Chicago Heights, Ill., a corporation of Maine.

109,376. PAPER FOR NEGOTIABLE INSTRUMENTS. Registered April 4, 1916. G. W. TODD & COMPANY. Renewed April 4, 1936, to The Todd Company, Inc., Rochester, N. Y., a corporation of New York, assignee.

109,647. DRY AND READY-MIXED PAINTS, WALL-PAINTS, LACS, STAINS, ENAMELS, VARNISHES, AND FILLERS. Registered April 11, 1916. THE PATTERSON-SARGENT COMPANY, as assignee of Davies & Meacham. Renewed April 11, 1936, to The Patterson-Sargent Company, Cleveland, Ohio, a corporation of Ohio, assignee.

110,245. DRIED FISH, AND PARTICULARLY COD-FISH. Registered May 9, 1916. UNION FISH COMPANY, San Francisco, Calif., a corporation of California. Renewed May 9, 1936.

110,297. OYSTERS, CLAMS, AND SCALLOPS. Registered May 16, 1916. THE ANDREW RADEL OYSTER COMPANY, South Norwalk and Bridgeport, Conn. Renewed May 16, 1936, to The Andrew Radel Oyster Company, South Norwalk, Conn., a corporation of Connecticut.

110,326. TOILET-PAPER. Registered May 16, 1916. THE PEERLESS MFG. CO., Norristown, Pa. Renewed May 16, 1936, to The Peerless Paper Mills, Inc., Oaks, Pa., a corporation of Pennsylvania, successor.

110,518. WHEAT-FLOUR. Registered May 30, 1916. TACOMA GRAIN COMPANY, Tacoma, Wash., a corporation of Washington. Renewed May 30, 1936.

110,545. BISCUIT AND BREAD. Registered May 30, 1916. NATIONAL BISCUIT COMPANY, Jersey City, N. J., and New York, N. Y. Renewed May 30, 1936, to National Biscuit Company, New York, N. Y., a corporation of New Jersey.

110,681. AN EXTERNAL REMEDY FOR CERTAIN NAMED AILMENTS AND DISEASES. Registered June 6, 1916. PRIMA-CURA COMPANY. Renewed June 6, 1936, to Prima Cura Company, Parkersburg, W. Va., a firm, successor.

110,689. RAWHIDE, LEATHER, LACE-LEATHER, PACKING-LEATHER, HYDRAULIC CUP-LEATHER, AND CURRIED MILL-BUTTS. Registered June 6, 1916. CHAS. A. SCHIEREN COMPANY, New York, N. Y., a corporation of New York. Renewed June 6, 1936.

110,911. WHEAT-FLOUR. Registered June 20, 1916. BAY STATE MILLING CO., Winona, Minn., a corporation of Minnesota. Renewed June 20, 1936.

111,082. PENNANTS AND BANNERS. Registered June 20, 1916. WRIGHT & DITSON, Jersey City, N. J., and Boston, Mass. Renewed June 20, 1936, to Spalding Sales Corporation, Jersey City, N. J., and New York, N. Y., a corporation of New Jersey, assignee.

111,169. VULCANIZED FIBER. Registered July 4, 1916. AMERICAN VULCANIZED FIBRE CO. Renewed July 4, 1936, to National Vulcanized Fibre Co., Wilmington, Del., a corporation of Delaware, assignee.

111,160. WASTE-BASKETS. Registered July 4, 1916. AMERICAN VULCANIZED FIBRE CO. Renewed July 4, 1936, to National Vulcanized Fibre Co., Wilmington, Del., a corporation of Delaware, assignee.

111,178. CERTAIN NAMED WATERPROOFED TEXTILES. Registered July 4, 1916. JOHN BOYLE & COMPANY, INCORPORATED, New York, N. Y., a corporation of New York. Renewed July 4, 1936.

111,254. LIQUID MALT PREPARATIONS HAVING DIASTASIC PROPERTIES. Registered July 4, 1916. MALT-DIASTASE CO., New York, N. Y. Renewed July 4, 1936, to Malt-Diastase Co., Brooklyn, N. Y., a corporation of New York.

111,257. A PASTE PAINT GROUND IN JAPAN, ESPECIALLY ADAPTED FOR COACH AND AUTOMOBILE PAINTING. Registered July 4, 1916. JOHN W. MASURY & SON, New York, N. Y. Renewed July 4, 1936, to John W. Masury & Son, Brooklyn, N. Y., a corporation of New York.

111,258. A PASTE PAINT GROUND IN JAPAN, ESPECIALLY ADAPTED FOR COACH AND AUTOMOBILE PAINTING. Registered July 4, 1916. JOHN W. MASURY & SON, New York, N. Y. Renewed July 4, 1936, to John W. Masury & Son, Brooklyn, N. Y., a corporation of New York.

111,291. WHEAT-FLOUR. Registered July 4, 1916. THE ST. ANTHONY MILLING & ELEVATOR COMPANY, St. Anthony, Idaho, and Denver, Colo. Renewed July 4, 1936, to The Colorado Milling & Elevator Company, Denver, Colo., a corporation of Colorado, assignee.

LABELS RENEWED

14,125. OVERLAND FOR CIGARS. Registered April 7, 1908. C. B. HENSCHEL MFG. CO., Milwaukee, Wis. Renewed April 7, 1936, to S. S. Pierce Co., Boston, Mass., a corporation of Massachusetts, assignee.

LABELS

REGISTERED FEBRUARY 25, 1936

47,069.—*Title:* WOOLEE MULEES. For House Slippers for Men, Women, and Children. B AND B SHOE COMPANY, Chicago, Ill. Published August 15, 1933.

47,070.—*Title:* MODERN MELBAS. For Crisp Toasted Bread. BROOKS LTD., San Francisco, Calif. Published June 24, 1935.

47,071.—*Title:* DELICIOUS. For Brownies. CHIMES BROWNIES, INC., New York, N. Y. Published December 2, 1935.

47,072.—*Title:* OLD HARBOR. For Blended Whisky. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa. Published December 23, 1935.

47,073.—*Title:* DONALDSON'S SCHOOL LUNCH BREAD. For Bread. THE DONALDSON BAKING COMPANY, Columbus, Ohio. Published May 1, 1935.

47,074.—*Title:* BALDINE. For a Hair Grower. BEN FAIN, Tyler, Tex. Published November 1, 1935.

47,075.—*Title:* HADEES FIRE KINDLER. For Fire Kindling. FISHERS GRAIN COMPANY, INC., Fishers, Ind. Published October 22, 1935.

47,076.—*Title:* ROYAL CHARTER. For Scotch Whisky. THE GOVERNOR AND COMPANY OF ADVENTURERS OF ENGLAND TRADING INTO HUDSON'S BAY, commonly called "Hudson's Bay Company", Winnipeg, Manitoba, Canada. Published November 13, 1935.

47,077.—*Title:* JOHNSON'S FLAT VARNISH. For Flat Varnish. S. C. JOHNSON & SON, INC., Racine, Wis. Published December 26, 1935.

47,078.—*Title:* JOHNSON'S KLEEN FLOOR. For a Cleaner for Waxed Floors. S. C. JOHNSON & SON, INC., Racine, Wis. Published December 28, 1935.

47,079.—*Title:* JOHNSON'S QUICK-DRYING VARNISH. For Quick-Drying Varnish. S. C. JOHNSON & SON, INC., Racine, Wis. Published December 28, 1935.

47,080.—*Title:* JOHNSON'S TOUCH-UP ENAMEL. For Enamel for Automobiles. S. C. JOHNSON & SON, INC., Racine, Wis. Published December 16, 1935.

47,081.—*Title:* JOHNSON'S AUTOMOBILE WAX. For Automobile Wax. S. C. JOHNSON & SON, INC., Racine, Wis. Published December 16, 1935.

47,082.—*Title:* KEMP'S CHOCOLATE ALMONDS. For Chocolate Almonds. E. F. KEMP, INC., Somerville, Mass. Published December 23, 1935.

47,083.—*Title:* MACY'S PERSONAL PALETTE. For Cosmetics. R. H. MACY & CO., INC., New York, N. Y. Published October 7, 1935.

47,084.—*Title:* AMO-LITE. For a Cleanser and Water Softener. VINCENT MAGGIO, doing business as The Amo-Lite Company, Canton, Ohio. Published November 14, 1935.

47,085.—*Title:* DOENTS. For a Sedative and Hypnotic. MELVIN CO., South Pasadena, Calif. Published December 7, 1935.

47,086.—*Title:* POSE'S HAIR CULTURE. For a Hair Tonic. EDWARD R. POSE, Roscoe, Calif. Published November 14, 1935.

47,087.—*Title:* FLARE-FIT. For Shoes. THE SELBY SHOE CO., Portsmouth, Ohio. Published November 1, 1935.

47,088.—*Title:* SNOW KING. For Baking Powder. THE SNOW KING BAKING POWDER CO., Cincinnati, Ohio. Published December 3, 1935.

47,089.—*Title:* MERRY CHRISTMAS. For Paper Bows. CHAS. A. STEVENS & COMPANY, Chicago, Ill. Published November 12, 1935.

47,090.—*Title:* GUNTHER'S LAGER BEER. For Lager Beer. WILLIAM E. THOMSEN, Baltimore, Md. Published January 3, 1936.

47,091.—*Title:* "BLACK LEAF" WORM PELLETS FOR POULTRY. For Worm Pellets for Poultry. TOBACCO BY-PRODUCTS & CHEMICAL CORPORATION, (INCORPORATED), Louisville, Ky. Published November 15, 1935.

47,092.—*Title:* "BLACK LEAF 40" NICOTINE SULPHATE. For Nicotine Sulphate. TOBACCO BY-PRODUCTS & CHEMICAL CORPORATION, (INCORPORATED), Louisville, Ky. Published September 18, 1935.

47,093.—*Title:* "BLACK LEAF" WORM POWDER. For Worm Powder for Poultry. TOBACCO BY-PRODUCTS & CHEMICAL CORPORATION, (INCORPORATED), Louisville, Ky. Published November 15, 1935.

47,094.—*Title:* "BLACK LEAF 40" NICOTINE SULPHATE. For Nicotine Sulphate. TOBACCO BY-PRODUCTS & CHEMICAL CORPORATION, (INCORPORATED), Louisville, Ky. Published January 2, 1936.

47,095.—*Title:* "BLACK LEAF 40" NICOTINE SULPHATE. For Nicotine Sulphate. TOBACCO BY-PRODUCTS & CHEMICAL CORPORATION, (INCORPORATED), Louisville, Ky. Published January 2, 1936.

47,096.—*Title:* TEA GARDEN. For Grape Juice. TEA GARDEN PRODUCTS CO., San Francisco, Calif. Published December 16, 1935.

47,097.—*Title:* GRAHAM. For Shoes. TOLMAN-DAVIDSON ADVERTISING PRESS, INC., Brockton, Mass. Published June 1, 1935.

47,098.—*Title:* BERCO. For Shoes. TOLMAN-DAVIDSON ADVERTISING PRESS, INC., Brockton, Mass. Published December 26, 1935.

47,099.—*Title:* LA SALLE. For Headwear Boxes. TRADE LITHOGRAPH & PRINTING CO., INC., New York, N. Y. Published January 1, 1935.

47,100.—*Title:* MELO-REX. For Cough Syrup. UNITED DRUG COMPANY, Boston, Mass. Published December 12, 1935.

47,101.—*Title:* REX-RUB. For An Athlete's Rub. UNITED DRUG COMPANY, Boston, Mass. Published December 12, 1935.

47,102.—*Title:* ASAHI EXTRA FANCY ARKANSAS BLUE ROSE RICE. For Rice. WEST COAST IMPORTING COMPANY, Los Angeles, Calif. Published December 3, 1935.

PRINTS

REGISTERED FEBRUARY 25, 1936

15,593.—*Title:* PICKS YOU UP. For Beer. THE BUCKEYE BREWING COMPANY, Toledo, Ohio. Published November 17, 1935.

15,594.—*Title:* BROADWAY. For Chocolates. DAGGETT CHOCOLATE COMPANY, Cambridge, Mass. Published October 4, 1934.

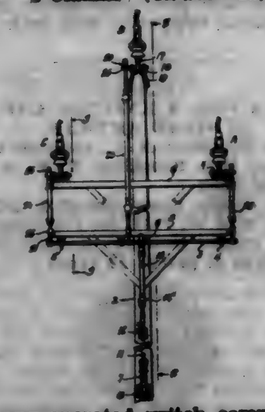
19,862
TELEVISION DEVICE
Frank W. Adsit, St. Paul, Minn., assignor of one-tenth to James B. Sherwood, Minneapolis, Minn.
Original No. 1,796,420, dated March 17, 1931, Serial No. 262,232, March 19, 1928. Application for reissue March 15, 1932, Serial No. 599,871
7 Claims. (Cl. 178—6)



1. In a television device, the combination of a rotatable wheel, a multiplicity of pins of equal length protruding from said wheel, small mirrors for receiving light from successive portions of objects as said wheel is rotated formed on said pins, said mirrors being arranged around the periphery of said wheel in the form of a helix and having an inclined position relatively to a tangent drawn at the circumference of the wheel, whereby light reflected by said mirrors is moved in both a horizontal and vertical position, a photo-electric cell, and means for utilizing the currents therefrom to modulate a radio broadcast wave.

19,863
FLUE GAS CLEANING APPARATUS
Herman Riehtren, Darmstadt, Germany, and John B. Eberlein, Chicago, Ill., assignors to Freyn Engineering Company, Chicago, Ill., a corporation of Maine
Original No. 1,933,698, dated November 7, 1933, Serial No. 581,250, December 18, 1931. Application for reissue April 22, 1935, Serial No. 17,592
21 Claims. (Cl. 183—21)

1. In a gas washer, in combination, a substantially circular housing having inner and outer top, bottom and inner and outer connecting side walls, an inlet and outlet provided in the inner of said walls at diametrically opposed points, a dividing wall extending from the top of the inner wall above the inlet to the base below the outlet and separating the inlet from the outlet, said inlet and outlet being connected by passages provided by the housing, partitions located in the passages, and spray nozzles in the passages between the inlet and the partitions.

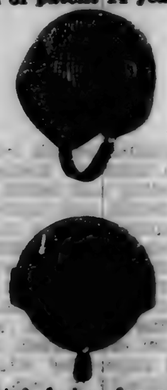
19,864
GANG OPERATED SWITCH
John J. Desmond, Hubbard Woods, Ill., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Original No. 1,963,695, dated March 28, 1933, Serial No. 441,797, April 5, 1930. Application for reissue November 15, 1934, Serial No. 753,241
5 Claims. (Cl. 200—48)

5. A gang operated switch comprising a plurality of switch units, an insulating supporting structure supporting said switch units in spaced relation, each switch unit having a blade carried by and insulated from a rock shaft distinct and separate from the rock shaft of each of the remaining switch units, each switch unit having a rock arm carried by its rock shaft, a second supporting structure spaced from said first mentioned supporting structure, a metallic rock shaft spaced from each switch unit and carried by said second supporting structure and provided with a plurality of rock arms, insulating links joining said last mentioned rock arms with the rock arms of said switch units, each of said insulating links being adjustable to permit accurate alignment of said switch units, and means spaced from said last mentioned rock shaft for operating said rock shaft.

19,865
HOSE COUPLING
Joseph Peter Eastman, Manitowoc, Wis.
Original No. 1,969,542, dated August 7, 1934, Serial No. 484,046, September 24, 1930. Application for reissue May 23, 1935, Serial No. 21,113
17 Claims. (Cl. 285—94)

8. A hose coupling comprising an end wall and a sleeve projecting therefrom, said sleeve being adapted to receive the end of a hose and to be

contracted to permanently grip the same, said sleeve having an upper portion, nearer said wall, and a lower portion, said sleeve, before contraction, being internally bored with two bores, the larger bore being in said lower portion, and being,



before contraction, of two different diameters externally, the larger diameter being upon said lower portion, and, after contraction, said sleeve being cylindrical externally over both said portions.

19,866

DESIGN FOR A KNITTED CAP OR SIMILAR ARTICLE

Alex Epstein, Brooklyn, N. Y., assignor to Epstein & Hammer, Inc., Brooklyn, N. Y., a corporation of New York

Original No. 86,360, dated March 1, 1932, Serial No. 39,866, May 16, 1931, for 3½ years. Application for reissue October 14, 1933, Serial No. 49,480. Term of patent 14 years

The ornamental design for a knitted cap or similar article, substantially as shown.

19,867

FOLDING OF ENVELOPE BLANKS AND THE LIKE

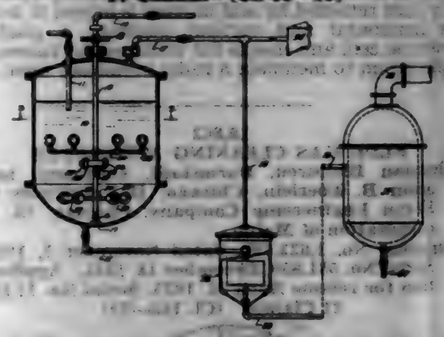
Max Goder, Neuss, Germany, assignor to United States Envelope Company, Springfield, Mass., a corporation of Maine

Original No. 1,985,859, dated December 25, 1934, Serial No. 686,273, August 22, 1933. Application for reissue May 10, 1935, Serial No. 20,835

8 Claims. (Cl. 93—67)

1. A machine for folding flat paper articles, comprising a pair of spaced sheet-supporting members for supporting a pile of sheets at a pair of opposed corners, and sheet-folding means for operation on certain flaps or extensions of said sheets, in combination with a plate having suction means for suctionally engaging a lowermost sheet of the pile, said plate being arranged for movement from a point below the pile of sheets to a position for delivering the lowermost sheet to said sheet-folding means, sheet-folding members pivoted to a pair of opposed edges of the plate and movable from a position in which they form a continuation of the plate at said edges into a position in which they bear against the plate

and vice versa, said sheet-folding members having suction means for suctionally engaging the said sheet, means operatively connected to the sheet-folding members for turning said members towards the plate during the movement of the plate away from the pile so as to fold the sheet along lines registering with said opposed edges of the plate, means for moving the plate towards and away from the pile of sheets, and controlling means for breaking the suction action on the plate reaching the delivery position.



19,868

FOOD PRODUCT AND PROCESS OF MANUFACTURING THE SAME

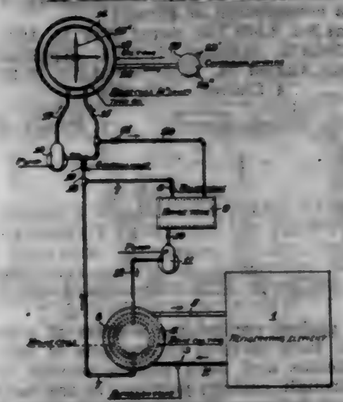
George Grindrod, Oconomowoc, Wis., assignor to Grindrod Process Corporation, Waukesha, Wis., a corporation of Wisconsin

Original No. 1,790,126, dated March 24, 1931, Serial No. 287,184, June 21, 1928. Application for reissue March 22, 1933, Serial No. 662,367

17 Claims. (Cl. 99—45)

1. The process of manufacturing stable food products, containing protein-like substances, consisting in subjecting the material to the action of steam jets having a temperature, velocity and position to uniformly reach and stabilize the food particles against coagulation prior to material thermal chemical change, immediately cooling the stabilized material to a point where thermo-chemical change will be avoided and then concentrating the material into a hydrated colloid and allowing it to jell.

17. A product of manufacture, a concentrated ice-cream mix containing those solid constituents normally present in ice-cream but concentrated approximately to one-half the volume of a natural liquid ice-cream mix, and in which the protein constituents are stabilized against coagulation whereby coagulation and deterioration of the product are offset.



19,869

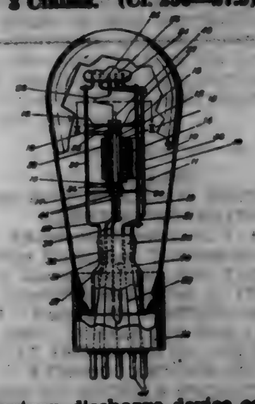
METHOD AND APPARATUS FOR AVOIDING SHOCK CHILL IN PRECIPITATING SUBSTANCES FROM LIQUIDS

Leo D. Jones, Philadelphia, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a corporation of Delaware

Original No. 1,558,619, dated October 27, 1925, Serial No. 442,691, February 5, 1921. Application for reissue May 5, 1934, Serial No. 724,178

10 Claims. (Cl. 62—172)

1. The method of treating liquid containing a substance precipitable by cooling which comprises forming a discontinuous precipitate of said substance in the liquid by reducing the temperature thereof at a substantially constant rate by heat absorption in refrigerant cooled at a rate bearing a substantially constant relation to changes in the temperature of the liquid.



19,870

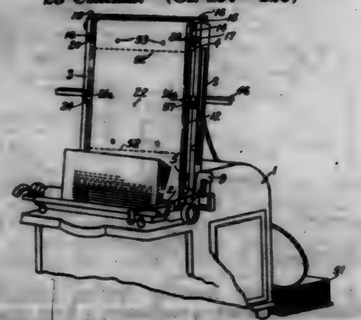
ELECTRON DISCHARGE DEVICE WITH INDIRECTLY HEATED CATHODE

Ernest A. Lederer, Glen Ridge, and John W. Marden, East Orange, N. J., assignors to Westinghouse Lamp Company, a corporation of Pennsylvania

Original No. 1,948,746, dated February 6, 1934, Serial No. 233,537, November 16, 1927. Application for reissue April 27, 1934, Serial No. 722,788

3 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an evacuated envelope, a hollow thermionically active uni-potential cathode and an anode, an electron emitting filament within said cathode having its opposite ends non-inductively arranged, said electron emitting filament extending beyond one limit of said cathode and means externally of said cathode for shielding said anode from the electrons emanating from said electron emitting filament.



19,871

APPARATUS FOR HANDLING MULTIPLE PAPER STRIPS

William C. Pfeiffer, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a corporation of Ohio

Original No. 2,011,836, dated August 20, 1935, Serial No. 667,631, August 31, 1933. Application for reissue January 9, 1936, Serial No. 58,419

23 Claims. (Cl. 197—126)

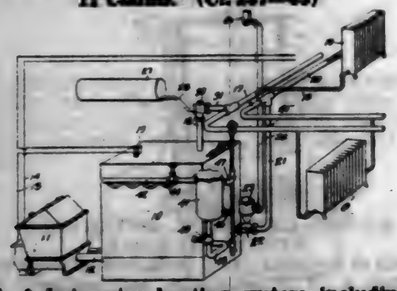
22. An article of manufacture for supporting, on a movable conveyor adapted to convey the article supplementary to any conveying action of the paper, a plurality of copy-producing sheets interleaved between paper webs, said article consisting of a plate having on one side a guide portion for receiving and guiding said conveyor, a latching member cooperating therewith to releasably secure said plate to said conveyor, and a holder on said plate for holding said copy-producing sheets whereby to adjust the position of the copy-producing sheets with respect to the paper webs in order to vary the location at which copying commences on said paper.

19,872

VEHICLE BRAKE

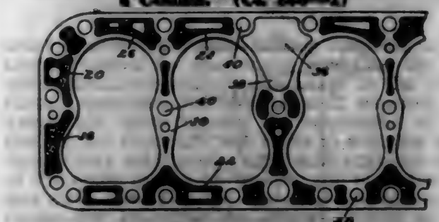
Roy S. Sanford, New York, N. Y., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a corporation of Illinois

Original No. 1,663,233, dated May 1, 1928, Serial No. 581,945, August 15, 1922. Reissue No. 17,147, dated November 27, 1928, Serial No. 315,089, October 25, 1928. This application for reissue April 26, 1935, Serial No. 18,480



21 Claims. (Cl. 188—78)

1. The combination with two rotary members, of retarding means for each member, and a common means for applying power to said retarding means, said power applying means including



mechanism operating to distribute the applied power between said retarding means proportional to the amounts of frictional resistance between the rotary members and the retarding means to secure substantially equal retardation of said rotary members, together with a device for adjusting the retarding means to compensate for wear without affecting the operation of said mechanism.

19,873
HOT WATER HEATING SYSTEM
Homer A. Thrush, Peru, Ind., assignor to H. A. Thrush & Co., Peru, Ind., a corporation of Indiana
Original No. 1,931,419, dated October 17, 1933, Serial No. 653,723, January 26, 1933. Application for reissue October 12, 1935, Serial No. 45,209
11 Claims. (Cl. 237—63)

11. A hot water heating system including in combination a boiler, a radiator, a first pipe from the upper portion of the boiler extending upwardly to the radiator, a second pipe extending from the radiator downwardly to the boiler, a shut off valve in the first pipe located to prevent thermal circulation of the water but permitting forced circulation thereof, a pump for intermittently producing forced circulation in said system, and means for preventing the gases liberated in the boiler and passing upwardly into the first pipe from entering the first pipe on the remote side of the valve from the boiler and passing to the radiator when said pump is inactive.

19,874
SKELETON METAL-BACKED GASKET
John H. Victor, Wilmette, Ill., assignor to Victor Manufacturing & Gasket Company, Chicago, Ill., a corporation of Illinois
Original No. 2,001,225, dated May 14, 1935, Serial No. 706,932, January 17, 1934. Application for reissue August 26, 1935, Serial No. 37,335
4 Claims. (Cl. 277—1)

3. A gasket, comprising a sheet of asbestos, a metallic back secured to one side of said sheet, the asbestos and back having service openings therethrough, certain portions of the back being cut away between the service openings to provide a skeleton back having a metallic reinforcement around the openings, and exposing asbestos throughout the major portion of its area.

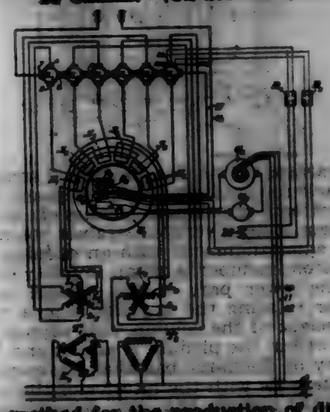
PLANT PATENTS

GRANTED FEBRUARY 25, 1936

167
ROSE
William Spandikow, Jr., Maywood, Ill., assignor to William Spandikow & Sons, Maywood, Ill., a copartnership composed of William Spandikow, Sr., William Spandikow, Jr., and Elmer A. Spandikow
Application October 22, 1935, Serial No. 46,366
1 Claim. (Cl. 47—61)

A variety of rose as disclosed, characterized by the new and novel markings of its blooms of "Rose Madder" (Alizarin) and splotched and striped radially from the base of each petal with "Madder Lake" and "Pink Madder", long, stiff and practically thornless stems, superior shipping qualities, its vigor and resistance to disease.

PATENTS

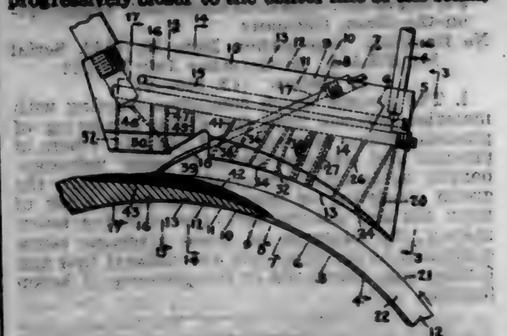


GRANTED FEBRUARY 25, 1936

2,031,581
SEXUAL HORMONE DERIVATIVES
Lorenz Ach, Mannheim-Waldhof, and Wilhelm Dirscherl, Heidelberg, Germany, assignors to Rare Chemicals, Inc., Nepera Park, N. Y., a corporation of New York
No Drawing. Application November 21, 1933, Serial No. 698,422. Renewed December 14, 1934. In Germany November 26, 1932
7 Claims. (Cl. 260—106)

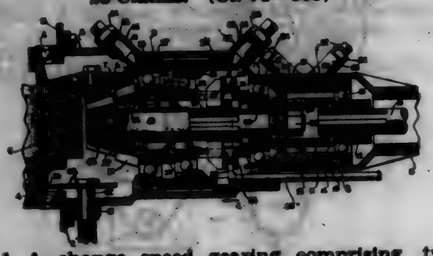
5. As a new product, an ester of the female sexual hormone (follicle hormone) $C_{18}H_{32}O_2$, melting at about 100° C. this ester being believed to be the chloroformic ester having the formula

$$Cl—CO—O—(C_{18}H_{31}O).$$



2,031,582
CONVERSION OF ALTERNATING CURRENTS INTO DIRECT CURRENT OR VICE VERSA
Johan Emil Alm, Stockholm, Sweden, assignor to Baltzar Carl von Platen, Stockholm, Sweden
Application February 10, 1934, Serial No. 710,704
In Sweden July 12, 1933
22 Claims. (Cl. 175—364)

1. A method for the production of direct current from polyphase substantially sinusoidal alternating current which comprises superimposing on each phase of said alternating current an auxiliary alternating voltage having a wave form such that the wave form of the resulting phase voltage is substantially zero during a finite interval, and commutating each phase voltage during said zero interval.



2,031,583
TORCH FOR WELDING SEAMS ALONG CURVING SURFACES
James L. Anderson, Chester, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Original application August 2, 1931, Serial No. 554,458. Patent No. 1,973,980, dated September 4, 1934. Divided and this application November 17, 1933, Serial No. 698,049
5 Claims. (Cl. 158—27.4)

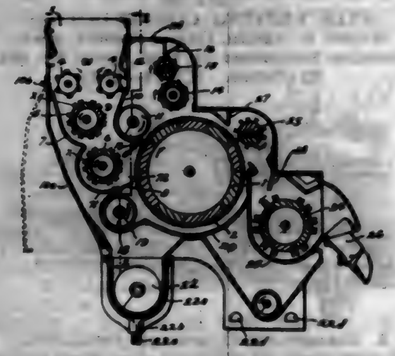
1. A torch for welding a seam by relative movement of the torch and seam, the torch having a face and a plurality of jet orifices in the face for directing flames against the work, successive jet orifices lengthwise of the torch face being disposed to direct the flames to strike the metal at different points, the successive jets being first progressively closer to the center line of the seam,

then further from said center line and from each other, and then progressively closer again whereby the heat is applied to the metal with the same effect as by moving a single jet transversely of the seam as the seam moves longitudinally with respect to the single jet.

2,031,584
AXLE DRIVING CONSTRUCTION
Walter S. Austin, Grand Rapids, Mich.
Application September 11, 1933, Serial No. 688,886
23 Claims. (Cl. 74—366)

1. A change speed gearing comprising, two bevel ring gears of different diameters rotatable upon a common axis, a suitable housing, two bevel pinions meshing respectively with said ring gears, means for mounting both pinions for rotation supported by said housing and means accessible from the exterior of said housing for longitudinally adjusting said bevel pinions independently of each other and relative to their respective ring gears.

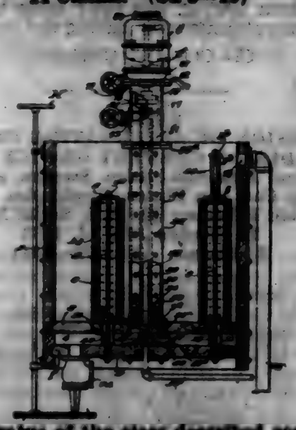
2,031,585
METHOD OF PRODUCING LIGHT WEIGHT PLASTERS
John C. Best and Frank Lee Marsh, Medicine Lodge, Kans., assignors to The Best Brothers Keene's Cement Company, Medicine Lodge, Kans., a corporation of Kansas
No Drawing. Application September 18, 1933, Serial No. 689,967
8 Claims. (Cl. 106—94)



4. The method of producing light weight plaster including calcining crushed or ground gypsum

rock, mixing the calcined material with water, adding an accelerating agent to the mixture, agitating the wet mixture until it has recrystallized in a finer particle size, and recalcining the material.

2,031,536
PROCESS FOR THE MANUFACTURE OF CONDENSATION PRODUCTS
Josef Blumfeld and Johannes Kuchenbuch, Krefeld-Uerdingen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application June 20, 1933, Serial No. 676,544. In Germany July 7, 1932
12 Claims. (Cl. 260—6)



1. The process which comprises reacting with material selected from the group consisting of phenols, chloro phenols, alkyl phenols, ethers of phenols and esters of phenols with monocarboxylic acids upon material selected from the group consisting of unsaturated fatty acids of fatty oils and natural fats, the glycerine esters thereof, the mixtures of these glycerine esters contained in the fatty oils and natural fats and furthermore stand oils in the presence of boron fluoride.

2,031,537
MACHINE FOR CLEANING SEED COTTON AND FOR EXTRACTING THE SEED COTTON FROM BURRS AND HULLS
John Bicwett, Dallas, Tex., assignor to The Murray Company, Dallas, Tex., a corporation of Texas
Application August 10, 1931, Serial No. 556,129
1 Claim. (Cl. 19—37)

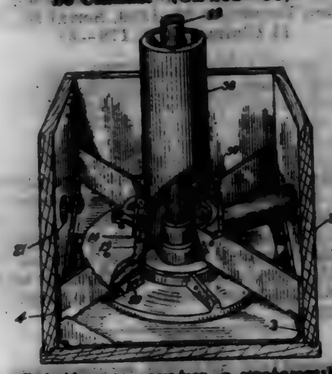
A cotton seed cleaning and extracting machine including, a lint engaging drum, a knocker for removing separable material from said drum, a transverse trough extending longitudinally of said drum entirely thereacross and located in position to remove matter knocked off the drum by said knocker, said trough being open to the drum along one side, a conveyor in said trough, said trough being closed at one end and open at its opposite end, said conveyor being arranged to convey matter to the open end of said trough, a second trough below the first trough having a connection with the first trough beyond the end of the drum for receiving material discharged from said first trough, the second trough being open to the drum along one side and having a discharge at its end opposite its receiving end, and a second conveyor in the second trough extending longitudinally of the drum and beyond the ends thereof for moving material longitudinally of said second trough continuing across the face of said drum from the receiving end to the discharge end of the said second trough, the second conveyor having the flights adjacent the receiving end of the second trough smooth for distributing the conveyed matter along the trough without choking and the subsequent flights provided with means for independently casting the conveyed matter into contact with the drum and for breaking up lengths of material.

2,031,562
APPARATUS FOR FLUID TREATING FIBROUS MATERIALS
Edward J. Abbott, Wilton, N. H., assignor to Abbott Machine Company, Wilton, N. H., a corporation of New Hampshire
Application June 15, 1929, Serial No. 371,243
11 Claims. (Cl. 8—19)

1. Apparatus of the class described comprising a receptacle for dye liquor, said receptacle having spaced bottoms providing a plenum chamber between them, a fixed vertical strainer column disposed in axial alignment with an opening in the upper bottom member, a pump impeller disposed within the lower part of the strainer column, means for rotating the impeller, and a support for the weight of the column, said support being disposed within the plenum chamber and having a plurality of discharge passages communicating at opposite ends with the interior of the column and with the plenum chamber, respectively, the support also having a chamber for the reception of heating means and channels leading from said chamber to the several delivery passages.

9. Apparatus for the fluid treatment of material wound on spools, including a vat, a vertical column extending centrally of the vat from the bottom to above the top of the vat, a motor mounted on said column, and means operated by the motor for delivering a downwardly divergent air current over the top of the vat to dissipate rising vapor.

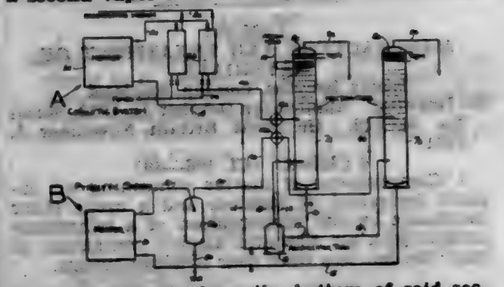
2,031,580
FILTER
Robert Nash Burchhalter and James Marshall Osburn, Michigan City, Ind., assignors to Michiana Products Corporation, Michigan City, Ind., a corporation of Indiana
Application July 11, 1933, Serial No. 680,995
10 Claims. (Cl. 210—165)



1. In a filter of the type comprising a casing having an inlet and an outlet and a perforated tube within the casing in communication with the outlet, the combination of a barrel grating

surrounding the tube, a barrel screen surrounding the grating and sustained by the grating against inlet pressure, heads sealed to the tube

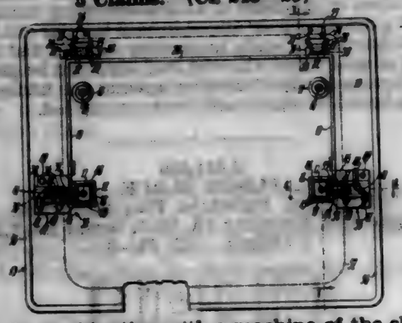
and the end of the barrel screen and means for yieldingly resisting the shortening of the screen barrel.



2,031,590
FLOTATION APPARATUS
Arthur C. Daman, Denver, Colo.
Application October 5, 1931, Serial No. 566,987
20 Claims. (Cl. 261—93)

1. In flotation apparatus, a rectangular cell, a plurality of baffles extending into the corners of the cell, to prevent their lateral movement, a sectional hood, the sections of which are respectively fastened to the baffles, one of the baffles being separately removable, a section of the hood being fastened to the latter baffle and removable therewith, a shaft in the cell, and a rotary impeller disposed on the shaft adjacent the hood.

2,031,591
CONVERSION OF HYDROCARBONS
James P. Daugherty, Jr., Woodbury, N. J., assignor to Houdry Process Corporation, Dover, Del., a corporation of Delaware
Application February 10, 1933, Serial No. 656,664
6 Claims. (Cl. 196—52)



6. Process of converting higher boiling hydrocarbons into lower boiling hydrocarbons which comprises passing the starting material through a vaporizing zone and then at low pressure into a converting zone containing catalytic material having selective adsorptive properties maintained in the temperature range of 750° to 1000° F., discharging the vapors into a vapor fractionating zone where partial condensation occurs, withdrawing the heavy condensate from the bottom of the fractionating zone, mixing a part of the heavy condensate with preheated fresh feed to form the starting material for said vaporizing zone and then passing the mixture to said vaporizing zone, introducing the remainder of the heavy condensate into the lower portion of a second vapor fractionating zone, withdrawing

heavy condensate from the bottom of said second fractionating zone, sending said last named condensate through a cracking zone and then at relatively high pressure into a pyrolytic reaction zone maintained in the temperature range of 850° to 1100° F., discharging the vapors from said last named reaction zone into said second fractionating zone, and withdrawing the overhead vapors from both said fractionating zones to provide the desired lower boiling hydrocarbons.

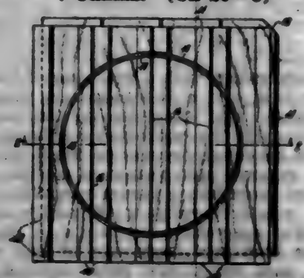
2,031,592
WITHDRAWN

2,031,593
TYPEWRITING MACHINE
William A. Dobson, Wethersfield, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application July 29, 1933, Serial No. 682,783
5 Claims. (Cl. 248—25)

1. In combination with a machine of the character described, and a baseboard on which said machine rests, said machine having an inner frame supporting the operating mechanism, and also having an outer decorative mask with sides serving to conceal said frame, a machine hold-down device including a barrel mounted on said baseboard, a bolt movably mounted by said barrel, the latter extending outwardly in the direction of the bolt-axis from one of the sides of the mask, said mask-side being arched at the barrel, so that the inner end of said barrel faces a portion of said inner frame, whereby said bolt, projectable beyond the inner end of the barrel, may engage said inner frame-portion, and a han-

die, extending transversely from said bolt through an opening in the wall of the barrel outside of the mask, so as to be accessible for engaging said bolt with said inner frame-portion or retracting it therefrom, said inner frame-portion having a covering of sound-deadening material, whereby transmission of machine noises to the baseboard by way of said bolt is minimized.

2,031,504
MANUFACTURE AND TREATMENT OF MATERIALS
Henry Dreyfus, London, England
No Drawing. Application October 31, 1932, Serial No. 640,529. In Great Britain November 5, 1931
6 Claims. (Cl. 106—40)

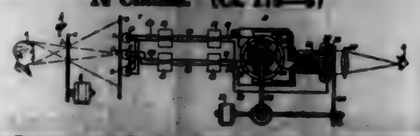


1. Compositions of matter containing an organic derivative of cellulose and a cyclic ether obtainable by the condensation of a trihydroxy alcohol with an aliphatic alcohol containing at least two but less than four hydroxy groups.

2,031,595
IRONING BOARD COVER
Hulda E. Finck, St. Charles, Mo.
Application November 21, 1934, Serial No. 754,855
5 Claims. (Cl. 68—10)

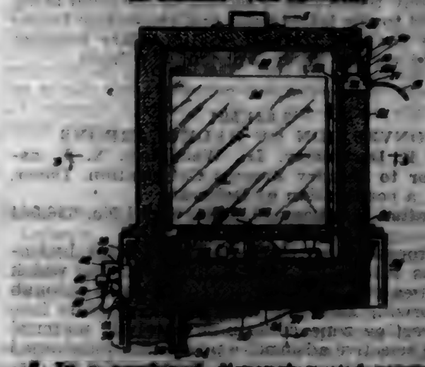
1. An ironing board cover comprising a body portion having its edges at its front end and sides hemmed to form a marginal tubular channel, portions of the sides of said cover being incurved and a draw cord arranged in said tubular channel and having its ends projecting beyond the rear end of said cover whereby said cord can be drawn to force said edges together against the underside of a board to which said cover is applied.

2,031,596
FLOOR BLOCK
Clarence C. Fulbright, Pine Bluff, Ark.
Application February 19, 1935, Serial No. 7,259
7 Claims. (Cl. 20—6)



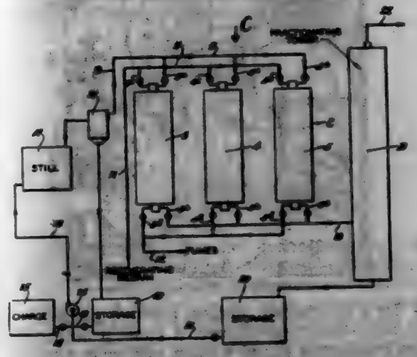
1. A block of the class described comprising, in combination: a plurality greater than two of assembled slats; said assembly having a groove in one of its surfaces extending in the outer slats at an angle other than ninety degrees to the points between said slats; and a resilient spline lying in said groove under tension tending to draw said slats together.

2,031,597
GUMMED STRIP MOISTENER
Thomas J. Gray, Milwaukee, Wis.
Application February 7, 1935, Serial No. 5,430
16 Claims. (Cl. 91—62.5)



14. A strip moistener comprising a hollow body having a substantially cylindrical chamber therein, and also having a closed space directly communicating with the bottom of said chamber, means controlled by liquid in said space for maintaining a predetermined supply of liquid therein, and a roller in said chamber moistened by liquid from said space, said body also having an opening through which said roller is exposed for contact with a strip to be moistened.

2,031,626
ELECTROOPTICAL SYSTEM
Frank Gray, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 27, 1930, Serial No. 505,049
14 Claims. (Cl. 178—6)

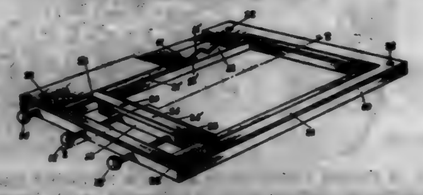


1. Image producing apparatus comprising a plurality of stationary strip light sources, terminal means for a plurality of image current channels, and means for distributing image currents simultaneously from said terminal means to respective groups of said light sources and from each of said terminal means to all of said sources in succession.

2,031,589
DRINKING WATER DISPENSER
Austin Gudmundsen, Wauwatosa, Wis., assignor of one-half to Rudolph L. Hascha, Milwaukee, Wis.
Application September 2, 1932, Serial No. 631,600
12 Claims. (Cl. 62—142)

6. In a combined dispensing and mixing apparatus, a source of a first substance, a source of a second substance, separate valves for controlling the supply of said substances, a single operating member operating said valves, and means whereby movement of said member in one direction controls the relative amount of opening of said valves and movement of said member in another direction dispenses said substances.

2,031,600
CONTROL OF CATALYTIC REACTIONS
James W. Harrison and Thomas R. Prickett, Woodbury, N. J., assignors to Hendry Process Corporation, Dover, Del., a corporation of Delaware
Application May 18, 1932, Serial No. 612,686
15 Claims. (Cl. 196—52)



1. In endothermic chemical transformations involving the use of a contact mass having catalytic activity and capable of transforming the starting material such as mineral oil in repeated passes during which the repassed material becomes more and more refractory, the process which comprises bringing the material to be transformed repeatedly into contact with said mass in separate and distinct passes at different temperatures and varying the volume of the mass inversely with the changes in temperature while the rate and volume of feed of material to the mass is held substantially constant.

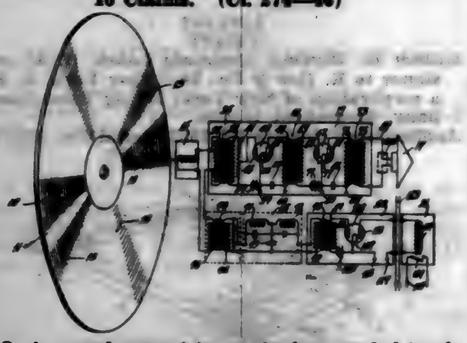
2,031,601
SEXTANT
Albert F. Hegenberger and Andrew W. Knisley, Dayton, Ohio
Application June 7, 1934, Serial No. 729,467
4 Claims. (Cl. 33—2.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a sextant having a housing and a bi-portioned means for simultaneously producing images of an observed object and the reading of its elevation above the horizon in a common focal plane, the indicating portion of said means comprising, a pendulum having a gear sector and including a protractor of arced ribbon form, manually releasable means for normally securing said pendulum against movement relative to said housing, lighting means disposed within said housing for illuminating a portion of said protractor, an impeller, and a train of gears connecting said gear sector with said impeller such that angular displacement of the former causes rotation of the latter.

2,031,602
CHASE
Gilbert H. Higgins, Mountain Lakes, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York; Irving Trust Company, permanent trustee
Application February 20, 1933, Serial No. 657,177
14 Claims. (Cl. 101—17)

1. In a device of the kind described, the combination of a frame adapted to receive type forms, means adjustably secured to said frame and operatively engageable with type forms arranged therein, and other means simultaneously coacting with the frame and first mentioned means when applied to the upper surfaces thereof for adapting the device to serve for preparing matrices.

2,031,603
PROPIONIC ACID ESTERS AND THEIR PRODUCTION
Harold S. Holt, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 3, 1932, Serial No. 608,941
7 Claims. (Cl. 260—106)

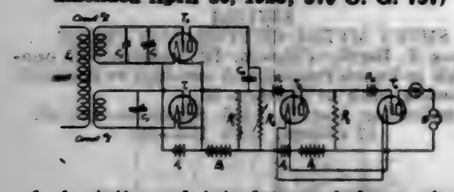


4. As a new compound, a propionic ester of a polyhydric ether alcohol wherein all the hydroxyl groups of the alcohol are esterified by propionic acid and in the alcohol portion of which no carbon atom is directly linked to more than one oxygen atom.

2,031,604
SHEET METAL CUTTER AND EDGER
James J. Ingels, Chicago, Ill., assignor of one-half to Enoch Purnell and one-half to Henry G. Goelitz, both of Chicago, Ill.
Application May 12, 1930, Serial No. 451,565
17 Claims. (Cl. 153—29)

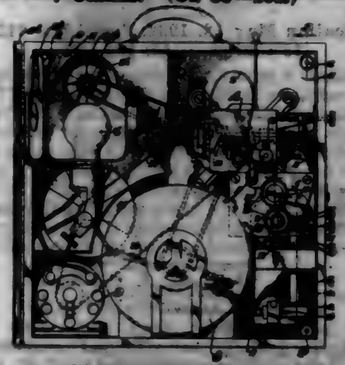
1. In a machine for cutting and edging sheet metal, two overlapping rotary cutters between which the sheet metal passes, and a shoulder adjacent the cutting point of said cutters over which said metal is bent while being cut to form a turned-up integral edge substantially at right angles to the adjacent portion of the sheet.

2,031,605
RECORD AND METHOD OF MAKING AND USING SAME
John Elliott Jenkins and Samuel E. Adair, Chicago, Ill., assignors, by mesne assignments, to Visomatic Systems, Inc., New York, N. Y., a corporation of New York
Application March 27, 1933, Serial No. 662,869
16 Claims. (Cl. 274—46)



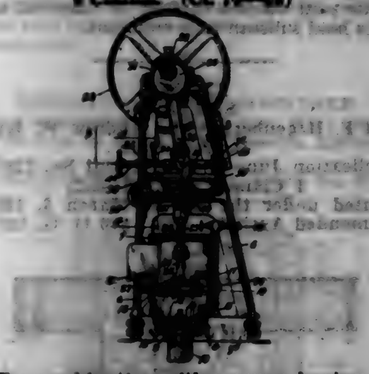
2. A record comprising a single recorded track continuous throughout its length and having therein a simultaneous recording of audible sound frequencies and one or more device-operating frequencies.

2,031,606
LACQUER
Edward F. Johnston, Wilmington, Del.
No Drawing. Application November 11, 1930, Serial No. 494,997
6 Claims. (Cl. 92—46)



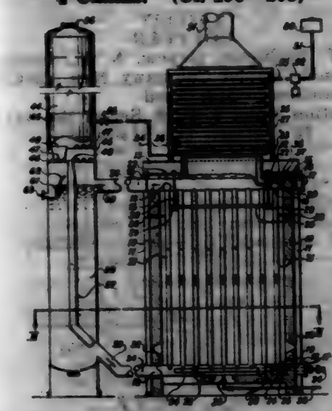
3. The process of preparing a sheeted product comprising preparing a wet mass of cellulose derivative material, forming a paper-like web therefrom, treating the web with a plasticizer, and allowing the web to harden.

2,031,607
STATIC AND INTERFERENCE BALANCE SYSTEM
James M. Kane, United States Navy, Washington, D. C.
Application November 5, 1932, Serial No. 641,581
8 Claims. (Cl. 250—20)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A static and interference balance circuit, comprising in combination with a radio frequency system including a transformer having an input primary winding connected to the output of the intermediate frequency amplifier of a superheterodyne radio receiving system and a pair of output secondary windings, an electron tube circuit connected with one of said secondary windings tuned to pass the desired and undesired signal energy, a second electron tube circuit connected with the other of said secondary windings tuned to pass only the undesired signal energy, said electron tube circuits having unity power factor, a signal amplifier, an electron tube detector connected in the output circuit of said amplifier, and means coupling the output circuits of said aforementioned electron tube circuits in opposition to the input circuit of said amplifier.

2,031,608
TALKING MOTION PICTURE APPARATUS
John Ripley Kiel, Chicago, Ill., assignor to Audio-tone Company, Chicago, Ill., a corporation of Illinois
Application May 3, 1930, Serial No. 449,834
Renewed May 28, 1935
7 Claims. (Cl. 88—16.2)

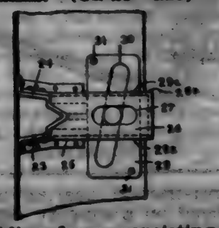


2. In a combined motion picture projector and sound-on-film reproducer, a case, a sound deadening mounting panel within said case and spaced therefrom, sound deadening means between said panel and case, projecting mechanism mounted on said panel, and sound reproducing mechanism mounted on said panel.

2,031,609
PUMP
Leland H. Legue, Denver, Colo., assignor to Denver Faucet Company, Denver, Colo.
Application June 18, 1934, Serial No. 730,921
6 Claims. (Cl. 74—42)

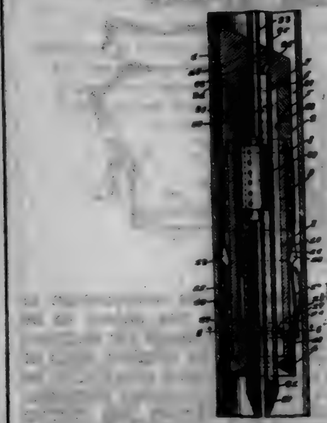
1. The combination with a pump having a reciprocating element, of operating mechanism comprising a pivoted rocker arm, a guide on the rocker arm, a crosshead on the guide, an eccentric operatively connected with the rocker arm through the intermediary of the crosshead, a piston rod pivoted to the rocker arm and connecting with the element for its reciprocation by the oscillating movement of the rocker arm, and means to move the crosshead relative to the pivot of the rocker arm to thereby vary the oscillating movement.

2,031,610
APPARATUS FOR FRACTIONAL DISTILLATION
Frank L. Maher, Berkeley, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
Application April 25, 1932, Serial No. 607,183
4 Claims. (Cl. 196—103)



2. A distillation apparatus comprising a fractionating column provided with a plurality of bubble plates, a fluid inlet intermediate adjacent bubble plates, a reservoir in said column below said bubble plates, a substantially horizontal upper header connected to the upper portion of said reservoir, a lower header connected to the lower portion of said reservoir, a plurality of parallel tubes connecting said headers, and a source of heat adjacent said tubes, the lowest of said bubble plates being provided with a duct leading downwardly into said reservoir and terminating adjacent the connection to said lower header.

2,031,611
PROCESS OF MAKING CELLULOSE ESTERS
Carl J. Malm and Charles L. Fletcher, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application April 13, 1931, Serial No. 529,864
4 Claims. (Cl. 260—101)

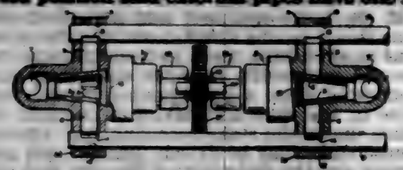


1. The process of acetylating cellulose, which comprises treating one part of cellulose with a mixture of not more than three parts each of acetic anhydride and acetic acid in the presence of approximately .01 part of sulphuric acid until the reaction mass becomes homogeneous.

2,031,612
FORM FOR MAKING CONCRETE ROADS
Barnet Maser, Bronx, N. Y.
Application December 28, 1933, Serial No. 704,275
3 Claims. (Cl. 25—118)

2. A road building form, consisting of a base member having an upstanding vertical flange provided with a rail at its upper end, a brace member fixed against the inner side of the vertical flange and fixed to the base, a yoke fixed to the sides of the brace member and provided with a horizontal connecting flange extending laterally of the brace member, said horizontal connecting flange having a stake receiving slot therein, the yoke having sides extending below the horizontal connecting member, said sides having opposing slots, a plate having parallel sides slidable in the slots and having a diagonal slot movable under the stake receiving slot, whereby a ground stake may be driven through said yoke and plate and the plate shifted through said yoke to clamp the stake on said yoke, to permit of shifting of the base relative to the driven stake.

2,031,613
OIL WELL PACKER
Elmer David McFadden, Harrisville, Pa., assignor of one-eighth to Horrise L. McFadden, Harrisville, Pa., and one-eighth to Perry R. McFadden, Grove City, Pa.
Application January 15, 1934, Serial No. 706,783
1 Claim. (Cl. 166—12)

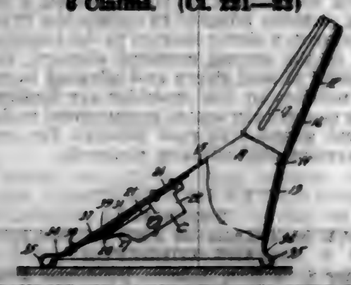


A well packer comprising a housing, an expandible packing element mounted on the housing, means for expanding the packing element against a well casing, a tubular coupling element connected to the housing, a shoulder in the coupling element provided with downwardly opening notches having spaced from the notches grooves extending throughout its entire length, a second coupling element adapted to engage the first coupling element, a sleeve located in the housing and secured to the second coupling element, ribs on the exterior of said sleeve and adapted to engage in the notches in the shoulder for locking the coupling elements in seated engagement with each other and adapted to pass through the grooves for separating the coupling elements.

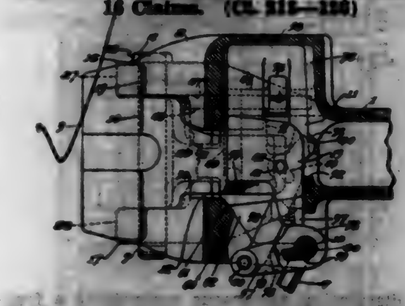
2,031,614
VALVE MECHANISM AND ACTUATING MEANS THEREFOR
Grosvenor S. McKee, Athens, Ohio, and Henry L. Galson, Philadelphia, Pa., assignors to Baldwin-Southwark Corporation, a corporation of Delaware
Application May 21, 1933, Serial No. 673,743
7 Claims. (Cl. 277—4)

1. A valve mechanism comprising, in combination, a pair of axially aligned rotatable valves, a high pressure pipe connected to one of said valves,

a low pressure pipe connected to the other of said valves, pipes leading to and from an external point and connected with each of said valves, means whereby when said valves are in one adjusted position said external pipes have one relation with respect to said high and low pressure pipes and when the valves are in another adjusted position said relation is reversed, and gear mechanism operatively connected to and arranged coaxially of said valves for actuating the same to effect said reverse operation.

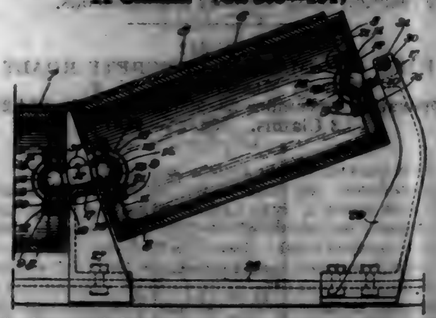


2,031,615
CLIMBING ASSEMBLY
Edward G. McKinney, Enid, Okla.
Application June 10, 1932, Serial No. 616,545
22 Claims. (Cl. 227—8)



3. In a climbing assembly, the combination of a series of fixed elements on the object to be climbed, stirrup members and means for securing said members to the feet of the climber, each of said members carrying an element adapted to be detachably secured to the first-named elements, and a flexible connection between the stirrup members and the elements carried thereby.

2,031,616
LIQUID DISPENSER
Elmer L. Nail, Wheaton, Ill.
Application December 27, 1933, Serial No. 704,181
6 Claims. (Cl. 221—83)

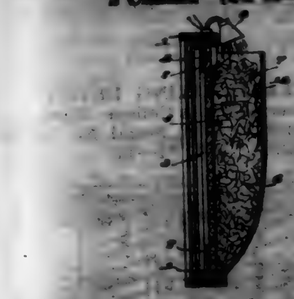


1. A liquid dispensing funnel, comprising in combination, a body member cut away along one side to provide an open mouth and adapted to receive a sealed receptacle containing a liquid to be dispensed, a cutter secured in said funnel body and adapted to enter and cut into said receptacle to open it, said body member having a channel arranged around its open mouth for collecting the residual liquid adhering to said funnel and said cutter after use when the funnel is in inverted or non-pouring position, and a yieldable spring member secured to said funnel body and normally engaging said cutter for directing residual liquid from the cutter into said channel.

2,031,617
COUPLER
Willard F. Richards, Depew, N. Y., assignor to The Gould Coupler Company, New York, N. Y., a corporation of Maryland
Application April 8, 1930, Serial No. 442,633
15 Claims. (Cl. 213—128)

1. In combination, a coupler head, a swinging knuckle, a locking block for said knuckle, and operating means for said block comprising a rocker shaft mounted with its axis extending transversely of the head, a lever mounted on said shaft, and a link connecting said lever and block, said block having depending legs adapted to engage a lock-set ledge on the head, said link having a widened portion with a diagonal slot adjacent its upper end, said slotted portion being received between the legs of the block, and connecting means passing through said block and said slot for allowing a predetermined amount of lost motion therebetween, the end of said link above said slot extending upwardly and rearwardly from said widened portion and normally underlying a portion of the head to prevent undesired raising of the block until the link has been raised to take up the lost motion.

2,031,618
BEARING AND CARRIER
Samuel Davis Robins, Manhasset, N. Y., assignor to Robins Conveying Belt Company, Passaic, N. J., a corporation of New Jersey
Application May 2, 1934, Serial No. 723,451
11 Claims. (Cl. 308—194)



1. An anti-friction bearing mountable on a spherical head on a support, comprising a self-contained assembly embodying inner and outer race members providing an annular race-way therebetween, the inner member comprising a body having a rearwardly extending portion, there being a concaved socket in said extension forming a seat for the spherical end of the support, said socket being adapted for free admission and removal of the spherical end of the support, anti-friction members in said race-way, a cap having its peripheral edge fixedly seated in the outer race member at the rear of the race-way and spacially enclosing the rear of the inner race member, and a seal for the open front of the race-way.

2,031,619
CELLULOSE DERIVATIVE SOLVENTS
George W. Seymour, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Original application November 13, 1931, Serial No. 574,928. Divided and this application November 15, 1932, Serial No. 642,761
3 Claims. (Cl. 260—54)

2. Process for the manufacture of formal diethylene glycol, which comprises reacting formaldehyde with diethylene glycol in the presence of an amount of a concentrated solution of hydrochloric acid equal to 5% calculated on the weight of the glycol.

2,031,620
DISPLAY SIGN
Fred Stonebraker, Sr., San Diego, Calif.
Application August 18, 1934, Serial No. 740,169
2 Claims. (Cl. 40—126)

1. A sign comprising a frame, an opaque plate carried by the frame and having a cut-out portion simulating a container, a transparent plate in the rear of said opaque plate and having lines depicting portions of the container, a reflector secured to the frame in the rear thereof and being spaced from the frame at the top to provide for the entrance of light between the reflector and the frame, and transparent crumpled Cellophane disposed between the reflector and said transparent plate for causing the illusion of depth to the container.

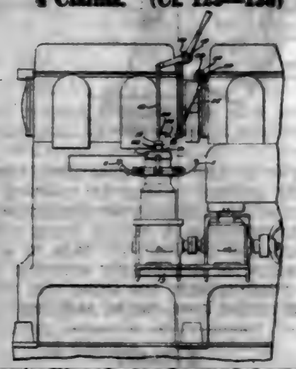
2,031,621
CONCRETE AND HYDRAULIC CEMENT
George R. Tucker, deceased, late of North Andover, Mass., by Charles W. Tucker, administrator, North Andover, Mass., and Henry L. Kennedy, Arlington, and Maynard S. Bonner, Cambridge, Mass., assignors to Dewey and Almy Chemical Company, North Cambridge, Mass., a corporation of Massachusetts
No Drawing. Application December 5, 1934, Serial No. 756,022
17 Claims. (Cl. 106—87)

16. That process for the preparation of concrete which comprises mixing hydraulic cement, aggregates and water in the presence of a hydroxy-alkyl amine.

2,031,622
KNEE PAD
John S. Walker, Pittsburgh, Pa.
Application April 10, 1933, Serial No. 15,639
1 Claim. (Cl. 2—24)

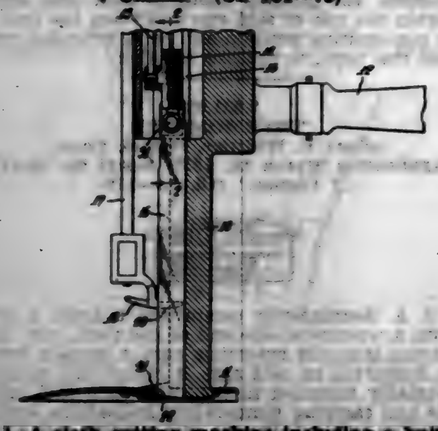
1. A device of the kind described, comprising a rigid body section having an opening therein, a calk fitted within the body section and extending through the opening, a saddle hung within the body section and holding the calk in the opening and means for detachably securing the body section to a leg to have the same rest within the saddle next to the knee cap of said leg.

2,031,623
POURING SPOUT CONTAINER
William J. Wardell, Mount Vernon, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application April 24, 1935, Serial No. 18,032
4 Claims. (Cl. 221—19)



1. A liquid container, comprising an imperforate end member having a sunken panel surrounded by a rim, a depressed seat formed in said sunken panel and surrounded by an annular bead, and a rotatable pouring spout unit located in said seat and confined within said annular bead, the latter being flattened at spaced intervals to provide overhanging ledges for retaining the pouring spout unit in its rotatable position, the pouring spout of said unit being within the rim of said can end when the unit is in non-pouring position and being extended over said rim when in pouring position.

2,031,624
THERMOMETER
Albert E. Whittier, Bristol, Conn.
Application March 12, 1935, Serial No. 10,618
2 Claims. (Cl. 73—118)

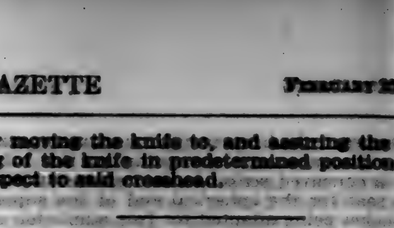


2. A thermometer comprising a shell, a disk with a window at one end of the shell, said disk having inwardly extending ears, a spindle loosely supported by said ears, a cylindrical member rotatably mounted in the shell upon said spindle and carrying temperature indications adapted to be exposed through said window, and a coil of thermo-responsive metal with one end fixed with relation to the shell and the other end attached to said cylindrical member.

2,031,625
REGULATING DEVICE FOR INTERNAL COMBUSTION ENGINES
Julius E. Wild, Springfield, and Wolfgang E. Schwarzmann, Longmeadow, Mass., assignors to United American Bosch Corporation, Springfield, Mass., a corporation of New York
Application November 28, 1933, Serial No. 700,662
4 Claims. (Cl. 123—138)

1. A controlling device for an internal combustion engine having a fuel distributor and means providing a passage for the supply of combustion supporting air to the engine, a valve in said passage, a lever and a rod connected to actuate said valve, a spindle having an arm thereon also connected to said rod, a fuel control rod entering said distributor, another arm on said spindle, elements providing a lost motion connection between the last named arm and the rod entering the distributor, a governor responsive to the speed of the engine, and connecting means between the valve and the governor so that as the speed of the engine increases the governor first actuates the valve toward closed position and subsequently adjusts the distributor through said lost motion connection to decrease the quantity of fuel supplied to the engine.

2,031,626
CLOTH CUTTING MACHINE
Martin Zawislowski, Huntington, N. Y.
Application February 14, 1935, Serial No. 6,429
7 Claims. (Cl. 164—75)

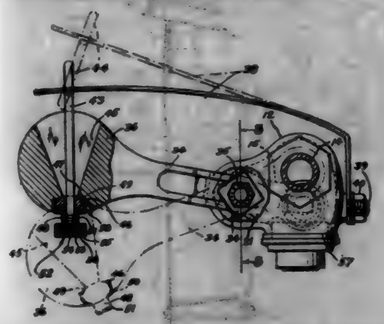


1. A cloth cutting machine including a knife, a crosshead adapted to be reciprocated, and means including a rack and a pinion between said crosshead and the upper end of said knife for moving the knife to, and assuring the locking of the knife in predetermined position with respect to said crosshead.

2,031,627
FRAMED MIRROR
Jack B. Abrams, Chicago, Ill.
Application February 3, 1934, Serial No. 709,530
6 Claims. (Cl. 88—96)

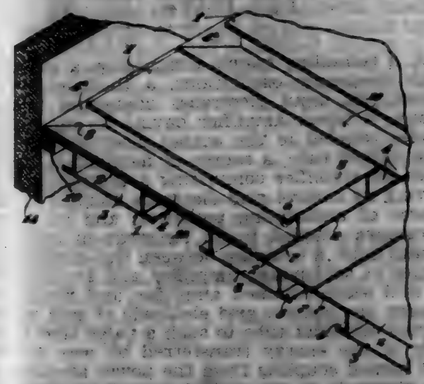
6. A mirror comprising, in combination, a mirror panel, a one-piece supporting structure for said panel having a frame enclosing a portion of the perimeter of said panel and a backing member located against the rear of said panel, the remaining portion of said panel being unconfined, and means including interlocking surfaces on said supporting structure and said panel for securing the latter against removal from said frame.

2,031,628
ROAD SURFACE MIXING DEVICE
Francis E. Aberne, Tufts College, Mass.
Application January 2, 1934, Serial No. 704,889
15 Claims. (Cl. 94—44)



1. As an article of manufacture, a road machine having mixing bars consisting of helically twisted flat metal strips set at an acute angle to the direction of the motion of the machine.

2,031,629
COATED TEXTILE MATERIAL
Stuart A. Athins, Westfield, N. J., assignor, by mesne assignments, to E. I. du Pont de Nemours & Co., Wilmington, Del., a corporation of Delaware
No Drawing. Application July 20, 1933, Serial No. 681,174
8 Claims. (Cl. 91—68)



1. An article of wearing apparel manufactured from a textile base coated with a water repellent plastic composition comprising a basic plastic and a plasticizer therefor consisting of a plurality of mutually soluble compounds selected from the group consisting of triphenyl phosphate, tricresyl phosphate, dimethyl phthalate, diethyl phthalate and dibutyl phthalate, in a quantity approximately equal to the amount of basic plastic.

2,031,630
HEAT RESPONSIVE VALVE
William L. Bellman, Stratford, Conn.
Application February 19, 1934, Serial No. 711,975
4 Claims. (Cl. 137—153)

3. In combination, a valve casing, a valve therein, a valve operating spindle mounted to turn in the casing, an operating lever secured to said spindle and including an enlargement forming a weight tending to close the valve, said enlargement having an upright tapered opening therein largest at the top and including a counterbore at its lower end, a bushing mounted for rocking movement in the counterbore and having an opening therethrough, a link passing through said tapered opening for supporting the lever in elevated position including a rod portion extending through said opening in the bushing and carrying an easily fusible element engaging the lower end of the bushing, and means for supporting the link.

2,031,631
BUILDING CONSTRUCTION
Albert F. Bemis, Newton, Mass., assignor to Bemis Industries, Incorporated, Boston, Mass., a corporation of Delaware
Application March 23, 1933, Serial No. 662,275
8 Claims. (Cl. 189—34)

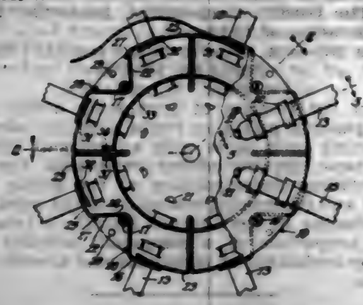
4. A wall comprising a series of units each having opposite rectangular face sheets with parts holding the sheets in spaced relation to define a box-like central portion and outstanding marginal flanges, wider marginal flanges upon one face of the unit extending beyond narrower marginal flanges upon the other face, the wider flanges of adjoining units having their edges juxtaposed, whereby passages or recesses are provided extending along marginal portions of the units.

2,031,632
PROCESS FOR RECOVERING ACIDIC GASES FROM GASEOUS MIXTURES
Robert Roger Bottoms, Louisville, Ky., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware
No Drawing. Application June 21, 1934, Serial No. 731,520
8 Claims. (Cl. 23—2)

1. In the process of separating acidic gases from gaseous mixtures containing the same by contacting such gases with an aqueous solution of a basic organic amino compound, the step of inhibiting decomposition of the amino compound and preventing corrosion of the apparatus by including in the aqueous solution a relatively small proportion of a compound selected from a group consisting of vanadium and arsenic compounds.

2,031,633
GOLF BALL SCRUBBER
George A. Brilhart, Indianapolis, Ind.
Application July 26, 1935, Serial No. 33,312
2 Claims. (Cl. 15—97)

1. In a device for cleaning golf balls, the combination of a receptacle for containing a washing fluid, a cover for the receptacle, a web below the cover fixed within the receptacle, a plate above the web, spring clamps releasably securing the plate to the web, a sponge disk fixed to the plate, a crank shaft journalled in the cover and in the web, a plate fixed to the shaft within the receptacle, a sponge disk fixed to the last plate on the side next to the first sponge disk, said sponge disks receiving the golf ball between them.



2,031,634
WATER SOLUBLE DIAZOIMINO COMPOUNDS
Miles Augustinus Dahlen, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 2, 1934, Serial No. 748,648
12 Claims. (Cl. 260—24.5)

5. A composition of matter being the product of coupling a diazotized primary arylamine, having no water-solubilizing substituents, through the azo group to nitrogen of an ac-tetrahydroquinoline-sulfonic acid having less than three sulfonic groups.

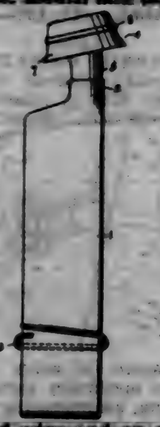
2,031,635
FILM REEL
Herman A. de Vry, Chicago, Ill.
Application October 8, 1934, Serial No. 747,393
8 Claims. (Cl. 242—70)

1. A film reel comprising a hub and a pair of rims spaced apart axially of the reel to receive

the film therebetween, and spokes mounting the rims on the hub, said spokes being movable endwise with respect to their mounting at one end thereof.

4. A film reel having a pair of separable hub plates and having film holding members held between said plates, said film holding members comprising a stationary member held in fixed position between said plates and a radially movable member of different curvature than the stationary member mounted between said plates and separable from said stationary member to receive a film therebetween.

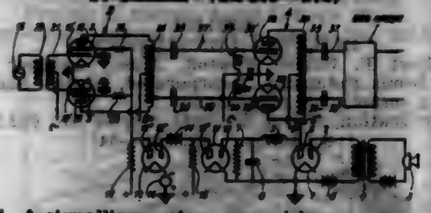
2,031,636
MANUFACTURE OF ARTIFICIAL RIBBONS, STRAW, AND THE LIKE
Henry Dreyfus, London, England
No Drawing. Application August 7, 1930, Serial No. 473,779. In Great Britain October 3, 1929
2 Claims. (Cl. 18—54)



1. Process for the production of artificial materials of flattened cross-section, said process comprising subjecting a plurality of substantially parallel, separate filaments of a thermoplastic derivative of cellulose to the action of heat and pressure so as to produce a melting effect upon the filaments, and to cause them to unite to form a product of flattened cross-section and applying to the flattened product a wax-like substance to produce a lustrous effect.

2,031,637
AZEOTROPIC DEHYDRATION OF AQUEOUS MIXTURES OF LOWER ALIPHATIC ACIDS AND ANHYDRIDES
Henry Dreyfus, London, England
No Drawing. Application May 25, 1933, Serial No. 672,803. In Great Britain June 6, 1932
18 Claims. (Cl. 202—42)

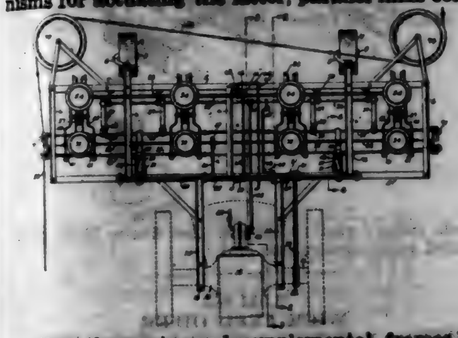
1. Process for the separation of water from admixture with organic liquids selected from the group consisting of lower aliphatic acids and lower aliphatic anhydrides which comprises removing water therefrom in the form of an azeotropic mixture with ethylidene chloride.



2,031,638
SANITARY APPLIANCE
Charles F. Emery, Jr., Houston, Tex.
Application November 5, 1932, Serial No. 641,406
Renewed January 7, 1936
1 Claim. (Cl. 128—285)

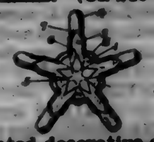
An appliance of the character described comprising a sack like receptacle formed of flexible material, said receptacle being open at one end and reduced at the other end, a releasable clamp normally closing said open end, a mouth piece having an extended tubular neck fitted into said reduced end, said mouth piece being formed of yieldable material, said mouth piece having a permanently retracted rim, said rim being thickened adjacent the mouth and tapering to a thin

outwardly curved edge and an annular oval rib formed integrally with the outer side of and surrounding said rim and spaced from the edge thereof said rib forming anchoring means and also being effective to maintain the rim retracted.



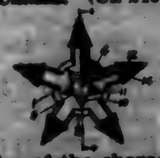
2,031,639
METHOD OF AND MEANS FOR MODULATION
James Leslie Finch, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application February 27, 1933, Serial No. 658,735
17 Claims. (Cl. 179—171)

1. A signalling system comprising, a source of high frequency oscillations, a thermionic tube having its input electrodes connected to said source, a power amplifier having its input electrodes coupled to the output electrodes of said first named tube, a source of modulating potentials, an amplifier comprising a thermionic tube having its control grid electrode coupled to said source of modulating potentials and its output electrodes coupled to an electrode in said first named tube, a coupling between the output electrodes of said power amplifier and an electrode in said second named amplifier and means for biasing the control grid electrode of said second named amplifier tube to such a value that peaks only of the energy transferred by way of said last named coupling from the power amplifier to the electrode in the second named amplifier affect the operation thereof.



2,031,640
TRACTOR PLANTER
Gerald Geraldson, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a corporation
Application September 6, 1934, Serial No. 743,134
12 Claims. (Cl. 111—80)

9. In an implement of the class described, a main frame having wheels at its rear end, draft members connecting the front end of the frame to a tractor, a supplemental frame, seed dropping mechanisms on the latter frame, means connecting a tractor to the seed dropping mechanisms for actuating the latter, parallel links con-

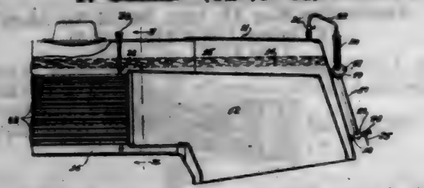


necting the main and supplemental frames, a rock-shaft on the main frame and connected to the supplemental frame, and means associated with the rock-shaft and a power-lift on a tractor for raising and lowering the supplemental frame.

2,031,641
ILLUMINATED DECORATIVE DEVICE
Elmer J. Graf, Roselle Park, N. J., assignor to G. B. G. Corporation, Newark, N. J., a corporation of New Jersey
Application April 24, 1933, Serial No. 667,567
14 Claims. (Cl. 240—10)

1. An illuminated decorative device including a plural part stamped casing having portions fitting and fastened together to form a holder, said portions of the holder having central body portions and complementary extensions arcuately formed to provide sockets for baseless lamp bulbs, baseless lamp bulbs anchored in said sockets against turning and withdrawal, and positioned therein so as to throw light within the body portion as well as outside said extensions, a current supply connector attached to one of said holder portions, said bulbs being connected in series with the electrical parts of said connector, said central body portion being provided with means for emanating light therefrom.

2,031,642
ILLUMINATED DECORATIVE DEVICE
Elmer J. Graf, Roselle Park, N. J., assignor to G. B. G. Corporation, Newark, N. J., a corporation of New Jersey
Application February 2, 1934, Serial No. 709,459
14 Claims. (Cl. 240—10)

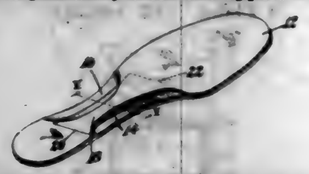


10. In a device of the character described including, a casing having an opening through which the bulb portion of a lamp may be passed, and light-dispersing means carried by the casing, a single lamp for the source of light and means for holding the lamp within the casing with the stem of the lamp projecting outwardly away from the casing, said means comprising insulating means securely and permanently anchored to the lamp and also fastened to the casing, whereby a complete unitary structure is formed for direct attachment to a socket.

2,031,643
COMBINATION CHAIR AND LAMP
Albert A. Granovsky, New York, N. Y.
Application March 24, 1934, Serial No. 717,157
1 Claim. (Cl. 240—4)

An upholstered arm chair having a seat, back, and thick forward extensions at the sides of the back; one or both of said forward extensions being provided with a window in the upper front portion; each said extension provided with said window having a chimney-like flue in its interior, having a bottom intake and an upper exit; a metal lining extending rearwardly from said window and forming a heat distributing means; an electric lamp adjustably mounted back of said window and in said flue and free from any local heat confining means.

2,031,644
WATER LEVEL INDICATOR FOR STEAM BOILERS
Lewis O. Gunderson, Chicago, Ill., assignor to Electro-Chemical Engineering Corporation, Chicago, Ill., a corporation of Delaware
Application March 26, 1934, Serial No. 717,337
17 Claims. (Cl. 73—54)



1. Apparatus for indicating the static water level in steam boilers in operation which comprises a pipe in spaced relation from said boiler, an upper leg connecting the top of said pipe with the boiler at a point near the top of the boiler immediately below the normal water level therein, a lower leg of smaller flow capacity than said upper leg connecting the lower end of said pipe with the boiler at a point below the level of active steam formation therein, a tube extending through said pipe and terminating above the lower leg connection thereon and visible means connected to said tube for indicating the height of water in the boiler.

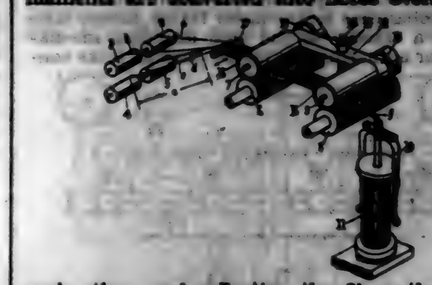
2,031,645
METHOD OF MAKING SHOES
John B. Hadaway, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application April 8, 1933, Serial No. 664,146
In Great Britain April 6, 1932
23 Claims. (Cl. 12—142)

1. That improvement in methods of making shoes having close fitting sole margins which con-

sists in separating a sole into an inner layer and an outer layer in a plane substantially parallel to the outer surface of the sole, thereby reducing the resistance of the sole to widthwise stretching without reducing the thickness of the sole, attaching the sole to a lasted shoe having a transversely convex bottom, and pressing the sole margins into close relation to the shoe upper, thereby stretching said outer layer widthwise to offset any tendency of the sole margins subsequently to pull away from the upper.

22. That improvement in methods of making outsoles for use in the manufacture of shoes which consists in separating an inner layer of an outsole from an outer layer from about the heel breast line to the ball line of the outsole, thereby reducing the resistance of the outsole to widthwise stretching, said inner layer being separated in a plane substantially parallel to the outer face of the outsole and being thicker than said outer layer.

27. A sole for use in the manufacture of shoes having a single tongue cut from about the heel breast line to the ball line to facilitate stretching the sole widthwise of its shank portion, the thickness of the material at the forepart and heel portion of the sole remaining unchanged.

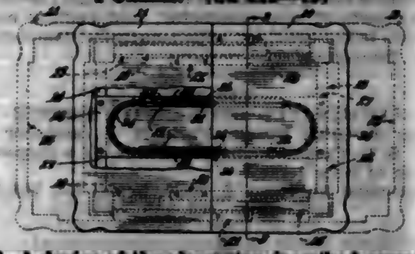


2,031,646
MOUNTING FOR LIGHT SENSITIVE DEVICES
Paul Haas, Maspeth, N. Y., assignor to United Research Corporation, Long Island City, N. Y., a corporation of Delaware
Application May 11, 1935, Serial No. 20,957
14 Claims. (Cl. 179—100.2)

1. A mounting for a light sensitive device comprising a bracket of insulating material having an enlarged portion at one end with an opening therein, tensioning members positioned in said opening, conductors attached to said tensioning members and passing through a longitudinal opening in said bracket, and an optical element positioned in front of said bracket.

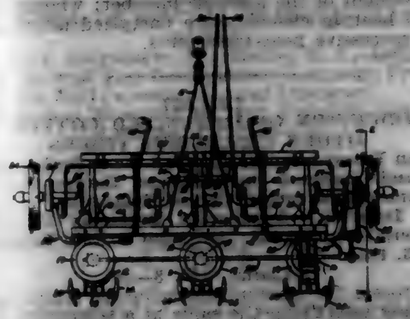
2,031,647
MANUFACTURE OF SPUN YARNS
Frank Corbyn Hale, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application June 8, 1933, Serial No. 674,829
In Great Britain July 4, 1932
5 Claims. (Cl. 19—1)

1. Process for the production of yarn of fibrous character, which comprises continuously subjecting to a breaking load a plurality of continuous filaments having thin portions at intervals along their length, said thin portions occurring at spaced intervals and being staggered as between filament and filament so that by the breakage of the filaments occurring at the thin portions the filaments are converted into fibres overlapping



each other, and collecting the fibres thus produced as a continuous end.

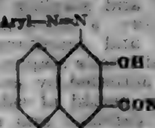
2,031,648
WICK FEED OILER
William N. Hollanger, St. Clair Shores, Mich.
Application January 18, 1932, Serial No. 587,432
7 Claims. (Cl. 184—64)



1. In a wick feed oiler, a casing provided interiorly thereof with an outwardly opening substantially cup-shaped portion for the reception of air and a lubricant from within the casing, a wick for conducting the lubricant from the casing into said portion, and means converging from spaced points within the casing for conducting air to said portion, said means being so constructed and arranged that at least one vent for air will be provided when the casing is installed in any desired position from a vertically upright to a horizontal position.

2,031,649
EXTENSIBLE TABLE
William Benjamin Harrington, Milan, Ind.
Application March 14, 1934, Serial No. 715,415
4 Claims. (Cl. 211—75)

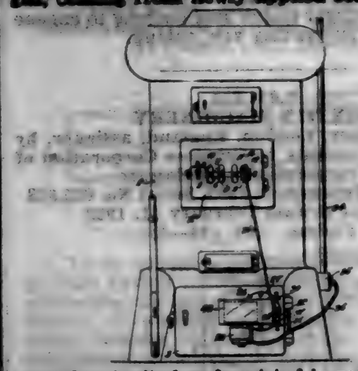
3. A device of the character described comprising a table supporting structure, a pair of coplanar table members adapted to form a continuous table when their edges are pressed together, and means for automatically controlling the movement of said table members relative to each other and the table supporting structure, said means including a loop-like flexible equalizing member secured at one point to one of said table members and at another point to another of said table members in a substantially closed fixed guide channel therefor.



2,031,650
LISTER-PLANTER
Simeon B. Hendricks and John H. Stavisel, Rockford, Ill., assignors to J. I. Case Company, Racine, Wis., a corporation
Application April 30, 1934, Serial No. 723,511
8 Claims. (Cl. 111—84)

1. In an implement of the class described having a frame, the combination, with the frame, of a crank-axle pivotally connected to the frame, a clutch on the axle including a sprocket, a shaft in the clutch, a drive wheel on the outer end of and rotatable with the clutch, an arm on the inner end of the shaft, a slotted link connected to the arm, a bell-crank mounted on the frame and connected to the link in sliding relation to the latter, and a lever connected to the bell-crank for actuating the latter and the link whereby the drive wheel may sink into depressions and rotate therethrough.

2,031,651
AZO DYES AND METHODS FOR THEIR PREPARATION
Emmet F. Hitch and Miles A. Dahlen, Wilmington, Del., and Martin E. Friedrich, Carneys Point, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 27, 1933, Serial No. 682,444
16 Claims. (Cl. 260—95)

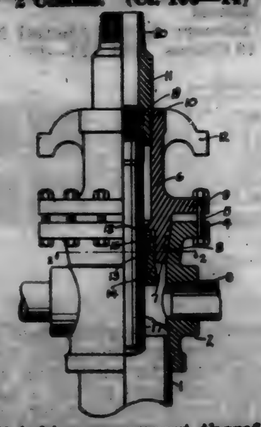


14. An azo dye described by the structural formula

in which X represents the residue of a trifluoromethyl-arylamide.

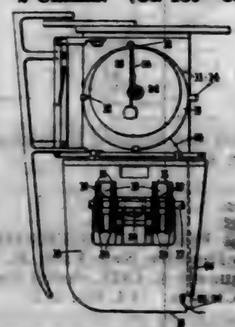
2,031,652
THERMOSTATICALLY CONTROLLED DAMPER DEVICE
Alvin G. Hoppins, Verona, N. J.
Application March 12, 1935, Serial No. 10,598
10 Claims. (Cl. 110—73)

1. A forced draft mechanism for a coal heating furnace, including a thermostat device mounted on the interior part of the furnace and preferably on the firing door, an electrically operated fan blower mechanism attached to the exterior part of the ash pit door and having a part extending therethrough with a damper valve therein and means inter-connecting said damper valve and the thermostat device which acts to start the opening of the damper valve only after gas, coming from newly applied coal to the furnace, has ignited and assisted in raising the temperature within the furnace.



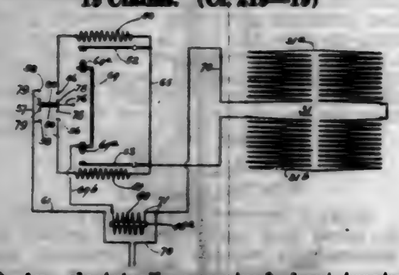
2,031,653
COOLER FOR REFRIGERATORS
Robert Herwin, New York, N. Y.
Application August 4, 1933, Serial No. 683,529
6 Claims. (Cl. 62—141)

1. A cooling container for refrigerators, comprising a hollow body having one substantially flat side adapted to rest on a support in said refrigerator; the opposite top side of said container being outwardly convex, and pan like extensions in cooperation with said hollow body into which said convex top may shed the liquid dripping thereon.



2,031,654
TUBING SUPPORT
James H. Howard, Houston, Tex., assignor to J. H. McEvoy & Company, Sherman, Tex., a corporation
Application June 5, 1933, Serial No. 674,876
2 Claims. (Cl. 166—14)

1. A well tubing, a support therefor including a well casing, a casing head thereon having a downwardly tapered seat, a bushing shaped to fit and form a seal in said seat, a sleeve removably secured in the lower end of said bushing, a downwardly tapered slip seat in said sleeve, slips

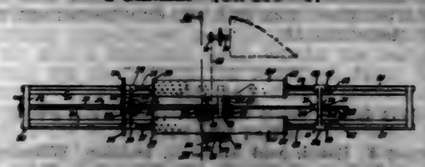


in said slip seat adapted to engage said tubing, said sleeve being adjustable in said bushing, and means at the upper end of said bushing to engage and assist in supporting said tubing.

2,031,655
TEXTILE MACHINERY
Joanny Jaboulay, London, England, assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
Application February 7, 1933, Serial No. 655,558
In Great Britain February 11, 1932
2 Claims. (Cl. 139—13)

1. A shuttle for a circular loom of the type described, said shuttle comprising a flat flanged weft spool having a central bore, a spindle rotatably mounted within said bore, a balanced guide arm secured to one extremity of said spindle and lying close to one flat side of the spool, said balanced guide arm being adapted to rotate about said spool and to unwind weft therefrom, and means disposed within said bore and adapted to co-operate with said bore and said spindle to control the rotation of said guide arm and thereby to impart substantially constant tension to the weft as it is unwound from the spool by the guide arm.

2,031,656
ELECTRIC TOASTER
Ivar Jeppesen, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application January 6, 1933, Serial No. 650,425
19 Claims. (Cl. 219—19)

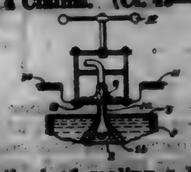


19. An electrically-energized heat-treatment apparatus comprising two members movable relatively to each other for instituting and terminating the heat-treatment period, a heating element carried by one of said members; an electric circuit in which it is energized, said circuit including a temperature-responsive switch element connected for controlling a circuit-in-parallel with the heat treatment circuit which is arranged when energized to operate means for terminating the heat-treatment period, said circuit-in-parallel with the heat-treatment circuit having two branches each including a heating element and a switch with a member movable for opening and closing the circuit; means for operating said switch member to open either branch when the other is closed, said means including connections operated by the heat-treatment-terminating movement of the movable member; whereby the two heating elements are energized alternately in successive heat-treatments.

2,031,657
PRODUCTION OF IMMUNIZED COTTON OR OTHER CELLULOSIC FIBERS
John Edward Jones, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application December 31, 1931, Serial No. 584,286. In Great Britain February 23, 1931
1 Claim. (Cl. 8—28)

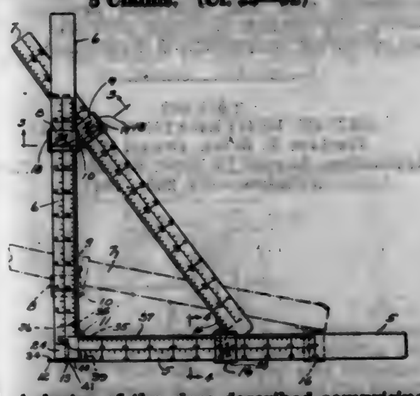
Process for immunizing cellulosic fibers comprising esterifying the same at a temperature of about 50° C. to a point not substantially exceeding the di-ester stage in the presence of a sulfonic acid.

2,031,658
BRUSH MAKING MACHINE
Lloyd E. Jones, Pasadena, Calif., assignor to Fuller Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application September 26, 1933, Serial No. 690,866
4 Claims. (Cl. 300—3)



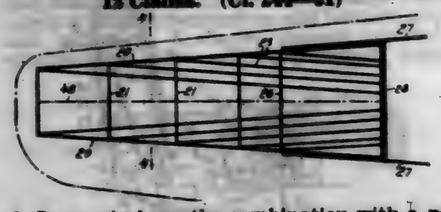
1. A brush making machine including a frame, a carriage slidably mounted thereon, a pair of brush core supporting means, each rotatably mounted upon the carriage, a drilling mechanism mounted upon the frame and operable for drilling the bristle receiving holes in one of the two brush cores, a bristle inserting and stapling mechanism mounted upon the frame and operable for inserting and stapling the bristles in the other brush core, a drive means operable for intermittently and simultaneously actuating the drilling and bristle stapling mechanisms, and a feed means actuated by said drive means during the inactive period of said mechanisms for advancing the carriage and simultaneously rotating the pair of brush core supporting means a predetermined amount for each actuation thereof.

2,031,659
PROCESS FOR MAKING SMOKELESS POWDER
Milton F. Lindsley, Jr., Kings Mills, Ohio, assignor, by mesne assignments, to E. I. du Pont de Nemours and Company, a corporation of Delaware
No Drawing. Application November 24, 1931, Serial No. 576,613
3 Claims. (Cl. 52—12)



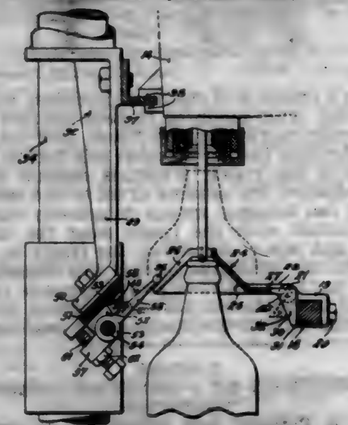
1. A process of forming grains of nitrocellulose suitable for bulk powder from finely divided nitrocellulose, said process comprising the step of suspending the finely divided nitrocellulose in water and agitating said suspension in the presence of a mixed solvent comprising one component which is a solvent for a nitrocellulose and which is miscible with water, and another component which is a solvent for the nitrocellulose but is not miscible with water, and then driving off said solvents.

2,031,660
METHOD OF SEALING CHARGED GLASS BULBS
Albert J. Loepsinger, Providence, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a corporation of Delaware
Application November 28, 1932, Serial No. 644,454
4 Claims. (Cl. 49—77)



2. The method of sealing a bulb of frangible material having a body, nearly filled with a fluid charge capable when the bulb is sealed of bursting it at a predetermined temperature, and having an open tubulated portion with the end to be sealed in close proximity to said charge; which method comprises maintaining the body and its charge below said predetermined temperature while continuously applying heat to the tubulated portion to bring it to the fusion temperature and thereby effect its sealing; followed by the said continuous application of heat at gradually reduced temperatures until the temperature of the material is below the strain temperature thereof thereby to effect annealing of the tubulated portion.

2,031,661
POCKET VECTOR
Lewis F. Mendenhall, Dover, N. J.
Application May 16, 1934, Serial No. 725,917
5 Claims. (Cl. 33—92)

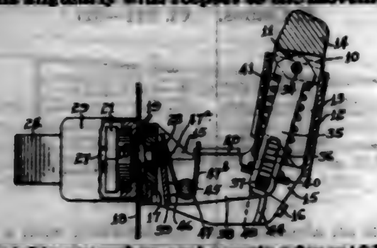


1. A device of the class described comprising a base arm, a vertical arm pivotally connected to said base arm at a point spaced slightly from the end of each arm, a latch comprising spring members carried by the two arms, respectively, for engagement for yieldingly holding such arms in open angular position at the pivot, an hypothenuse bar having means for slidably connecting one end thereof to one of said arms, and tubular means having a transparent face for connecting the other end of said bar slidably upon the other arm, the inner surface of the said tube means having pressure exerting means for engaging the arm upon which the tube means is carried.

2,031,662
WING STRUCTURE
Pierre Ernest Mercier, Paris, France
Application April 17, 1935, Serial No. 16,743
13 Claims. (Cl. 244—31)

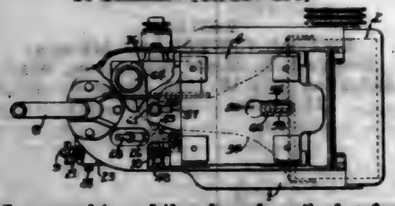
1. In an airplane, the combination with a pair of spars having spaced free ends and a bulkhead connecting the spars inward from the free ends thereof, of a wing containing a box structure which includes longitudinal webs, said structure terminating at one end in a portion wedge-shaped in longitudinal section and received between the free ends of the spars, a connection between each side of the box structure and the adjacent spar near the free end thereof, and a connection between the thin end of the wedge and the bulkhead, said connection extending throughout a substantial portion of the length of the bulkhead.

2,031,663
BOTTLE CENTERING MEANS
George A. N. Meyer, Milwaukee, Wis.
Application July 16, 1934, Serial No. 735,382
11 Claims. (Cl. 226—129)



1. A bottle centering device for bottle filling machines comprising, a movable bottle centering element, positive means for imparting a downward movement to said element, and means for yieldably resisting the upward movement of said element.

2,031,664
DOOR LATCH MECHANISM
Derr Miller, Detroit, Mich., assignor to Dura Company, Toledo, Ohio, a corporation of Ohio
Application February 5, 1934, Serial No. 709,745
7 Claims. (Cl. 292—167)

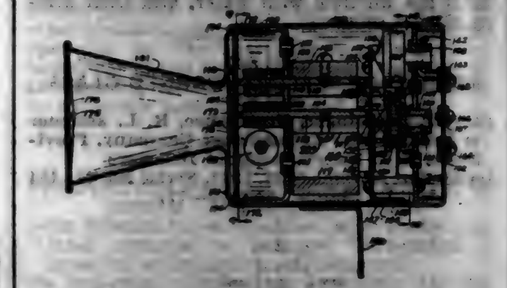


8. A door latch comprising movable abutment means, a latching member movable longitudinally to and from latching position independently of motion of said abutment means, means for normally holding said abutment means against movement during such independent movement, retracting means for said latching member movable

in a direction at an angle to the longitudinal movement of said latching member, said retracting means being operable to shift said abutment means angularly with respect to the movement of

the latching member, and a spring for said latching member and engageable with said abutment means, said spring being compressed only upon said independent retracting movement of the latching member.

2,031,565
FLOOR SANDING MACHINE
Harry L. Myers, Toledo, Ohio, assignor to American Floor Surfacing Machine Company, Toledo, Ohio, a corporation of Ohio
Application March 12, 1935, Serial No. 10,662
10 Claims. (Cl. 51—176)



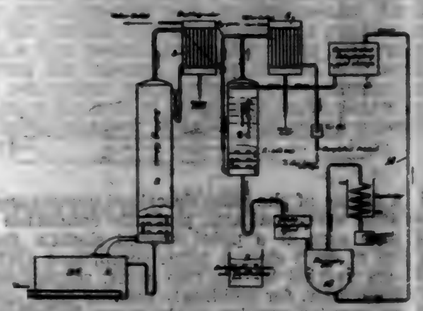
9. In a machine of the class described, a frame, a sanding drum mounted therein, suction creating means carried by the frame and including a fan housing having an open side facing transversely of the frame, a suction conduit leading from adjacent the sanding drum to the open side of said fan housing, means detachably engaging said conduit with the frame near the sanding drum, and means carried by the frame in opposition to the open side of said fan housing and acting on the conduit at points opposite the fan housing to releasably hold said conduit in abutting relation with the open side of said housing.

2,031,666
PRODUCTION OF 5-HALOGEN-2-AMINOTOLUENES
Robert L. Perkins, East Aurora, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application October 25, 1932, Serial No. 639,167
14 Claims. (Cl. 260—130.5)

1. A method of producing a purified 5-halogen-2-aminotoluene from a crude 5-halogen-2-aminotoluene which comprises separating the 5-halogen-2-aminotoluene in the form of a sulfate from a sulfuric acid solution of impurities.

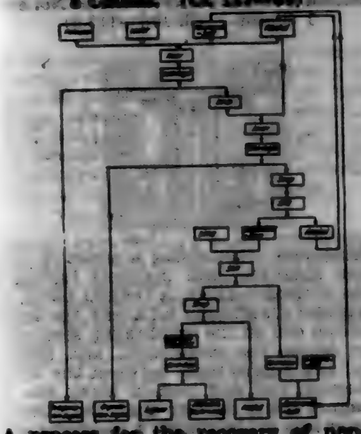
2,031,667
AUDIBLE SIGNAL DEVICE
Maurice E. Pipkin, New York, and Eli Judson Blake, Rochester, N. Y.; said Blake assignor to said Pipkin
Application January 28, 1933, Serial No. 653,538
5 Claims. (Cl. 177—7)

4. An audible signal device comprising a sound projector and a microphone mechanically resonant to the same frequency, an oscillating circuit also resonant to said frequency electromagnetically coupled to said projector and said microphone and including said microphone and a source



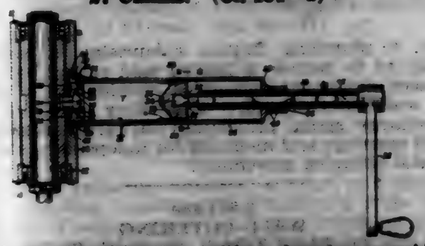
of direct current, said microphone maintaining electric oscillations in said circuit while the sound projector and its electromagnetic coupling translate said oscillations into sound waves.

2,031,668
ART OF PURIFYING YEAST
Gustave T. Reich, Drexel Hill, Pa.
No Drawing. Application April 4, 1929, Serial No. 353,536
5 Claims. (Cl. 195—96)



1. In the art of purifying yeast wherein is contained light colored and dark colored living yeast cells, the steps of forming a suspension of the yeast in water in which the proportion of water is between one part yeast and four parts water and one part of yeast and ten parts of water, then heating the suspension to substantially above 25° C., until there forms at the top of the suspension a layer of dark colored yeast, removing this layer and then decolorizing the yeast in the remaining suspension by adding a member of the group composed of acetic acid, phosphoric acid and hydrogen peroxide, and causing the solution to stand until the yeast in said remaining suspension is decolorized.

2,031,669
ART OF DEHYDRATING ESTERS
Gustave T. Reich, Drexel Hill, Pa.
Application August 23, 1930, Serial No. 477,456
9 Claims. (Cl. 260—106)



2. The process of dehydrating wet esters of organic acids which comprises intimately commingling said wet esters in liquid state with a saturated solution of a dehydrating salt, whereby the salt solution withdraws the water from the said wet ester and becomes diluted, and separating the dry ester from the salt solution.

2,031,670
ART OF RECOVERING NON-SUGARS FROM SACCHARINE MATERIALS
Gustave T. Reich, Philadelphia, Pa.
Application May 12, 1932, Serial No. 611,027
8 Claims. (Cl. 127—59)

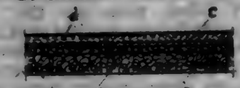
1. A process for the recovery of non-sugars from an aqueous solution of saccharine materials such as molasses, cane and beet juice and sucrose containing materials, and also certain soluble potash salts comprising adding to the solution, ammonium salt and ethyl alcohol, the alcohol and ammonium salts being proportioned relatively to each other and to the non-sugars so that the inorganic non-sugars will be precipitated by the ammonium salts, leaving the organic non-sugars mainly in solution until thereby a precipitation of potash salts occurs.

2,031,671
LUBRICATING SYSTEM
Harry A. Rising, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application August 19, 1932, Serial No. 629,531
27 Claims. (Cl. 184—1)

1. The combination with a bearing provided with an opening, of a lubricant-applying device co-operating with the opening and arranged to receive a collapsible tube containing the lubricant to be applied, the bearing having means for engagement with both the applying device and the tube.

2,031,672
OIL CAN
Frank M. Schaefer, Chicago, Ill.
Application February 12, 1935, Serial No. 6,343
1 Claim. (Cl. 221—42)

A device of the class described including a substantially flat container having an outlet at one side thereof and a lateral groove in its upper face, said groove being tapered in plan and extending angularly with respect to the horizontal plane of said container, a closure for said container having a longitudinal passage adapted to communicate with said container, a head formed on said closure having a transverse passage therein, a stem rotatably mounted in said transverse passage having an S shaped passage adapted to communicate with said longitudinal passage

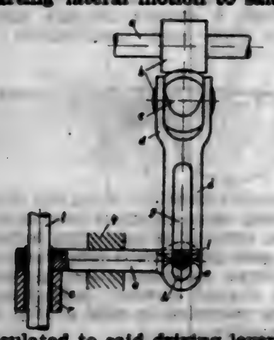


when in operative position, a curved spout, and a head formed on said spout having a transverse opening, one end of said stem being fixedly arranged in said last named transverse opening whereby to form communication to said spout from said S shaped passage, said spout being adapted to be mounted in said groove when in inoperative position.

2,031,673
PROCESS FOR PROTECTING LEATHERS, SKINS, FABRICS, AND THE LIKE DURING THEIR MANIPULATION OR MAKING UP INTO MANUFACTURED GOODS
Robert Schneider, Paris, and Armand Poelman, Charenton, France, assignors to Materials Protector Corporation, Newark, N. J., a corporation of New Jersey
No Drawing. Application December 4, 1929, Serial No. 411,868. In France December 8, 1928
2 Claims. (Cl. 91—68)

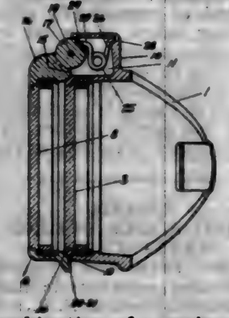
2. The method of temporarily protecting the surface of leather, fabric or similar articles during their manufacturing and handling, which comprises applying to the surface to be protected a thin layer of benzyl-cellulose mixed with a plastifying agent so that it is moderately adhesive to said surface, and easy to be torn off when protection of said surface is no longer required.

2,031,674
PROTECTING SHOES DURING THEIR MANUFACTURE
Robert Schneider, Paris, and Armand Poelman, Charenton, France, assignors to Materials Protector Corporation, Newark, N. Y., a corporation of New Jersey
Application November 27, 1931, Serial No. 577,068
In France December 3, 1930
10 Claims. (Cl. 12—142)



1. A method for protecting shoes and similar articles during their manufacture which comprises spreading a latex coagulant on the surface of said shoe and subsequently applying rubber latex on said shoe over said coagulant.

2,031,675
SEWING MACHINE
Curt Wilhelm Schweiger, Munich, Germany
Application April 4, 1934, Serial No. 718,987
In Germany May 4, 1933
2 Claims. (Cl. 112—158)



1. A drive for the regulatable transverse motion of the needle bar in zigzag sewing machines,

comprising a bearing for the needle bar, a driving lever having a displaceable fulcrum constructed as a bolt for varying the range of motion of the needle bar, a link non-detachably disposed between said bearing and driving lever for imparting lateral motion to said needle bar

and articulated to said driving lever, and means for automatically disengaging the bolt from said driving lever to render the latter ineffective and for locking the link and needle bar against lateral motion when said bolt is displaced into zero position.

2,031,676
EYE PROTECTOR
Harry F. Shindel, Reading, Pa., assignor to Wilson Products, Inc., Reading, Pa., a corporation of Pennsylvania
Application January 3, 1935, Serial No. 196
7 Claims. (Cl. 2—14)

1. The combination of a main windowed eye-protector frame and a relatively movable windowed cover frame therefor, characterized by a hinged connection of said frames consisting of complementary pivot ears on the respective frames, a pin pivotally connecting said ears, and a reversely acting spring having a tensioning end engaging one frame and an opposite-end torsion-exerting extension eccentrically engaging a pivot ear of the other frame to pivotally swing the latter.

2,031,677
BLASTING CAP CHARGE
Charles P. Spaeth, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 8, 1933, Serial No. 697,112
7 Claims. (Cl. 52—4)

1. A blasting cap composition comprising nitrocellulose impregnated with a liquid explosive nitric ester in an amount less than that of the nitrocellulose.

2,031,678
DYNAMIC MICROPHONE
Harry Kern Turlington, Los Angeles, Calif., assignor of one-half to Silvey M. Murlin, Los Angeles, Calif.
Application October 25, 1933, Serial No. 695,111
1 Claim. (Cl. 179—115.5)

A microphone, comprising a series of grouped horseshoe magnets, said magnets having their like poles arranged about a central point, and a non-magnetic diaphragm adjacent the magnets, an induction coil on the diaphragm, semi-circular busbars below the diaphragm and above the magnets, and connections between the busbars, the induction coil and lead-in wires, one leg of each magnet being shorter than the other, with the shorter legs in the center, a magnetic annular element mounted on the shorter poles and centrally of the diaphragm.

2,031,679
PLUMBING FIXTURE
John Tjaarda, Birmingham, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application April 9, 1934, Serial No. 719,857
13 Claims. (Cl. 137—111)

1. A plumbing fixture comprising a casing adapted to enclose a faucet, said casing having spaced elongated horizontal openings in a wall or walls thereof, valve controlling arms and a discharge spout projecting outwardly through said openings and mounted for independent horizontal swinging movement.

2,031,680
WALL COVERING
Jay Lloyd Tuthill, Dermont, Pa.
Application June 11, 1932, Serial No. 616,539
10 Claims. (Cl. 72—19)

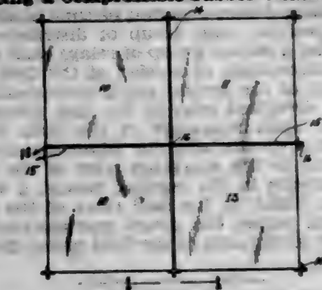
1. A resilient sheet of wall covering having a plurality of uniformly spaced rectangular troughs therein, each trough being of substantially U shaped cross section laterally and having both ends of the trough sloping upwardly and outwardly.

2,031,681
MANUFACTURE OF CALCIUM CHLORITE
George Paul Vincent, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
No Drawing. Application May 8, 1935, Serial No. 20,537
6 Claims. (Cl. 23—88)

1. In the manufacture of calcium chlorite, the improvement which comprises absorbing chlorine dioxide in an aqueous slurry of calcium hydroxide containing calcium chlorate in proportion less than sufficient to saturate the slurry until calcium chlorite precipitates and separating the precipitated calcium chlorite from the slurry before precipitation of calcium chlorate begins.

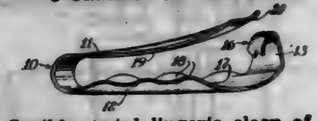
2,031,682
METHOD AND MEANS FOR ELECTROSURGICAL SEVERANCE OF ADHESIONS
Reinhold H. Wappler, Yonkers, and Frederick Charles Wappler, New York, N. Y.; said Frederick C. Wappler executor of said Reinhold H. Wappler, deceased
Application November 18, 1932, Serial No. 643,150
11 Claims. (Cl. 174—39)

1. In an instrument for electro-surgical severance of an adhesion, a clamping member constructed and arranged to engage the adhesion at spaced transverse areas, a cutting electrode adjacent to and insulated from the clamping member and mounted for movement in a transverse plane lying between said spaced areas, means for conducting a cutting current to said cutting electrode, and means for moving said electrode to effect a severance of the adhesion between the clamped areas, whereby the resultant stumps remain engaged by the instrument.



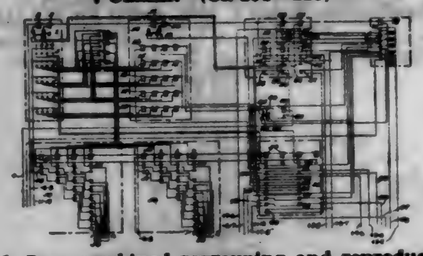
2,031,683
ROTARY REDUCING MACHINE
Walter J. Armstrong, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application January 9, 1932, Serial No. 585,789
11 Claims. (Cl. 83—11)

1. In a reducing machine, a rotor, and means for removing unpulverable fragments from the sphere of action of the rotor and receiving such fragments, said means comprising an upright deflection plate extending longitudinally of the rotor and having a hinging axis at its lower portion parallel to the rotor axis to one side of the vertical plane of the latter, said plate being swingable about said axis away from the rotor to expose the latter, and a substantially horizontal displaceable shelf on the side of the plate remote from the rotor axis and having a supporting engagement with said plate.



2,031,684
TILE SPACER
Fred H. Berger, Los Angeles, Calif.
Application December 13, 1933, Serial No. 702,940
4 Claims. (Cl. 72—18)

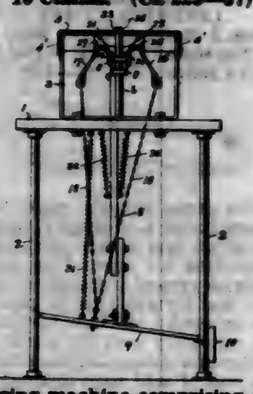
2. A self-contained tile spacer adapted to be inserted into the corner joint spaces between tiles, comprising a compressible rubber element which



includes a plurality of webs extending radially from a common juncture.

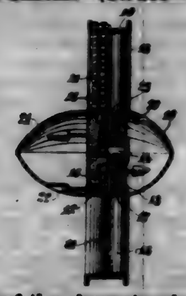
2,031,685
LINGERIE CLASP
William J. Bember, Green Bay, Wis.
Application December 1, 1934, Serial No. 755,606
2 Claims. (Cl. 24—259)

1. A flexible metal lingerie clasp of the class described comprising a U-shaped unit including an upper member and a base member, one part thereof comprising an upper free member bent longitudinally to present inwardly a concave surface and its end terminating to present a concave surface upwardly, the base member having a plurality of upwardly and outwardly extending integral abutments along the longitudinal edges thereof; the end of said base member forming a hook which extends at substantially right angles to the longitudinal center of said base member and then turning upwardly and then being inclined downwardly, the extreme end of said hook terminating in a right-angled downwardly extending portion.



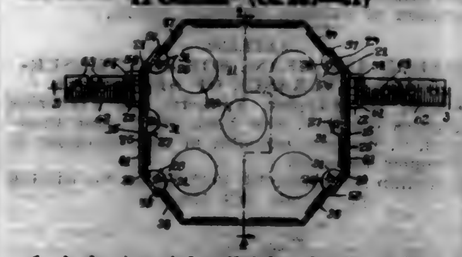
2,031,686
INSTALLATION FOR COMPILING AND COLLABORATING STATISTICAL DATA
Charles Berol, Geneva, Switzerland
Application December 11, 1928, Serial No. 325,341
In Switzerland December 14, 1927
7 Claims. (Cl. 164—115)

1. In a combined regrouping and reproducing mechanism, where data in a strip comprised of fields is passed under a reading means and is selected according to particular classification digits arranged one on each field and then reproduced, a distributor for determining the order of reproduction, the said distributor comprising a plurality of relays adapted to be energized according to the value of the said classification



digits of the several fields, the energized relays being retained over a period of time in their energized position, said group of distributors also comprising a second group of relays each relay of which corresponds to a relay of the first group, that relay of the second group corresponding to the first energized relay of the first group being energized upon repassage of the strip through the reading means, whereby when the digit corresponding to the energized relay of the second group appears in the reading means, a working circuit is closed by the said relay of the second group and causes the direct reproduction of at least part of the data of the field under the reading means.

2,031,687
PRESSING MACHINE
Martin J. Boriski, Houston, Tex.
Application June 13, 1935, Serial No. 26,525
10 Claims. (Cl. 223—37)

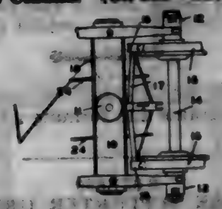


1. A pressing machine comprising a work supporting platform having a slot, pressure plates arranged underneath the platform and having lips arranged to work through the slot and normally in approximately parallel relation to project through a slit in fabric positioned on the platform, means for actuating the plates to move the lips into approximately parallel relation with the platform to clamp the fabric forming the margins of the slit against the platform.

2,031,688
FAN AND MOTOR CONSTRUCTION
William Spencer Bowen, Westfield, N. J.
Application March 9, 1934, Serial No. 714,745
3 Claims. (Cl. 230—238)

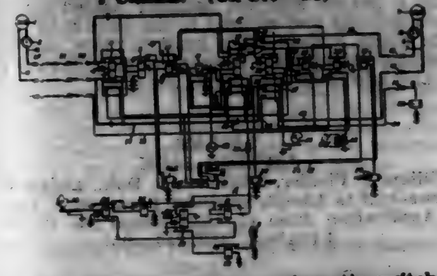
1. A device of the character described comprising a rotatable impelling means formed with a plurality of radially extending blades, electrical means connected operatively with the impelling means and disposed at the axis of the blades, stationary supporting means for the electrical means comprising blades curved in a direction opposite to that of the first blades, the electrical means lying wholly within the planes of the blades, electrical conductors in certain of the stationary blades connected with the electrical means, and cylindrical supporting means on the extremities of the stationary blades.

2,031,689
OUTLET BOX
Christopher C. Burchill, Chicago, Ill., assignor of one-half to Edward E. Burchill, Chicago, Ill.
Application June 8, 1934, Serial No. 25,595
11 Claims. (Cl. 247—31)



1. A sheet-metal outlet-box having a base and side-walls, a portion of said side-walls being formed of a member integral with said base for a part only of its length, the remainder of said side-walls being formed of another member integral for a portion only of its length with said base, tongues integral with and at substantially right-angles to said base and in substantial register with the complementary ends of said side-wall members, terminal strips integral with the upper ends of said tongues, locking tabs integral with and at approximately right-angles to said strips and having necks fitting in recesses in the top edges of the adjacent end portions of said side-wall members, one of said side-wall members at each of their meeting ends being shaped to form a bracket-socket extending only a part of the height of the box side-walls.

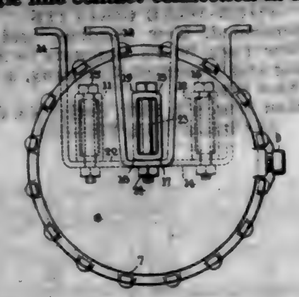
2,031,690
BRAKE SHIELD
Clarence E. Budd, South Bend, Ind., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application November 21, 1934, Serial No. 754,874
2 Claims. (Cl. 188—2)



1. A brake backing plate adapted to be arranged at and to close the open side of a brake drum, and having secured at its periphery a sheet metal member doubled on itself and having one edge in close proximity to the internal surface of the drum and having a portion adjacent its other edge projecting over the exterior of the drum.

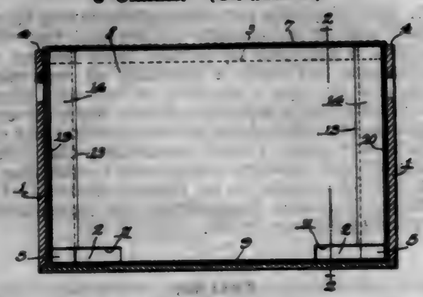
2,031,691
BRAKE BEAM SAFETY SUPPORT
Sterling H. Campbell and Frank H. Pietsch, St. Louis, Mo., assignors to Railway Devices Company, St. Louis, Mo., a corporation of Missouri
Application March 16, 1935, Serial No. 11,411
3 Claims. (Cl. 188—216)

1. In a device of the class described, a car truck including side frames, a connecting bolster, and brake beams; said truck being provided with a horizontal member, a pair of rotatable retainers passing vertically through said member, a two-part safety support, each part of said support passing horizontally through one of said retainers, and means for securing the parts of said support together to operatively position them under the brake beam.



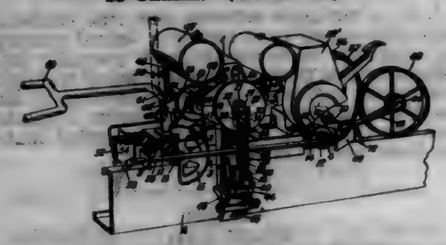
2,031,692
TELEPHONE SYSTEM
Arthur Carson, Richmond, Va., assignor to American Telephone & Telegraph Company, a corporation of New York
Application March 23, 1935, Serial No. 13,570
7 Claims. (Cl. 179—18)

1. In a telephone system, automatic switches, means for setting up a connection involving a plurality of said switches in series, timing mechanism, release means for a particular one of said switches, means controlled by the called party for rendering said mechanism effective to prepare a circuit for the partial operation of said release means, means responsive to such partial operation for releasing certain of said switches, and means for fully operating said release means to cause the release of said particular switch.



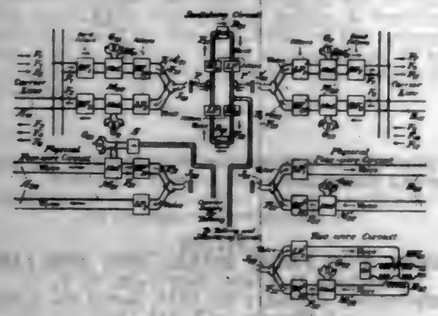
2,031,693
RESERVOIR MOUNTING
James D. Curtin, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application October 12, 1934, Serial No. 748,127
7 Claims. (Cl. 303—1)

1. A reservoir assembly for air brake systems comprising a pair of spaced supporting members, a reservoir; at least two spaced lugs on one end of said reservoir and rigidly connected to one of said members; and a single lug on the other end of the reservoir and secured to the other member by a substantially single line contact connection, said lug being constructed and arranged to obtain said single line contact connection in any one of



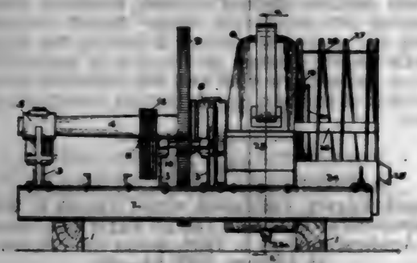
a plurality of positions of said lug and its supporting member.

2,031,694
LINING FOR FRUIT BOXES AND THE LIKE
Richard D. Croce, New York, N. Y.
Application February 26, 1935, Serial No. 8,262
3 Claims. (Cl. 217—3)



1. A lining for fruit boxes or the like comprising a member of corrugated paper board scored transversely and bendable along its scores to fit the inner faces of three walls of the box and the corner portions defined thereby, a second scored member of corrugated paper board bendable along the scores to provide a portion for fitting snugly on the bottom of the box, a portion for fitting against one wall and the adjacent corner portions of the box, and a portion constituting a cover.

2,031,695
MACHINE FOR TAMPING EARTH
Joseph Eggert, Columbus, Ohio; Emma L. Keny administratrix of said Joseph Eggert, deceased
Application July 5, 1932, Serial No. 620,206
18 Claims. (Cl. 94—46)



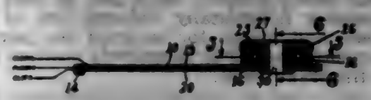
1. A machine for tamping earth along and under a concrete side form comprising a carriage designed to ride upon said side form, a tamping unit, and means for oiling said side form embodying a means for vaporizing the oil.

2,031,690
SWITCHING ARRANGEMENT FOR FOUR-WIRE CIRCUITS
Lloyd Espenschied, Kew Gardens, and Newton Monk, New York, N. Y., assignors to American Telephone and Telegraph Company, a corporation of New York
Application March 2, 1933, Serial No. 659,410
18 Claims. (Cl. 179—15)

1. In a telephone switching office having terminated therein a plurality of physical four-wire circuits, a plurality of carrier lines having superimposed on each a plurality of equivalent four-wire circuits, a plurality of two-wire physical circuits and a switching circuit for inter-connections, the method for interconnecting any circuit to any other circuit comprising the translating of the opposite directional frequencies of any pair of circuits to be interconnected to two different common frequencies for transmission over the switching circuit.

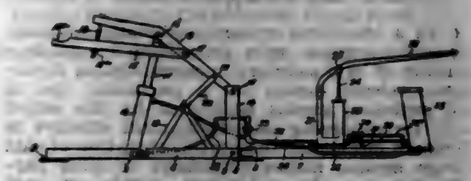
2,031,697
GRINDING MILL
Arthur W. Fahrenwald, Moscow, Idaho
Application April 27, 1934, Serial No. 722,718
5 Claims. (Cl. 83—8)

1. In a wet pulp grinding mill, the combination with a feed tank having a lateral classifying chamber, of a rotary drum partially submerged in said tank, said drum having a peripheral intake, and an axial outlet opening to said classifying chamber, and a conveyer rotatable with the drum for returning unclassified material from said chamber to the tank.



2,031,696
BOOK END
John Fassel, West Hartford, Conn.
Application May 17, 1934, Serial No. 726,135
2 Claims. (Cl. 211—43)

1. A book end of the character described comprising an L-shaped frame constructed of wire, a sheet forming a lining on said frame and a

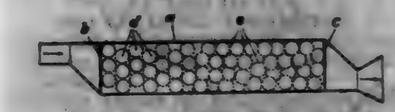


sewed to said frame and forming a covering over said lining.

2,031,699
HOSE SUPPORTER GRIP
Wallace F. Fassett, Derby, Conn., assignor to The Ansonia O & C Company, Ansonia, Conn., a corporation of Connecticut
Application July 27, 1934, Serial No. 737,148
3 Claims. (Cl. 24—245)

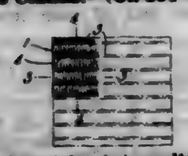
3. A hose supporter grip having a clasp member comprising a base strip and a rubber shank member extending upwardly therefrom, a button head secured upon the upper surface of the shank member, and said head comprising a metallic disk having a covering of rubber on its upper and lower surfaces and having a central opening therein and a headed securing member passed through said opening and secured to the base strip below the shank to secure the head in place, and said member gripping the rubber covering between the shank and lower surface of the disk.

2,031,700
LIFTING JACK
William J. Fiedler, Milltown, S. Dak., assignor of one-half to Adolph Gobelsha, Parkston, S. Dak.
Application June 17, 1935, Serial No. 27,070
6 Claims. (Cl. 254—93)



1. In a jack, a base comprising a pair of pivotally connected members, a hydraulic lifting device on one of said members and including a lifting cylinder having a piston operating therein and provided with a rod, a standard pivoted at one end to said one base member, an angular lifting lever pivoted at one end to said standard and also pivoted intermediate its ends to the rod of said piston, a load engaging member carried by said lever, a reservoir mounted on the other of said base members, a pump mounted on the last named base member, conduit means connecting said reservoir with the pump, other conduit means connecting the pump with the lifting cylinder, and including a valve equipped bypass connected with said reservoir, and a leak conduit connecting the upper portion of the lifting cylinder with the reservoir.

2,031,701
CABINET CONSTRUCTION
Gregg F. Furstenthal, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 2, 1934, Serial No. 723,433
3 Claims. (Cl. 220—9)



1. An open topped cabinet for articles to be cooled comprising a plurality of vertically extending and connected sheet metal front, back, and end walls, said end walls extending below the front and back walls and forming a supporting structure for the cabinet, an open topped container disposed within the confines of said wall members with its top substantially coinciding with the open top of said cabinet, said container extending downwardly approximately to the bottom of said front and back wall members, inturned flanges on said front and back wall members, means extending between and supported by said flanges for supporting said container, rigid connecting members extending between said end wall members adjacent the bottoms thereof and in substantial vertical alinement with said front and back wall members, inturned flanges on said rigid connecting members, and a platform carried below said container by the inturned flanges of said rigid connecting members.

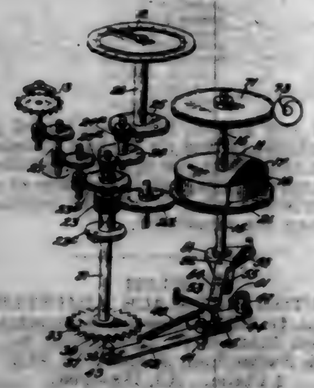
2,031,702
SILENCER FOR INTERNAL COMBUSTION ENGINES
Kurt Frey, Oranienburg, near Berlin, Germany, assignor to Degea Aktiengesellschaft (Aktiengesellschaft) Berlin, Germany, a corporation of Germany
Application January 8, 1935, Serial No. 970
In Germany March 26, 1934
2 Claims. (Cl. 137—169)

1. A silencer for internal combustion engines comprising a tube of predetermined cross-section having an inlet and an outlet, two perforated plates arranged within said tube in spaced relation to each other, a plurality of filling bodies of inorganic fibrous sound-absorbing material located within said tube between said plates, said filling bodies being of predetermined shape to provide interstices between adjacent bodies, and individual foraminated fire-proof containers each independently enclosing one of said filling bodies to substantially preserve the predetermined shape thereof.

2,031,703
CRINKLED ELASTIC MATERIAL
James J. Galligan and William James Robinson, Providence, R. I., assignors, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application September 1, 1932, Serial No. 631,313
13 Claims. (Cl. 154—55)

1. As a new article, integrally united plies of elastic material having air pockets therebetween, the ply on each outer side of the composite article being outwardly puckered, the rubber of one ply of the article having a greater resistance to stretch than the remainder.

2,031,704
AUTOMATIC SLACK ADJUSTER
Hans Gallusser, Geneva, Switzerland
Application January 16, 1934, Serial No. 705,992
In Switzerland January 16, 1933
1 Claim. (Cl. 188—200)



In an automatic play take-up device for brake rigging, the combination of an outer casing, an inner casing telescopically combined with said outer casing, a conical stop on each of said casings, a flat stop on each of said casings in opposed spaced relation to the conical stop thereof, a threaded bar projecting into said casings and constituting part of the brake rigging, clamps located within said casings in operative relation to said threaded bar, said clamps each consisting of a plurality of sections held together by an elastic member and being movable between the stops of the respective casings and co-operating therewith to respectively grip and release said thread bar, a pair of double levers constituting part of the brake rigging, one of said casings being connected with one of said levers, two spaced abutments carried by the other of said levers, and a setting member carried by the other casing and movable between said spaced abutments, said setting member in co-operation with said pair of abutments being arranged to shift said casings relatively to each other to adjust said clamps relatively to said threaded bar to automatically take up play in said brake rigging.

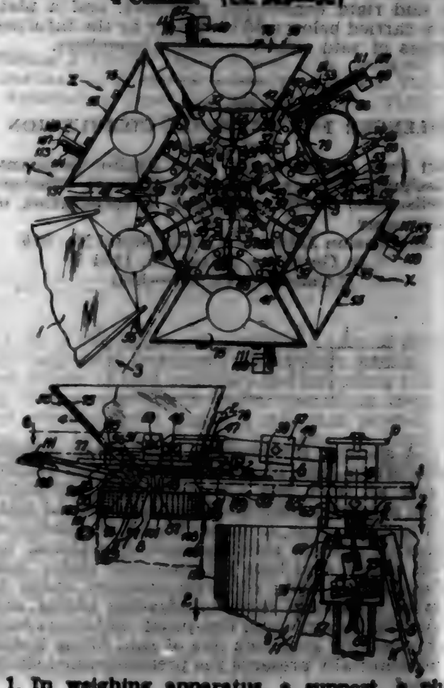
2,031,705
TIMEPIECE AND THE LIKE
Robert Constantine Graseby, New Malden, England
Application May 12, 1934, Serial No. 725,378
In Great Britain August 3, 1933
3 Claims. (Cl. 58—28)

2. Time-piece to be operated from a synchronous motor, comprising an indicating device, a driving spring operatively connected with said device, a shaft to be driven by the syn-

chronous motor, a rotary tooth-gapped synchronizing member operatively connected with said device, a toothed co-acting synchronizing member, a lever carrying said member at an end, a support operatively connected with said shaft for rotation thereby, a hammer device pivoted on said support and rotatable therewith, a loading spring acting between said support and hammer device, the other end of said lever extending

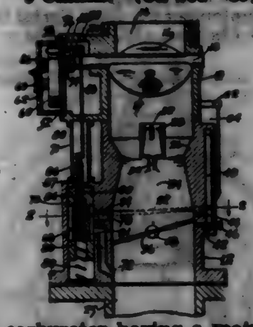
into the path of said hammer device, and a stop located in the said path just in front of said lever-end, and adapted for arresting said hammer device until the continued rotation of said support permits said hammer device to slip past said stop under the influence of its loading spring and to strike said lever-end with a momentary hammer-blow producing a stab-like engagement of the toothed member in the tooth-gapped member.

1,831,706
STRINGED MUSICAL INSTRUMENT
George D. Hambrecht and James Weldon Paine, Canajoharie, N. Y.
Application February 1, 1931, Serial No. 454,714
19 Claims. (Cl. 84—294)



1. A stringed musical instrument including a sounding board, strings extending substantially parallel with the sounding board, means whereby an upward pull is exerted upon the sounding board when the strings are subjected to tension, and slidable means for varying the upward pull.

1,831,707
DEVICE FOR SIMULTANEOUSLY TWISTING AND WINDING KNITTED THREADS
Ferdinand Hanft, Berlin-Charlottenburg, Germany, assignor to Maschinenfabrik A. G. St. Gallen (Switzerland), Glarus, Switzerland, a Swiss corporation
Application July 28, 1932, Serial No. 622,567
In Germany July 29, 1932
4 Claims. (Cl. 117—1)

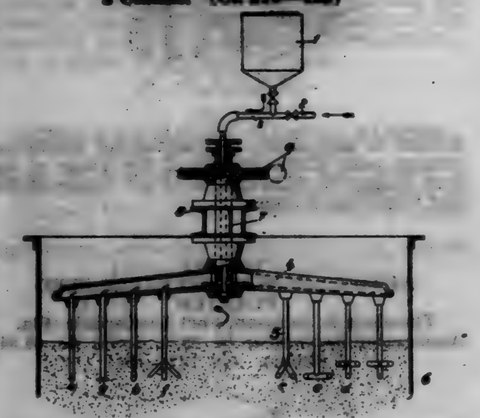


4. In a knitting machine for the manufacture of knitted threads, a knitting head for producing the knitted thread, a take-up device to draw the thread from said knitting head, and a twisting device disposed beyond the take-up device for twisting the knitted thread about its axis.

1,831,708
APPARATUS FOR FILLING BAGS
Burton A. Hammerald and Edward Ingstad, Indianapolis, Ind., assignors to Bemis Bro. Bag Co., St. Louis, Mo., a corporation of Missouri
Application January 3, 1931, Serial No. 507,321
6 Claims. (Cl. 249—52)

1. In weighing apparatus, a support, a plurality of weighing means mounted on said support, elements movable by said weighing means upon the determination of a predetermined weight and returnable after the weight is removed, an intermittently returnable switch engageable by said elements when the weight is subnormal, a motor drive for the support including a circuit, said switch controlling said circuit to stop the motor when the weight is subnormal and to automatically again start the motor when said weight reaches the predetermined amount, and frictional braking means determining the point of stopping of the support.

1,831,709
CARBURETOR
Scott F. Hunt, South Bend, Ind., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application November 7, 1924, Serial No. 751,238
9 Claims. (Cl. 261—39)

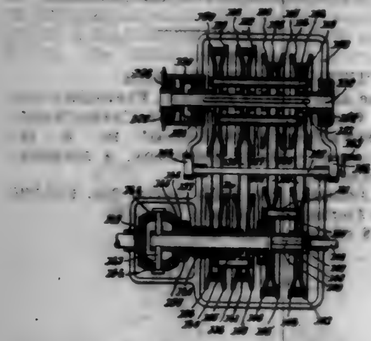


1. In a carburetor having a main carbureting passage, a throttle valve, an unbalanced choke valve, temperature responsive means operably connected to the choke valve, a fluid pressure differential actuated motor including a cylinder connected to the main carbureting passage on either side of the throttle, a piston in said cylinder, a fuel passage adapted to discharge fuel into the cylinder and to be closed by the piston under certain operating conditions, and connecting means between the piston and the choke valve whereby said motor may influence the position of the choke valve and the choke valve may influence the position of the piston, said motor acting also to interconnect the main carbureting passage on either side of the throttle valve when said choke valve is actuated by said temperature responsive means.

1,831,710
PULVERIZING APPARATUS
Johannes Ihlefeldt, Dessau, Germany, assignor to the firm G. Polysius, Aktiengesellschaft, Dessau, Germany
Application August 30, 1931, Serial No. 559,719
In Germany August 29, 1931
6 Claims. (Cl. 83—6)

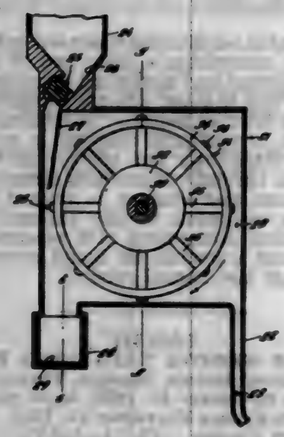
1. In apparatus of the class described, the combination with a pulverizing mill of elongated form having an inlet for the material to be pulverized adjacent one end and a discharge outlet adjacent the other end, and provided with an apertured partition at an intermediate point to afford separate pulverizing zones, whereby the material may flow generally in one direction through the mill, of means for effecting circulation of gas within the mill in opposite directions in different portions of the length thereof, said means including a port for the gas communicating with the interior of the mill adjacent said partition.

1,831,711
PURIFYING OF WATER
Max Jaenicke and Gustav Reiffeul, Frankfort-on-the-Main, Germany, assignors to Carbo-Norit-Union Verwaltungs-Gesellschaft m. b. H., Frankfort-on-the-Main, Germany, a corporation of Germany
Application January 18, 1932, Serial No. 652,396
In Germany January 25, 1931
8 Claims. (Cl. 210—125)



8. Apparatus for filtering water and other aqueous liquids comprising a filter bed of granular filtering material and means for introducing pulverulent to fine grained adsorptive material into the mass of filtering material comprising an arm in the form of a conduit adapted to rotate in a horizontal plane over the surface of the filter bed, teeth in the form of conduits communicating with said arm and adapted to project into the filter bed, a receptacle for the adsorptive material, a conduit connecting said receptacle with said arm, and a conduit for liquid communicating with said last named conduit.

1,831,712
MULTIPLE GROOVE EXPANDING PULLEY
Marcel Jannin, Meudon, France
Application November 16, 1923, Serial No. 674,336
In France December 12, 1922
18 Claims. (Cl. 74—230.17)



1. An expanding pulley adapted to be mounted on a shaft, which comprises in combination, a series of flanges mounted in juxtaposition on said shaft so as to form a plurality of pairs each adapted to accommodate a belt between its flanges the respective faces of the two flanges of a pair that are in contact with the belt being inclined so as to cause the belt to move radially with respect to the shaft when two flanges are given a relative axial displacement, a plurality of rods extending throughout said flanges, means on said rods for removably fixing in a rigid manner the even numbered flanges of said series relatively to one another in the axial direction while allowing said even numbered flanges to move with respect to the odd numbered flanges, means wholly independent, for relative displacements in

the axial direction, of the last mentioned means for removably connecting together in a rigid manner all the odd numbered flanges of said series, means for angularly connecting said

flanges to said shaft, and means for producing relative axial displacements of the whole of the even numbered flanges and of the whole of the odd numbered flanges.

2,031,713
AUTOMATICALLY OPERABLE SEED PLANTER
Theodore E. Johnson, Fort Lauderdale, Fla.
Application September 16, 1935, Serial No. 40,849
3 Claims. (Cl. 221—124)

3. In a structure of the class described, an air distributing head provided in one face with a segmental suction groove, a suction line connected with said groove, said head being further provided adjacent one end of the groove with an air inlet orifice, a pressure feed line connected with the head and in communication with said orifice, a relatively rotatable wheel including a hub in matched relationship with said head, said hub being provided with circumferentially spaced passages successively registrable with the groove and air inlet orifice, said wheel also including tubular spokes communicating at their inner ends with said passages and being open at their outer ends in the manner and for the purposes described.

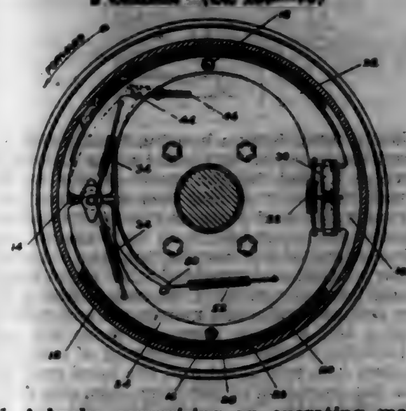
2,031,714
PROCESS FOR THE PRODUCTION OF DISULPHIDES FROM MERCAPTOTHIAZOLS
Gerhard Kallner, Ida- und Marienhütte, near Saarau, Germany, assignor to Silesia, Verein Chemischer Fabriken, Ida- und Marienhütte, near Saarau, Germany
No Drawing. Application March 29, 1935, Serial No. 13,754. In Germany August 2, 1934
5 Claims. (Cl. 260—24)

1. A process for the production of thiazole disulphides from mercaptothiazols characterized by the feature that an essentially dry, powdered mercaptothiazole is treated with oxygen in presence of nitrogen oxides.

2,031,715
NONREFILLABLE BOTTLE STOPPER
William H. Kern, Jersey City, N. J., assignor to Associated Inventions, Inc., Jersey City, N. J., a corporation of New Jersey
Application September 29, 1934, Serial No. 746,164
9 Claims. (Cl. 215—39)

1. A non-refillable bottle stopper comprising a cylindrical sleeve adapted to be attached to the neck of a bottle, a guard in said sleeve adapted to permit the flow of liquid therethrough but to prevent the insertion of a tool therebelow, a valve seat at the lower end of said sleeve, and a valve mounted for limited reciprocating movement between said guard and seat, said valve comprising a downwardly disposed head adapted to rest upon said seat and a plurality of upwardly extending, spaced guiding portions having surfaces slidably engaging said sleeve and joining said head at their lower ends and adapted to limit upward movement of said valve by contact with said guard, the spaces between said guiding portions constituting passages for the outflow of liquid and the inflow of air during the normal pouring operation.

2,031,716
CLUTCH CONTROL MECHANISM
Victor W. Kliesrath, South Bend, Ind., assignor to Bragg-Kliesrath Corporation, South Bend, Ind., a corporation of New York
Application July 29, 1931, Serial No. 553,739
4 Claims. (Cl. 192—.01)



1. In an automotive vehicle provided with a clutch, a throttle controlled engine and an accelerator, a double-ended pressure differential operated motor for operating said clutch, an accelerator operated valve means for initiating the clutch disengaging and engaging operations of said motor, and a foot operated valve independent of said throttle and aforementioned valve means, said foot operated valve being so designed as to be normally inoperative, and when so inoperative, to facilitate the clutch disengaging

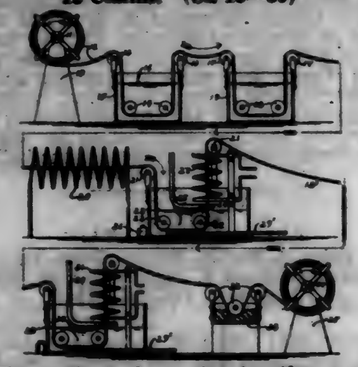
operation of the motor and further designed to be selectively operable to control the rate of efflux of fluid from the pressure end of said motor to

completely control the clutch engaging operation of the motor in synchronization with the operation of the throttle to control the speed of the engine.

2,031,717
BRAKE
Robert F. Kohr, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application March 7, 1933, Serial No. 660,351
9 Claims. (Cl. 188—73)

1. A brake comprising an operating member including a lever having a longitudinal slot, lateral cams on the lever, and an arm extending beyond the fulcrum of the lever.

2,031,718
DISPLAY DEVICE FOR MERCHANDISE
Claude W. Kress, New York, N. Y.
Application March 17, 1931, Serial No. 523,504
14 Claims. (Cl. 211—87)



13. In a merchandise display device, in combination, a plurality of fixedly supported vertically spaced tubular horizontal bars, a series of horizontally spaced tubular main vertical bars mounted solely upon said horizontal bars at the front thereof, means carried within each of said tubular main vertical bars adapted for separately disconnectibly mounting said tubular main vertical bars upon said tubular horizontal bars, a plurality of channel strips forming supplemental vertical bars respectively extending along the front of and each having its flanges in engagement with a said main vertical bar and with its web spaced from the front face of said main vertical bar, and means adapted to secure said channel strip fixedly in place on said main vertical bar.

2,031,719
MANUFACTURE OF CONDENSATION PRODUCTS FROM ALCOHOLS AND PHENOLS
Herbert Langwell and Charles Bernard Maddocks, Epsom, England
No Drawing. Application March 15, 1934, Serial No. 715,777. In Great Britain March 17, 1933
8 Claims. (Cl. 260—150)

1. The process of production of condensation products from phenols comprising reacting the phenolic body with methyl isobutyl carbinol with the aid of aqueous zinc chloride of a concentration of about 80 per cent. strength.

2,031,720
METHOD OF MAKING BONDED RUBBER AND METAL ARTICLES
Roger K. Lee, Highland Park, and Willett J. McCartney, Royal Oak, Mich., assignors to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application September 28, 1932, Serial No. 635,158
15 Claims. (Cl. 18—59)

1. The method of securing together a piece of metal and a body including rubber which consists in fixing on a surface of said metal during a partial curing operation a film-like semi-cured non-tacky rubber coating having a capacity for further curing, thereafter placing a body including vulcanizable rubber in contact with the exposed surface of said semi-cured coating, and heating the resulting unit during a subsequent curing operation to cause the rubber of said body and coating to cure while in contact with each other and to cause said coating to become integrally bonded with said metal surface and with the rubber of said body.

2,031,721
METHOD OF MANUFACTURING HIGHLY EMISSIVE CATHODES
Siegmund Loewe, Berlin-Steglitz, Germany
No Drawing. Original application July 16, 1931, Serial No. 551,296. Divided and this application June 16, 1932, Serial No. 676,949. In Germany July 17, 1930
3 Claims. (Cl. 250—27.5)

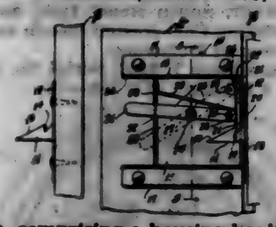
1. A method of producing highly emissive cathodes comprising the steps of producing a mixture

of the oxide of an earth alkaline metal with magnesium powder, arranging said mixture in a vacuum and heating it for liberating said earth alkaline metal, heating said reaction mixture still further for eliminating the remaining free metallic magnesium, coating the resulting reaction mixture containing the free earth alkaline metal and magesium oxide with a protective layer, mounting said mixture with a cathode core, a grid and a plate in a bulb near said cathode core, heating said mixture for evaporating said protective layer, and heating said mixture further for evaporating said earth alkaline metal and for precipitating it on to said cathode core to form a highly emissive layer on said cathode core.

2,031,722
BRAUN TUBE
Siegmund Loewe and Peter Paul Fries, Berlin, Germany
Application July 15, 1933, Serial No. 680,594
In Germany July 30, 1932
3 Claims. (Cl. 250—27.5)

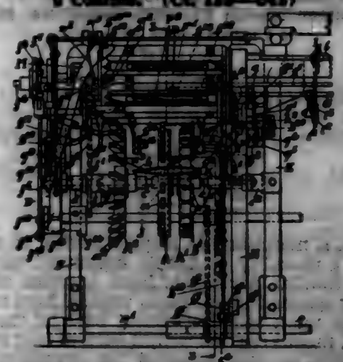
1. A Braun tube including an evacuated bulb having a bottom furnished at its inside with a coating of fluorescent material, the side walls of the bulb being furnished at their outside with a coating of good heat radiating material and with a further elastic, firmly adhering coating of transparent material, said further coating being arranged on the first said coating for the purpose of preventing an implosion of the bulb.

2,031,723
DRINKING FOUNTAIN
Perry S. Martin, Harrisonburg, Va.
Application August 9, 1930, Serial No. 474,199
16 Claims. (Cl. 251—134)



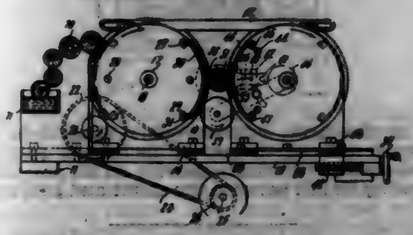
1. In an automatic water valve for water troughs, a depending outlet pipe having a restricted exit forming a valve seat, a sleeve extending below and slidable on said pipe, a pin extending transversely into said sleeve, a valve for the exit carried in the sleeve and resting freely on said pin whereby removal of the pin allows the valve to drop out of the sleeve, and spring means normally urging the sleeve in one direction, said sleeve acting as a discharge pipe for guiding the water from the valve.

2,031,724
FOOD PRODUCT AND ITS MANUFACTURE
William Ayer McKinney, Winnetka, and Heinz C. Lorensen, Chicago, Ill., assignors to Kitchen Art Foods, Inc., Chicago, Ill., a corporation of Delaware
No Drawing. Application February 13, 1932, Serial No. 654,582
6 Claims. (Cl. 99—11)



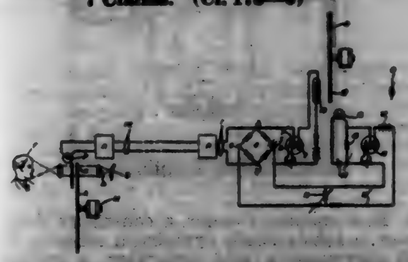
1. The method of making a palatable yeast food product without the use of heat which is characterized by mixing together dry ingredients including dry yeast, sugar and consolidating the same by a small quantity of glycerin which does not substantially affect the sugar so as to avoid excessive hardness in the material.

2,031,725
SCREEN DOOR FASTENER
Adrien R. Meller, Beaumont, Calif.
Application August 3, 1935, Serial No. 683,551
1 Claim. (Cl. 292—173)



A latch, comprising a housing having side, top, and bottom walls, an end wall having an opening to receive a latch bolt, a plate slidable on said end wall relatively to said opening, a lever pivotally engaging said plate and pivotally mounted in said housing, another end wall spaced from the free edges of the bottom, top and side walls to form a hood, and provided with a slot receiving said lever for manual operation, and a leaf spring secured to the last mentioned end wall and engaging the lever to normally move the plate into latching position, the free end of said lever extending into said hood and the hood providing means for operation of the lever from one end of the housing only.

2,031,726
WEFT REPLENISHING MECHANISM OF LOOMS FOR WEAVING
John Ernest Moore, Manchester, England
Application February 19, 1934, Serial No. 712,038
In Great Britain February 27, 1933
9 Claims. (Cl. 139—343)

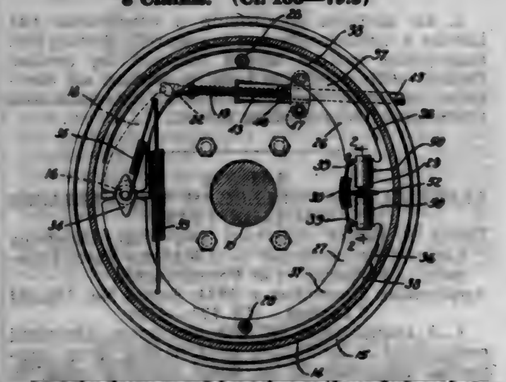


1. In a weft replenishing loom a plurality of connected and movable shuttle holders mounted at one end of the loom, a magazine for loaded shuttle skewers carried adjacent the same end of the loom and adapted to be oscillated with and by the sley of said loom, means for moving said shuttle holders to bring a filled shuttle to weaving position, said means simultaneously moving a shuttle with a used skewer to an ejecting position, said means acting at the same time to bring a shuttle holder with an empty shuttle into a position for being refilled, and means connecting said magazine with said shuttle holders to move said magazine in unison with said holders and without relative movement thereto as the weft is changed.

2,031,727
ROTARY PRINTING MACHINE
Otto Niemand, Long Island City, N. Y.
Application May 11, 1935, Serial No. 21,019
10 Claims. (Cl. 101—38)

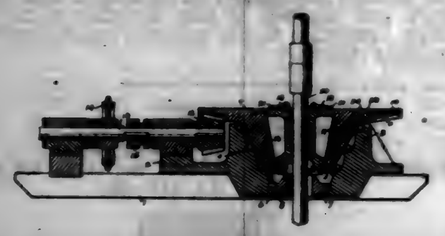
1. Printing apparatus, comprising a plurality of spaced rotary cylinders, a base for supporting said cylinders, means on the base for synchronously rotating said cylinders on said base, removable supporting means intermediate the cylinders for holding a cylindrical printable body thereon, and slidable bracing means in connection with one of the cylinders for retaining one end of the cylindrical body on the supporting means in alignment thereon during the printing operation.

2,031,728
ELECTROOPTICAL SYSTEM
Harry Nyquist, Millburn, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application August 22, 1933, Serial No. 686,306
7 Claims. (Cl. 178—6)



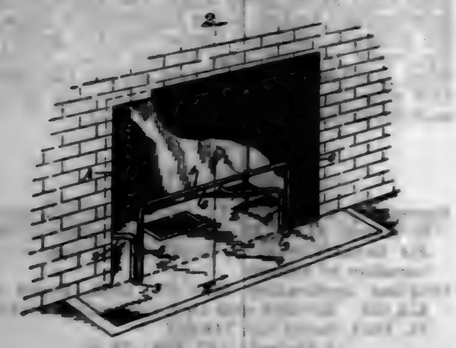
1. An electro-optical receiver comprising a conjugate network, means for supplying incoming image current to one set of conjugate terminals of said network, an amplifier supplied with image current variations produced in one arm of said network, a light source included in the output circuit of said amplifier, means for scanning light supplied by said source to control the production of an image of a field of view, and means for causing the response of said light source to be linearly related to said incoming image current, comprising a light sensitive means supplied with light from said source, means for supplying current variations produced by said light sensitive means to the other conjugate terminals of said network, said last-mentioned means including means for causing the varying current flowing through the image current arm of said network and supplied to said amplifier to be in phase opposition to the incoming image current supplied thereto.

2,031,729
BARREL HEAD FASTENER
George H. Osgood, Tacoma, Wash.
Application November 17, 1932, Serial No. 698,427
1 Claim. (Cl. 217—89)



A barrel-closure band for a barrel having a bevelled head and a circumferential groove adjacent to but removed from its end, comprising, a strip of metal adapted to extend around the edge of the barrel, said strip being composed of three sections; the lower section being a narrow inward anchor-flange adapted to lie in the circumferential groove in the barrel; the upper section being a wide inward pressure-flange bent, before being applied to the barrel, at substantially right-angles to the intermediate section; and the intermediate section being, before being applied to the barrel, or larger diameter at its upper edge than at its lower edge; the width of said intermediate section being substantially equal to the distance from the circumferential groove to the lower bevelled edge of the head, whereby when said band is drawn taut around the barrel, said wide flange is bent upwards to lie flat on said bevel surface of the barrel head.

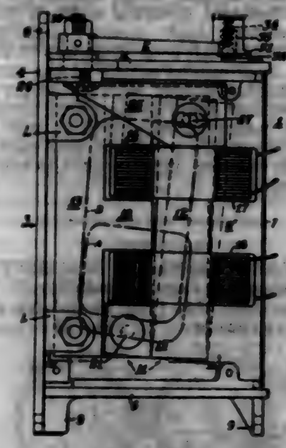
2,031,730
BRAKE
Humphrey F. Parker, Detroit, Mich., and Bryan E. House, South Bend, Ind., assignors to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Original application May 21, 1930, Serial No. 454,250. Divided and this application October 16, 1934, Serial No. 748,482
8 Claims. (Cl. 188—79.5)



1. A brake comprising shoes, threaded sockets disconnectedly engaging the ends of the shoes, an adjusting member having its opposite ends threaded into said members, and a spring tensioned between the shoes adjacent the sockets and holding the shoes against the sockets.

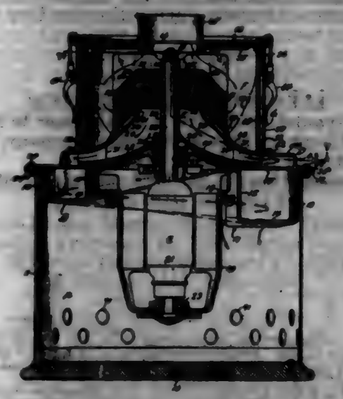
2,031,731
ROTARY DRILLING MACHINE
Thomas C. Patten, Tyler, Tex.
Application October 23, 1934, Serial No. 749,595
6 Claims. (Cl. 255—23)

4. A rotary drilling machine comprising a base having an opening to receive a vertical pipe, a tubular slip retainer on the base through which the pipe may extend, said retainer being tapered upwardly, and a rotary table on the base having a slip seat above the retainer.



2,031,732
ANDIRON
Francis J. Flynn, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a corporation of Michigan
Application December 10, 1934, Serial No. 756,789
3 Claims. (Cl. 126—236)

1. An andiron comprising a continuous bar having a downwardly and rearwardly sloping fuel supporting portion and a forward leg portion formed with a reverse bend providing an elongated upwardly opening recess for reception and retention of a protecting screen.

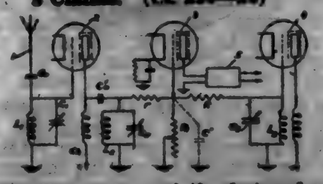


2,031,733
ELECTRIC CONTROLLER OF THE VARIABLE VOLTAGE TYPE
Harry F. Porter, Harrison Township, Allegheny County, Pa., assignor to Allegheny Steel Company, a corporation of Pennsylvania
Application December 4, 1924, Serial No. 755,894
5 Claims. (Cl. 171—119)

1. A transformer of the character described comprising a laminated core having arms connected magnetically at their opposite ends by intermeshing fingers to form a closed magnetic circuit, said arms being movable relative to each other, spaced primary and secondary windings on said core in flux linking relationship to said closed magnetic circuit, and a magnetic shunt disposed between said coil windings and engaging said arms when occupying one position relative to each other to divert sufficient magnetic flux from the secondary winding to effectually dec-

ergize the same, said secondary winding having voltage induced therein of increasing value as said arms are moved to provide an air gap of increasing length between the shunt and said arms.

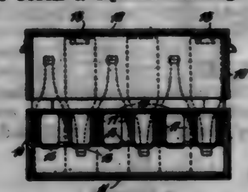
2,031,734
VACUUM CLEANER
Frederick Bickel, Jr., Dewey M. Dow, and Lachlan W. Child, Toledo, Ohio, assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio, a corporation of Delaware
Application August 21, 1933, Serial No. 686,102
14 Claims. (Cl. 183—77)



9. In a vacuum cleaner, a centrifuge dust separator, a substantially cylindrical collector casing wall surrounding said separator, a trough located between the lower end of said wall and the bottom of the separator, and lying below said bottom, and a removable shell including an upright wall to fit within said casing wall and an inwardly extending annular trough to fit said casing trough, the inner edge of said annular trough forming a mouth to receive said separator, and of sufficient diameter to clear the separator, said shell being of durable form retaining material, and a liner of cheap disposable material shaped to fit the interior of and received within said shell.

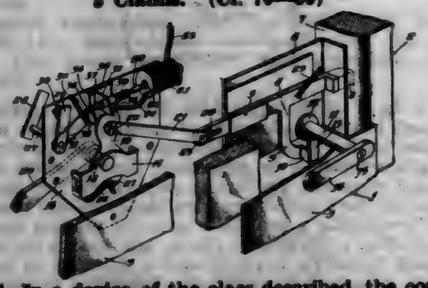
2,031,735
CONTADER CLOSURE APPLYING APPARATUS
Arthur I. Risser, Chicago, Ill., assignor to U. S. Bottlers Machinery Co., Chicago, Ill., a corporation of Illinois
Application December 31, 1934, Serial No. 759,939
20 Claims. (Cl. 226—83)

20. The combination with a screw capping machine having cap feeding means and cap applying means with contractable cap gripping means arranged normally to freely receive a cap therein; said gripping means and feeding means arranged for relative movement into and out of cooperative relation in feeding a cap to the gripping means, of means for engaging under the cap for holding same in the gripping means when same is in cooperative relation with the feeding means.



2,031,736
RADIO RECEIVING SYSTEM
Yves Rocard, Paris, France, assignor to La Radiotechnique, Paris, France, a corporation of France
Application January 15, 1932, Serial No. 586,768
In France January 23, 1931
5 Claims. (Cl. 250—20)

1. In a radio receiver of the heterodyne type, the combination of a circuit arranged to be traversed by the radio frequency currents received and having a terminal subjected to a predetermined radio frequency potential with respect to the earth, a generator of oscillations of inaudible frequency having an output circuit, a connection comprising a high ohmic resistance between the output circuit of the said generator and said terminal of the said first-named circuit, a tube having a plurality of electrodes, one of which is an input electrode and a conductive connection between the input electrode of the said tube and an intermediate point on the said resistance.

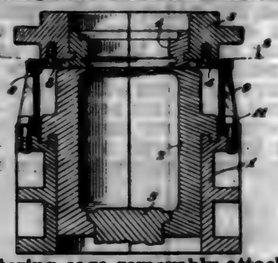


2,031,737
CRATE
Arturo Rosales, Panama, Panama
Application December 6, 1934, Serial No. 756,336
1 Claim. (Cl. 217—29)

In a crate having an enclosing box, a bottle separator comprising two parallel grids each having bottle neck enveloping rings held together by arms having web flanges, the rings of each grid being in registration with each other, with the rings of one grid having openings of smaller diameter than the diameter of the openings of the other grid, each larger ring having a diameter substantially equal to that of the bottle where the neck merges into the body of the bottle and each smaller ring having a diameter substantially equal to that of the neck near the tip of the bottle, webs within the web flanges of each grid and separating the two grids from each other, and disposed to form a square having a length and

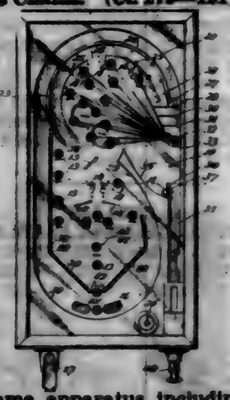
breadth substantially equal to the diameter of the body portion of the bottle intended to be placed therein, whereby the crate when placed within the box is adapted to receive a first series of bottles resting on the bottom of the box in upright position and held within said squares by the outer periphery of the rings and out of contact with the webs, and to receive a second series of bottles in inverted position with the tips of the bottles extending through the smaller rings but out of contact with the bottom of the box, with the minimum of space between the first and second series of the bottles.

2,031,738
MAGNETICALLY RELEASABLE LATCH
Fred C. Schoch, Oak Park, Ill.
Application October 29, 1934, Serial No. 750,447
5 Claims. (Cl. 70—59)



1. In a device of the class described, the combination of a slidable automobile door latch bolt with means for moving said latch bolt from latching position, comprising a handle operated arm operatively connected to said latch bolt, means for restraining movement of said arm comprising a spring operated swingable lug, means for manually disposing said lug adjacent said arm, and magnetic means for releasing said lug whereby said lug acting under the influence of said spring swings from its position adjacent said arm.

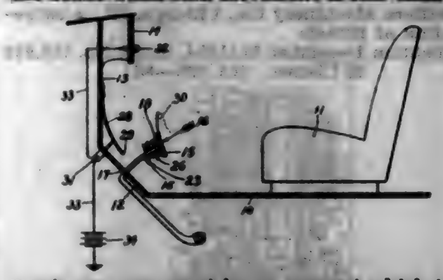
2,031,739
MOLD ALIGNING APPARATUS
Hosea Shaffer, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a corporation of West Virginia
Application November 26, 1934, Serial No. 754,966
2 Claims. (Cl. 49—69)



1. Mold aligning apparatus including a partible neck ring, a neck ring holder in which the neck

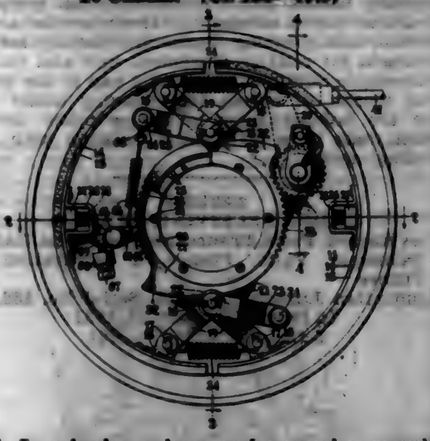
ring halves are mounted, a partible blow mold below the neck ring, a blow mold holder in which the blow mold halves are mounted, a centering ring removably attached to the neck ring holder,

and a centering cage removably attached to the blow mold holder and adapted to embrace the centering ring when the neck ring and blow mold are closed.



2,031,740
GAME
Kenneth C. Shyvers, Chicago, Ill.
Application September 26, 1935, Serial No. 42,319
6 Claims. (Cl. 273—121)

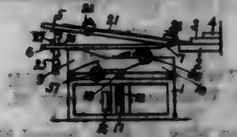
1. In a game apparatus including a playing board having a plurality of scoring pockets provided with numerical designations within which a projectile may be deposited, those pockets disposed adjacent the upper portion of the board bearing the higher numerical designations, means for projecting a projectile onto the playing board including a projecting chute, and means on said board including a guide and a plurality of barriers arranged to cause the projectile projected onto the playing board to travel a substantially S-shaped path, means provided adjacent the end of said path for causing the projectile to emerge therefrom to move to a position on the playing board which will place it in the path of travel of the next succeeding projectile as the latter emerges from the projecting chute, whereby the first projectile may be struck by the second projectile for deflecting it in the direction of scoring pockets bearing high numeral designations.



2,031,741
INDICATOR
George L. Smith, Washington, D. C., assignor to United States Ordnance Company, Washington, D. C., a corporation of Virginia
Application October 4, 1935, Serial No. 43,586
7 Claims. (Cl. 177—311)

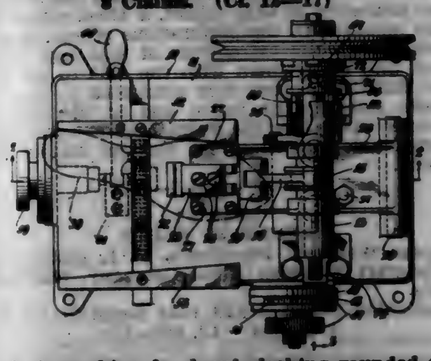
1. In an operating mechanism for a vehicular internal brake, a brake pedal, a stop limiting the maximum brake applying movement of the pedal, and signal means positioned to be operated during the movement of said pedal in applying the brake when said movement is less than said

maximum movement by an amount which is insufficient to permit proper application of the brake when its drum has expanded due to heating.



2,031,743
SELF-ADJUSTING BRAKE
Hugh Smith, Buffalo, Joseph Schiedel, Hamburg, and Arthur B. Asbury, Buffalo, N. Y.
Application December 28, 1931, Serial No. 583,444
20 Claims. (Cl. 188—79.5)

1. In a brake, a drum and a member movable toward or away from the drum into or out of braking engagement therewith, an element rotatable in one direction for moving the member into braking engagement, an actuating element movable to rotate the rotatable element in said one direction, teeth carried by said rotatable element, a pivoted pawl having a tooth engageable with said teeth, resilient means for urging movement of said pawl to rotate said rotatable element in a direction opposite to said one direction, and means for limiting said movement of the pawl, said last mentioned means being manually adjustable to vary the limits of movement of the pawl.



2,031,742
GLASS BEVELING MACHINE
Ray B. Smith, Tacoma, Wash.
Application March 27, 1934, Serial No. 717,582
5 Claims. (Cl. 51—122)

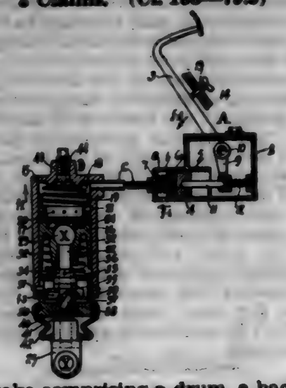
1. A glass beveling machine of the class described, comprising a reciprocating glass carrying table, carriage rails supporting said table on a rigid frame structure, power means for automatically imparting a reciprocating movement of said table on said carriage rails, a series of glass grinding wheels beside said reciprocating table, means for so adjusting said table laterally, that a plate of glass carried thereon will consecutively contact each of said grinding wheels operatively

mounted beside said table, and said grinding wheels pyramided one above the other for consecutively grinding and finishing a bevel on the edge of a plate of glass carried on said reciprocating glass carrying table.

2,031,744
CUTTING MACHINE
John Frederick Smith, Quincy, Mass., assignor to Compo Shoe Machinery Corporation, New York, N. Y., a corporation of Delaware
Application June 7, 1934, Serial No. 729,403
8 Claims. (Cl. 12—17)

1. A machine for bevel slashing rounded sole blanks comprising a base providing a support for the blanks, a knife slidably mounted over said base for reciprocation into the blank, and gage means for fixing the position of a given blank with respect to said knife, said means comprising selectively usable right and left side gages each adapted respectively to contact two points on the same side of a right or left blank, and a toe gage, said side gages being mounted on a common sliding bar, and means for adjusting said bar laterally selectively to accommodate right or left blanks of varied sizes.

2,031,745
COMBINATION AIR AND SPRING CUSHION SEAT AND THE LIKE
Maurice Stubnitz, Pittsburgh, Pa., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application June 11, 1933, Serial No. 675,610
9 Claims. (Cl. 155—180)

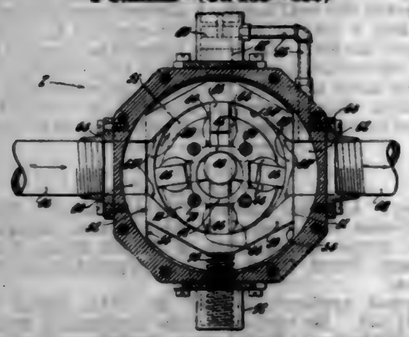


1. A spring cushion seat and the like comprising a lower border frame, cross bars bridging sides of said frame, a bottom plate resting on said cross bars, a spring assembly resting on said bottom plate, tongues struck out from the ends of said cross bars, said tongues being bent over the lower edges of the spring assembly and bottom plate to clamp the assembly and the plate to the cross bars, stuffing on top of the spring assembly and a cover over the stuffing, and extending down the sides of the seat to the lower border frame and secured thereto.

2,031,746
LAMP, TUBE AND SIMILAR DEVICE
Ralph B. Thomas, Salem, Mass., assignor to Hygrade Sylvania Corporation, Salem, Mass., a corporation of Massachusetts
Application May 15, 1934, Serial No. 725,709
8 Claims. (Cl. 176—32)

1. An electric device of the character described comprising an envelope sealed to a stem, the area adjacent the seal having a circumferential shoulder and a cylindrical portion adapted to receive a base, the elements of the cylindrical portion being substantially parallel to the longitudinal axis of the lamp, said area also being provided with an annular channel and a plurality of circumferential locking ribs separated by V-shaped notches.

2,031,747
BRAKE
Robert Charles Louis Pierre Turgot, Saint Etienne de Cuines, Savoie, France, assignor, by mesne assignments, to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Original application June 23, 1931, Serial No. 546,242. Divided and this application March 9, 1934, Serial No. 714,802. In France June 22, 1930
2 Claims. (Cl. 188—79.5)

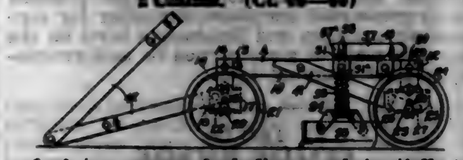


1. A brake comprising a drum, a backing plate, a friction member, a support on the backing plate, a threaded rod longitudinally slidable to apply the friction member to the drum, a threaded sleeve connected to the friction member into which sleeve the threaded end of the rod is adapted to be screwed, a toothed collar secured to the rod, a second toothed collar slidable on and rotatable on the rod, and links pivotally connected to the support and to the second collar.

2,031,748
PIANO KEYBOARD
Frederick A. Vietor, Great Neck, N. Y.
Application May 18, 1934, Serial No. 726,196
9 Claims. (Cl. 84—433)

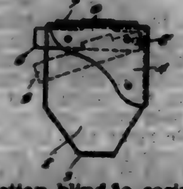
1. A piano key having a balance rail pin opening at a point intermediate the ends thereof, at least one relatively heavy weight secured to the key at a point closely adjacent said opening and positioned at a point spaced outwardly of the opening, and at least one lighter fine adjustment weight disposed at a point spaced outwardly of the heavier weight to obtain a low moment of inertia at the commencement of the depression and rebound of the key.

2,031,749
POWER TRANSMISSION APPARATUS
Edwin E. Vincent, Springfield, Mass.
Application December 16, 1932, Serial No. 647,631
3 Claims. (Cl. 185—136)



1. An apparatus of the class described comprising in combination, a housing, a cylinder slidable therein having a central cylindrical bore, a rotor journalled in said housing having a central axial opening and with radially disposed slots extending into said central opening, ring-like sections at opposite sides of the rotor adjacent the central opening closing the radial slots at opposite sides adjacent the inner ends thereof, a substantially rigid floating member in said central opening of the rotor, pairs of guide members oscillatable at opposite sides of said slots, blades between said members having inner concave ends engaging and slidable on said floating member and outer convex ends slidable in the bore of the cylinder, the lower end portions of said blades being relatively narrower than the upper portions thereof whereby the opposite sides thereof are slidable on the inner sides of said ring-like sections so that the said blades are held against sidewise movements.

2,031,750
METHOD FOR PURIFYING TITANIUM SUB-OXIDE MATERIALS
Foord von Bichowsky, Cleveland, Ohio, assignor to Krebs Pigment and Color Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 23, 1935, Serial No. 7,823
6 Claims. (Cl. 23—202)



1. Method for purifying titanium sub-oxide containing materials by acting upon the therein contained siliceous impurities with substances capable of reacting with the impurities to form compounds containing fluorine, under such conditions as not to appreciably attack the titanium compounds, and removing the so formed fluorine compounds.

2,031,751
TOY ROAD SCRAPER
John V. Watt and Anthony M. Watt, Waterford, N. J.
Application May 1, 1935, Serial No. 19,872
2 Claims. (Cl. 46—46)

1. A toy scraper including a substantially triangular frame having parallel rear end portions, a U-shaped bracket having its legs upstanding and connected to said portions, a bolster supporting said bracket, down-turned perforated legs connected to said bolster, a wheel supported axle mounted in the perforations of said down-turned legs, the extremities of said legs being bent into engagement with the axle to prevent rotation thereof, members connected to the opposite sides of the frame and to the axle, a scraper carried by the frame, and a wheel supported axle pivoted to the forward end of the frame.

2,031,752
VENETIAN BLIND
George Woodruff, Providence, R. I., assignor to Aircraft Venetian Blind Company, Hazleton, Pa.
Application September 18, 1934, Serial No. 744,571
2 Claims. (Cl. 156—17)

1. In a Venetian blind, a casing for receiving the upper portion of the blind, a bracket adapted to be connected to the upper portion of a window frame, the bracket having a horizontal flange provided with a keeper recess, a member connected to the top part of the casing at an end thereof and having a portion spaced from the casing, the space receiving the horizontal flange of the bracket and a latch member pivoted to the end of the casing and having a part for engaging in the keeper recess of the bracket when the latch member is in operative position.

2,031,753
RUBBER HEEL
Frank P. Wright, Long Beach, Calif.
Application September 6, 1934, Serial No. 742,590
1 Claim. (Cl. 36—75)

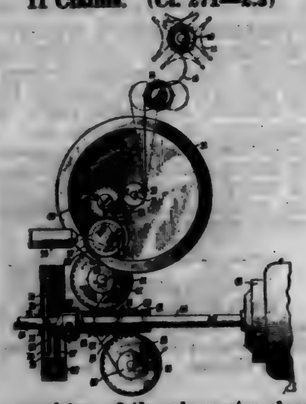
In a rubber heel the combination of: a rubber heel body, having an upper attaching face and a lower wearing face, and nail holes formed in said wearing face spaced inwardly substantially equal distances from the outer edge of said body; washers embedded in said body about said nail holes; a block of metal embedded in said body to conform with a portion of the rear outer edge of said body to one side of the center of said body and having

its lowermost surface lying in the plane of said wearing face, said block at its ends overlapping an adjacent pair of said washers; and means for connecting said block to said washers.

2,031,754
EXTENSIBLE COUPLING
Joseph Milla Bacigalupi, Oakland, Calif., assignor to Ernest J. Sweetland, Piedmont, Calif.
Application November 4, 1932, Serial No. 641,211
10 Claims. (Cl. 239—66)

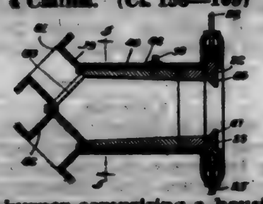
1. Lawn sprinkling means of the imbedded type comprising a sleeve member with a removable sprinkler nozzle carried thereby, an internally threaded nipple forming a sliding fit within said sleeve member, a hollow screw fitting carried by said nipple within said sleeve and accessible from the lawn surface when said nozzle is removed, an expansible ring surrounding said screw fitting and abutting against said nipple, said screw fitting having an upper portion of larger diameter than the threaded portion, said upper portion being constructed and arranged to expand said expansible ring against said sleeve member when the screw fitting is advanced into the thread of said nipple.

10. Coupling means for uniting tubular members comprising a pair of telescopically fitted tubular members, an internal thread formed on the smaller of said tubular members, a hollow plug having an external thread to engage said internal thread, said plug having an upper enlarged shoulder constructed and arranged to engage and expand an annular sealing element adjacent one end of said smaller tubular member against the inner wall of the larger tubular member to hold said telescopic elements in sealed engagement with each other.



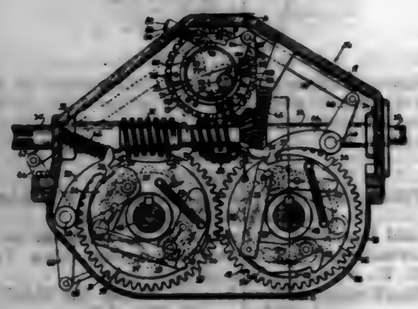
2,031,755
COMBINED SALT AND PEPPER SHAKER
Charles L. Baranowski, South Bend, Ind.
Application April 4, 1935, Serial No. 14,762
5 Claims. (Cl. 65—45)

1. A shaker of the class described having a dispensing opening, a valve for said opening comprising a U-shaped member pivotally mounted, one arm of said member normally closing said opening, means engaging the light of said



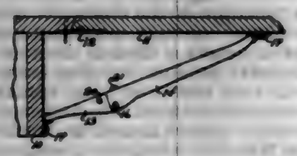
member and urging closing movement of said valve, and a weight on the other arm of said valve to assist opening of the valve incidental to shaking.

2,031,756
FILM FEEDING MECHANISM FOR FILMS HAVING SOUND TRACK
Ewald Boecking, Brooklyn, N. Y., assignor to International Projector Corporation, New York, N. Y., a corporation of Delaware
Application March 8, 1934, Serial No. 714,571
11 Claims. (Cl. 271—2.3)



1. In a machine of the character described for feeding a film at constant speed past a fixed point, means for imposing a friction drag on said film, means for edge guiding the film immediately in advance of said point, an idler sprocket operatively interposed between the first-named means and the second-named means, and means to cause the film to travel into and out of engagement with each of said means.

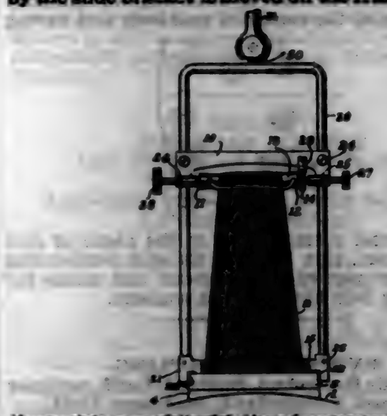
2,031,757
APPARATUS FOR BURNING FUEL
Arthur J. Boynton, Winnetka, Ill., assignor to H. A. Brassert & Company, Chicago, Ill., a corporation of Illinois
Application December 29, 1933, Serial No. 704,390
4 Claims. (Cl. 158—100)



1. A gas burner comprising a housing, similar hollow sections of heat resisting material in said housing in reversed arrangement whereby air and gas may be introduced into the burner from different directions through adjacent sections of the heat resisting material.

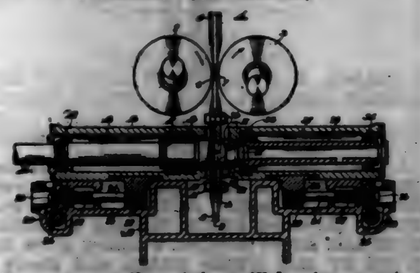
2,031,758
TRACTOR
Theophilus Brown, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application May 5, 1930, Serial No. 449,859
Renewed January 5, 1934
31 Claims. (Cl. 97—51)

1. The combination with a tractor, of power take-off mechanism associated with the tractor comprising two power operated devices comprising driving and driven parts adapted to transmit energy to separate implement parts, means for causing actuation of the driven part of one of said power devices, and means for causing operation of the driven part of the other of said power devices in timed sequence thereto, said driving parts being associated together whereby one device derives its power from the other.



2,031,759
TABLE LEAF SUPPORT
Frank L. Casper, Howes Cave, N. Y.
Application October 10, 1933, Serial No. 693,030
9 Claims. (Cl. 211—64)

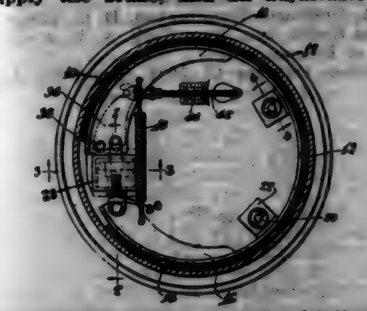
1. The combination with a hingedly mounted member and its support, of a brace comprising a pair of pivotally connected sections pivotally mounted on the hinged member and support, a resilient element connecting said sections to assist the latter to assume an end to end relation as said hingedly mounted member is raised, and pivoted means carried by the brace and actuated by said resilient element for effectively latching said sections in end to end relation.



2,031,760
HAIR CURLING DEVICE
Thomas N. Coffelder, Pittsburgh, Pa.
Application December 13, 1934, Serial No. 757,325
2 Claims. (Cl. 132—33)

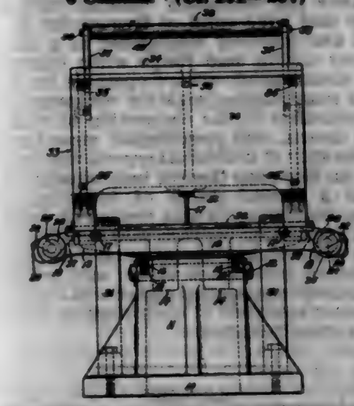
1. A hair curling device comprising a clamp, a bifurcated frame having its ends in engagement with said clamp, a slide bracket in frictional engagement with said frame, and a spool interchangeably mounted on said guide bracket and clamp, means on said spool for clamping strands of hair, and means for rotating said spool whereby the slide bracket is moved on the frame against

the resistance of its frictional engagement therewith and in the direction of the clamp.



2,031,761
DEMOUNTABLE GUIDE DISK FOR CROSS ROLLS
August P. Diescher, Pittsburgh, Pa., assignor to Diescher Tube Mills, Inc., Pittsburgh, Pa., a corporation of Delaware
Application November 29, 1933, Serial No. 700,170
7 Claims. (Cl. 308—58)

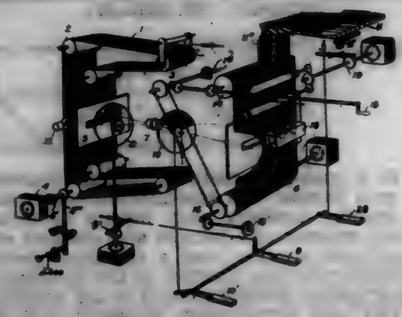
1. In a cross-rolling tube mill having a pair of cross-rolls, a driving shaft extending transversely of the pass line of the mill at one side of the cross-rolls, axially movable bearing means for said shaft, a removable guide disk member detachably mounted on said shaft at the inner end thereof beyond said bearing means and extending between the cross-rolls for peripherally engaging tubes passing through the mill, supporting means for the inner end of said shaft beyond said disk member, and means for moving the shaft bearing means axially for adjusting the disk member axially relatively to the cross-rolls and for withdrawing the shaft from said supporting means and from the disk member to permit the disk member to be removed transversely of the shaft.



2,031,762
BRAKE
Adiel Y. Dodge, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application July 21, 1930, Serial No. 469,522
23 Claims. (Cl. 188—78)

1. A brake structure comprising, in combination, a drum, a fixed anchor member at one side of the drum, a floating expansible handlike friction device having one of its separable ends confined within the anchor member, applying means outside of the anchor for forcing said ends apart to apply the brake, and an adjustable thrust

member forming the end of the friction device extending through the anchor and engaging both the anchor member and said applying means.



2,031,763
MARKING MACHINE
Charles F. Eaton, West Newbury, Mass., assignor, by mesne assignments, of one-half to North American Holding Corporation, Syracuse, N. Y., a corporation of New York, and one-half to Parshad Holding Corporation, Syracuse, N. Y., a corporation of New York
Application December 2, 1933, Serial No. 700,665
6 Claims. (Cl. 101—297)

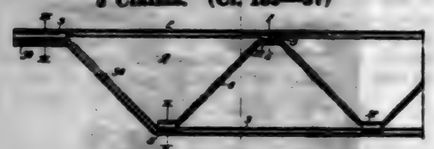
1. A marking machine comprising a base, a substantially horizontal work-bed mounted on the base and adapted to support an embossing plate and the blank to be marked, and a platen pivotally supported by the base on a horizontal axis adapted to be swung downwardly into marking relation to the work-bed and upwardly away from the work-bed to afford free access to the work-bed, unobstructed by the platen, for arranging the work thereon and an adjustable stop screw mounted on the platen near the free end thereof and adapted to cooperate with the work-bed to limit the movement of the platen toward the work-bed and a spring-passed latch mounted on the platen and arranged to engage the stop screw to lock it against accidental displacement.

2,031,764
PHOTOELECTRIC MUSICAL SYSTEM
Ivan Eremeeff, Philadelphia, Pa.
Application March 15, 1934, Serial No. 715,656
27 Claims. (Cl. 84—1)

1. A photoelectric musical system, comprising a console for housing electrical tone generating units and an electrical tone reproducing unit, all having a common amplification and sound emitting system, each of said electrical tone generating units comprising an individual standard keyboard, a bank of shutters, each of said shutters in said bank being individually connected to its own co-operative key in said keyboard, a set of diminishing rollers for supporting and individually closing each of said shutters in said bank, automatic means for individually closing said shutters, a pedal operated speed control for varying the revolutions of all diminishing rollers in said set, means for connecting and disconnecting the diminishing means, a light source, a stationary single aperture light limiting mask in the front of said light source, a single optical system for the projection of light of said light source, in predetermined variable amounts, onto a photoelectric element, a photoelectric element, a stationary light limiting single aperture mask in front of said photoelectric element, a uniformly repeating light scanning pitch means operating in conjunction with said optical system, a synchronous motor for driving said scanning pitch means and maintaining international pitch, means for varying the speed of said scanning pitch means for flattening and sharping the international musical pitch, a stationary preadjustable quality belt mask for selectively and individually modulating the intensity of said predetermined pulsating light energies which are

produced by said scanning and projecting pitch means, said quality belt mask comprising a plurality of different specially and synthetically prepared sections, each of said sections having a predetermined number of vertical rows of translucent patterns and apertures of predetermined shapes and sizes, manual means for preadjusting any of said different sections in said quality mask in register with said scanning pitch means, swell pedal means, tremolo pedal means for controlling the increase and decrease in intensity in predetermined selective beats, per predetermined fraction of time, in said light energy, means for indicating and registering the amount of light energy impressed on said photoelectric element, said electrical tone reproducing unit comprising a keyboard, a bank of shutters, each of said shutters in said bank being individually connected to its own co-operative key in said keyboard, a set of diminishing rollers for supporting and individually closing each of said shutters in said bank, automatic means for individually closing said shutters, a pedal operated speed control for varying the revolutions of all said diminishing rollers in said set, means for connecting and disconnecting said diminishing means, a light source, a stationary single aperture light limiting mask in the front of said light source, a single optical system for the projection of the light of said light source in variable amounts onto a photoelectric element, a photo-

electric element, a stationary light limiting single aperture mask in front of said photoelectric element, a multi-track belt record, with a plurality of parallel tracks recorded and synthetically prepared, each of said tracks representing a record of predetermined musical tones of predetermined quality and pitch, each of said tracks predeterminedly co-operating with its own key in said keyboard in conjunction with said single optical system, which is common to all tracks, a synchronous motor for driving said multi-track record at a uniform speed for perfect tuning with said electrical tone producing units for maintaining international pitch of the musical tones, means for selectively changing the speed of drive of said multi-track record for playing said record in different musical keys, swell pedal means, tremolo pedal means for controlling the increase and decrease in intensity of predetermined selective beats per predetermined fraction of time in said predetermined light energy, and a common amplifying and sound emitting system for said electrical tone producing units and said electrical tone reproducing unit.



2,031,765

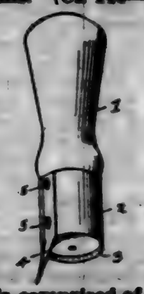
METALLIC STRUCTURAL FRAMEWORK

John Ashley Ferguson, Pittsburgh, Pa., assignor of one-third to Thomas B. Sturgus, Pittsburgh, Pa.

Application April 19, 1933, Serial No. 666,143

5 Claims. (Cl. 189—37)

4. In a built-up structural unit, the combination with flanged and side-grooved compression and tension members each having continuous rounded grooves, of a flanged and rounded side-grooved web member, and a clamping member for securing the web member to the compression member having flanges entered in the grooves of the web and compression members and said clamping member clamped thereto.



2,031,766

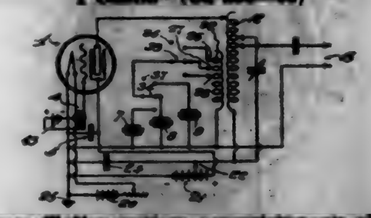
CORING KNIFE

George D. Gardner, San Jose, Calif., assignor to Herbert Edward Gray, San Jose, Calif.

Application August 15, 1932, Serial No. 629,277

2 Claims. (Cl. 146—83)

1. A coring knife comprised of a handle having a blade projected from a closed end thereof at an angle outwardly to the axis of said handle; and an annular shoulder on an end of the handle concentric with the axis thereof and adjacent the root end of the blade to penetrate into the article to be cored to center the knife as it is rotated.



2,031,767

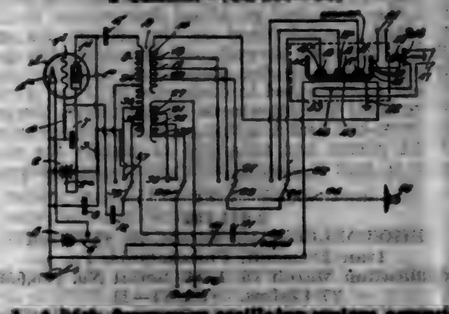
ELECTROMECHANICAL OSCILLATOR CIRCUIT

Louis A. Gebhard, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a corporation of Delaware

Application October 15, 1932, Serial No. 638,011

1 Claim. (Cl. 250—36)

An oscillation system comprising, an electron tube having anode, screen, control and cathode electrodes therein, circuit means connected with said electrodes for producing negative resistance oscillations, said circuit means including a resonant circuit comprising an inductance connected between said anode and said cathode, said resonant circuit being adjustable to different values for cooperating with said tube to produce and maintain negative resistance oscillations within a wide band of frequencies, a second inductance provided with a plurality of taps connected individually with a plurality of contacts, piezoelectric means selectively connectible with said tapped inductance for selectively causing said oscillations in said wide band of frequencies to be restricted and precisely maintained at a particular frequency within said range when desired, said circuit means being always operable for producing and maintaining negative resistance oscillations regardless of the connection of said piezoelectric means, said piezoelectric means comprising a plurality of individual crystal vibrators each having an electrode thereof individually connected with a second group of contacts, selector switches individual to said groups of contacts, a tandem connection between said switches for permitting any selected crystal to be connected with any selected inductance value, said inductances being inductively coupled and means for connecting another electrode of each vibrator to one end of said second inductance.



2,031,768

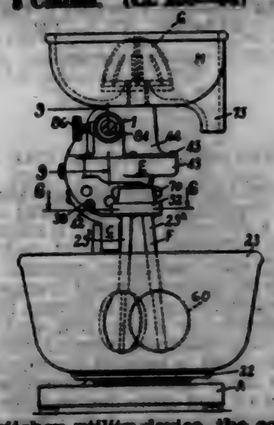
ELECTROMECHANICAL OSCILLATOR CIRCUIT

Louis A. Gebhard, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a corporation of Delaware

Application October 15, 1932, Serial No. 638,012

2 Claims. (Cl. 250—36)

1. A high frequency oscillator system comprising an electron tube including a cathode, control grid, anode and shield grid electrodes, an oscillation circuit for said tube, an inductance coil having means connectable between said control grid and said anode, a multiplicity of piezoelectric crystal elements each having a grounded and an ungrounded electrode, a coupling coil coupled with said inductance coil, an effective connection between one side of said coil and said grounded electrodes, tapped connections extending from the inductance coil, separate tapped connections extending from said coupling coil, a plurality of switch contacts and connections extending therefrom to the ungrounded electrodes of said piezoelectric crystal elements and means including said tapped connections for selectively connecting a particular piezoelectric crystal element with a portion of said coupling coil and simultaneously including a portion of said inductance coil in said oscillation circuit for adjusting said oscillation circuit for maintaining oscillations at a particular frequency.



2,031,769

KITCHEN UTILITY DEVICE

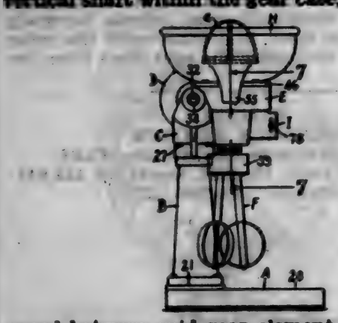
Alfred C. Gilbert, North Haven, and Arthur A. Arnold, New Haven, Conn., assignors to The A. C. Gilbert Company, New Haven, Conn.

Application November 25, 1932, Serial No. 644,293

3 Claims. (Cl. 259—84)

1. In a kitchen utility device, the combination of a base, a pedestal rising therefrom, a bracket pivoted to the pedestal, a motor on the bracket and having a horizontally arranged shaft, a gear housing carried by the motor casing and extending across one end of the motor casing in a position to overhang the base, gears in said housing driven from the motor shaft, a vertical shaft in the gear housing driven by said gears and having a bearing depending from the gear housing, a second gear housing surrounding said bearing and secured thereto, intermeshing agitator shaft gears in said second gear housing, agitator shafts depending from said gears, and a gear member on the lower end of said vertical shaft and within said second gear housing meshing with one of the agitator shaft gears to drive the same.

2,031,770



KITCHEN UTILITY DEVICE

Alfred C. Gilbert, North Haven, and Arthur A. Arnold, New Haven, Conn., assignors to The A. C. Gilbert Company, New Haven, Conn.

Application December 30, 1932, Serial No. 649,961

9 Claims. (Cl. 259—121)

1. In a device such as described, the combination of a base, a pedestal rising therefrom, a bracket on the pedestal, a motor on the bracket, a gear case adjacent one end of the motor, a vertical shaft in said gear case, an agitator driven from the lower end portion of said vertical shaft and adapted to stir the contents of a receptacle supported on the base, a gear element on said vertical shaft within the gear case, gearing interposed between said gear element and the motor shaft, and a power shaft arranged transversely with respect to the bracket and driven from said vertical shaft and having a socket associated therewith for the connection of various accessory appliances, said power shaft being located in a plane below the plane of the motor shaft.

2,031,771

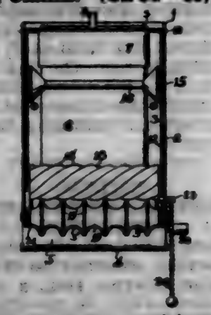
TEMPLE FOR EYEGLASSES

Frank L. Grier, Milford, Del.

Application November 1, 1934, Serial No. 751,058

3 Claims. (Cl. 88—52)

1. A combined drag and bearing member for temples for eyeglasses comprising a live rubber ferrule positioned at the curve of the temples and having its outer surfaces decreasingly tapered from the rear to the front end, and having its lower surface conforming to the curvature of that portion of the ear which it engages.

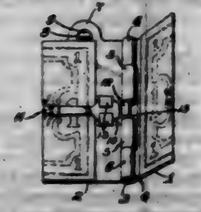


2,031,772

TOILET PAPER HOLDER AND DISPENSER

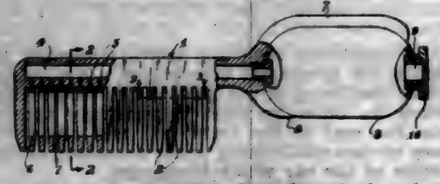
Frank J. Hall, San Francisco, Calif.

Application March 15, 1935, Serial No. 11,239



4 Claims. (Cl. 91—46)

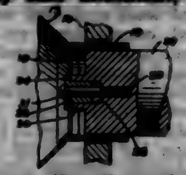
1. A lavatory fixture comprising a casing having a liquid receptacle at the bottom thereof, means in the casing for supporting a roll of paper, roller means movably supported above the



liquid in the receptacle having its underneath side in contact with a sheet supplied from the roll, spring means yieldably holding the roller means above the liquid in the receptacle, manually movable means extending externally of the casing for depressing the roller means, whereby the sheet may be brought into contact with the liquid in the receptacle, and means normally maintaining the sheet in contact with the roller means and for delivering the said sheet from the casing.

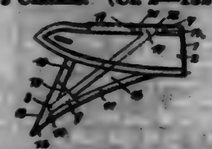
2,031,773
CURRENCY HOLDER
Robert L. Halperin, Los Angeles, Calif.
Application October 16, 1931, Serial No. 568,042
13 Claims. (Cl. 206—37)

1. A currency holder comprising hinged members, a spring arm connected to one of said members and having its free end opening toward the free end of the hinged member to which it is connected and adapted to engage and retain notes folded about said members.



2,031,774
FOUNTAIN COMB
Lewis Helfrich, William Helfrich, and Oscar H. Corrington, Akron, Ohio
Application December 10, 1934, Serial No. 756,884
3 Claims. (Cl. 132—13)

1. In a device of the class described, a body portion having a conduit and provided with teeth, said body portion and said teeth being hollowed out, ports leading from said conduit to said teeth, each of said teeth having one outlet opening extending through the entire width of the teeth, the opening of every other tooth only being on line with each other and arranged substantially near the said conduit and the opening of the other teeth only being on line with each other and arranged substantially near the tips of said teeth so there will be a staggered relationship between the first and second mentioned set of teeth, and a flexible reservoir for holding a liquid attached to said body portion.

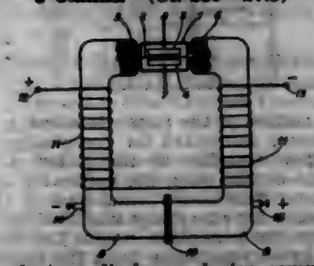


2,031,775
ELECTRODYNAMIC SOUND REPRODUCING APPARATUS
Donald Thomas Hinchen, Sydney, New South Wales, Australia, assignor to The Magnavox Company, Fort Wayne, Ind., a corporation of Arizona
Application April 28, 1934, Serial No. 722,932
5 Claims. (Cl. 179—115.5)

5. In a securing means for an inside type of centering spider for an electrodynamic cone diaphragm, the combination of a center pole piece having an abutment formed upon the projecting end thereof, a diaphragm having an annular actuating coil disposed about said pole piece, a flexible transversely extending coil centering member secured to said diaphragm and at one side engaging said abutment, securing means

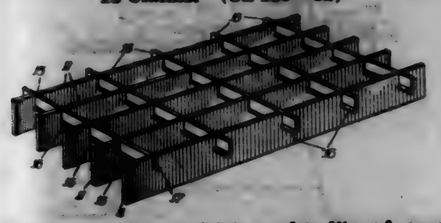
adapted to engage the other side of said centering member at its center having a portion which extends through the centering member and engages said abutment with a splined connection, and a screw threaded means for securing said means against the centering member and clamping said member upon said abutment.

2,031,776
STIFFENING OF DOUBLE COLLARS
Robert Hönigsberg, Vienna, Austria
Application February 7, 1935, Serial No. 5,439
In Germany February 9, 1934
2 Claims. (Cl. 2—132)



1. A folded collar including a neckband and an outer fold connected with said band and having front tips, a stiffening member, a support for one end of said stiffening member at each tip of the outer fold, each stiffening member extending obliquely to the tip of the collar, a cross piece carried by the terminal of the stiffening member disposed adjacent the collar fold and extending obliquely to the stiffening member with the acute angle at the front, a support for said cross piece locking the latter against accidental withdrawal, the portion of said stiffening member lying between said supports being freely disposed.

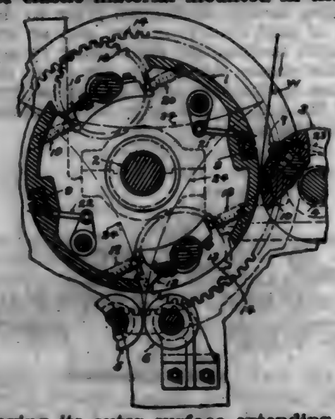
2,031,777
CAR TRUCK
George T. Johnson, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio
Application April 26, 1931, Serial No. 533,543
7 Claims. (Cl. 105—221)



1. In combination, a pedestal type side frame for car trucks having depending jaws and a transverse web at the upper ends of the same, stop flanges connecting the jaws and web and cooperating with the same to form pockets, a journal box having upper lugs extending into said pockets, and a retaining plate secured to the lower end of one of said jaws and bearing against the bottom of the journal box, said retaining plate having stop flanges and substantially vertical walls forming pockets.

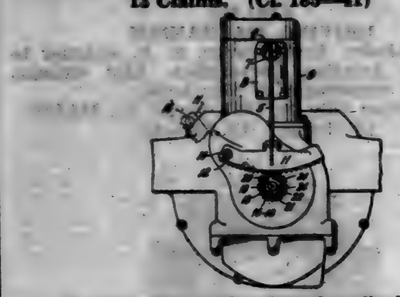
2,031,778
MAGNETRON
Wilhelm Eberhard Köhler, Dietrich Prins, and Felix Henrique, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application August 29, 1935, Serial No. 36,949
In Germany July 5, 1934
3 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an elongated evacuated envelope containing a straight thermionic cathode extending thru opposite ends of said envelope and an anode, magnetic poles positioned close to the ends of said envelope to provide a magnetic field parallel to said cathode, said poles being electrically insulated from each other and connected to opposite ends of the thermionic cathode to serve as current leads for said cathode.



2,031,779
GRATING AND METHOD OF MAKING SAME
Walter F. Ladd, Gary, Ind.
Application June 29, 1933, Serial No. 678,144
12 Claims. (Cl. 189—32)

1. A grating comprising a plurality of spaced parallel main bars having slots therein communicating with their edges and cross bars disposed within said slots, each of said cross bars having portions turned from the plane of said cross bar and abutting adjacent side faces of adjacent main bars.

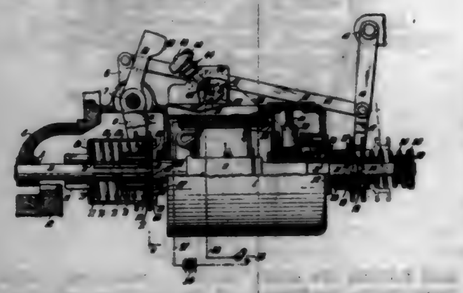


2,031,780
ROTARY CUTTING AND FOLDING MECHANISM FOR PRINTING MACHINES
Frederick Lamatsch, Grantwood, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York; Irving Trust Company, New York, N. Y., permanent trustee
Application February 19, 1932, Serial No. 593,963
1 Claim. (Cl. 270—77)

A cutting and folding mechanism including a folding cylinder and a cutting cylinder, web cutting means mounted in the peripheral portions of the cylinders and coacting to cut the web into separate sheets, pins operably carried by the folding cylinders to temporarily hold the leading edge of the web and sheets, folding rollers operably mounted adjacent the folding cylinder, a folding blade operably carried by the folding cylinder and adapted to cooperate with the folding rollers to fold the sheets from the folding cylinder, a socket formed in the cutting cylinder in advance of and immediately adjacent the cutting means, a soft yieldable nipper formed entirely of elastic material mounted in the socket

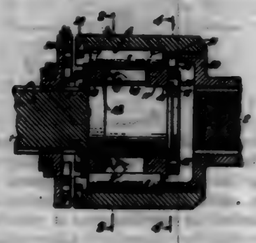
and having its outer surface extending radially beyond the periphery of the cutting cylinder to engage the web and sheets, this outer surface being parallel to the peripheral surface of the cutting cylinder and coextensive with the greatest transverse dimension of the nipper.

2,031,781
ENGINE STARTING APPARATUS
Raymond P. Lansing, Montclair, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application September 28, 1931, Serial No. 565,646
13 Claims. (Cl. 185—41)



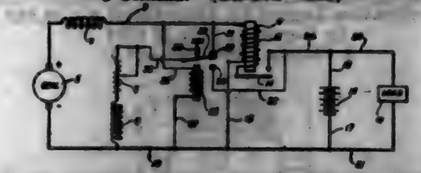
1. In apparatus of the class described, a driven member to be rotated, means for imparting stored energy to said driven member in successive impulses, said means comprising a resilient member mounted to oscillate as a pendulum, and means for drivably connecting the oscillating end of said resilient member to said driven member.

2,031,782
ENGINE STARTING MECHANISM
Raymond P. Lansing, Montclair, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application October 30, 1931, Serial No. 572,210
Renewed March 11, 1935
20 Claims. (Cl. 290—38)



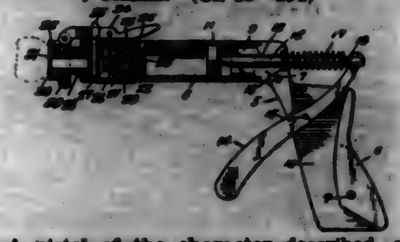
1. In apparatus of the class described, an engine driven member, an electric motor having a

driving shaft, a motor-driven member driven therefrom and normally out of engagement with said engine member, means for moving said motor-driven member into engagement with said engine member, means for disengaging said motor-driven member, means for rendering said disengaging means ineffective prior to de-energization of said electric motor, and an overrunning clutch mechanism facilitating re-acceleration of the engine member in the event that the latter loses momentum after the initial firing impulse of the engine, but prior to de-energization of the electric motor.



5. In an engine starting mechanism, a driving motor, a rotatable shaft projecting from said motor at both ends thereof, a driving member mounted on one end of said shaft for longitudinal movement thereof and rotary movement therewith and adapted to cooperate with and drive a member of the engine to be started, a control member mounted on said shaft at the opposite end of said motor for longitudinal movement thereof and rotary movement thereon, and a driving connection between said two members.

2,031,783
DRIVING MECHANISM
Francis Linder, East Orange, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application July 30, 1931, Serial No. 554,963
18 Claims. (Cl. 192—45)



1. An overrunning clutch comprising a driving member, a driven member, rollers intermediate the members, wedging elements intermediate one of the members and the rollers, cams acting upon rotation of the driving member in one predetermined direction only to move the wedging elements substantially radially and engage them with the rollers and effect a locking action of the rollers between the wedging elements and one of said members, and means integral with the wedging elements for holding them in contact with the cams during overrunning of the driven member.

2,031,784
ELECTRICAL APPARATUS
Charles I. McNeill, Bloomfield, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application January 31, 1934, Serial No. 709,210
2 Claims. (Cl. 171—314)

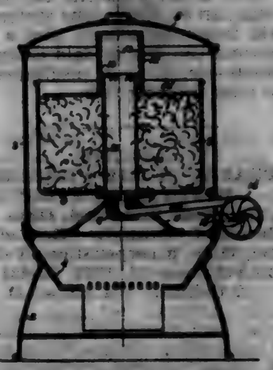
1. In a system of the class described, a battery and generator connected for energization of the former upon rotation of the latter, a reverse current cut-out between the generator and battery, a shunt field constituting part of the generator, means for energizing said field by current taken from the generator, means for energizing said field by current taken from the battery, and selective means for rendering said energizing means successively effective, said selective means comprising a switch connecting said shunt field with the generator during the initial excitation period and movable substantially simultaneously with the closing of said reversed current cut-out to a position insuring excitation of said shunt field directly from the battery.

2,031,785
FIREARM
George H. North and Roy J. Baker, La Crosse, Kans.
Application February 11, 1935, Serial No. 6,004
7 Claims. (Cl. 46—194)

1. A pistol of the character described, comprising a stock forming a handle, a piston cylinder carried by said stock, a piston working within the cylinder, a trigger pivoted to the handle and operating said piston, a reduced tip on said cylinder for discharging air therefrom, a return check valve within said tip, a discharge nozzle carried by the cylinder at the tip thereof, and means for the clamping of an explosive cap upon the nozzle for explosion under pressure of air from the tip.

2,031,786
APPARATUS FOR MAKING GOLF BALLS
John M. Oldham, Detroit, Mich., assignor to L. A. Young Company, Detroit, Mich.
Original application November 13, 1933, Serial No. 697,778. Divided and this application April 14, 1934, Serial No. 720,731
9 Claims. (Cl. 18—36)

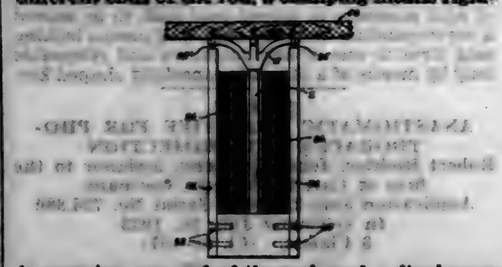
1. A mold for applying a shell to golf balls, comprising complementary segmental hemispherical sections having flanges on the edges thereof, the flanges having sprue passages therein opening into the mold in 90-degree angular relation, the sections having central opposed sprue passages opening in the mold in 90-degree angular relation relative to the passages in said flanges,



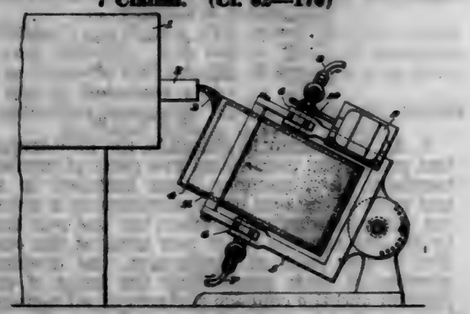
the molds also having vent openings disposed in 90-degree angular relation to each other and centrally relative to the adjacent sprue passages.

2,031,787
SULPHURIC ACID CONTACT PROCESS
John H. Perry and Karl E. Ridler, Shaker Heights, Ohio, assignors to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application November 30, 1934, Serial No. 755,354
4 Claims. (Cl. 23—175)

1. A catalyst for use in a contact sulphuric acid process comprising platinum deposited upon a magnesium sulphate—aluminum sulphate—iron sulphate carrier.



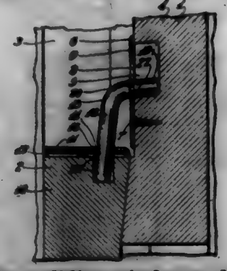
2,031,788
LINEN WASHING MACHINE
Jules Perroens and Alphonse Perroens, Thildonck, Belgium
Application February 27, 1934, Serial No. 713,894
In Belgium March 1, 1933
2 Claims. (Cl. 68—37)



1. In a machine for the washing of linen, in combination, a first vat, a second vat inside the first vat and adapted to contain the linen to be washed the said second vat being provided with perforated side walls, a pump, a perforated central tube extending in the said second vat, the said tube being provided at its upper portion with projections, a plate at the upper portion of the second vat whereby a pressure is exerted upon the linen, a tubular portion bodily connected with the said plate and provided with racks engaging the projections of the tube arranged in the said second vat whereby the said plate is adapted to be fixed in adjustable positions to the said tube, means whereby a washing liquid is fed from the said pump into the said perforated tube, passes afterwards through the linen and flows back in passing through the outer vat to the pump.

2,031,789
ACOUSTIC ELECTRIC ENERGY CONVERTER
George Washington Pierce, Cambridge, Mass.
Application August 9, 1933, Serial No. 684,642
9 Claims. (Cl. 179—110)

1. In a sound reproducer, a metallic rod having strong magnetostrictive qualities, an electro-magnetic coil encircling said rod and spaced slightly therefrom, a strong permanent magnet arranged with opposite poles thereof opposite different ends of the rod, a clamping means rigidly securing one end of the rod, and a diaphragm connected to the opposite end of the rod, said coil when connected to alternating current being effective to vibrate the diaphragm in accordance with the current.



2,031,790
METHOD OF COOLING MOLTEN MATERIAL
Edward J. Franke, Great Barrington, Mass., assignor to E. I. du Pont de Nemours & Company, Inc., a corporation of Delaware
Application October 12, 1931, Serial No. 568,517
7 Claims. (Cl. 62—170)

1. The process of rapidly cooling molten cyanid which consists in tapping a stream of the molten cyanid from a furnace, causing it to impinge immediately and without substantial loss of temperature upon a cooled surface substantially inclined from the horizontal and spreading the molten cyanid thereon by moving the surface laterally relative to the said stream, whereby a thin layer of the cyanid remains in contact with the surface until substantially cooled.

2,031,791
WINDOW SASH LOCKING MEANS
Parker Riddle, Pittsburgh, Pa.
Application May 18, 1935, Serial No. 22,156
12 Claims. (Cl. 70—14)

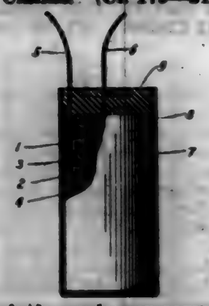
1. A lock for a sliding window sash comprising a lock member carried by said sash, an interlocking

member carried by a window element which is separate from said sash, a strut locked to both of said members and being slidable in the direction of its length a limited distance relative to one of said members to permit said sash to be moved a corresponding distance only, and means locking said strut to one of said members and releasable only by means of a separate especially shaped key.

2,031,792
ANASTIGMATIC OBJECTIVE FOR PHOTOGRAPHY AND PROJECTION

Robert Richter, Jena, Germany, assignor to the firm of Carl Zeiss, Jena, Germany

Application July 25, 1934, Serial No. 736,880
In Germany July 26, 1933
9 Claims. (Cl. 88—57)

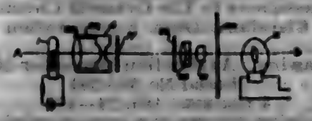


1. An anastigmatic objective for photography and projection, comprising two pairs of meniscal members, each member being bounded by air, and each of the said pairs consisting of a diverging and a converging member, the one pair lying at the one and the other pair lying at the other side of the locus of diaphragm, the diverging member of each pair facing the locus of diaphragm, the concave surfaces of all members being turned toward this locus, those surfaces of each pair which face each other having different radii of curvature and those surfaces of the diverging members which face the locus of diaphragm being spaced at a distance greater than four fifths of the arithmetical means of the radii of curvature of these two surfaces.

2,031,793
ELECTROLYTIC DEVICE

Preston Robinson, Williamstown, Mass., assignor to Sprague Specialties Company, North Adams, Mass., a corporation of Massachusetts

Application August 3, 1934, Serial No. 738,346
11 Claims. (Cl. 175—315)

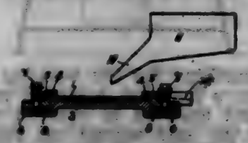


1. An electrolytic condenser comprising at least one film-forming electrode, and a viscous electrolyte comprising a fixed amount of water, and a dehydratable substance, said substance being in such a condition of equilibrium with regard to the electrolyte that upon any loss of water from the electrolyte a dehydration of said substance takes place.

2,031,794
MOVING PICTURE SOUND RECORDING AND REPRODUCING APPARATUS

Paul Safranski and King Rose, New York, N. Y.

Application June 25, 1932, Serial No. 618,165
1 Claim. (Cl. 179—100.3)

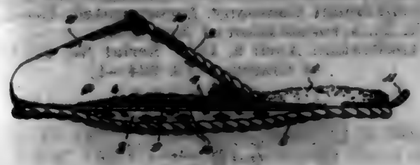


Apparatus for recording sound upon photographic film and reproducing it therefrom, comprising a source of light, a relatively small cylindrical casing having a lens member positioned on the optical axis of said light source having opposed concave cylindrical surfaces, a light gate through which a light beam from the concave surfaces of said lens member may pass, said lens member and light gate positioned adjacent the end of the casing positioned adjacent said light source, trimming means positioned to define said light beam adjacent the opposite end of said casing, an objective lens system positioned beyond said trimming means, and a photo-electric cell beyond the end of said casing, said casing and photo-electric cell positioned to permit the film to pass therebetween.

2,031,795
APPARATUS FOR PRODUCING BIMETALLIC STRIP

George S. Salzman, Cleveland, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a corporation of Ohio

Application February 22, 1933, Serial No. 656,100
2 Claims. (Cl. 207—11)



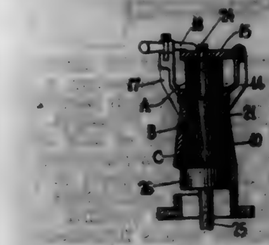
1. In apparatus of the character described, the combination of a supporting bed adapted to receive a strip of steel passing thereover, and overhanging flanges mounted on said supporting bed adapted to cover and frictionally contact the marginal portions of the surface of a strip passing over said bed, said flanges being provided with overflow openings at a predetermined level.

2,031,796
SLIPPER

Susan Stephens, Louisville, Ky.

Application October 1, 1934, Serial No. 746,433
1 Claim. (Cl. 36—9)

A slipper composed of washable material and comprising an insole and an outer sole secured together along the greater portions of their edges but separated along one side whereby to form a pocket open at one side between the insole and the outer sole, a reinforcing insole of stiff material insertible in and removable from said pocket through the open side of the same, and separable fasteners secured upon the opposing surfaces of

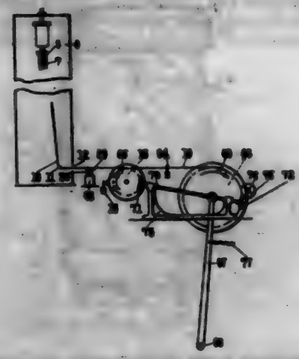


the inner and outer soles whereby to normally close the open side of the pocket.

2,031,797
FIXTURE FOR ASSEMBLING RUBBER ARTICULATED JOINTS

John P. Tarbox, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania

Application February 25, 1931, Serial No. 518,057
Renewed September 12, 1933
4 Claims. (Cl. 25—33.2)



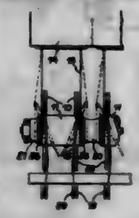
1. An apparatus for telescopically fitting together relatively rigid elements one of which circumscribes the other and an intervened annulus of rubber which spaces them apart under substantial radial stress which consists of a funnel through which a plurality of rubber annuli may be forced simultaneously, means cooperating with the funnel for forcing said annuli axially of the funnel, means for internally spreading the rubber annuli and for aligning said elements upon the axis of the funnel and carried by at least one of said elements within the funnel, an abutment movably connected with the funnel and located in its operative position in spaced axial relation to the small end of said funnel and movable from a position axially juxtaposed to the small end to an inoperative position out of axial alignment therewith and means coacting with the movable abutment for locking the relatively rigid elements in their axially aligned positions.

2,031,798
MANUFACTURE OF ARTIFICIAL MATERIALS

William Ivan Taylor, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware

Application November 16, 1932, Serial No. 642,867
In Great Britain November 27, 1931
2 Claims. (Cl. 18—8)

1. Apparatus for the production of banks of artificial filaments, yarns, threads and like filamentary materials, said apparatus comprising in combination means for producing an artificial material, a feed-roller adapted to draw said material, a standard adapted to oscillate about a pivot, a rotatable reel mounted on said standard and adapted to take said material from said feed-roller and to wind it in bank form, means adapted to drive frictionally said reel from said feed-roller, and means adapted to move said standard about said pivot so as to control the drive to said



reel so that the rate of winding the material is maintained substantially equal to the rate of drawing irrespective of change of diameter of the package being wound.

2,031,799
APPARATUS FOR FEEDING AND WINDING TEXTILE THREADS

William Ivan Taylor and Alfred Herbert Woodruff, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware

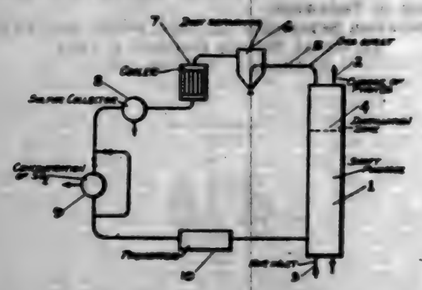
Application September 25, 1934, Serial No. 745,380
In Great Britain October 4, 1933
10 Claims. (Cl. 18—8)

1. Apparatus comprising a feed-roller for a thread, a waste-roller disposed adjacent to said feed-roller, thread guide means movably mounted so as to direct a thread either to the feed-roller or to the waste-roller, and thread-controlled means adapted to maintain the guide means in position to direct a thread to the feed-roller so long as the thread continues to be fed from the feed-roller and to cause the guide means to move into position to direct the thread to the waste-roller on cessation of the feeding of the thread from the feed-roller.

2,031,865
PRESERVING JAR

William A. Thiele, North Tonawanda, N. Y.

Application January 5, 1933, Serial No. 650,133
5 Claims. (Cl. 215—37)

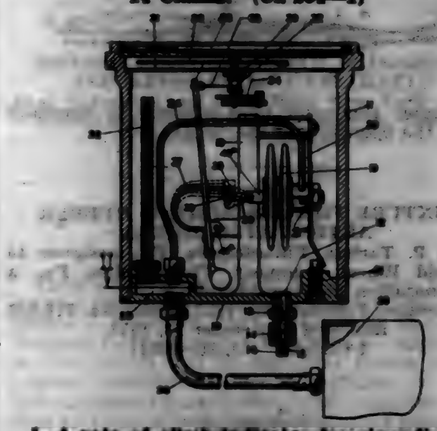


1. The combination with a receptacle having a bottom that is incapable of supporting the receptacle in upright position, of a cover-securing, lever-operated yoke mounted on the receptacle in upright position, and a combined support and closure member having means on one side for closing the receptacle when in use as a closure and for receiving and engaging the lower portion of the receptacle when in use as a support, and

having legs on the other sides to support the member and receptacle, the said legs projecting axi-

ially a distance from said closure at least as great as said yoke to permit the yoke to pass over them.

2,031,861
BURNING OF PYRITES
Daniel Tyrer, Norton-on-Tees, England, assignor to Imperial Chemical Industries, Limited, London, England, a British company
Application October 11, 1932, Serial No. 637,845
In Great Britain October 15, 1931
7 Claims. (Cl. 23—226)



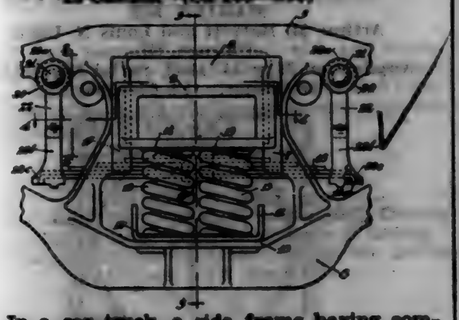
1. In a process of roasting pyrites the step of moving pyrites in a roasting furnace through a distillation zone and a combustion zone in counter current to a gas stream, said gas stream being formed by introducing into said combustion zone a restricted quantity of a gas containing free oxygen and an amount of a sulfur dioxide containing preheated gas, said amounts of gases being so adjusted that the gases around the top of the combustion zone are substantially free from oxygen and have a sulfur dioxide concentration of at least 20%.

2,031,862
RECOVERY OF SULPHUR DIOXIDE FROM GAS MIXTURES
Daniel Tyrer, Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application May 6, 1933, Serial No. 669,769. In Great Britain May 6, 1932
1 Claim. (Cl. 23—178)

A process for the regenerative absorption of sulphur dioxide which includes the step of washing an SO_2-containing gas with an aqueous solution containing a soluble mono-basic phosphate and sodium citrate.

2,031,863
RATE OF CLIMB INSTRUMENTS
Adolf Urfer, Brooklyn, N. Y., assignor to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y., a corporation of New York
Application April 9, 1930, Serial No. 443,720
14 Claims. (Cl. 264—1)

1. A rate of climb indicator for aircraft comprising, in combination, a chamber, a second chamber, a yielding wall between said chambers and subject to differential pressures in said chambers, means placing one of said chambers in communication with the atmosphere, means placing the other of said chambers in restricted communication with the atmosphere, indicating means controlled by the yielding wall, and temperature responsive means intermediate said indicating means and yielding wall for correcting error in the instrument indication caused by changes in the viscosity of air from different temperatures.



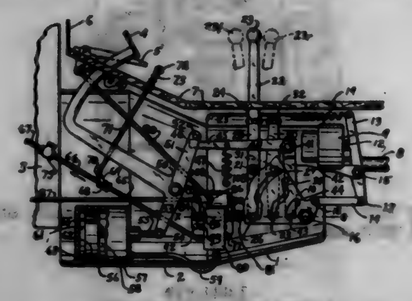
2,031,864
VENETIAN BLIND
August T. Vietori, Pawtucket, R. I., assignor to Artcraft Venetian Blind Company, Hazleton, Pa.
Application March 14, 1934, Serial No. 715,344
1 Claim. (Cl. 156—17)

In a Venetian blind including a top rail, a bracket connected to one end of the top rail and having a pinion attached thereto, a second bracket attached to a stationary member, a pair of spaced horizontal arms on the second bracket extending to a point above the first bracket and said second bracket having a hole therein located below the arms for receiving a part of the first bracket, a shaft journaled in the arms of the second bracket and having a worm thereon engaging the pinion, a pulley on the shaft, a cord

passing over the pulley and depending therefrom, said second bracket having a horizontally arranged part connected with its lower end, said part having a pair of spaced holes therein through which the two parts of the cord pass.

2,031,865
CAR TRUCK
Edwin W. Webb, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a corporation of New Jersey
Application July 2, 1934, Serial No. 733,746
18 Claims. (Cl. 105—206)

1. In a car truck, a side frame having compression and tension members and bolster columns extending between the said members and defining a lateral opening, a bolster working within said opening, a spring supported by said tension member and assisting to support said bolster and a spring supported beneath said bolster by said compression member and assisting to support said bolster.



2,031,866
KNOCK-DOWN POLYGONAL WEBBED END-CLOSING CONTAINER
Arthur J. Weiss, St. Albans, N. Y., assignor to Robert Gair Company, Inc., New York, N. Y., a corporation of Delaware
Application April 24, 1934, Serial No. 722,114
23 Claims. (Cl. 229—37)

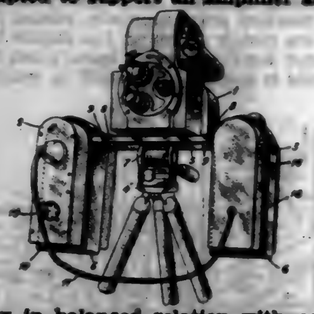
1. A container having major body forming panels opposed to each other forming relatively wide front and rear walls, minor body forming panels scored and angularly disposed from said major panels and each other and located opposite one another to form relatively narrow, bent side walls and a plurality of connected end closing flaps and webs on all said panels one of said flaps including an interlocking member to lock the ends of the container and being adapted to close the ends of said container when infolded and interlocked.

2,031,867
POWER TRANSMITTING DEVICE FOR AUTOMOTIVE VEHICLES
Oscar Werner, Cleveland, Ohio
Application January 25, 1932, Serial No. 587,638
27 Claims. (Cl. 192—.01)

1. In an automotive vehicle having an internal combustion engine, a clutch and a gear-changing transmission, automatic means for shifting the transmission gears when the proper vehicle speed has been reached and automatic means for disengaging the clutch whenever the engine throttle is closed and for re-engaging same when the engine throttle is opened sufficiently to synchronize

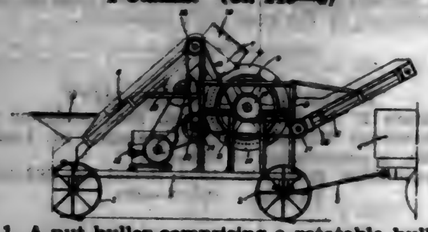
the speed of the engine with the speed of the driven shaft of the transmission, and interlocking means for preventing the shifting of the gears while the clutch is engaged and for preventing the reengagement of the clutch previous to the completion of the gear shift operation.

2,031,868
BASEBALL GLOVE OR MITT
William P. Whitley, Clayton, Mo., assignor to Rawlings Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application March 29, 1933, Serial No. 663,255
1 Claim. (Cl. 2—19)



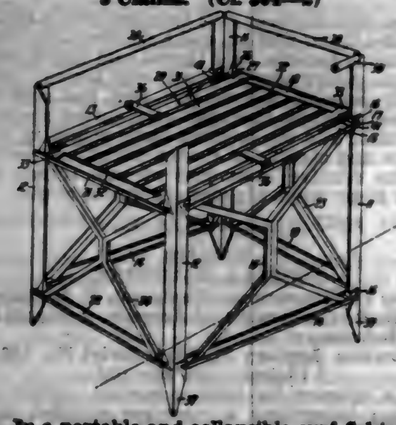
A baseball glove or mitt provided with a thumb, an index finger portion, and a skeleton-like bridging means between said thumb and index finger portion, comprising a rearwardly bowed, transversely-disposed top member that has sufficient inherent stiffness to remain in a curved shape or condition, said top member being round in cross section and capable of flexing slightly to provide for the relative movement of said thumb and index finger when the glove or mitt is in use.

2,031,869
CAMERA MOUNTING
Arthur G. Zimmerman, Westmont, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 31, 1934, Serial No. 709,078
5 Claims. (Cl. 88—16.2)



1. A support for talking motion picture apparatus comprising a cross-bar adapted to be supported upon a tripod, and clamped thereto by a motion picture camera resting upon the

cross-bar, and a yoke at each end of said cross-bar adapted to support an amplifier and a bat-

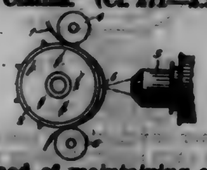


tery box in balanced relation with each other and with said camera.

2,031,810
WALNUT HULLER
W. Charles Anderson, Linden, Calif., assignor to Anderson Orchard Company, Linden, Calif., a corporation of California
Application December 12, 1933, Serial No. 701,988
4 Claims. (Cl. 146—8)

1. A nut huller comprising a rotatable hulling reel, a cooperating concave including spaced bars arranged in a row substantially concentric with the reel and parallel to its axis; certain ones only of such bars being freely turnable, and the turnable bars being of such cross sectional form as to have longitudinal edges further from the axis of rotation than the sides of the bars.

2,031,811
SURF FISHING DEVICE
Eugenio A. Azzara, San Francisco, Calif.
Application August 13, 1934, Serial No. 739,806
3 Claims. (Cl. 294—2)

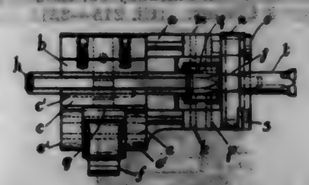


1. In a portable and collapsible surf fishing device of the character described, a plurality of structural members detachably retained together to form a raised platform, said members including four upright corner members having depending lower ends forming sand spikes, platform members releasably carried by the corner members, and lower lateral members interlocked with said corner members and presenting substantial bearing areas upon the sand, said interlock being releasable only upon upward movement of the corner members relative to the lateral members.

2,031,812
METHOD OF AND APPARATUS FOR MAKING ICE
Arthur M. Barrett and Louis N. Udell, Chicago, Ill.
Application May 15, 1933, Serial No. 671,022
18 Claims. (Cl. 62—104)

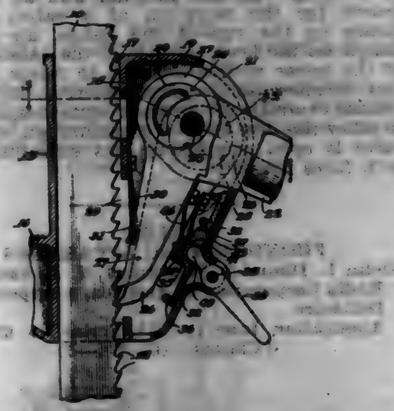
1. A method of making ice, which consists in moving a cold-conducting cell-like container through a body of water and in separable contact with a cold-conducting member containing a freezing medium for a sufficient time to form a block of ice within said container.

2,031,813
PHONOPHOTOGRAPHIC APPARATUS
Cecil N. Batsel, Collingwood, and Edward W. Kellogg, Maplewood, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application January 3, 1935, Serial No. 949,994
7 Claims. (Cl. 271—2.3)



1. The method of maintaining a film in contact with a supporting drum at an operational point comprising the step of flexing the film so that it is urged by only its own flatwise elasticity against the drum at the said operational point.

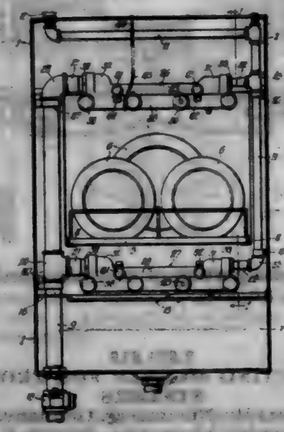
2,031,814
DEVICE FOR REMOVING DRILLS OR OTHER ARTICLES FROM THEIR SHAFTS
Reginald Aslins Bedford, Stumperlowe, Sheffield, England
Application September 19, 1935, Serial No. 41,237
In Great Britain September 24, 1934
6 Claims. (Cl. 29—96.1)



1. A device for separating joined components capable of being forced apart comprising a base block for accommodating the joined components, gripping means provided on said base block and

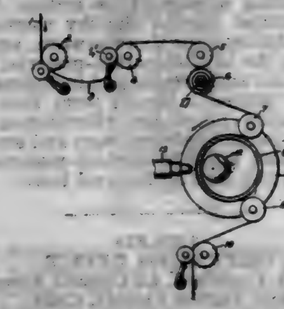
operable upon one of said components, a slidable impact member positionable and operable against the other of said members and an anvil member mounted about a pivot on the base block adjacent to the impact member and adapted, on being

struck by a hammer, to contact with and transmit impacts to the slidable impact member and cause the latter to impinge against the said other member so as to force it apart axially from the one member.



2,031,815
LIFTING JACK
Louis C. Berman, Chicago, Ill., assignor to Duplex Tool Co., Chicago, Ill., a corporation of Illinois
Application September 5, 1935, Serial No. 39,114
16 Claims. (Cl. 254—116)

1. A lifting jack embodying a standard provided with teeth, a load engaging member movable along the standard, a pair of alternately acting pawls carried by said load engaging member and co-operating with said teeth, opposed springs between which each of said pawls operate, a controlling and reversing slide adapted to act on said springs, means for actuating said slide, and means for yieldingly locking said slide in its adjusted position.

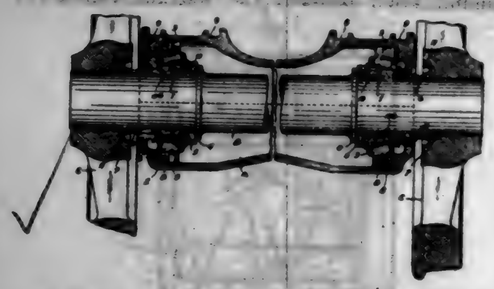


2,031,816
DISHWASHING MACHINE
Edward L. Blakeslee, Oak Park, Ill., assignor to G. S. Blakeslee & Co., Cicero, Ill., a corporation of Illinois
Application May 27, 1933, Serial No. 672,789
8 Claims. (Cl. 141—8)

1. In combination in a dish washing machine, a casing, a washing solution pipe at one side of the casing, a rinse water pipe at the other side of the casing, a spray head disposed between the pipes and comprising washing spray means and rinsing spray means, and means pivotally connecting the head at the sides thereof to the pipes for movement on an axis extending transversely of the casing, said connecting means establishing communication between the washing solution

pipe and the rinse water pipe and the washing spray means and the rinsing spray means, respectively.

2,031,817
FILM DRIVING APPARATUS
Arthur J. Bradford, Alpinus, N. Y., assignor to General Electric Company, a corporation of New York
Application May 14, 1929, Serial No. 363,053
9 Claims. (Cl. 274—5)

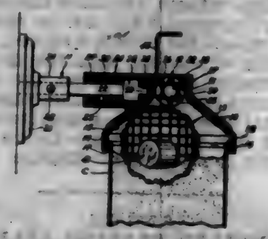


1. Apparatus of the character described for moving a film without vibration through a point of control comprising a film driven smooth faced drum over which the film is wrapped, an inertia mass directly connected with the drum, means for withdrawing the film from the drum, and braking means engaging the film passing to the drum operative to produce a predetermined tension of the film on the drum for causing it to adhere to the drum without slippage.

2,031,818
ROLLER BEARING AXLE
Tracy V. Buckwalter, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application October 6, 1934, Serial No. 747,182
3 Claims. (Cl. 287—52)

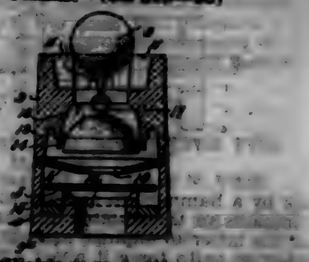
3. A car wheel having a hub portion provided with an axial axle receiving bore and an annular

groove in at least one end of said hub portion of such proportion as to reduce the tightness of



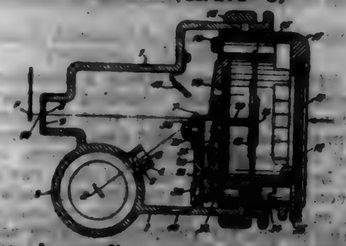
fit of the end portion of said hub portion when pressed on an axle.

2,031,819
COLLECTING MEMBER FOR TROLLEY SYSTEMS
Ottmar Conradty, Nuremberg, Germany, assignor to C. Conradty, Nuremberg, Germany, a firm
Application December 15, 1933, Serial No. 702,521
In Germany December 27, 1933
6 Claims. (Cl. 191—55)



1. A substantially non-frangible trolley-collector, comprising a support, a brittle, frangible contact-material carried thereby thereon, with flexure-producing gaps therebetween, and means for relieving the brittle contact-material from all flexure-strains and stresses and including a binder-material poured in liquid form into all said gaps and upon hardening effectuating perfect mechanical contact between each and every point of the support and the contact-material so as to unite the two into an integral body.

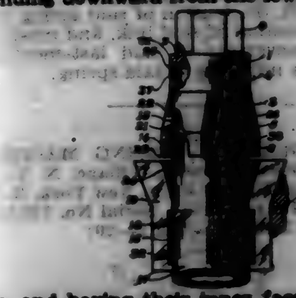
2,031,820
DISPENSING DEVICE
Harvey B. Crawford, La Canada Township, Los Angeles County, Calif.
Application January 12, 1935, Serial No. 1,530
8 Claims. (Cl. 221—196)



1. A device for dispensing material from a container including a body for carrying the container, a valve for discharging the material from the body, and an unsecured hollow perforate agitator resting on the valve to be moved about by actuation thereof to agitate said material for free flow through the valve.

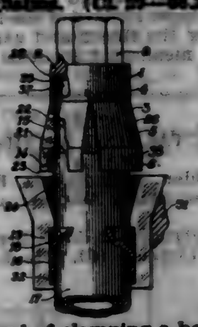
2,031,821
AUTOMATIC BOTTLE STOPPER
Juan Bautista Della Libera y Silicani, Habana, Cuba
Application November 8, 1933, Serial No. 697,149
In Cuba January 12, 1933
3 Claims. (Cl. 215—35)

1. A non-refillable type bottle stopper adapted to be placed in the neck of a bottle, comprising an external sectional shell structure having upper and lower sections with ports in each end surface of the structure to permit the flow of liquid therethrough, each section forming a chamber adapted to house independent valve units, said upper section having a downwardly extending annular flange about the port therein, forming with the external wall an annular groove for the reception of a valve, spacing means on the rim of the flange, an annular flange, on the lower surface of the external wall of the upper section adapted to retain a valve seat member and a semi-spherical valve seat located centrally of the lower section, and means to allow the flow of fluid therethrough when the valve is open comprising lugs extending from both faces thereof.



2,031,822
PHONOGRAPHIC APPARATUS
Glenn L. Dimmick, Westmont, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 1, 1932, Serial No. 615,862
6 Claims. (Cl. 274—5)

1. Sound recording apparatus including a diaphragm, means arranged to form chambers on opposite sides of said diaphragm, an additional compartment adjacent one of said chambers, and acoustically damped passageways extending between said compartment and said chambers.



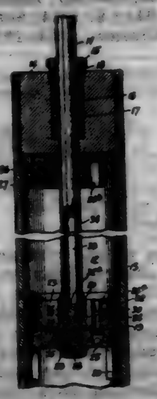
2,031,823
PRESSED-ON HOSE COUPLING
Joseph Peter Eastman, Manitowoc, Wis.
Application April 30, 1934, Serial No. 723,517
6 Claims. (Cl. 285—34)

2. A hose coupling comprising an end wall and a sleeve projecting therefrom, said sleeve being adapted to receive the end of a hose, and to be contracted to grip the same, said sleeve comprising an upper portion in the form of an unbroken tube attached to said end wall, and a plurality of tongues, each such tongue being substantially in the form of a wedge when viewed in axial section with respect to the coupling, said wedges having their thin ends upward, attached to and extending downward from the lower edge of said

tube, and having their inner faces substantially vertical before contraction, to admit the hose, said inner faces sloping inward after contraction, their lower ends thereby then gripping the hose, said inward sloping being due to said wedges having been bent inward at their thin ends aforesaid, during said contraction.

2,031,824
METHOD OF PRESSING A COUPLING ON TO A HOSE
Joseph Peter Eastman, Manitowoc, Wis.
Original application April 30, 1934, Serial No. 721,517. Divided and this application August 28, 1934, Serial No. 741,149
5 Claims. (Cl. 29—203.5)

1. The method of clamping a hose coupling on to the end of a hose which consists in positioning the segments of a split die around a band, the band then lying in a recess provided in the die, forcing the coupling endwise into the die and into the band, thereby contracting the coupling to grip the hose, and then removing the segments of the die, leaving the band encircling the coupling.

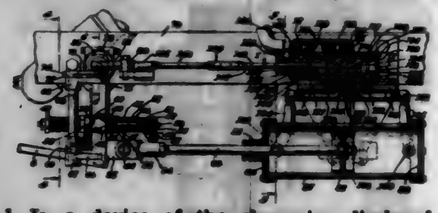


2,031,825
RENEWABLE HOSE COUPLING
Joseph Peter Eastman, Manitowoc, Wis.
Refiled for abandoned application Serial No. 752,483, November 18, 1934. This application September 3, 1935, Serial No. 39,883
6 Claims. (Cl. 285—34)

4. A hose coupling comprising two members adapted each to encircle a hose, means for drawing said members toward each other in axial direction, a gripping sleeve having tongues, and means, operated automatically by said drawing together, for causing said tongues to be pressed inward into the substance of the hose to grip the same, said tongues being, upon completion of said drawing together, each substantially in the form of an outwardly concaved arch, the distance

of the intrusion of said tongues into the substance of the hose being equal to the thickness of said tongues plus a substantial distance due to the rise of said arches.

2,031,826
PROTECTING MEANS FOR MECHANISMS
Edward C. Ekstromer, Los Gatos, Calif., assignor of one-half to Homer J. Lloyd, Los Gatos, Calif.
Application September 22, 1934, Serial No. 745,161
11 Claims. (Cl. 286—27)

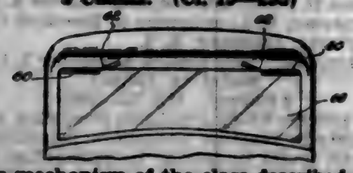


1. In combination, means defining a chamber having a mechanism therein to be protected against liquid from an exterior source; said mechanism including a vertically disposed member operating through a wall of the chamber; a receptacle carried by the member in which liquid leaking between the member and said wall into the chamber will be collected; and means co-acting with the receptacle to eject the collected liquid from the chamber and through the said member during one movement of the member.

2,031,827
PROCESS OF MAKING TETRAPHOSPHATES
Augustus H. Fiske, Warren, and Charles S. Bryan, Providence, R. I., assignors to Rumford Chemical Works, Rumford, R. I.
No Drawing. Application December 7, 1934, Serial No. 756,457
3 Claims. (Cl. 23—106)

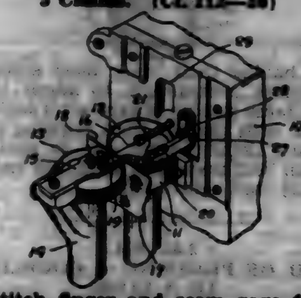
1. A process which comprises producing a tetraphosphate by reacting phosphoric pentoxide with an alkali metal hydroxide in substantially their theoretical proportions, to make a tetraphosphate.

2,031,822
BOOSTER
Marion Ames Garrison, Alhambra, Calif.
Application December 16, 1932, Serial No. 646,677
9 Claims. (Cl. 121—41)



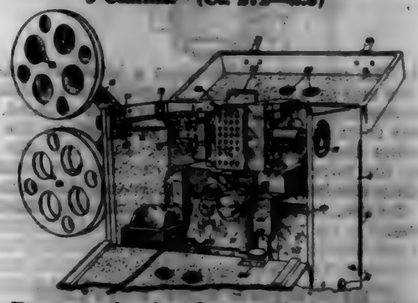
1. In a device of the character disclosed, a manually turnable shaft, two arms carried thereon, one of said arms being fixed to the shaft and the other of said arms floating thereon, said fixed arm provided with a yoke having two spaced apart legs and said floating arm being between said legs, resilient abutments between said legs of the yoke and the floating arm; each resilient abutment having a pin for push engagement with the floating arm, and a coil spring adapted to be tensioned when a pin is moved in one direction.

2,031,829
BRAKE LOCK
George W. Godsey, Elizabeth, N. J.
Application May 8, 1934, Serial No. 724,498
7 Claims. (Cl. 192—3)



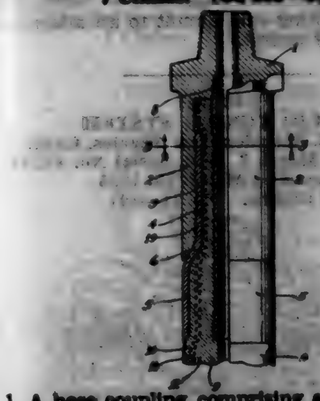
1. In a device of the character described for locking the brakes of gas engine vehicles, in combination with the engine throttle, cylinder means, a piston movable within said cylinder means and connected to the vehicle brakes, a valve operated entirely in response to the operation of the engine throttle, and fluid conducting means interconnecting said cylinder means and said valve, whereby the application of the vehicle brakes when the engine throttle is in one position causes said piston to move and effect the retention of the vehicle brakes in applied condition, whereas the movement of the engine throttle to another position initiates reverse movement of said piston, thereby effecting the release of the vehicle brakes.

2,031,830
WINDSHIELD CLEANER
Elwood Hansmann, Glencoe, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application March 7, 1934, Serial No. 714,407
3 Claims. (Cl. 15—255)



1. In mechanism of the class described, a pair of shafts, wiper blades attached thereto, power means for oscillating said shafts, a hand control for said power means, a link connected with and moved by said hand control, wedge means associated with said link, a clutch connected with one of said shafts and controlled by said wedge means, a spring having one end connected to said link and the other end connected to said last-mentioned shaft, the tension of said spring varying with the position of said link, and means for limiting the movement of said last-mentioned shaft under the influence of said spring.

2,031,831
STITCH FINGER FOR SEWING MACHINES
Charles J. Hausbeck, Queens Village, N. Y., assignor to Julius Kayser & Co., New York, N. Y.
Application June 30, 1934, Serial No. 733,956
5 Claims. (Cl. 112—38)

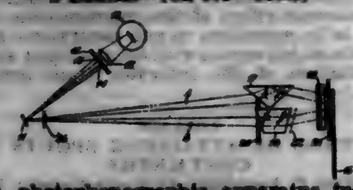


1. A stitch finger and seam gage for sewing machines of the character described, comprising a holder, means for securing the holder on the frame of the machine, means for movably attaching the finger and gage to said holder, a spring engaging the upper surface of the finger for yieldingly retaining the finger and gage in operative position, and means for securing the spring to said holder.

2,031,832
PORTABLE TALKING MOTION PICTURE APPARATUS
Harold C. Holden, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application February 12, 1932, Serial No. 592,453
9 Claims. (Cl. 271—2.3)

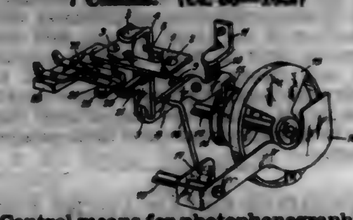
1. Drum mechanism for carrying a sound record film past a reproduction point, comprising a shaft, a drum rotatably mounted upon said shaft and adapted to be driven by the film passing thereover, an annular means having a smooth bearing face and fixed to one of the aforesaid parts, and a plurality of spring-pressed plungers co-operating with said smooth bearing face and rotationally affixed to the other of the aforesaid parts to provide a braking force upon said drum, whereby said drum operates at a uniform speed.

2,031,833
PRESSED-ON HOSE COUPLING
George Hutchinson, Manitowoc, Wis., assignor to Eastman Manufacturing Company, Manitowoc, Wis.
Application December 4, 1934, Serial No. 755,901
7 Claims. (Cl. 285—34)



1. A hose coupling comprising an outer sleeve and an inner sleeve, both said sleeves being of continuous material adapted to encircle the hose, said inner sleeve comprising an upper portion and a lower or skirt portion, both of substantial length, said outer sleeve being adapted to be permanently contracted on to said upper portion of said inner sleeve, thereby causing said portion to be also permanently contracted, to grip the end of a hose placed therein, said skirt portion then extending downward, beyond said outer sleeve, around the hose.

2,031,834
ICE CREAM PAIL
Charles B. Kliefoth, Newark, N. Y., assignor to Bloomer Bros. Company, Newark, N. Y., a corporation of New York
Application May 12, 1933, Serial No. 670,759
10 Claims. (Cl. 229—14)



1. A container for holding semi-solid material, comprising a tapered pail having a bottom at its smaller end and open at its larger end, said bottom forming a permanent tight joint with the side walls of the pail at all sides thereof, a tapered slide insertable in and removable from said pail through said open end, said slide having a bottom and side walls held in substantially tight relationship to each other by said pail, adjacent side walls being unconnected to each other along at least one corner of said slide so that when said slide is removed from said pail said side walls may be readily separated and opened up to obtain easy access to contents of said slide, and closure flaps foldable into overlapping relation to each other to form a substantially tight closure for one end of said slide.

2,031,835
RECORDING AND REPRODUCTION OF ELECTRICAL IMPULSES
Edward W. Kellogg, Moorestown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 4, 1933, Serial No. 664,238
5 Claims. (Cl. 179—100.3)

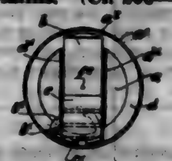
1. A photophonographic apparatus including means for modulating a pair of light beams in accordance with the sound to be recorded, a cylindrical lens interposed in the paths of said beams with its length dimension parallel to the movement of said beams, means interposed in one of said paths for reversing the movement of one of said beams, and means for producing a substantially equal sharp focus of each of said beams.

2,031,836
SOUND AND PICTURE CAMERA
Edward W. Kellogg, Moorestown, and Sidney Read, Jr., Haddonfield, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application June 3, 1933, Serial No. 674,130
7 Claims. (Cl. 88—16.3)

1. Control means for photophonographic apparatus comprising brake means, means for releasing the brake means, switch means normally actuated by said releasing means after the release of said brake means, means for actuating said switch means by said releasing means independently of said brake means, and shutter means actuated by a part of said brake means.

2,031,837
LAG COMPENSATING DEVICE
Paul Kollsman, Woodhaven, N. Y.
Application August 3, 1929, Serial No. 383,407
14 Claims. (Cl. 73—4)

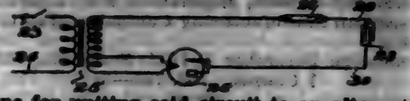
2. A device having an indicator and springs of different form and characteristics including a main spring means, and a compensating spring means, said spring means being interconnected so that the force of the compensating spring means is adapted to act counter to that of the main spring means, with a deformation in the main spring means directly causing a deformation in the compensating spring means, said



spring means being so different from each other that a change in pressure exerted on both spring means will cause a major resultant movement in one direction or in an opposite direction to actuate the indicator, and the material of the different spring means each having a specific hysteresis different than that of the other, and the spring means being so related to each other that the hysteresis effect of the compensating spring means is in opposition to and neutralizes that of the main spring means with the resultant effect of no actuation of the indicator from hysteresis effects.

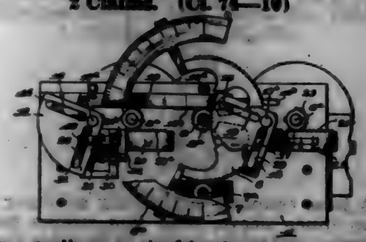
2,031,838
METHOD OF ATTACHING SPOUTS TO CONTAINERS
William F. Leonhart, St. Louis County, Mo.
Application August 27, 1934, Serial No. 741,600
3 Claims. (Cl. 113—121)

1. The method of attaching spouts to metal containers which consists in supplying a spout with one end flared and curled back close to the flared portion thereof and a flat container part having an opening and a flange around said opening of substantially equal diameter with the flared portion of the spout, placing said spout in said opening with its flared portion against the edge of said flange, moving said spout axially relatively to said container part to curl said flange over the flared and curled end of said spout to form an interlocking seam and then compressing said seam.



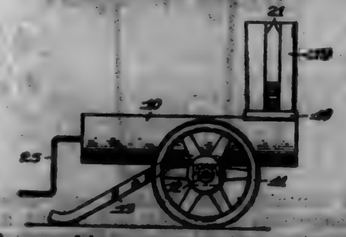
2,031,839
CONTAINER FOR LIP STICKS AND THE LIKE
Alex Limbach, Carmel, N. Y.
Application May 22, 1934, Serial No. 726,942
3 Claims. (Cl. 206—56)

1. A container for a lipstick or the like having an opening through which the material is movable, a carrier for the material movable rectilinearly within the container, an actuating disk rotatable about its central axis, means to rotate the disk, a slot in the disk extending generally radially thereof, a pin mounted on the carrier offset from the central axis of the carrier and engaging said slot whereby rotary movement of the disk imparts rectilinear movement to the carrier.



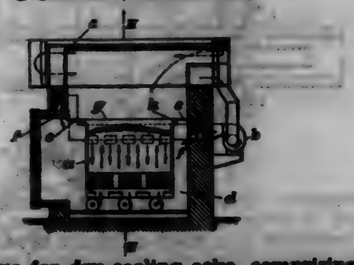
2,031,840
CONDENSER TESTER
Madison P. McCarty, Dallas, Tex., assignor of one-half to Clarence E. Bevan, Dallas, Tex.
Application February 3, 1933, Serial No. 655,876
1 Claim. (Cl. 175—183)

A condenser testing circuit comprising a neon tube, a rectifier, terminals for connecting a condenser in series with the rectifier and tube, and



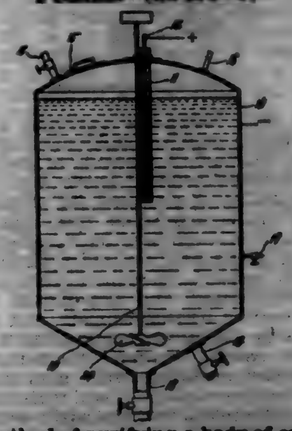
means for uniting said circuit to an alternating current supply circuit.

2,031,841
RADIO TUNING SYSTEM
George B. Marsden, Los Angeles, Calif.
Application March 2, 1930, Serial No. 432,810
Renewed March 24, 1935
2 Claims. (Cl. 74—10)



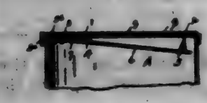
1. In a unitary control tuning system, a control member, a plurality of circuits each tuned by a variable condenser, relatively adjustable intermediate driving connections for each of said condensers comprising similar pivotally movable members rotatable by said control member at uniform rates, and a rectilinearly movable condenser operating member connectible with each of said pivotally movable members, and means adjusting at least one of said rectilinear movable members at points along a radial line of its respective pivotal member to vary the effective radii of said pivotally movable members at ratios determined by mutually tuning their respective circuits to the same wavelength.

2,031,842
TOY MACHINE GUN
Elmer C. Mitchell, Chicago, Ill.
Application January 9, 1935, Serial No. 967
4 Claims. (Cl. 124—13)



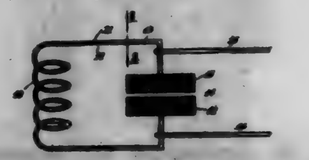
1. A toy machine gun comprising a hollow cylinder having an opening for the introduction of projectiles in the top at one end thereof and having an opening for the discharge of projectiles located eccentrically in one end thereof, a longitudinally grooved cylinder rotatably mounted within said hollow cylinder, impellers mounted in said grooves, said impellers comprising a stiffener rod, an impeller spring extending from one end of said rod and a retractor spring surrounding the other end of said rod and a cam disposed in the end of said hollow cylinder co-operating with said stiffener rod to force the same into and permit its withdrawal from the groove within which it is located.

2,031,843
APPARATUS FOR THE DRY COOLING OF COKE
Arnold Mecttcli, Winterthur, Switzerland, assignor to firm Sulzer Freres Societe Anonyme, Winterthur, Switzerland
Application November 17, 1933, Serial No. 698,413
In Switzerland November 21, 1932
1 Claim. (Cl. 202—228)



Apparatus for dry-cooling coke, comprising a closed chamber, a movable car adapted to contain a load of hot coke to be cooled in said chamber, said car having heat-conducting sides, an open top, and louvres in its bottom portion adapted for the entry of cooling fluid, a closed heat exchanger compartment, a heat exchanger in said compartment, said compartment having an inlet for fluid from said chamber and a fluid outlet, the opening in the top of the car being registrable and deregistrable with the inlet to said heat-exchanger compartment and forming a substantially gas-tight joint therewith, whereby fluid entering said compartment when the opening in the top of the car is in registration with said inlet must first pass through said car, and means for directing a fluid completely around and in contact with the sides of the car and through said louvres into and through a body of coke contained in said car, and then over the heat exchanger and back into contact with the side walls of the car, said means including a passage from the heat exchanger compartment to said chamber and means for causing a circulation of fluid through said passage.

2,031,844
MANUFACTURE OF CAUSTIC SODA
Hugh K. Moore, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a corporation of Maine
Application October 26, 1932, Serial No. 695,198
2 Claims. (Cl. 204—9)

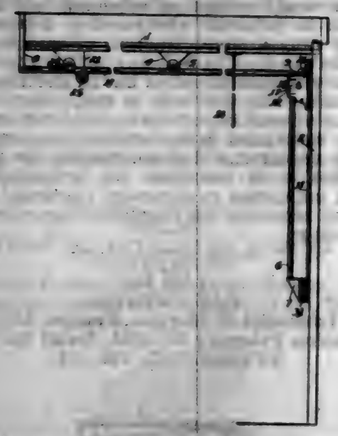


1. A method of purifying a body of caustic soda solution contaminated by dissolved complex impurities tending to blacken the solid caustic soda recovered by evaporating aqueous content of the solution which comprises exposing said body of solution to cathodic electrolyzing action while keeping only a small fraction of said body exposed to anodic electrolysing action and out of circulatory communication but in electrical communication with the rest of said body, thereby splitting up said impurities to insoluble ones colloidally suspended in the solution and imparting an inky appearance thereto, heating the solution to ebullition to coagulate the colloidally suspended impurities in distinctly coarsened condition, and removing the coarsened impurities from the solution.

2,031,845
CAN OPENER
Launcelot R. Morgan, Tucson, Ariz.
Application February 23, 1934, Serial No. 712,516
3 Claims. (Cl. 220—24)

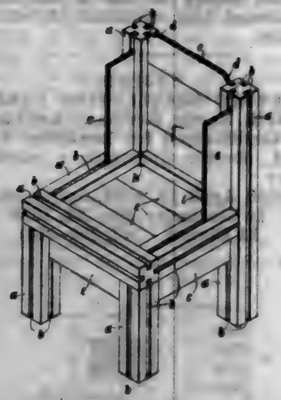
1. In a can closure, the combination of a spring supported arm carried within the top of the can and adjacent thereto; spaced apart openings through the top of said can; spaced apart closure plugs carried on said arm to control the openings in the top of the can; and a sealing strip carried across the top of the can secured thereto around the openings to seal the can prior to use.

2,031,846
ELECTRIC OSCILLATION CIRCUIT
Herbert Muth, Berlin, Germany, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin Germany, a corporation of Germany
Application April 19, 1930, Serial No. 445,599
In Germany May 24, 1929
13 Claims. (Cl. 250—40)



5. An oscillation circuit comprising an inductance having a single continuous core of solid non-conducting material, a continuous layer of conducting material superposed on and fixed to said core, and a layer of chemically inactive conducting material over said first mentioned layer of conducting material.

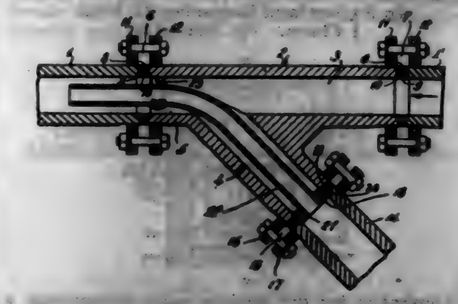
2,031,847
OVERHEAD SLIDING DOOR
Paul Nayler, Long Branch, Ontario, Canada
Application December 7, 1934, Serial No. 756,436
11 Claims. (Cl. 20—19)



10. An overhead sliding door construction comprising a door frame provided with a vertical track at each side; a carriage slidable on each track; a one-piece door disengageably supported by and swingable on said carriages, the point

of support of the door being substantially midway between the top and bottom thereof; and

counterbalances connected with the carriages to partly support the weight of the door.

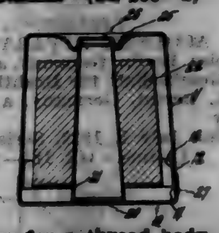


2,031,848
CONSTRUCTIONAL TOY
Ronald Ogden, Slough, England
Application October 24, 1934, Serial No. 749,792
In Great Britain October 28, 1933
2 Claims. (Cl. 46—31)

1. A toy construction set comprising flat ended struts having a symmetrical cross section provided for the whole length of their faces with similar grooves of cross section substantially rectangular and panels adapted to fit the grooves of the struts, the panels and struts being designed in pairs in each of which the panel length exceeds that of the strut by twice the depth of the grooves.

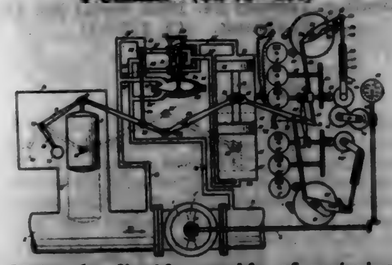
2,031,849
PIPE FITTING
John J. O'Leary, Petersburg, Va., assignor to Atmospheric Nitrogen Corporation, New York, N. Y., a corporation of New York
Application May 2, 1930, Serial No. 449,220
8 Claims. (Cl. 285—22)

1. In combination with branch conduits for conveying gases having widely different temperatures and a main conduit for conveying a mixture of said gases, a branched pipe fitting having branches connected to said branch conduits and a stem joined to said main conduit by means of a packed joint, and means for protecting said packed joint from sudden changes in temperature caused by varying the relative amounts of said gases introduced into the main conduit through



said fitting, said means comprising a tube mounted concentrically in one of said branches and extending therethrough, through the stem of the fitting and to within said main conduit beyond said packed joint, whereby the temperature condition of said joint is maintained substantially constant.

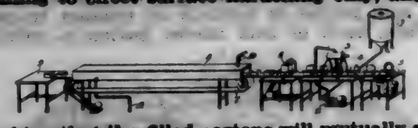
2,031,853
SHELL RELOADING MACHINE
Clarence E. Peterson, San Diego, Calif.
Application July 10, 1933, Serial No. 679,734
5 Claims. (Cl. 86—27)



1. In a shell re-loading machine, a table, a shell registering plate revolubly mounted thereon and adapted to carry a plurality of shells, a reciprocable support mounted above said table and plate, a plurality of elements for preparing and re-loading shells depending from said support and arranged in a circle so as to register with a plurality of shells held by said registering plate and act in concert thereupon when said support is reciprocated, and stop means including a portion carried by said support, and a portion engageable by a shell when said plate is revolved beyond the position assumed for completion of the re-loading operation, said stop means arranged to require rotation of said registering plate to advance the relation of the shells with respect to said element after each reciprocation of said support.

2,031,851
CONTAINER FOR THREAD BODIES
Paul Pinabiet, Fort Chester, N. Y., assignor, by mesne assignments, to Menihed Pulp Corporation, Dover, Del., a corporation of Delaware
Application January 27, 1934, Serial No. 708,068
9 Claims. (Cl. 206—1)

1. A container for a thread body, comprising a shallow receptacle and a deep cover of paper pulp molded to ultimate shape and moisture resistant, said receptacle having a central boss projecting upward to engage and center the lower end of a conical thread cop, said receptacle having the central portion of its top molded to engage and to center the upper end portion of a cop seated on said boss.

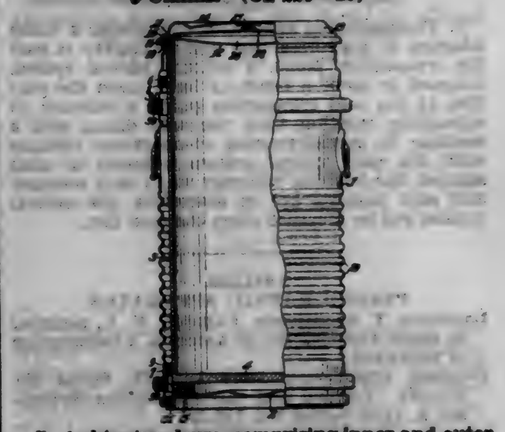


2,031,852
METER FOR LIQUIDS
Jean Pierre Edmond Paillet, Chemin de la Feuillense, Saint Cloud, France, assignor to Etablissements Pompes Guinard (Pompes Guinard & Etablissements Cohendet Reunis), Chemin de la Feuillense, Saint Cloud, France, a corporation of France
Application June 27, 1934, Serial No. 732,558
In France July 4, 1933
4 Claims. (Cl. 73—197)

1. Meter for liquids capable of metering the weights of liquids of varying densities, particularly of liquids with irregular expansion coefficients, such as oils, petrols, petroleums and alcohols, comprising flow responsive means having a movable member in said means, a correcting device consisting in a float sunk into the liquid to be metered, a counterweight and means for balancing said float by said counterweight, a register, a transmission with variable ratio inserted between the movable member of said flow responsive means and the register, a hydraulic servo-motor comprising a power member driven by the pressure of the metered liquid, means for controlling said servo-motor by said correcting device, and means whereby said servo-motor is made to vary the ratio of the transmission.

2,031,853
PACKAGING MOLTEN SOAP
Ralph H. Potts, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois
Application April 24, 1931, Serial No. 532,569
7 Claims. (Cl. 226—92)

1. The method of packaging soap which consists in flowing the soap while in a hot liquid condition into commercial cartons, superficially chilling to effect surface hardening only, and so



packing that the filled cartons will mutually support each other against deformation while hardening throughout.

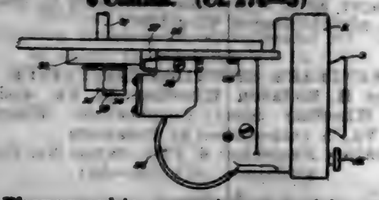
2,031,854
SURFACE-FINISHED PAPER
George A. Richter, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a corporation of Maine
No Drawing. Application September 11, 1931, Serial No. 562,426
1 Claim. (Cl. 91—68)

A paper whose fibrous body portion is sized and made water-resistant by the dissemination therein of about 2½% to 5%, based on the weight of dry fiber, of a water-resistant sizing agent, and at least one face of which is surfaced with a pellicle of regenerated cellulose receptive of and penetrable by printing and writing inks, said pellicle being developed in situ from a smooth, thin film of solution deposited on said paper base and being so intimately bonded with the main body of the paper as to constitute therewith in effect a single ply of integral structure.

2,031,855
SANITARY SHIPPING CONTAINER
Charles H. Rollason, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware
Application November 6, 1931, Serial No. 573,327
9 Claims. (Cl. 220—10)

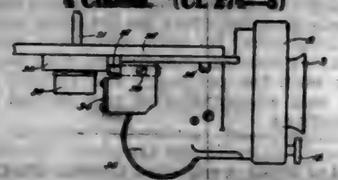
7. A shipping drum, comprising inner and outer containers, an inner cover for the inner container, and an outer cover for both containers, said outer cover having bearing engagement with said inner cover at both the periphery and central portion thereof, said engagement at said central portion being resilient.

2,031,856
MACHINE FOR FILLETING FISH
Harold Stanley Rowton and John Leslie Rowton, Aberdeen, Scotland
Application October 25, 1933, Serial No. 695,092
In Great Britain October 29, 1932
31 Claims. (Cl. 17—3)



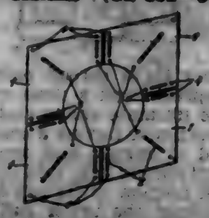
1. A filleting tool for a fish-dressing machine

comprising a pair of spaced elongated blades positioned adjacent the surface of the machine upon which the fish rests, means for supporting said blades in position in relation to said surface, each of said blades having a pointed



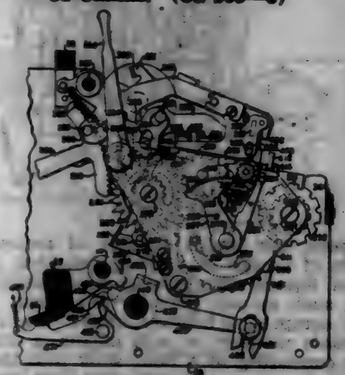
forward extremity and a cutting edge which gradually recedes further from said surface as the cutting edge approaches the rear of said blade, said cutting edges also diverging away from each other towards the rear of said blades.

2,031,857
PHONOGRAPHIC APPARATUS
Lawrence T. Sachtleben, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application June 1, 1933, Serial No. 673,863. Divided and this application April 27, 1934, Serial No. 723,748
6 Claims. (Cl. 274—5)



1. Phonographic apparatus comprising a drum adapted to support a film and to convey it past the translation point, a unitary optical system adapted to focus a beam of light upon the said film at the said translation point, a bushing in concentric relation with the said drum, and a member in predetermined co-operative relation with the said optical system adapted to abut against the bushing whereby when said member and said bushing are in abutment, the optical system will be focussed upon the said film.

2,031,858
PHONOGRAPHIC APPARATUS
Lawrence T. Sachtleben, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application June 1, 1933, Serial No. 673,863. Divided and this application November 9, 1934, Serial No. 752,235
4 Claims. (Cl. 274—5)



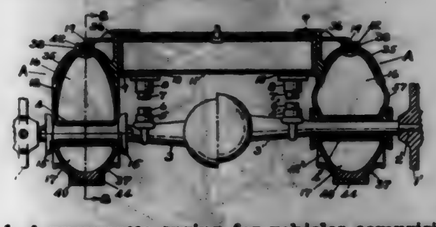
1. Phonographic apparatus comprising a drum adapted to support a film and to convey it past a recording or reproduction point, a unitary optical system adapted to focus a beam of light upon the said film at the said recording or reproduction point, a bushing in concentric relation with the said drum, and a member in predetermined co-operative relation with the said optical system adapted to abut against the bushing whereby when said member and said bushing are in abutment, the optical system will be focussed upon the said film.

2,031,859
ACOUSTIC APPARATUS
Carl Schapira, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 1, 1933, Serial No. 678,612
2 Claims. (Cl. 181—31)

1. A support for an encased loudspeaker, with this characteristic feature that the frame for supporting the diaphragm and its associated driving system, is secured on a sheet wall which is strengthened by elongated corrugations formed therein.

2,031,860
CASH REGISTER
Bernis M. Shipley, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application January 24, 1930, Serial No. 423,210
31 Claims. (Cl. 235—3)

1. In a machine of the class described; the combination with a group of type elements; and a printing hammer therefor; of a pivoted frame to pivotally support the hammer, the frame being adapted to be swung to expose other mechanism; a floating lever on the frame to operate the hammer; and a projection on the frame to restrain the hammer in its normal position relative to the frame when said frame is swung.

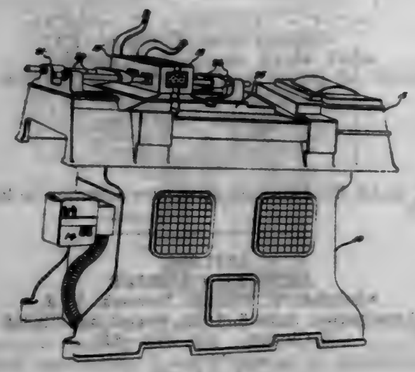


2,031,861
SWITCH BOX LATH CLAMP
Joseph E. Slunck, Omaha, Nebr.
Application January 23, 1935, Serial No. 2,816
2 Claims. (Cl. 247—31)

1. In a switch box lath clamp, a switch box, an outwardly extending flange on the switch box, said box having a slot adjacent to and parallel with said flange, an inwardly extending flange along one edge of said slot, and a clamping mem-

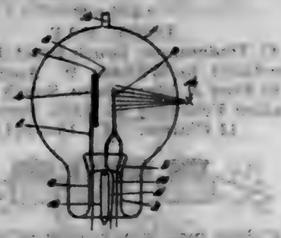
ber pivotally mounted on the inwardly extending flange and adapted to be moved pivotally outward through the slot in spaced relation with the outwardly extending flange.

2,031,862
PNEUMATIC AUTOMOBILE SPRING
Herschel D. Smith, Buffalo, N. Y., assignor of one-half to Harris P. Richardson, Buffalo, N. Y.
Application July 23, 1934, Serial No. 736,536
13 Claims. (Cl. 267—35)



1. A pneumatic spring for vehicles comprising a substantially circular casing and cover, projections on said casing, means to attach said casing to a vehicle frame, a resilient air container in said casing and cover including a partition below the center of said container to divide said container into a large upper chamber and a smaller lower chamber, means to form an air passage between said upper and lower chambers, bosses on said container to cooperate with the projections on said casing, and means extending transversely through said partition to connect said spring to the axle of said vehicle.

2,031,863
WELDED ARTICLE AND PROCESS THEREFOR
Samuel A. Snell, Toledo, Ohio, assignor to The Bingham Stamping & Tool Company, Toledo, Ohio, a corporation of Ohio
Application April 25, 1931, Serial No. 532,926
12 Claims. (Cl. 219—16)

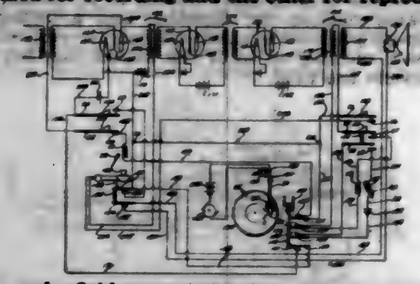


7. A core for a hollow member comprising a member of compressible material normally of larger dimension than the interior dimension of the hollow member, said member having recesses to accommodate distorted metal of the hollow member.

10. The method of effecting a flash weld between the edges of complementary blanks, which consists in employing a yielding resistance of fibrous insulating material interposed between the blanks to hold the surfaces to be welded in suitable relation for flashing, and applying a push-up pressure against the counter-resistance of said member to force the blanks together to complete the weld.

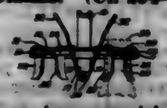
11. An article of manufacture fabricated of sheet metal elements, certain portions of said elements being welded together forming a hollow metallic structure; and a permanent core member formed of compressible electrical insulating material compressibly interposed within said hollow metallic structure.

2,031,864
PHOTOELECTRIC TUBE
Marten Cornelis Teves and Hendrik Johannes Moerkamp van Embden, Eindhoven, Netherlands, assignors to the N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application November 23, 1931, Serial No. 576,836
In Germany December 6, 1930
10 Claims. (Cl. 250—27.5)



1. A photo-electric device comprising an electrically conducting electrode, a non-conducting solid material thereon, a photo-electric electron emitting layer on said solid material, an electron-emitting body mounted in spaced relation with respect to said photo-electric layer, and an auxiliary electrode interposed in the space path between the electron-emitting body and the said photo-electric layer.

2,031,865
SYSTEM AND APPARATUS FOR RECORDING AND REPRODUCING SOUND
Adolph A. Thomas, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 7, 1931, Serial No. 526,956
29 Claims. (Cl. 179—100.11)



29. A combined recording and reproducing unit having two electro-magnetic coils, one of which

is used for recording and the other for reproduc-

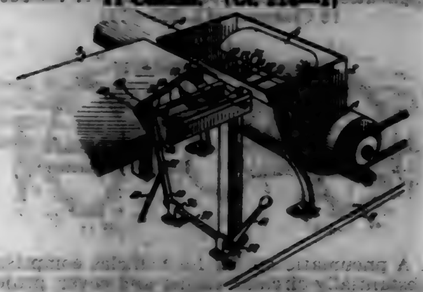
ing, and a field magnet structure common to both coils.

2,031,366
ARTICLE CARRIER
Adolphus E. Thuma, Newark, N. J.
Application July 5, 1935, Serial No. 29,900
4 Claims. (Cl. 294—87)

1. An article carrier comprising a plate having an aperture therein for receiving a portion of the article, said plate having a guide slot adjacent said aperture, a jaw member secured to said plate adjacent said aperture, another jaw member on said plate in cooperative relation to said first jaw member and adapted to grasp said portion of said article therewith, said second jaw member having a flange slidably disposed in said guide slot, resilient means drawing said second jaw member toward said first jaw member, and a lever coupled to said second jaw member for slidably moving said second jaw member away from said first jaw member.

2,031,367
DOOR MAT
Clinton C. Tiedemann, South Bend, Ind., assignor of one-third to William W. Austin and one-third to Fred A. Murmann, South Bend, Ind.
Application February 25, 1935, Serial No. 8,173
11 Claims. (Cl. 15—161)

1. In a door mat, a plurality of cleaning elements, a carrier for each element including a base and vertical walls for confining said element, said walls terminating in horizontally extending outwardly off-set portions whose ends extend inwardly and terminate in outwardly spaced relation to said element, and means extending between adjacent carriers and including flanges fitting into the off-sets of adjacent carriers below the ends thereof.



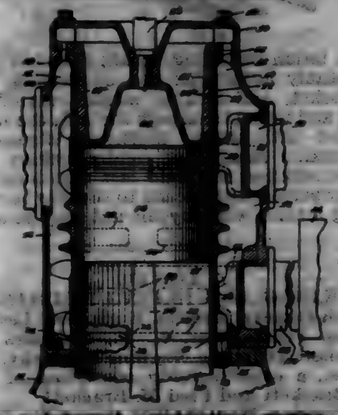
2,031,368
SHOE LASTING JACK
Joseph Toscano, Brooklyn, N. Y.
Application November 1, 1934, Serial No. 751,985
3 Claims. (Cl. 12—122)

1. A shoemaker's stand comprising a table, an adjustable column on which said table is rotatably mounted, stepped means associated with said column to positively support said table at predeterminable heights, a toothed disc fixed on said column below the table, a spring actuated detent slidably mounted below said table to en-

gage the teeth of said disc selectively, and means on said table for supporting a shoe last.

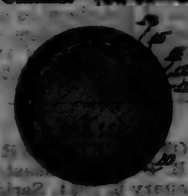
2,031,369
MECHANISM FOR EMPTYING CONTAINERS
John E. Trostle, Glasgow, Tex.
Application March 19, 1934, Serial No. 716,151
11 Claims. (Cl. 214—1)

1. In combination with a hopper, a container opening mechanism including supports extending in spaced parallel relation across the hopper for supporting the respective ends of a container, a knife, and means supporting the knife for movement between the supports to slit the intermediate portion of the container.



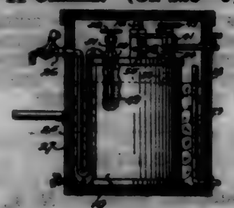
2,031,370
PNEUMATIC APPLIANCE
Louis Abbott Vertrees, Oak Park, Ill.
Application April 13, 1934, Serial No. 721,345
5 Claims. (Cl. 128—327)

2. In a pneumatic appliance of the class described, combined wall sections providing an inflation chamber, one of said wall sections being expansible and adapted to encircle and circumferentially impinge a user's limb, the other of said wall sections being substantially non-extensible



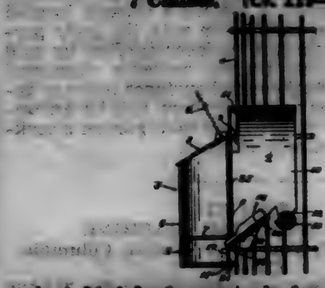
and circumferentially cooperating with said expansible section to form said inflation chamber, said non-extensible wall section extending from the marginal portion of the expansible wall section at the point where said marginal portion is adapted to engage the user's limb to the corresponding opposite marginal portion of said expansible wall section, said non-extensible wall section at said marginal portions being adapted when said chamber is inflated to be pressed against the user's limb whereby to counteract tendency for the appliance to experience axial shifting when inflated and to counteract axial bulging, and air conducting means communicating with said inflation chamber.

2,031,371
ENGINE
Edward T. Vincent, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application December 2, 1934, Serial No. 755,674
10 Claims. (Cl. 123—196)



1. In an internal combustion engine of the sleeve valve type having a crankcase, a cylinder, sleeve valve means operable in said cylinder, a cylinder head structure for closing the outer open end of the cylinder, a piston operable in said cylinder and cooperating with the cylinder head to define a combustion chamber, and means introducing air under pressure greater than atmospheric intermediate the cylinder and sleeve valve means and intermediate the said combustion chamber and crankcase.

2,031,372
ROLLER
Andrew Morris Wightman, Chicago, Ill., assignor to Rapid Roller Company, Chicago, Ill., a corporation of Illinois
Application July 30, 1934, Serial No. 737,461
6 Claims. (Cl. 91—67.5)

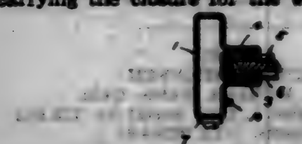


1. An impression roller comprising a metal core, a hard rubber base layer secured thereto, a body rubber layer over said hard rubber layer, an outer surface layer of hard rubber and a cushioning layer of soft rubber between said body layer and said surface layer, all of said layers being firmly bonded together.

2,031,373
LIQUID DISPENSER
Elmer R. Williams, Tulsa, Okla.
Application August 6, 1934, Serial No. 738,452
11 Claims. (Cl. 225—9)

1. A liquid beverage dispenser comprising, an upright cooling tank, an influent inlet within the tank and below its top located to discharge an admixture of liquid and gas in solution onto the wall of the tank above the liquid level therein, a liquid conductor for conveying liquid from the bottom of the tank, a liquid dispensing conductor connected with the conveying conductor, a gas conductor for conducting gas from the upper end of the tank and connected with the liquid conductors for mixing the gas with the liquid, the gas conductor having a reduced gas inlet port, a valve for controlling the supply of gas to the flowing liquid, and a pressure signal having an inlet in the tank below the normal liquid level therein.

2,031,374
BIRD FEED RECEPTACLE
Ludovica Butler and Joseph D. Butler, San Francisco, Calif.
Application March 26, 1934, Serial No. 717,449
7 Claims. (Cl. 119—18)



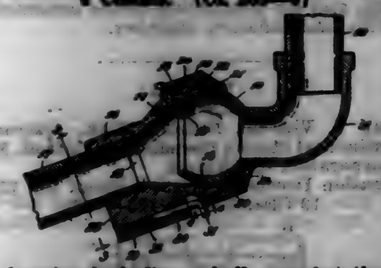
1. A bird feed receptacle for bird cages, comprising a closed compartment located outside the cage for holding the bird feed and having an opening in the side thereof adjacent the cage; a hooded vestibule attached to the side of the compartment having the opening therein and located within the cage, said compartment and vestibule being notched to receive a portion of the cage therein for removably supporting the receptacle on the cage.

2,031,375
COMBINATION STORM WINDOW AND SCREEN
Harry O. Dobie, Superior, Wis.
Application October 30, 1934, Serial No. 750,111
1 Claim. (Cl. 189—64)

A window sash comprising in combination a hollow sheet metal sash member having a U-

shaped projection centrally of the inner wall thereof, and a U-shaped sash for slidable engagement within said projection, said slidable sash carrying the closure for the window, and cushioning means surrounding the outer portion of said U-shaped sash with the opposed edges of said cushioning member turned inwardly intermediate of the window closure and the opposed side walls of the U-shaped sash.

2,031,876
AIRPLANE
Vincent J. Burnelli, Keyport, N. J., assignor to Burnelli Aircraft, Ltd., a corporation of Delaware
Application February 19, 1935, Serial No. 7,274
3 Claims. (Cl. 244—12)



1. An airplane having a lift producing airfoil-shaped body portion with an enclosed space therein, a pair of empennage carrying booms extending rearwardly from said body portion, one at each side thereof, a gunner's cockpit located at the junction of each boom with the body portion, horizontal control surfaces carried by said booms, and vertical control surfaces supported upon said horizontal control surfaces midway between said booms whereby there will be an unobstructed range of fire from each gunner's cockpit in excess of ninety degrees.

2,031,877
SHAKE SPLITTING MACHINE
James C. Butler, Vancouver, British Columbia, Canada
Application November 6, 1934, Serial No. 751,766
8 Claims. (Cl. 144—142)

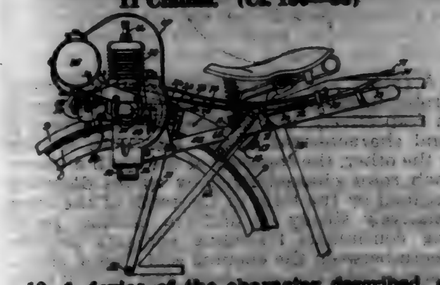
1. A power driven shake splitting machine comprising, a slide bed and a slidable reciprocating carriage frame and cross head mounted thereon, a pair of pivoted and tilting tables positioned intermediate of the sides of said slide bed, a stationary and double edged knife positioned intermediate of said tables and transversely of said slide bed, table tilting slides positioned below said slide bed, means engaging said slides and said reciprocating carriage whereby said slides are moved to cause said pivoted tables to alternately tilt as said carriage is reciprocated so that a block of wood positioned within said carriage frame and upon one of said tilting tables is forced against said stationary knife tilted in one direction and drawn against said knife tilted in an opposite direction whereby shakes are caused to be split from the bottom face of said block of wood.

2,031,878
ANGULAR BALL SWIVEL UNION
Alfred Joachim Cesta, Detroit, Mich.
Application October 22, 1935, Serial No. 45,151
6 Claims. (Cl. 285—9)

6. A union including a ball, a socket therefor, a rotatably adjustable nut connecting the ball and socket, and locking means carried by the socket and urged to engage the nut, the nut being provided with means positively engageable by said locking means for rigidly locking the nut against rotation and said last mentioned means being provided with means to slidably receive said locking means, whereby the nut may be adjusted.

2,031,879
FOLDING AND GLUING MECHANISM
Dietrich Daneke, Topeka, Kans., and Lee C. Williams, Pearl River, N. Y., assignors to The Brackett Stripping Machine Company, Topeka, Kans., a copartnership consisting of Edward M. Brackett and Fred M. Brackett
Application May 18, 1934, Serial No. 726,322
15 Claims. (Cl. 93—1)

1. In an apparatus of the character described, a support, conveyors for moving superimposed sheets along the support, means for mounting one of the conveyors on the support for movement to and from the other, means for applying glue in spaced relation to an edge of one of the sheets, means carried by the mounting means for pressing the sheets against the support, means bearing on the glued edge of the sheet to prevent curling of said edge, and a folding shoe carried by the support for folding the edge of the other sheet over said glued portion of the first sheet.



2,031,880
BOTTLE STOPPER
Arthur E. Dodge, Lancaster, Pa.
Application January 2, 1934, Serial No. 704,583
1 Claim. (Cl. 215—38)

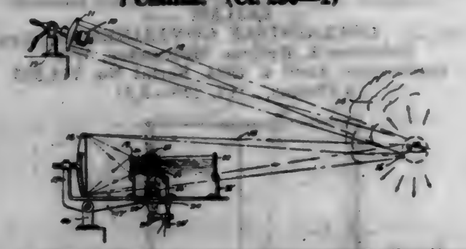
A bottle stopper comprising a cylindrical cork body having an arcuate recess in its upper face intersecting the axis thereof and having its ends terminating some distance from the periphery of the cork, a cap of moldable material having a recessed bottom and a centrally located fin

formed integral with the recessed bottom of the cap and of an arcuate shape and size to correspond and snugly fit the recess in the upper face of the cork, and the cap and fin cemented to the cork.

2,031,881
MOTOR BICYCLE
Ole Evinrude, Milwaukee, Wis., assignor to Outboard Motors Corporation, Milwaukee, Wis., a corporation of Michigan
Application December 26, 1933, Serial No. 703,955
11 Claims. (Cl. 180—33)

10. A device of the character described, comprising the combination with clamping members applicable to the rear fork of a bicycle, of a bracket projecting rearwardly therefrom, a propelling device comprising a frame pivoted to the bracket, an engine cylinder on the frame, an engine driven driving roller engageable and disengageable with a bicycle wheel upon the pivotal movement of said frame, exhaust means connected with the cylinder, and a lever rigidly connected with the exhaust means and projecting forwardly beyond said bracket, said lever being of a length such that its end will be available for manipulation in front of the rider of a bicycle to which said bracket is applied for adjusting said frame and device about said pivotal connection with said bracket.

2,031,882
HEATING OF RADIATORS
Arthur C. Frommann, Norfolk, Va.
Application February 8, 1934, Serial No. 710,365
1 Claim. (Cl. 219—38)



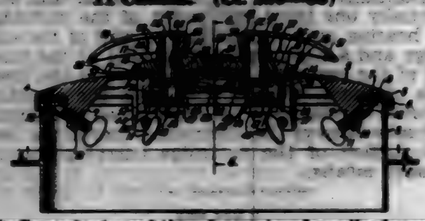
In a heater of the character described, a radiator having a plurality of tubular sections connected by ring-like nipples, an electric heater comprising a cylindrical cartridge inserted directly in one end of the lower end of the radiator and disposed to extend through and be laterally spaced from the nipples at least at one side of the cartridge, a heating unit within the cartridge substantially midway the ends thereof and substantially one third the length of the cartridge, the heating unit contacting the wall of the cartridge and a heat resistant packing at the inner end of the cartridge whereby water in the lower ends of the sections spaced from the cartridge will flow through the spaces between the nipples and inner end of the cartridge towards the central portion of the cartridge carrying the resistance means.

2,031,883
UPHOLSTERY FOR SEAT BACKS
William A. Geidis, Grand Rapids, Mich.
Application March 25, 1935, Serial No. 12,837
2 Claims. (Cl. 155—184)

1. In combination with a seat back, an upholstering structure comprising, a sheet metal plate, padding and a fabric cover thereover located at the front side of the plate, said fabric cover extending back of the plate and connected therewith, and penetrating means, each having a head at its front end, connected with the seat back at its front side and extending forwardly and through the metal plate for securing the upholstering structure over and at the front face of the seat back, said penetrating means being susceptible to the impact of a tool through the padding and its fabric cover.

2,031,884
SHORT WAVE SOUND SYSTEM FOR VISUALLY OBSERVING
Jesse L. Gray, Dallas, Tex.
Application September 8, 1930, Serial No. 480,373
7 Claims. (Cl. 250—1)

1. The method of transposing sound vibrations into light ray vibrations which consists, in projecting sound waves onto an object, whereby said waves are deflected and modified in varying intensities according to the structure of the object, collecting some of the modified sound waves and focusing them onto sensitive vibratory reflecting elements relative to their position of reflection from the object, directing light rays onto said elements, whereby said light rays are reflected in vibrating light beams of varying degrees of vibration according to the varying sound intensities, and producing a coarse half tone picture from said vibrating light beams.



2,031,825

CLOSURE MEMBER FOR FILL OPENINGS

Otis N. Grodell, Kansas City, Mo., assignor to Standard Steel Works, North Kansas City, Mo., a corporation of Missouri

Application May 18, 1932, Serial No. 612,043

11 Claims. (Cl. 220—55)

1. In a device of the character described, a closure member, a shaft rotatably supported by the closure member, a clamping member supported on the shaft for rotation therewith and rockable thereon in a plane parallel to the axis of the shaft, a spring yieldingly retaining the clamping member in clamping position, and a handle member on the shaft for rotating the clamping member to and from clamping position.

2,031,826

DISPENSING CONTAINER

Solomon A. Heifetz, Milwaukee, Wis.

Application January 29, 1934, Serial No. 708,734

4 Claims. (Cl. 206—56)

1. A device of the class described comprising a tubular tearable container, and a stiff relatively stronger encircling collar slidable thereon whereby a portion of the container may be torn away against said collar.

2,031,827

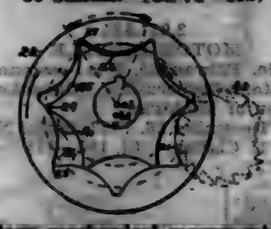
COLLAPSIBLE CONTAINER

Solomon A. Heifetz, Milwaukee, Wis.

Application April 4, 1934, Serial No. 715,895

5 Claims. (Cl. 229—5.5)

1. In a device of the class described a cylindrical body portion formed of a single sheet of material having a seam with edges folded back, a resilient coating formed on the contact edges of said seam, a ring encircling the lower edge of said cylindrical portion, and a pad of resilient material interposed between said ring and said cylindrical portion at the lower end of said seam.



2,031,836

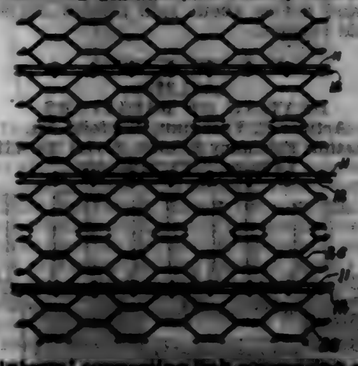
TOOTH CURVE FOR ROTORS AND GEARS

Myron F. Hill, Lansdowne, Pa., assignor to Hill Engineering Company, Inc., a corporation of New York

Original application August 24, 1931, Serial No. 559,290. Divided and this application January 27, 1933, Serial No. 653,254. Renewed October 5, 1933

36 Claims. (Cl. 74—462)

1. A rotary mechanical movement comprising two rotor members having internal and external teeth respectively, one member within, eccentric to, and characterized by one less tooth division than the other, the contours of the tooth divisions of each rotor characterized by curves described or outlined by the form of the teeth of the other at relatively steady or uniform angular speed, having continuous travelling contacts between the teeth between the opening and closing chambers across both the open mesh and the full mesh regions, said sliding contact curves on the inwardly convex teeth of the outer rotor including curves generated inwardly by approximately circular convex arcs, the teeth of the outer rotor being substantially wider than those of the inner rotor.



2,031,839

COUPLING LINK

Earl W. Hineberger, Seattle, Wash., assignor to Pacific Marine Supply Company, Seattle, Wash., a corporation of Washington

Application February 16, 1934, Serial No. 711,021

1 Claim. (Cl. 245—9)

An integral connecting link comprising straight portions forming a short lapped side-bar, a longer straight tension-bar terminating in inturned, curved bearing-bends having a comparatively short radius, and a pair of deflector bars disposed at oppositely inclined acute angles to the tension-bar and located between said bearing-bends and the short side-bar.

2,031,880

SPOOL HOLDER

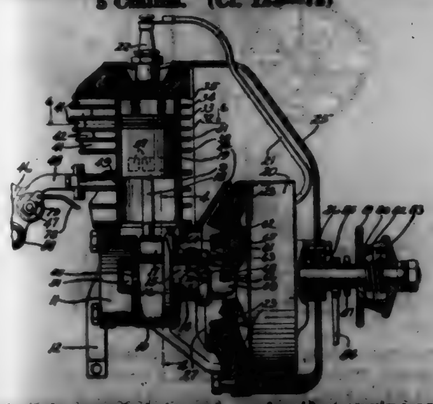
Louise C. Hogan, Spokane, Wash.

Application April 16, 1934, Serial No. 720,796

Renewed November 15, 1935

1 Claim. (Cl. 242—124)

A spool holder consisting of a strand of resilient wire bent back upon itself intermediate its length to form a standard and an arm spaced transversely from the standard and having one end integrally united with the adjoining end of the standard by an arcuate portion, the other end of the standard being formed with a support engaging portion, said arm being bowed outwardly and having its other end portion bent to form an inwardly extending loop loosely engaged about the standard adjacent the support engaging portion thereof and constituting an abutment for engaging an end face of a spool and limiting movement of the arm and standard through the bore of a spool thrust upon the holder and held thereon by frictional grip of the arm and standard.



2,031,891

INTERNAL COMBUSTION ENGINE

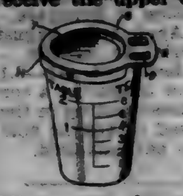
Finn T. Irgens, Wauwatosa, Wis., assignor to Outboard Motors Corporation, Milwaukee, Wis., a corporation of Michigan

Application April 9, 1934, Serial No. 719,686

5 Claims. (Cl. 123—73)

1. A two cycle internal combustion engine comprising the combination with a cylinder having a transfer passage in its side opening into the cylinder, of a crank case connected to the cylinder and provided with crank shaft bearing means, a crank shaft journaled in said means, and a detachable closure for one end of said crank case provided centrally with an opening and including means providing a passage communicating with the passage of said cylinder.

2,031,892



MEDICINE GLASS COVER

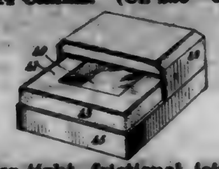
Edward Johnsen, Montclair, N. J., assignor to Meinecke & Company, New York, N. Y., a corporation of New Jersey

Application May 3, 1935, Serial No. 19,659.

4 Claims. (Cl. 46—15)

3. A medicine glass cover comprising a plate having a central depression adapted to seat within a glass and forming a receptacle for medicines, a depending flange extending around a portion of the periphery thereof and cooperating with the walls of said central depression to form a groove adapted to receive the upper edge of the glass

and card-holding means formed integrally with said cover between the ends of said depending flange, said means projecting above the top surface of said cover to engage the edge of the card so as to hold the card in place over the cover without concealing the insignia on said card.



2,031,893

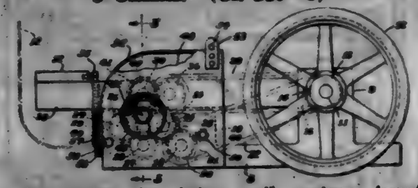
MERCHANDISE CONTAINER

Everett W. King, Norwalk, Conn., assignor to The Lamb-Felder-Schang Co., Inc., Rochester, N. Y., a corporation of New York

Application February 11, 1935, Serial No. 5,996

14 Claims. (Cl. 229—6)

1. A powder-tight, frictional joint for a container for finely comminuted material comprising two container parts having opposed surfaces in snug face-to-face contact, the opposed surface portion of one of said parts at the joint being of a velvety character having substantially the physical properties of the surface portion of the material known as velure.



2,031,894

APPARATUS FOR TYING COIL SPRINGS TOGETHER

Samuel Krakauer and Samuel E. Marcus, New York, N. Y.

Application October 25, 1934, Serial No. 750,002

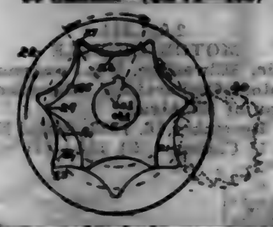
5 Claims. (Cl. 140—3)

1. Apparatus for tying coil springs together with a spirally formed wire comprising a table, a plurality of rollers mounted thereon, means to rotate the rollers, said rollers being formed with grooves relatively arranged to receive the spirally formed wire, whereby as the rollers rotate they will move the wire toward the springs to be tied thereby while simultaneously rotating the spirally formed wire, means to move the rollers out of cooperating relation to stop said forward and rotating movement of the wire as desired without stopping rotation of the rollers, and an actuating member for said last means mounted across the front of the table.

2,031,835
CLOSURE MEMBER FOR FILL OPENINGS
Otto N. Grodell, Kansas City, Mo., assignor to Standard Steel Works, North Kansas City, Mo., a corporation of Missouri
Application May 18, 1932, Serial No. 612,043
11 Claims. (Cl. 220—55)

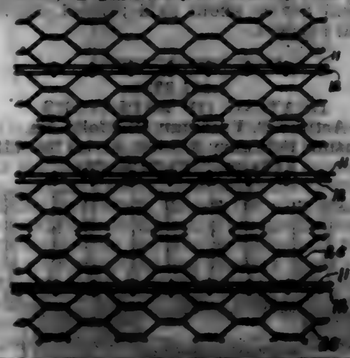
1. In a device of the character described, a closure member, a shaft rotatably supported by the closure member, a clamping member supported on the shaft for rotation therewith and rockable thereon in a plane parallel to the axis of the shaft, a spring yieldingly retaining the clamping member in clamping position, and a handle member on the shaft for rotating the clamping member to and from clamping position.

2,031,836
DISPENSING CONTAINER
Solomon A. Heifetz, Milwaukee, Wis.
Application January 29, 1934, Serial No. 708,728
4 Claims. (Cl. 206—63)



1. A device of the class described comprising a tubular tearable container, and a stiff relatively stronger encircling collar slidable thereon whereby a portion of the container may be torn away against said collar.

2,031,837
COLLAPSIBLE CONTAINER
Solomon A. Heifetz, Milwaukee, Wis.
Application April 4, 1934, Serial No. 718,885
5 Claims. (Cl. 229—5.5)

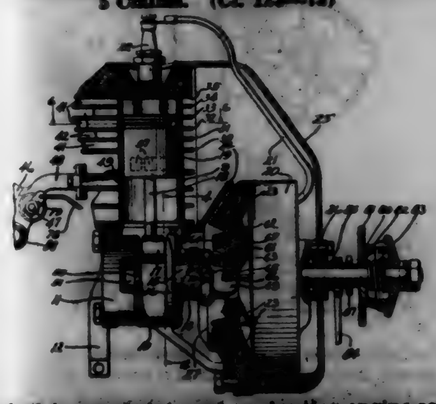


1. In a device of the class described a cylindrical body portion formed of a single sheet of material having a seam with edges folded back, a resilient coating formed on the contact edges of said seam, a ring encircling the lower edge of said cylindrical portion, and a pad of resilient material interposed between said ring and said cylindrical portion at the lower end of said seam.

2,031,838
TOOTH CURVE FOR ROTORS AND GEARS
Myron F. Hill, Lansdowne, Pa., assignor to Hill Engineering Company, Inc., a corporation of New York
Original application August 24, 1928, Serial No. 301,280. Divided and this application January 27, 1931, Serial No. 511,816. Renewed October 5, 1932
34 Claims. (Cl. 74—462)

1. A rotary mechanical movement comprising two rotor members having internal and external teeth respectively, one member within, eccentric to, and characterized by one less tooth division than the other, the contours of the tooth divisions of each rotor characterized by curves described or outlined by the form of the teeth of the other at relatively steady or uniform angular speed, having continuous travelling contacts between the teeth between the opening and closing chambers across both the open mesh and the full mesh regions, said sliding contact curves on the inwardly convex teeth of the outer rotor including curves generated inwardly by approximately circular convex arcs, the teeth of the outer rotor being substantially wider than those of the inner rotor.

2,031,839
COUPLING LINK
Karl W. Blasberger, Seattle, Wash., assignor to Pacific Marine Supply Company, Seattle, Wash., a corporation of Washington
Application February 16, 1934, Serial No. 711,021
1 Claim. (Cl. 245—9)



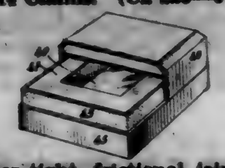
An integral connecting link comprising straight portions forming a short lapped side-bar, a longer straight tension-bar terminating in inturned, curved bearing-bends having a comparatively short radius, and a pair of deflector bars disposed at oppositely inclined acute angles to the tension-bar and located between said bearing-bends and the short side-bar.

2,031,840
SPOOL HOLDER
Louise C. Hogan, Spokane, Wash.
Application April 16, 1934, Serial No. 720,794
Renewed November 21, 1935
1 Claim. (Cl. 242—134)

A spool holder consisting of a strand of resilient wire bent back upon itself intermediate its length to form a standard and an arm spaced transversely from the standard and having one end integrally united with the adjoining end of the standard by an arcuate portion, the other end of the standard being formed with a support engaging portion, said arm being bowed outwardly and having its other end portion bent to form an inwardly extending loop loosely engaged about the standard adjacent the support engaging portion thereof and constituting an abutment for engaging an end face of a spool and limiting movement of the arm and standard through the bore of a spool thrust upon the holder and held thereon by frictional grip of the arm and standard.

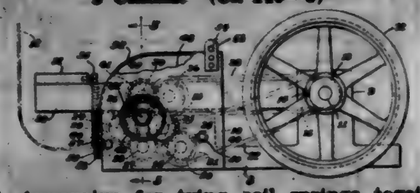
2,031,891
INTERNAL COMBUSTION ENGINE
Finn T. Irgens, Wauwatosa, Wis., assignor to Outboard Motors Corporation, Milwaukee, Wis., a corporation of Michigan
Application April 9, 1934, Serial No. 719,626
5 Claims. (Cl. 123—73)

1. A two cycle internal combustion engine comprising the combination with a cylinder having a transfer passage in its side opening into the cylinder, of a crank case connected to the cylinder and provided with crank shaft bearing means, a crank shaft journaled in said means, and a detachable closure for one end of said crank case provided centrally with an opening and including means providing a passage communicating with the passage of said cylinder.



2,031,892
MEDICINE GLASS COVER
Edward Johnson, Montclair, N. J., assignor to Meinecke & Company, New York, N. Y., a corporation of New Jersey
Application May 3, 1933, Serial No. 669,822
4 Claims. (Cl. 65—18)

3. A medicine glass cover comprising a plate having a central depression adapted to seat within a glass and forming a receptacle for medicines, a depending flange extending around a portion of the periphery thereof and cooperating with the walls of said central depression to form a groove adapted to receive the upper edge of the glass

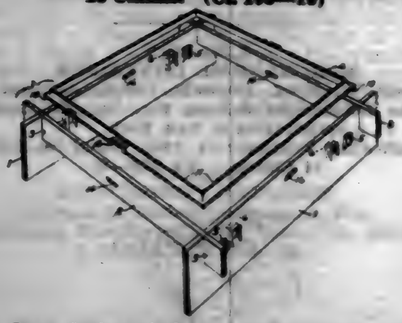


and card-holding means formed integrally with said cover between the ends of said depending flange, said means projecting above the top surface of said cover to engage the edge of the card so as to hold the card in place over the cover without concealing the insignia on said card.

2,031,893
MERCHANDISE CONTAINER
Everett W. King, Norwalk, Conn., assignor to The Lorscheider-Schang Co., Inc., Rochester, N. Y., a corporation of New York
Application February 11, 1935, Serial No. 5,996
14 Claims. (Cl. 229—4)

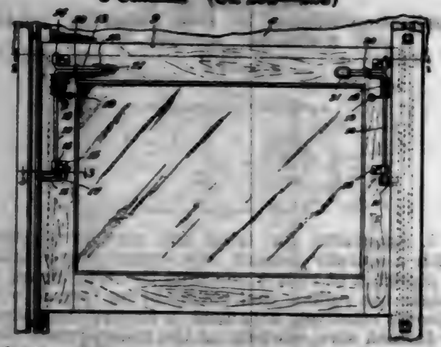
1. A powder-tight, frictional joint for a container for finely comminuted material comprising two container parts having opposed surfaces in snug face-to-face contact, the opposed surface portion of one of said parts at the joint being of a velvety character having substantially the physical properties of the surface portion of the material known as velure.

2,031,894
APPARATUS FOR TYING COIL SPRINGS TOGETHER
Samuel Krakauer and Samuel S. Marcus, New York, N. Y.
Application October 25, 1934, Serial No. 750,003
5 Claims. (Cl. 140—3)



1. Apparatus for tying coil springs together with a spirally formed wire comprising a table, a plurality of rollers mounted thereon, means to rotate the rollers, said rollers being formed with grooves relatively arranged to receive the spirally formed wire, whereby as the rollers rotate they will move the wire toward the springs to be tied thereby while simultaneously rotating the spirally formed wire, means to move the rollers out of cooperating relation to stop said forward and rotating movement of the wire as desired without stopping rotation of the rollers, and an actuating member for said last means mounted across the front of the table.

2,031,895
CARBOXYLIC ACID DERIVATIVES OF SULPHURIZED CINCHONA BARK ALKALOIDS
Ralph E. Lawrence, Wickliffe, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application August 17, 1933, Serial No. 685,652
21 Claims. (Cl. 148—8.1)

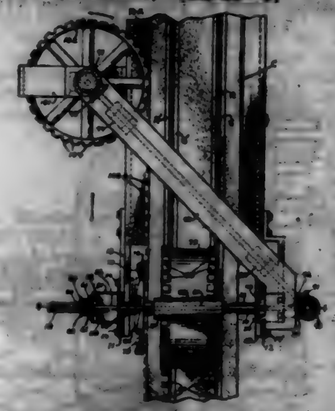


1. The process of producing a corrosion inhibitor which comprises reacting in the liquid phase with a concentrated carboxylic acid upon a sulphurized cinchona bark alkaloid.

2,031,896
MEANS FOR SUPPORTING SKYLIGHT GLASSES AND THE LIKE
George H. Lemke, Elmhurst, Ill.
Application May 15, 1935, Serial No. 21,621
12 Claims. (Cl. 108—16)

1. In a device of the character described the combination of structural members interfitted to provide a plurality of cells; a frame supported in each cell; a glass supported by said frame, the edges of said glass spaced from said members to provide a narrow channel therebetween; and means in said channel to secure said glass and frame to said members.

2,031,897
WINDOW SASH FASTENER
Albert L. Lace, Fort Valley, Ga.
Application November 19, 1934, Serial No. 753,761
3 Claims. (Cl. 292—228)



1. A sash fastener comprising upper and lower bearings adapted to be secured to a side rail of a sash in vertical spaced relation to each other, a rod to extend vertically of the side rail of a sash having its upper and lower portions journaled through said bearings and adjacent the upper bearing being folded upon itself to form an actuating handle of double strand formation projecting transversely from a side of the rod, the lower end of the rod being bent to form a window frame engaging leg projecting transversely from the rod at the opposite side thereof from said handle, and a spring coiled about said rod and having arms projecting transversely therefrom for engaging a side rail of a sash and a portion of the rod and yieldably resisting rotation of the rod in one direction.

2,031,898
METHOD OF DECOLORIZING GYPSUM
Frank Lee Marsh, Medicine Lodge, Kans., assignor to The Best Brothers Keene's Cement Company, Medicine Lodge, Kans., a corporation of Kansas
No Drawing. Application September 18, 1933, Serial No. 689,958
8 Claims. (Cl. 196—14)

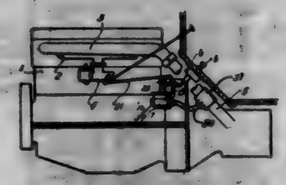
1. The method of decolorizing natural gypsum material containing a carbonate including reducing the gypsum material to substantially fine size particles, admixing with the particles a quantity of sulphuric acid to neutralize the carbonate content, and calcining said material.

2,031,899
INDENTING AND STAMPING MACHINE FOR CLAY PRODUCTS, SUCH AS PAVING BRICK AND THE LIKE
Edward D. Matter, Decatur, Ill., assignor to Decatur Brick Manufacturing Company, Decatur, Ill.
Application September 17, 1934, Serial No. 744,308
3 Claims. (Cl. 25—1)

1. A lug-forming and name-stamping machine comprising in combination a frame, a horizontally disposed driving shaft journaled on said frame, a measuring drum mounted on said shaft, a conveyor belt mounted on said drum, a top lug-forming roller, a side lug-forming roller, and a cam wheel journaled on said frame and driven by said driving shaft at the same speed of rotation as said driving shaft, a series of cams carried by said cam wheel, a name-stamping plate mounted on said frame and controlled by said cams, and means for actuating said stamping plate.

2,031,900
ACOUSTICAL WALL SURFACING
Edward J. Miller, Minneapolis, Minn.
Application April 7, 1933, Serial No. 665,813
6 Claims. (Cl. 154—44)

1. As an article of manufacture, an acoustical wall surfacing unit comprising a frame of plastic material, sound absorbing material within said frame and having its edges bonded to the frame by the natural adhesion of the plastic material of which the frame is composed, and a thin flexible metal foil membrane stuck at its marginal edge portions to the frame by the inherent adhesion of the plastic material of which the frame is composed to cover the sound absorbing material and form a decorative facing therefor.



2,031,901
EXPANSION JOINT FILLER, SHEAR BAR, AND SLEEVE ALIGNMENT DEVICE
Robert E. Mitchell, Seattle, Wash.
Application April 2, 1934, Serial No. 718,696
4 Claims. (Cl. 94—51)

1. The combination with a main supporting angle bar having a depending, notched, flange, of a series of transversely arranged centering plates mounted on the bar, said plates having depending notched end-flanges alined with notches of the bar-flange to receive dowel-pins, detachable hooks pivoted on the bar for detachable engagement with the dowel-pin for holding the latter in engagement with a notch of the bar and notches of the complementary plate, and a releasing lever rigid with said hook.

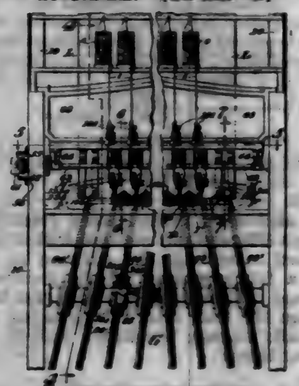
2,031,902
CHOKE VALVE CONTROLS FOR MULTI-CYLINDERED INTERNAL COMBUSTION ENGINES
Cleon Edward Patton, Portland, Oreg., assignor of one-half to William Carlson, Portland, Oreg.
Application June 7, 1932, Serial No. 616,044
2 Claims. (Cl. 123—179)

1. In a device of the class described, the combination with a multi-cylinder combustion engine, a carburetor and a self-starter; of a choke controlling governor comprising a cylindrical container having one end open, a flexible diaphragm fixedly secured to the open end of the container, a hollow stem fixedly secured to the flexible diaphragm, said stem having one end connected with the self-starter button and the carburetor choke valve and having a port in the other end and other ports spaced from the end, a needle valve threadably secured within the stem and adapted to restrict the opening in the end port, and a fabric washer fixedly secured about the stem and between the end port and the ports spaced from the end, said washer being adapted to frictionally engage the inner wall of the cylindrical container.

2,031,903
POST SIZING AND PEELING MACHINE
William Neal Riddick, De Ridder, La.
Application May 31, 1934, Serial No. 728,439
3 Claims. (Cl. 143—32)

3. A log sizing machine comprising a horizontal cylinder rotatably supported, means for rotating the cylinder, a bell-shaped cutting head connected to the front end of the cylinder and having cutting members therein, a pair of vertically arranged feed rollers each of double frusto-conical shape located in front of the cutting head, spring means tending to move the rollers towards each other, supporting means for a log arranged in front of the rollers, feeding means for pushing the logs from the supporting means between the rollers, said feeding means including a substantially conical member for engaging the front end of the log, the supporting means having the log engaging parts located below the transverse centers of the rollers.

2,031,904
MACHINE PARTS AND APPARATUS INTENDED FOR HIGH TEMPERATURE OPERATION
Fritz Rittershausen and Heinz Korschan, Essen, Germany, assignors to Fried. Krupp Aktiengesellschaft, Essen-an-der-Ruhr, Germany
No Drawing. Application May 12, 1931, Serial No. 536,940. In Germany June 6, 1930
10 Claims. (Cl. 75—1)



1. Articles which in their normal use are subjected to high temperatures or large temperature variations, said articles being composed of a steel alloy containing up to about 0.3% carbon, about 2.1 to 4.5% chromium, about 0.15 to 0.8% molybdenum, up to about 0.4% vanadium and up to 2% nickel.

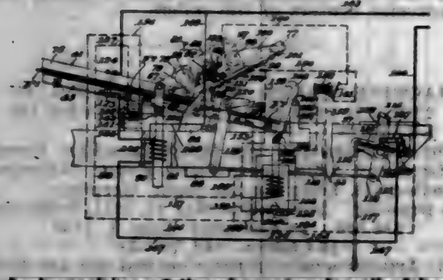
2,031,965

SEWING MACHINE MECHANISM

Frederick N. Ross, Grosse Pointe Park, and Horace L. Johnson, Detroit, Mich., assignors to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan

Application December 3, 1931, Serial No. 578,639
28 Claims. (Cl. 112—2)

1. In a machine of the character described, in combination, a sewing needle, a tube positioned in a plane substantially perpendicular to said needle, a looper needle carried by said tube in parallel spaced relation to the axis of the tube, a tubular housing in which said tube is freely movable and having an opening to receive said sewing needle, means for reciprocating said sewing needle and tube axially, and means for rotatively reciprocating said tube during the reciprocation of the sewing needle.



10. In an upholstery forming machine, rotatable gathering devices working in converging planes to in-gather a strip of material to form longitudinal ribs with fullness therebetween, means for bringing a strip of second material parallel with said first material along the lines of said ribs, and means to sew said ribs and second material to secure them in their final condition.

2,031,966

UPHOLSTERY SEWING MACHINE

Frederick N. Ross, Grosse Pointe Park, and Horace L. Johnson, Detroit, Mich., assignors to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan

Application August 14, 1933, Serial No. 685,842
18 Claims. (Cl. 112—2)

1. A machine of the character described having mechanism for assembling two sheets of fabric in superimposed relationship and forming a series of parallel folds in one of said sheets, and means for stitching the other of said sheets to said parallel fold, characterized by the fact that said mechanism includes means for feeding and gathering said one sheet comprising a series of gyratory feed bars disposed in converging relation.

18. In a machine of the character described, fabric piece-feeding mechanism having at the receiving end portions relatively movable into work-receiving and work-feeding positions, means including a solenoid for moving said portions into work-receiving position, means controlled by a piece being fed for controlling the circuit to said solenoid, a clamp for holding a second piece against feeding, means including a second solenoid for moving said portions into work-feeding position and for releasing said clamp, means jointly controlled by the fed position of an intermediate piece and by said second solenoid for controlling the circuit to the latter, and a retarded relay connected in parallel with said second solenoid for controlling the circuit thereto.

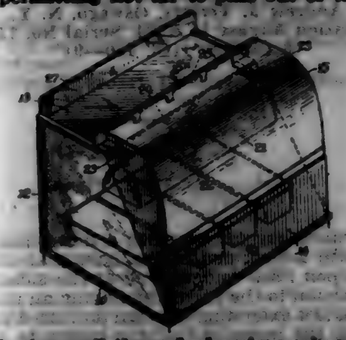
2,031,967

WINDOW CONSTRUCTION

John A. Ryan, Bronx, N. Y.

Application April 18, 1933, Serial No. 17,095
1 Claim. (Cl. 20—48)

In a window construction a pair of vertical side members, upper and lower sliding sashes, transversely extending ribs on the side members, each of said sashes being provided with a vertically swingable ventilating panel, the panel of the upper sash being provided with laterally disposed lugs for engaging over the upper rib on each of the side members, the lugs on the lower panel being adapted to engage the lower ribs at their under side, and stop strips extending vertically at the ends of the ribs away from the sashes to stop the lugs.



2,031,968

APPARATUS FOR TREATING TOASTED NUTS

Lester M. Sawin, Chicago, Ill.; Shallyn J. Sawin, administratrix of said Lester M. Sawin, deceased, assignor to The Sawin Nut Company, Chicago, Ill., a corporation of Illinois

Application August 14, 1933, Serial No. 685,050
3 Claims. (Cl. 219—38)

1. An apparatus for treating nuts comprising, in combination, a display case having a flat top wall, means within the case for supporting unpackaged nuts, a radiant heater within the case for directing heat downwardly onto the nuts, and a hood closing the rear side of the case and having a portion resting on the rear edge of the top wall, said portion having forwardly opening vents permitting hot air to pass out of the case

over the top wall thereof whereby packaged nuts resting on said top wall may be kept warm.

2,031,969

SOLDERING FLUX

William K. Schweitzer, East Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware

No Drawing. Application October 11, 1933, Serial No. 693,113
9 Claims. (Cl. 148—26)

1. In a process of soft soldering the step of applying a flux comprising a major amount of a phosphate thermally decomposable at or below soft soldering temperatures.

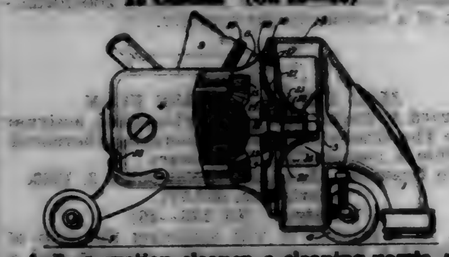
2,031,970

CONDENSER

Royal F. Sickles, Springfield, Mass.

Application April 13, 1935, Serial No. 16,457
5 Claims. (Cl. 175—41.5)

1. A condenser of the class described comprising in combination, a base having spaced openings extending therethrough, alternate superposed condenser and separator plates on said base, the uppermost plate being curved and adapted to be depressed, terminals extending from said condenser plates through said openings and being offset to have portions in different planes engageable with opposite sides of said openings to hold said plates against shifting longitudinally and permitting up and down movements, the said plates being provided with openings therethrough, a washer on the uppermost plate and provided with an opening therethrough, and a screw extending through said openings threadedly engaging said base having its head bearing on said washer for depressing the uppermost plate.



3. A condenser of the class described comprising in combination, a base having spaced lugs extending upwardly from a face thereof and provided with openings therethrough extending through the base at adjacent sides of the lugs, alternate superposed condenser and separator plates on said base between said lugs, the uppermost plate being curved and spring-like so as to be depressible, said plates provided with openings therethrough, a washer on the uppermost plate provided with an opening therethrough, a screw extending through said openings threadedly engaging said base with its head bearing on said washer, terminals extending through the openings of the base connected to the condenser plates, and ears provided on the separator plates at their ends disposed at opposite sides of the lugs.

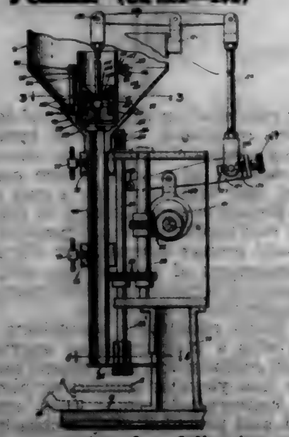
2,031,971

SUCTION CLEANER

Donald G. Smellie, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio

Application June 14, 1933, Serial No. 675,705
12 Claims. (Cl. 15—16)

1. In a suction cleaner, a cleaning nozzle, suction-creating means connected to said nozzle, a driving-motor for said means interiorly connected to atmosphere, means exterior of the motor shaft connecting the interior of said motor to a point of low pressure in said suction-creating means which point is also effective in said nozzle, and means automatically to open and close said connecting means while said motor is running and at rest respectively.



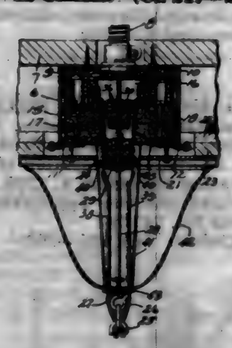
7. A suction-creating rotary fan comprising a back, blades carried on one side of said back, said back being formed with an opening connecting its bladed side, at a point closely adjacent the axis of rotation, to its opposite side, and valve means to open and close said opening.

2,031,972

MEASURING AND FILLING MECHANISM

Lambert Edwin Spear, Minneapolis, Minn., assignor to Blue Moon Cheese Products, Inc., Minneapolis, Minn., a corporation of Delaware

Original application December 8, 1930, Serial No. 500,822. Divided and this application October 10, 1934, Serial No. 747,786
9 Claims. (Cl. 221—103)

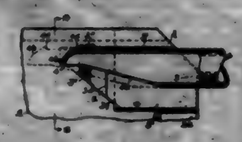


1. In an apparatus for delivering measured quantities of material into containers, a hopper

having a discharge opening, a cylinder mounted for limited vertical movement in said hopper and open to receive material at both ends, a seat in the bottom of the hopper normally engaged by said cylinder, a piston movably mounted in said cylinder and adapted, upon its up stroke, to first unseat the cylinder, after which the piston will relatively move therein and draw a portion of the material in the hopper into said cylinder below the piston, means whereby when the piston is moved downwardly, the cylinder is moved into engagement with said seat and the material in the lower portion thereof discharged therefrom through said discharge opening in a measured quantity, and means for preventing the formation of a vacuum in the cylinder.

2,031,912
ZINC CHLORIDE BASE FLUX
Edward A. Taylor, Shaker Heights, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application November 2, 1933, Serial No. 696,597
7 Claims. (Cl. 148—26)

4. In a process of soft soldering the step of applying a flux comprising zinc chloride and a small amount of an oxidizing agent, the composition being free from reducing agents whereby the oxidizing agent can exercise an effect on residues of the soft soldering process.



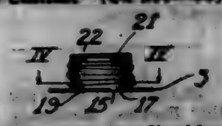
2,031,914
INTERCHANGRABLE ELECTRIC LIGHT FIXTURE HANGER AND SOCKET
Vernon V. Veysey and Harvey R. Andersen, Neenah, Wis.
Application March 27, 1933, Serial No. 662,880
12 Claims. (Cl. 247—29)

2. The combination with a pair of contacts and a recessed receptacle providing insulation and comprising a supporting part and affording access to said contact, of a plug device comprising a supported part and providing a pair of laterally movable prongs complementary to the respective contacts, and mechanical and positive means for moving said prongs laterally for the mechanical inter-engagement of said prongs with said contacts to provide a releasable mechanical and electrical connection therebetween.

9. An outlet receptacle comprising a support provided with a plug receiving aperture having an inlet, in combination with solidly mounted and relatively non-yielding supporting and electrical contacts converging toward each other toward said inlet and provided with mutually insulated mounting upon said support at opposite sides of said aperture.

2,031,915
ADAPTER FOR VALVE BAGS
Andrew J. Verwys, Oswego, N. Y.
Application August 14, 1934, Serial No. 739,723
6 Claims. (Cl. 150—9)

1. A valve bag for use with a filling pipe provided with a hook or the like, having an adapter folded upon itself and secured at the sides of its front portion to the valve and having an upwardly facing slot extending through its folded portion adjacent the inner end of the latter, to receive said hook whereby upon withdrawal of the pipe the adapter will move therewith and be crumpled and disposed in the mouth of the valve to close same, said adapter having transverse weakened portions to facilitate crumpling.



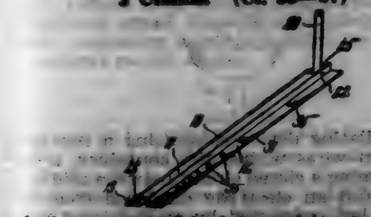
2,031,918
METHOD OF PRODUCING INSULATION FOR SUBMARINE CABLES
Robert R. Williams, Roselle, and Archie R. Kemp, Westwood, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Original application December 4, 1923, Serial No. 678,569. Divided and this application April 23, 1932, Serial No. 608,330. In Canada February 12, 1923
5 Claims. (Cl. 106—13)

1. The method of making an insulating material from rubber including removing from the rubber before it is vulcanized substantially all of the water soluble matter which would later cause osmotic action when the insulating material is submerged, mixing the rubber with a finely divided filler to form an insulating material for a cable, and causing the insulating material to absorb substantially the total amount of water which it is capable of absorbing before the cable is put into use, said water soluble matter being removed by subjecting said rubber to prolonged soaking in pure water and to working for limited periods of time so that the mechanical characteristics of said rubber will remain substantially unimpaired.

2,031,917
METHOD OF INHIBITING GUM FORMATION IN NAPHTHAS AND PRODUCTS OBTAINED THEREBY
Carl Winning, Leonard E. Sargent, and James F. Dudley, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application April 24, 1931, Serial No. 533,706
11 Claims. (Cl. 44—9)

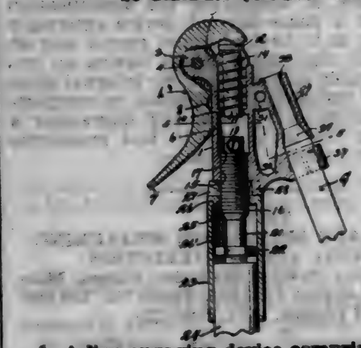
1. A motor fuel comprising cracked hydrocarbon spirits of the type normally tending to form gum containing a colorless gum inhibitor selected from aromatic amino and phenolic compounds in quantity sufficient to inhibit gum formation, and a dye selected from the group consisting of indophenols and oxazine-, indamine-, curbidine-, safranine-, and aposafranine- bases in quantity sufficient to impart color to the fuel and further stabilize the gasoline against gum formation.

2,031,918
SPRAY CONTAINER
Carl Winning, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application February 10, 1934, Serial No. 710,942
5 Claims. (Cl. 299—56)



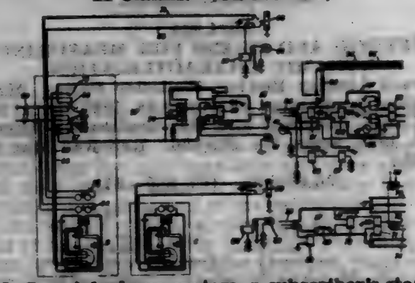
1. A device for spraying liquid, comprising a container imperforate except for an opening in one wall, a nozzle, coinciding with the opening and communicating with the container therethrough, protruding from a wall of the container, adapted to permit filling of the container and to permit flow of liquid from the container into the nozzle when the container is inverted, the outlet end of the nozzle having a spray hole of lesser size than the opening, and a baffle plate extending transversely across a portion of the nozzle to function as a dam to trap a portion of the liquid and prevent its backward flow from the nozzle into the container when the container is restored to a substantially horizontal position, the spray hole being below the level of the dam when the nozzle is restored to a substantially horizontal position whereby the trapped liquid in the nozzle can be ejected from the nozzle through the spray hole by pressure applied to the contents of the container.

2,031,919
AMPLIFYING SYSTEM
Arthur F. Bennett, Richmond Hill, N. Y., and Malcolm K. Gordon, Jr., Newark, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 25, 1931, Serial No. 532,754
3 Claims. (Cl. 177—311)



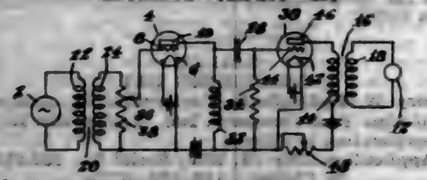
1. In a system for amplifying the sounds emitted by a vibrating body, a condenser type translating device in which one electrode of the device is the vibrating body and the other electrode serves as a support for the body, means for polarizing the device, a receiver and an amplifying system connected between the receiver and the translating device.

2,031,920
GEOMETRIC TOOL
Ernest Bemhimel, Arlington, Mass.
Application September 28, 1934, Serial No. 745,519
3 Claims. (Cl. 33—27)



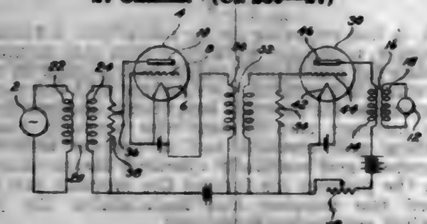
1. A geometrical tool comprising a rod having a pointed end, a channel member adapted to receive said rod, and means pivotally connecting said rod and member whereby said rod may be swung to positions at right angles to said member, said member having a series of perforations to receive the point of a lead pencil or the like for describing circles with said pointed end as a center.

2,031,921
GROUNDING SET
Henry W. Bedendieck, Taylorville, Ill., assignor to Tips Tool Company, Inc., Taylorville, Ill., a corporation of Illinois
Application July 18, 1931, Serial No. 551,812
26 Claims. (Cl. 173—273)



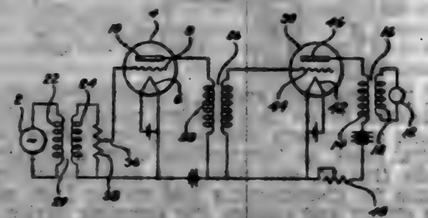
1. A line engaging device comprising a tubular member, a plunger working within said member, means for constantly urging said plunger in one direction, a clamping jaw coacting with the member, means for movably supporting said jaw upon the member, said plunger also normally maintaining said movable jaw in contact with the member, and manually operated means engaging the plunger for forcing the movable jaw toward the member and maintaining the jaw against separating movement.

2,031,922
TELEPHONE SYSTEM
Felix A. Benemal, St. Albans, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 29, 1932, Serial No. 625,561
11 Claims. (Cl. 179—27)



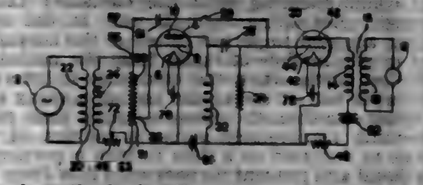
1. In a telephone system, a subscriber's station, a signaling device thereat, a link circuit individual to said subscriber's station and terminating at a central office, an intermediate office, a signaling device thereat, and means at said subscriber's station for disconnecting said station from said link circuit and causing the signaling device at said intermediate office to be actuated simultaneously with the signaling device at said station in response to a call incoming from said central office over said link circuit.

2,031,922
METHOD AND MEANS FOR MEASURING DYNAMIC CHARACTERISTICS
Edward L. Bowles, Watertown, Mass.
Application February 26, 1927, Serial No. 171,238
17 Claims. (Cl. 250—27)



1. A method of measuring the amplification coefficient of a space-current device externally connected so as to have an input circuit and an output circuit, the output circuit having an impedance of value so high that the internal plate resistance of the device is negligible by comparison, the said method comprising impressing a voltage upon the input circuit, and measuring the voltage across the impedance.

2,031,924
METHOD AND MEANS FOR MEASURING DYNAMIC CHARACTERISTICS
Edward Lindley Bowles, Wellesley Farms, Mass.
Application August 15, 1928, Serial No. 299,695
27 Claims. (Cl. 250—27)

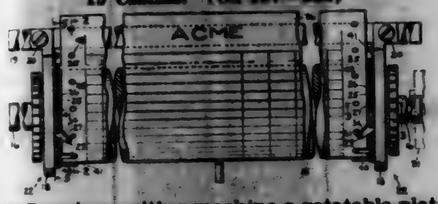


1. A method of measuring the dynamic internal plate resistance of each of a plurality of space-current devices that comprises successively connecting the space-current devices with a common input circuit and a common output circuit, impressing a constant alternating voltage upon the output circuit, and measuring an alternating-current impulse of the output circuit.

2,031,925
METHOD AND MEANS FOR MEASURING DYNAMIC CHARACTERISTICS
Edward Lindley Bowles, Wellesley Farms, Mass.
Original application February 26, 1927, Serial No. 171,238. Divided and this application August 15, 1928, Serial No. 299,695. Renewed May 26, 1934
26 Claims. (Cl. 250—27)

1. A method of measuring the mutual conductance of each of a plurality of space-current devices each externally connected so as to have an input circuit and an output circuit, the impedance in the output circuit having a value so low that it is negligible compared with the internal plate resistances of the devices, the said method comprising maintaining constant, predetermined, alternating-current conditions in one of the circuits of each device, and measuring predetermined alternating-current conditions in the other circuit of the said device.

2,031,926
ELECTRIC METER
Edward Lindley Bowles, Wellesley Farms, Mass.
Application September 8, 1931, Serial No. 561,485
Renewed May 21, 1935
22 Claims. (Cl. 250—27)



1. A method of calibrating an instrument for measuring a dynamic characteristic of a space-current device externally connected so as to have an input circuit and an output circuit, the said instrument having means for impressing a voltage upon the device, a second space-current device having an input circuit connected with the output circuit of the first-named device, and a meter for measuring the voltage of the output circuit of the second device, the said method comprising, with the first-named device out of the circuit, inserting into circuit a voltage approximately equal to the impressed voltage multiplied by the value of the said dynamic characteristic, and adjusting the circuits to give a reading on the meter approximately equal to the said value.

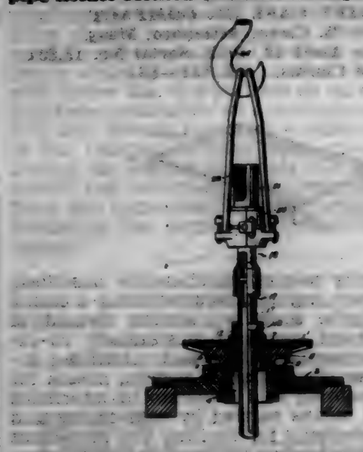
2,031,927
LAMP
Chester H. Braselton, New York, N. Y., assignor to Sirian Lamp Company, Newark, N. J., a corporation of Delaware
Application December 4, 1931, Serial No. 578,931
7 Claims. (Cl. 176—123)

7. A radiating device comprising a container, two lead-in wires within the container, a conductor forming a closed circuit between said lead-in wires, and an electrode displaced from said conductor but connected by an insulated metal circuit thereto at a point intermediate its ends.

2,031,928
TYPEWRITING MACHINE
Carl W. Brenn, Montclair, N. J., assignor to Autographic Register Company, Hoboken, N. J., a corporation of New Jersey
Application December 8, 1931, Serial No. 579,681
19 Claims. (Cl. 197—132)

1. In a typewriting machine a rotatable platen adapted to support a paper strip at the line of writing of the machine, said paper strip having a longitudinally extending row of feed apertures and said platen having a circular row of apertures spaced substantially like the paper strip apertures; a plurality of fingers pivotally mounted on the platen for rotation therewith and for movement toward and from the platen and the paper strip carried thereby; studs on the fingers; and means for automatically moving said fingers seriatim toward the strip paper on the platen and the studs on said fingers into engagement with the feed apertures in the strip paper and into the platen apertures as the platen and fingers carried thereby are rotated toward the line of writing.

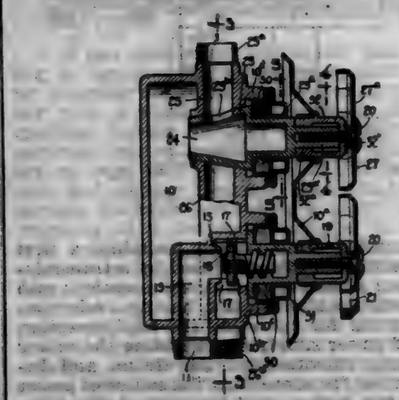
2,031,929
IMPREGNATION OF MATERIALS
Wilhelm Breuers, Ludwigshafen-on-the-Rhine, Hermann Mark, Mannheim, and Erich Konrad, Leverkusen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application July 29, 1932, Serial No. 626,210. In Germany August 18, 1931
10 Claims. (Cl. 91—68)



3. Preparations, suitable for impregnating porous materials, comprising essentially a water-soluble sulphonic acid body selected from the group consisting of sulphonic acids of rubber materials, sulphonic acids of polymerised styrene and of water-soluble salts of said sulphonic acids.

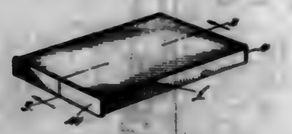
2,031,930
STABILIZED REFINED MINERAL, VEGETABLE, AND ANIMAL OILS
Hyym E. Buc, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application April 21, 1933, Serial No. 667,159
21 Claims. (Cl. 87—8)

1. As a stable composition of matter a member of the class of substances consisting of highly refined mineral, animal and vegetable oils and highly refined fats, having incorporated therein a relatively small amount of a phenolic compound containing a tertiary aliphatic hydrocarbon radical as side chain.



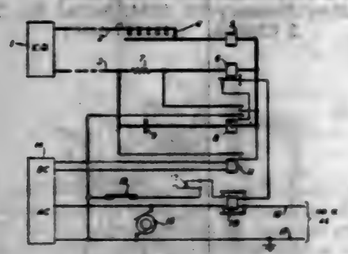
2,031,931
WELL DRILLING APPARATUS
Walter L. Church, Houston, Tex., assignor of one-half to W. L. Foster, Harris County, Tex.
Application February 6, 1934, Serial No. 709,820
9 Claims. (Cl. 255—63)

1. In apparatus of the character described, a pipe holder formed of sections hinged together at



one side and open at the outer side, the upper end of the holder having ratchet teeth.

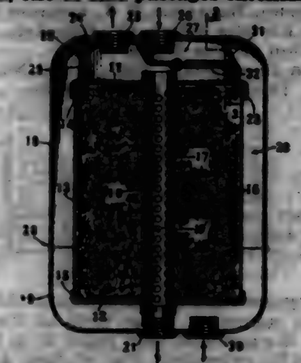
2,031,932
COMBINED DIVERTING AND HOT-COLD CONTROL FIXTURE
Edward S. Cornell, Jr., Larchmont, N. Y., assignor to American Radiator Company, New York, N. Y., a corporation of New Jersey
Application January 22, 1934, Serial No. 707,872
3 Claims. (Cl. 277—59)



1. A diverting fixture comprising a substantially flat casing provided with a hollow interior constituting a relatively large mixing chamber, an inflow pipe for cold fluid and an inflow pipe for hot fluid, spaced apart from each other and extending through a wall of the casing into one end of the mixing chamber, valve means at the inner end of each of the inflow pipes for controlling the flow of fluid into the mixing chamber, ports associated with each of the said valve means, each directing the flow of fluid into the mixing chamber in a plurality of streams, an outflow passage means in said mixing chamber and extending throughout the length of the said chamber and arranged to be connected to separate piping leading to a plurality of locations, and valve means for easily effecting communication of said outflow passage means with the mixing chamber and for selective flow through said separate piping respectively.

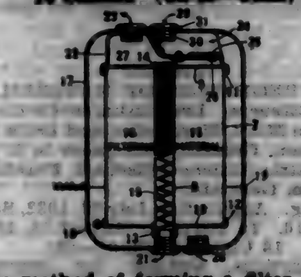
2,031,932
VANITY CASE OR COMPACT
Harry B. Clegg, Attleboro, Mass.
Application April 29, 1935, Serial No. 18,851
5 Claims. (Cl. 132—33)

1. In a vanity case of the character described, a pair of telescoping members including a casing and a composite container section formed of separate opposed elements substantially co-extensive in horizontal extent and interfitted together to form the container section, means for releasably retaining said elements in interfitted relation, and means carried by said casing and one of said elements for limiting the movement of said container section outwardly of said casing.



2,031,934
PRINTING TELEGRAPH SYSTEM
Thomas L. Corwin, Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 12, 1934, Serial No. 734,709
12 Claims. (Cl. 178—4.1)

1. A communication system including a first communication station connected by a transmission line to a second communication station; said second communication station having a teletypewriter, a motor for operating the teletypewriter, a source of power supply for operating the motor but normally disconnected therefrom, and instrumentalities for connecting the source of power supply to the motor, said instrumentalities including a relay of the type which requires a plurality of current pulses to pass through its winding before it will operate, and control means at the first station for transmitting pulsating direct current over the line to the second station for operating said relay.

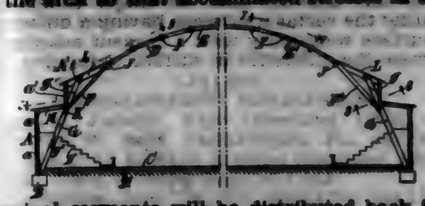


2,031,935
FILTER
Charles H. Cuno, Meriden, Conn., assignor to The Cuno Engineering Corporation, Meriden, Conn., a corporation of Connecticut
Application April 21, 1933, Serial No. 667,146
4 Claims. (Cl. 210—131)

1. A filter comprising a sheet metal shell, a sheet metal hood secured substantially contiguous an end portion of the shell and of less width than the shell, a cartridge having end caps and supported at at least one end by said hood, inlet and outlet passages in the end of said shell adjacent the hood, one of said passages extending through

the hood and the other into the space around the hood.

2,031,936
ART OF FORMING FILTERS
Charles H. Cuno, Meriden, Conn., assignor to The Cuno Engineering Corporation, Meriden, Conn., a corporation of Connecticut
Original application April 21, 1933, Serial No. 667,146. Divided and this application February 10, 1934, Serial No. 710,802
10 Claims. (Cl. 29—148.3)



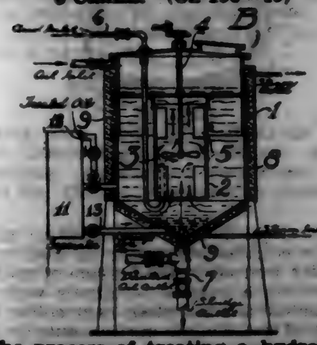
1. The method of forming a filter having cylindrical cup-like shell members and an inner incombustible filter cartridge slidably positioned at one end on a nipple in one shell member and slidably positioned at the other end by a flanged hood eccentrically positioned upon another nipple within the other shell member, which comprises assembling the incombustible filter cartridge, slidably positioning one end of the cartridge in one of the shell members, slidably positioning the other end of the cartridge in the other shell member and welding the edges of the shell members together while thus slidably supporting the ends of the cartridge member.

2,031,937
ARCH BUILDING CONSTRUCTION
Louis Davidson, Hewlett, N. Y.
Application December 14, 1931, Serial No. 580,987
7 Claims. (Cl. 189—21)

1. A building construction having a plurality of long span arches, said arches being divisible into two groups, one group having its ends terminating above the floor line and spaced relatively close together, and the other group having its ends at substantially the floor level and spaced relatively far apart, the terminal segments of many arches of the second group of arches having portions rigidly connected therewith extending beyond the curvature of the arch, and arch sub-segments connecting certain of the arches to the extending portions of the terminal

segments of the second group of arches outwardly of the arch so that accumulated stresses in said

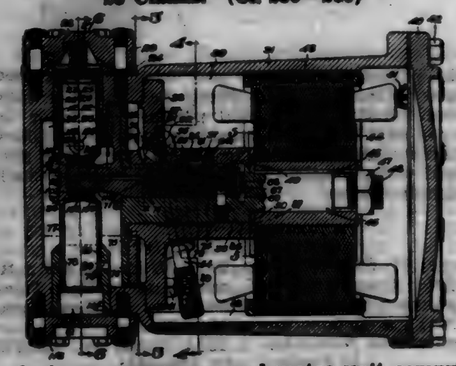
terminal segments will be distributed back into the arches proper.



2,031,938
PROCESS FOR THE HALOGENATION OF ORGANIC FLUIDS
Richard M. Dennehy and George Hearne, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 6, 1932, Serial No. 631,758
16 Claims. (Cl. 260—166)

1. In a process for the chlorination of an organic liquid, the step of atomizing said liquid within a chamber by means of a stream of chlorine gas and causing substantially all of the liquid product to flow as a film on the walls of the chamber.

2. In a process for the chlorination of an organic liquid, the steps of admixing with said liquid a volatile and substantially inert cooling agent, atomizing the mixture of said liquid and cooling agent within a chamber by means of a stream of chlorine gas and dissipating all or part of the heat liberated by the chlorination by evaporation of said cooling agent within the chamber.

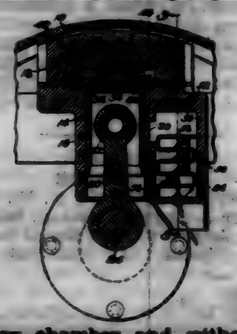


10. In a process for the substantial production of unsaturated monochloride from tertiary olefine in the liquid state, the steps of admixing with said olefine a volatile and substantially inert cooling agent, atomizing the mixture of said liquid and cooling agent within a chamber by means of a stream of chlorine gas and dissipating all or part of the heat liberated by the chlorination by evaporation of said cooling agent within the chamber.

2,031,939
METHOD OF TREATING HYDROCARBONS
Theodore R. Denham, Irvington, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application February 26, 1932, Serial No. 595,235
8 Claims. (Cl. 196—49)

1. The process of treating a hydrocarbon oil with a reagent of the class consisting of sulfuric anhydride and fuming sulfuric acid, at a temperature above about 80° C. and below the boiling point of the hydrocarbon oil, which comprises continuously feeding said treating agent initially into a violently agitated portion of the treating zone where the hydrocarbon oil and the treating agent are maintained in a violently agitated contact long enough to permit a substantial portion of the reaction to take place, continuously removing the reacted materials to a portion of said zone of less violent agitation, removing the sludge from the hydrocarbon oil and continuously replenishing the supply of hydrocarbon oil to be treated.

2,031,940
COMPRESSOR
William D. Drysdale, Buffalo, N. Y., assignor to Walter J. Snyder, Boston, Mass.
Application August 9, 1933, Serial No. 684,037
23 Claims. (Cl. 230—206)



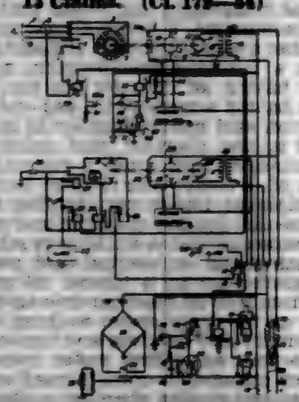
1. A gas compressor and motor unit comprising, in combination, a housing presenting a motor chamber and a crank-case and suction chamber with a partition therebetween, said motor chamber having an inlet for the gas, and said partition having a passage for gas and lubricating oil from said motor chamber to said crank-case and suction chamber, said crank-case and suction chamber presenting a reservoir for lubricating oil, a compressor cylinder having a lateral, refrigerant intake port leading from said crank-case and suction chamber into said cylinder, a compressor piston working in said cylinder and covering and uncovering said port, an oil pump cylinder having a lateral, oil intake port leading from said oil reservoir into said oil pump cylinder, an oil pump piston working in said oil pump cylinder and covering and uncovering said oil intake port, an electric motor housed within said motor chamber, a crank housed within said crank-case and suction chamber, a driving shaft connecting said motor to said crank-pin to drive the latter, a bearing for said shaft supported by said partition and provided with an oil chamber about said shaft and a passage leading from said oil chamber to said crank-case and suction chamber, an oil supply conduit leading from said oil pump cylinder to said oil chamber, and baffle means to cause the separation of the oil from the gas within said crank-case and suction chamber and the return of the oil to said oil reservoir.

2,031,941
REFRIGERANT COMPRESSOR
William D. Drysdale, Mount Clemens, Mich., assignor to Walter J. Snyder, Boston, Mass.
Application November 1, 1934, Serial No. 750,981
10 Claims. (Cl. 230—172)

1. In a refrigerant compressor for use in a

compressor-condenser-expander circuit, the combination of a housing presenting a primary chamber having an inlet to receive the gaseous refrigerant, means presenting a secondary chamber within said primary chamber, a restricted passage between said chambers, and a baffle between said chambers, and a pump housed within

said primary chamber and without said secondary chamber, said pump having its intake communicating with said primary chamber by way of said restricted passage and said secondary chamber, said baffle being distinct from and disposed without said pump along the line of such communication.



1,931,942

CONTROL CIRCUIT

James M. Duguid, Springfield, N. J., and John H. Sole, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application November 1, 1924, Serial No. 750,918

13 Claims. (Cl. 179—84)

1. In combination, two motor generator sets, a load circuit, and means operated when the load circuit is connected to one of said sets and the generator voltage of this set falls below a predetermined lower limit for starting the other motor generator set, for disconnecting the load circuit from the first motor generator set and for connecting the load circuit to the other motor generator set.

1,931,943

METHOD AND MEANS FOR SEPARATING SEEDS

Frederick Charles Dyer and Harold Langdon McClelland, Toronto, Ontario, Canada

Application September 2, 1921, Serial No. 497,943

7 Claims. (Cl. 209—166)

1. A method of separating seeds from seeds by utilising a difference in the wettability of their surfaces as distinguished from differences in specific gravity, size, or shape comprising treating the surfaces of seeds having a difference in surface wettability with a reagent adapted to increase the difference in surface wettability, introducing said seeds to an air-liquid surface in such a way that momentum of the seeds normal to the surface of the liquid is substantially eliminated, and floating the less wettable seeds from the more wettable seeds.

1,931,944

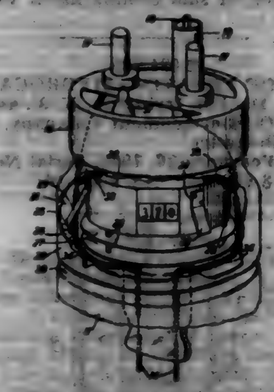
RUBBER COMPOSITION CONTAINING PETROLEUM RESINS

Per K. Frolich, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application September 2, 1931, Serial No. 561,494

11 Claims. (Cl. 100—23)

1. Method of preparing a rubber composition comprising incorporating rubber and a synthetic hydrocarbon resin of petroleum origin isolated from the thermal decomposition products of petroleum oils and vulcanizing the mixture.



1,931,945

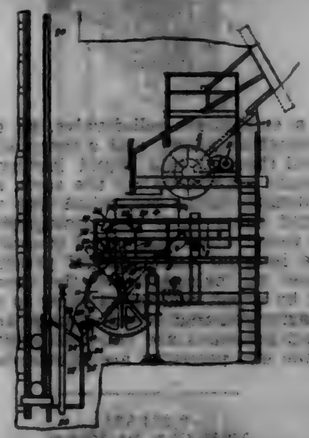
ELECTRICAL DEVICE

Omer M. Glunt, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application June 24, 1933, Serial No. 676,549

3 Claims. (Cl. 250—27.5)

1. An electrical device comprising an enclosing vessel, an electrical conductor in said vessel, a collar rigidly secured to the outside of said vessel and supporting a pair of terminals with which said conductor is connected, said collar having a laterally off-set, hollow portion outside of said vessel and having an aperture, and a meter in said hollow portion and connected to said terminals for electrically recording and indicating through said aperture the time during which said conductor has been in use.



1,931,946

SKIP LOADING MECHANISM

Frank H. Goodell, East Cleveland, Ohio, and Charles W. Rees, Philadelphia, Pa., assignors to The C. O. Bartlett & Snow Company, Cleveland, Ohio, a corporation of Ohio

Application June 16, 1931, Serial No. 544,736

5 Claims. (Cl. 214—135)

1. In combination in an apparatus for handling material, a weighing hopper oscillatably mounted on a bearing so positioned relative to the weight and the shape of said hopper that when empty said hopper will tilt on said bearing and when containing a predetermined quantity of the material to be handled will tilt the opposite way, a gate closing a discharge opening in said hopper which gate is normally held closed, a bucket, means to move said bucket to and from loading position beneath said gate, means carried by said bucket adapted to engage and open said gate as said bucket approaches loading position, means adapted to feed material to said hopper including a motor controlled by an electric circuit, a switch in said circuit normally held open, means adapted to close said switch when said hopper is tilted in empty position, a second switch in said circuit normally held open and means adapted to close said second switch when said gate is in closed position, an element pivotally suspended across the discharge opening of said bin adapted, by its movement responsive to discharge of material, to control a switch in an electric circuit which includes the station from which the movement of said skip is controlled.

1,931,947

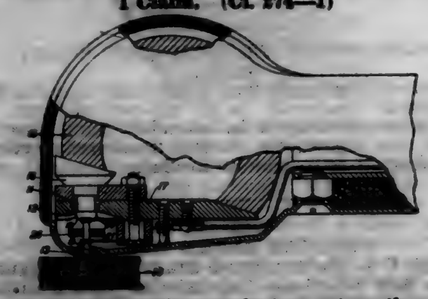
PROCESS FOR THE REFINING OF ALLOYS

Ture Robert Haglund, Stockholm, Sweden

No Drawing. Application September 12, 1934, Serial No. 741,707. In Sweden September 20, 1933

11 Claims. (Cl. 75—17)

1. A process for the refining of alloys containing carbon as a component and with the carbon at least partly concentrated in particles of smaller size than the average size of the crystals of the alloy, comprising the step of removing at least part of the finest particles after disintegration of the alloy.



1,931,948

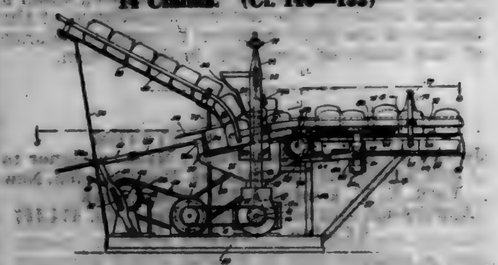
VIBRATION DAMPING DEVICE

Henry C. Harrison, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 27, 1933, Serial No. 682,454

1 Claim. (Cl. 274—1)

In a phonograph reproducing system, the combination with a record of relatively low stiffness and a reproducer having a moving system cooperating therewith and resonating with the material of the record at certain frequencies, of the frequency selective damping means for reducing the response of the reproducer at the resonant frequencies comprising a thin disc of damping material secured at its central portion to the moving system with the plane of the disc normal to the motion of the system, the disc being proportioned to flex in a direction normal to the plane of the disc at the resonating frequencies and to vibrate bodily as a mass element at lower frequencies.



1,931,949

MECHANISM TO ASSEMBLE A COMPOSITE LOAF

William Walter Hartman, Los Angeles, Calif.

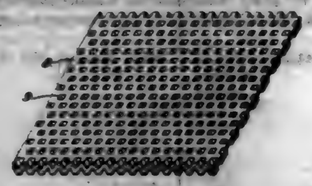
Application October 24, 1932, Serial No. 639,316

14 Claims. (Cl. 146—153)

2. In combination, mechanism adapted to cut a loaf or the like into sections, a conveyor to move the cut loaf, an elevator adapted to lift a section from the conveyor to temporarily stop its forward movement, means to return said section to the conveyor, and an alining element on the conveyor to aline said returned section with a section from a subsequent loaf.

1,931,950

BUILDING MATERIAL



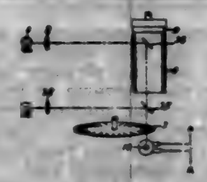
Norman P. Hershberger, Scarsdale, N. Y., assignor to Bakelite Building Products Co. Inc., New York, N. Y., a corporation of Delaware

Application October 22, 1931, Serial No. 570,677

12 Claims. (Cl. 72—16)

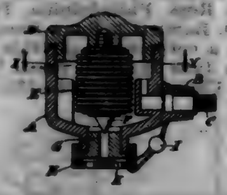
1. As a new article of manufacture, building material comprising a rigid cementitious base

having a plurality of surface depressions therein, coating material entirely covering a portion of said base, and another portion which is adapt-



ed to be overlapped in assembly being uncovered, the depressions in said uncovered portion forming air cells to aid in insulation.

2,031,951
BURGLAR ALARM SYSTEM
Ralph V. L. Hartley, South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 25, 1932, Serial No. 595,046
1 Claim. (Cl. 177—316)



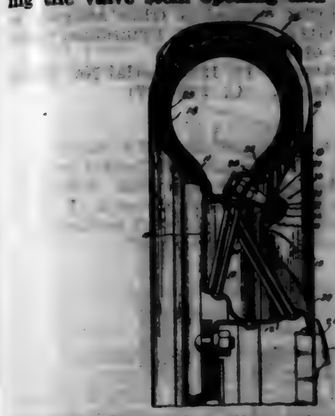
In a burglar alarm system for a vault, in combination, a loud-speaking type receiver having a diaphragm within the vault, a balanced electrical bridge system including in one of its arms said loud-speaking type receiver, a source of alternating current connected to input points of said balanced electrical bridge system to operate said loud-speaking type receiver to produce sustained air vibrations within the vault, a relay in circuit connection with output points of said balanced electrical bridge system, a local circuit controlled by said relay and an alarm device in said local circuit, said alarm device being operated when a change occurs in the acoustic impedance of the interior of the vault sufficient to cause unbalance of said balanced electrical bridge system.

2,031,952
ELECTRO-OPTICAL SYSTEM
Joseph W. Horton, Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 11, 1930, Serial No. 474,407
8 Claims. (Cl. 250—41.5)

1. In an electro-optical system, means for producing a plurality of beams of light of constant intensity, means for varying one of said beams in accordance with signals, means for simultaneously varying said plurality of beams of light at a carrier frequency rate, and means controlled by said varying light beams for simultaneously producing a signal modulated carrier current and for superposing thereon an unmodulated component of carrier current in phase with the signal modulated current.

2,031,953
STEAM LINE WATER RELIEF VALVE
Louis C. Hyatt, Albany, N. Y., assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y., a corporation of New York
Application January 31, 1933, Serial No. 655,219
8 Claims. (Cl. 236—56)

1. In a condensate relief valve, an expansible and contractible vessel, and a thermally responsive liquid therein, said liquid having a boiling temperature approximately the same as that of the condensate to be controlled, the volume of said liquid being such that unvaporized liquid fills the vessel while said vessel is contracted, so that the internal and external pressures upon said vessel will balance while the vessel is surrounded by vapor, said vessel being so constructed and arranged that it will expand to its limit while said pressures are balanced and will contract while said pressures are unbalanced.

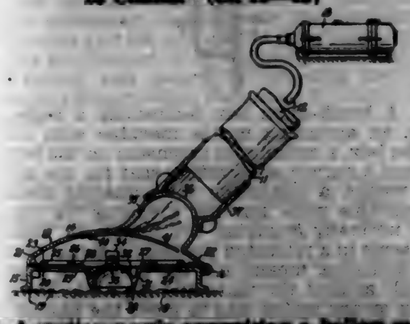


2,031,954
VEHICLE BUMPER
Herbert S. Jandus, Detroit, Mich., assignor to General Spring Bumper Corporation, Detroit, Mich., a corporation of Michigan
Application April 15, 1926, Serial No. 444,434
12 Claims. (Cl. 293—55)

7. In a bumper construction, a front bar, a rear bar, said bars having nesting concentric eyes, a bolt assembly including a part passing through the eyes for maintaining said eyes in position, said rear bar eye being narrower than said front bar eye, and spacers in said bolt assembly compensating for the difference in the lengths of the eyes, said spacers comprising resilient elements clampingly exerting frictional forces against the edges of the rear bar eyes.

2,031,955
VALVE CAP FOR USE WITH WHEEL OR TIRE COVERS
Herbert S. Jandus, Detroit, Mich., assignor to Lyon Cover Company, Detroit, Mich., a corporation of Michigan
Application November 6, 1933, Serial No. 696,512
4 Claims. (Cl. 150—54)

1. As an article of manufacture, a valve stem cap centrally threaded to be screwed over the free end of the stem and having an enlarged marginal portion for engagement with a wheel cover plate about a valve stem opening therein, said cap having an annular skirt extending inwardly from said marginal portion for telescoping the valve stem opening and also having its

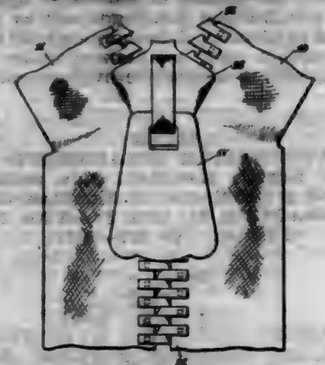


centrally threaded portion externally enveloped by a metallic cup.

2,031,956
OIL RETAINER
Lloyd A. Johnson, Hillsborough, Calif.
Application July 25, 1932, Serial No. 624,535
8 Claims. (Cl. 286—1)

1. An oil retainer comprising a pliable packing having an annular flange and an axially extending portion, a contractile member surrounding the axially extending portion, and a one-piece metal cage adapted to enclose and secure in a liquid tight joint the annular flange of said pliable packing member and also to provide a barrier to retain said contractile member on the axially extending portion of said packing member.

2,031,957
SUCTION NOZZLE
Fredrik Johan Robert Karlström, Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware
Application March 25, 1933, Serial No. 662,672
In Germany April 8, 1932
23 Claims. (Cl. 15—13)

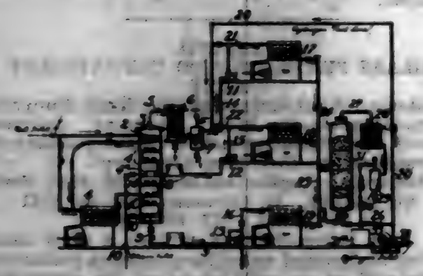


1. A suction nozzle comprising a hollow member having an intake opening and an opening adapted to be connected to a source of suction, an agitator member movably mounted with respect to said hollow member and movable due to variations of flow of air in said hollow member, and means separate from the agitator operative by flow of air through the hollow member for producing said variations of flow of air in said hollow member to cause movement of said agitator member.

2,031,958
GLASS PERMEABLE TO ULTRAVIOLET RAYS
Waldemar Kaufmann and Everhard Bungartz, Frankfort-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application March 24, 1933, Serial No. 662,637. In Germany May 20, 1931
11 Claims. (Cl. 106—39.1)

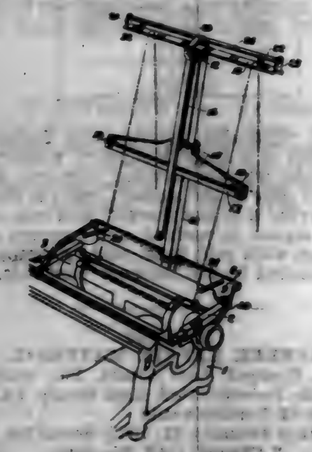
1. As a composition of matter, a glass batch having as its chief constituent barium metaphosphate and as an addition agent the metaphosphate of at least one alkaline earth metal, said glass batch yielding a glass characterized in that it is permeable to ultra-violet rays and resistant to water.

2,031,959
FASTENER
Roland S. Kelley, Meadville, Pa., assignor to Hookless Fastener Company, a corporation of Pennsylvania
Application July 10, 1933, Serial No. 679,689
4 Claims. (Cl. 24—205)



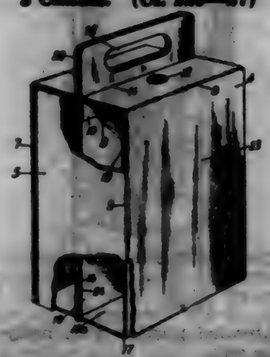
3. In a separable interlocking fastener the combination of a flexible support, a series of bifurcated non-metallic fastener elements disposed astride one edge of the support, each of the bifurcations having a recess therein, and non-metallic retaining means in each of said recesses in locking relation with said tape, said retaining means being cemented to the fastener elements.

2,031,960
RUBBER REPAIR MATERIAL
Arthur B. Kempel, East Brady, Pa., assignor to Rex-Hide, Incorporated, East Brady, Pa., a corporation of Pennsylvania
Application January 21, 1935, Serial No. 2,703
3 Claims. (Cl. 91—68)



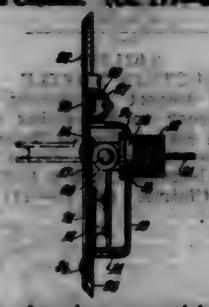
1. Repair material comprising an unvulcanized rubber element having incorporated in its attaching face a stable terpene oil forming a solid, tacky solution with the rubber.

2,031,961
DESTRUCTIVE HYDROGENATION
Stephen A. Kiss, Brooklyn, N. Y., assignor to Standard-I. G. Company
Application July 24, 1931, Serial No. 553,234
10 Claims. (Cl. 196—52)



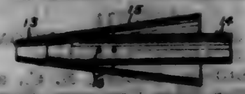
1. In a process for destructive hydrogenation of petroleum the steps of preheating with hydrogen a rapidly flowing stream of an oil fraction capable of complete vaporization below 700° F. at a selected pressure in excess of 20 atmospheres by passing the same through an elongated heating zone of narrow cross section, separately preheating a heavier oil fraction in the absence of hydrogen by passage of a stream thereof through an elongated heating zone of narrow cross section to a temperature above 700° F. while at a pressure above its critical homogeneous pressure, the rapidity of heating and pressure applied to said heavier fraction being adapted to prevent separation of phase, and discharging both streams into a reaction zone, maintained under conditions adapted for destructive hydrogenation.

2,031,962
TYPEWRITER ATTACHMENT
Marie W. Krauth, Hamilton, Ohio, assignor to Krauth & Benninghofen, Hamilton, Ohio
Application March 31, 1934, Serial No. 718,417
1 Claim. (Cl. 197—126)



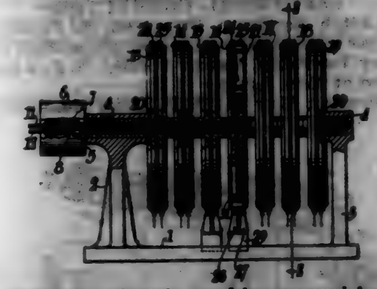
In a device of the nature disclosed, a frame including a tubular post, a rack slidably mounted upon the post, a counter-weight for said rack slidably housed within said post and connecting with said rack, and sheet holding bars removably attached upon one side of said rack, each bar for engagement through a sleeved end of a sheet for suspendingly sustaining the sheet.

2,031,963
CARTON
Theodore A. Kundtz, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a corporation of Ohio
Application September 19, 1935, Serial No. 41,271
5 Claims. (Cl. 229—37)



4. In a carton of the type described, an outer casing unit, and an inner handle unit inserted into the outer casing unit, said inner handle unit having side walls which lie adjacent the corresponding side walls of the outer casing unit, said outer casing unit having cover flaps hingedly connected to said side walls thereof which close the upper end of the carton when they are in substantially horizontal position, the upper edges of the said side walls of the inner handle unit being disposed beneath said cover flaps when they are in closed position and contacting therewith to prevent the handle portion from being pulled upwardly out of the outer casing unit.

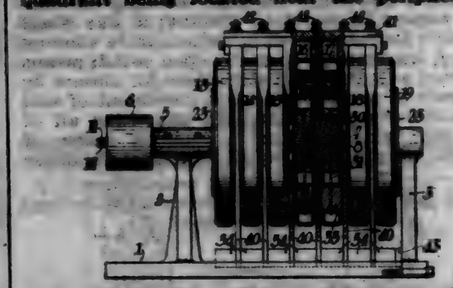
2,031,964
PULL BOX REMOTE CONTROL
Daniel Mapes, Upper Montclair, N. J., assignor to Walter Kidde & Company, Inc., New York, N. Y., a corporation of New York
Application April 1, 1931, Serial No. 526,971
3 Claims. (Cl. 177—372)



3. A break-glass box comprising a body portion, an actuating means movable with respect to the box, a cylindrical extension on the box and having a curved self-nesting seat for the actuating means, a handle on the actuating means, a fracturable plate forming a closure for the box and normally engaging the handle to maintain the same in a retracted position, a spring between the actuating means and the handle to urge the handle against the plate and maintain the actuating means seated and to move the handle with respect to the box and actuating means when the plate is fractured, at least three spaced circumferential abutments on the body portion to position the plate, an apertured cover carried by the body portion to secure the plate against the abutments, and means on the handle spaced from the circumference of the aperture and bearing on the plate, whereby the fractured portions of the plate tend to fall clear of the aperture upon fracture of the plate.

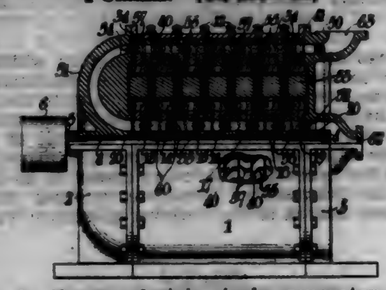
2,031,965
FIRE EXTINGUISHING APPARATUS
Daniel Mapes, Upper Montclair, N. J., assignor to Walter Kidde & Company, Inc., New York, N. Y., a corporation of New York
Application February 19, 1934, Serial No. 716,587
10 Claims. (Cl. 169—11)

3. In combination a source of carbon dioxide under pressure, a discharge nozzle for said source, a shield into which said nozzle discharges carbon dioxide constructed and arranged to prevent substantial entrainment of air therebetween, said shield comprising means to form a central jet of carbon dioxide discharging from the shield with a velocity sufficient to entrain air and means to form a layer of carbon dioxide having a velocity sufficient to surround said central jet as long as it has a velocity sufficient to entrain air.



2,031,966
CENTRIFUGAL THERMOELECTRIC MACHINE
Robert J. Mathias, Cincinnati, Ohio
Application November 26, 1934, Serial No. 754,825
5 Claims. (Cl. 136—4)

1. A thermo-electric machine comprising a rotatable casing containing an electrically non-conductive liquid and mounted upon an axis, a thermo-couple system contained therein and enveloped by said liquid, one set of junctions of which system are located near the periphery of said casing and the other set of junctions of which system are located in proximity to the center of said casing, and means for removing electricity from said system when the casing is rotated upon its axis.



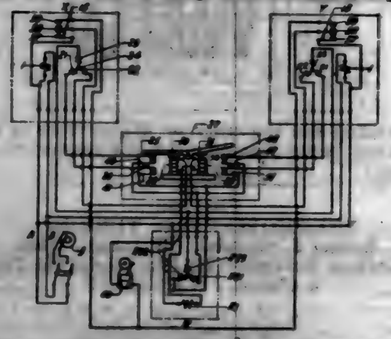
2,031,967
THERMOELECTRIC MOTOR-GENERATOR
Robert J. Mathias, Cincinnati, Ohio
Application November 26, 1934, Serial No. 754,826
4 Claims. (Cl. 172—232)

1. An electric dynamo comprising a stationary armature unit in which electric current may be induced and from which electric current may be withdrawn, and a rotatable field unit in closely spaced relation to said armature, said field unit comprising a casing containing a fluid and containing four quadrants of thermo-couples located 90° apart, one set of junctions of each quadrant being located near the periphery of

said casing and the other set of junctions of each quadrant being located near the center of said casing.

2,031,968
THERMOELECTRIC TURBINE
Robert J. Mathias, Cincinnati, Ohio
Application November 26, 1934, Serial No. 754,827
4 Claims. (Cl. 136—53)

1. A thermo-electric turbo-generator comprising a rotatable thermo-couple system having "hot" and "cold" junctions, means for first-stage conversion of fluid kinetic energy into rotary power associated with the "hot" junctions of the thermo-couple system and means for second-stage conversion of that fluid kinetic energy into rotary power associated with the "cold" junctions of the thermo-couple system.



2,031,969
METHOD OF PURIFYING GLASS SAND
Rob R. McGregor, Swissvale, and Edwin W. Tillotson, Pittsburgh, Pa., assignors to Macbeth-Evans Glass Company, Charleroi, Pa., a corporation of Pennsylvania
No Drawing. Application August 24, 1934, Serial No. 742,144
4 Claims. (Cl. 252—8)

4. The method of removing iron and other impurities from glass sand, comprising mixing a body thereof with a dissolving agent of the class consisting of alkali borates, alkali carbonates and alkali phosphates, heating the mixture to such temperature as to dissolve the impurities of the sand without substantial dissolving of the sand, and thereafter treating the mixture to remove the dissolved impurities.

2,031,970
SIGNALING SYSTEM
Samuel Nelson Mead, Amesbury, Mass., assignor to Chas. J. Henschel & Co., Inc., New York, N. Y., a corporation of New York
Application July 11, 1931, Serial No. 552,188
1 Claim. (Cl. 177—337)

In a self synchronous signaling system, a plurality of transmitter units and a receiver unit,

each unit comprising a motor having a field winding and a polyphase armature winding movable with respect to said field winding; a star wheel mounted for rotation with the armature winding of each transmitter, normally open switch means mounted adjacent each star wheel for closure by the teeth of said star wheel on movement of said armature winding, means for energizing all of said field windings from a common source of current, relay means adapted to connect the phase

windings of the transmitter armature which is moved to the corresponding phase windings of the armature of the receiver unit and to disconnect the phase windings of the other transmitter armatures from said armature winding of the receiver unit and means including said switch means for operating said relay means to so connect the transmitter armature winding which has been moved to the receiver armature winding.

2,031,971
LIGHT CONCENTRATE METHOD AND MEANS
William J. Merrissey, Brooklyn, N. Y.
Application November 10, 1933, Serial No. 697,377
10 Claims. (Cl. 88—24)

1. In an optical scanning device, a pair of plates having flat surfaces and squared ends supported at an acute angle relative to each other with adjacent squared ends forming a slit, means for projecting some light rays directly through the slit, and means for projecting other rays onto said surfaces where, due to the angular relation of the surfaces, said last rays are progressively reflected forward to pass through said slit.

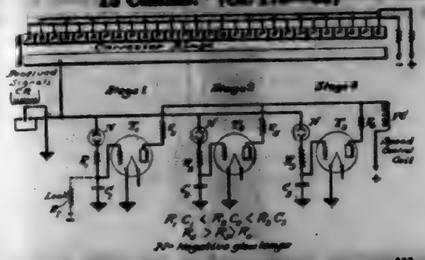
2,031,972
SWEETENING PROCESS
Franz Rudolf Meser, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of California
No Drawing. Application June 20, 1933, Serial No. 676,346
4 Claims. (Cl. 196—32)

1. A process for producing a sweet non-corrosive mineral oil distillate, comprising: treating said distillate solely with an alkali hydroxide and elementary sulfur and adding to the resulting product a small quantity of an unsaturated hydroaromatic compound which is capable of inhibiting the corrosive action of sulfur.

2,031,973
IMPREGNATION OF WOOD
Charles W. Mudge, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 24, 1931, Serial No. 570,974
4 Claims. (Cl. 99—12)

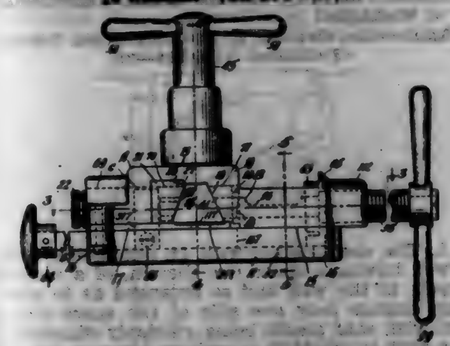
3. An improvement in the process of impregnating wood, fiber board and the like with Montan wax which comprises subjecting the wood to a pretreatment comprising wetting the wood with a dilute aqueous solution of hydrochloric acid.

2,031,974
RECOVERY OF CHEMICALS FROM WASTE PULPING LIQUORS
Harold R. Murdock, Canton, N. C., assignor to The Champion Fibre Company, Canton, N. C., a corporation of Ohio
No Drawing. Application November 4, 1933, Serial No. 696,748
5 Claims. (Cl. 23—48)



1. The improvement in the process of recovering pulping chemical from the solids content of a waste pulping liquor of a pulping process employing a sodium compound as pulping chemical, which liquor contains a sodium-containing pulping chemical and a considerable proportion of organic matter, which consists in adding to the material under treatment a combustion-promoting inorganic compound which is adapted to yield a substantial proportion of a sodium-containing active pulping chemical and incinerating the mixture.

2,031,975
ELECTRICAL CONDUCTOR
Edwin Fitch Northrup, Princeton, N. J., assignor to Ajax Electrothermic Corporation, Ajax Park, Ewing Township, Mercer County, N. J., a corporation of New Jersey
Application May 14, 1930, Serial No. 452,187
8 Claims. (Cl. 171—97)

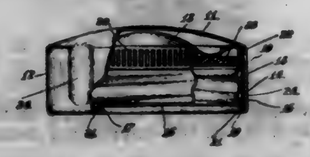


2. A conductor system for supplying large amperages of alternating current comprising a pair of parallel hollow conductors of appreciable linear dimension and free from loops and all but simple bends side by side and close enough together for substantial mutual inductance, a source of water supply connected to pass water through the conductors for cooling purposes, in combination with high frequency electrical apparatus aside from the conductors themselves connected to the conductors, and a source of alternating current having frequency sufficiently high to cause appreciable eddy current losses in a solid conductor, connected to the conductors at points spaced along the conductors with respect to the points of connection of the high frequency electrical apparatus to pass the current from the source through the conductors in opposite directions to the high frequency electrical apparatus, the walls of said conductors being so thin that the cross sectional area is only about one third of that required for similar conductors without the water cooling.

2,031,976
SYNCHRONIZING SYSTEM
Paul A. Nesen, Bergenfield, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application October 12, 1934, Serial No. 748,133
15 Claims. (Cl. 178—53)

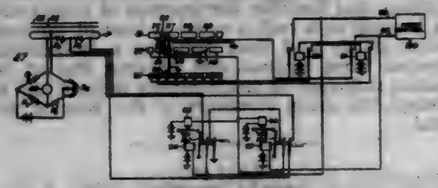
1. A system for synchronizing an oscillatory device with a series of received impulses, which comprises instrumentalities for producing incremental correcting impulses of one polarity or the other, depending upon the phase relation of the oscillations of said device and the received impulses, correcting means including a plurality of circuits having different time constants, each circuit embodying a storing condenser and the input circuit of a thermionic tube, and means including the output circuits of said tubes for utilizing the resulting potential charges on said condensers to correct any departure in phase relation between the oscillations of said device and said received impulses.

2,031,977
TOOL FOR PREPARING BELT ENDS
John C. Olsen, Chicago, Ill., assignor to Flexible Steel Lacing Company, Chicago, Ill., a corporation of Illinois
Application February 21, 1935, Serial No. 7,486
10 Claims. (Cl. 164—15)



1. In a device for preparing the end of a belt, the combination with a holder recessed for the reception of the end portion of a V-belt; of means for clamping the belt end portion in the recess; means, carried by the holder, for removing a section of the belt transversely thereof and while clamped; and means, carried by the holder, for cutting off the end of the belt while clamped.

2,031,978
ALLOYS
Roy E. Paine, Cleveland, Ohio, assignor, by mesne assignments, to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application January 4, 1934, Serial No. 705,236
3 Claims. (Cl. 75—1)



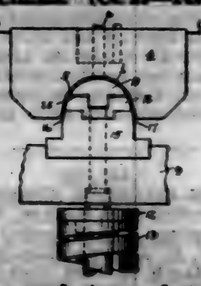
1. A magnesium base alloy containing from about 0.1 per cent to about 20.0 per cent of tin, from about 0.1 per cent to about 4.0 per cent of cobalt, and from about 0.1 per cent to about 10.0 per cent of zinc, the balance of the alloy being magnesium.

2,031,979
CONTAINER CLOSURE
Charles H. Rasmussen, Brooklyn, N. Y., assignor to Ferdinand Gutmann & Co., Brooklyn, N. Y., a corporation of New York
Application September 25, 1935, Serial No. 41,943
7 Claims. (Cl. 215—43)

1. A container closure embodying therein an outer shell having a skirt, and an inner shell having a skirt provided with means adapted to co-operate with complementary means upon the neck of a container in applying a closure to, or removing it from, a container, the bottom edge of the skirt of said inner shell being provided with a plurality of pendant lugs spaced in relation to each other circumferentially of the skirt, and the bottom edge of the skirt of said outer shell being inwardly curled to bring its edge in abutting relation to the skirt of the outer shell intermediate said lugs and in engaging relation with the opposite edges of each of said lugs.

2,031,980
GAIN CONTROL CIRCUIT
Haakon I. Romnes, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 23, 1934, Serial No. 716,924
19 Claims. (Cl. 178—44)

1. In control circuits for a station on a signal transmission line, a plurality of attenuation networks for controlling the attenuation on said line, control means comprising a galvanometer for selectively inserting and withdrawing said networks in and from the line to maintain the energy level on the line substantially constant, and means for giving said galvanometer an added movement in the direction of the last movement thereof at the time of inserting a network in and withdrawing a network from the line to prevent hunting action.



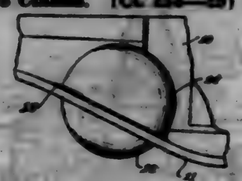
2,031,981
TAPE LADDER FOR VENETIAN BLINDS
George C. Runge, Chicago, Ill., assignor to R. L. Mauser Company, Chicago, Ill., a corporation of Illinois
Application June 22, 1935, Serial No. 27,884
5 Claims. (Cl. 156—17)

1. In a tape ladder for Venetian blinds, the combination with the face and rear bands of the

tape, of slat-supporting members connecting the bands at regular intervals, and transverse stiffening members in one of the bands intermediate the locations of the slat-supporting members.

2,031,962
METHOD OF MAKING BEARINGS
George H. Salzman, Cleveland Heights, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a corporation of Ohio
Application September 22, 1931, Serial No. 564,557
6 Claims. (Cl. 29—149.5)

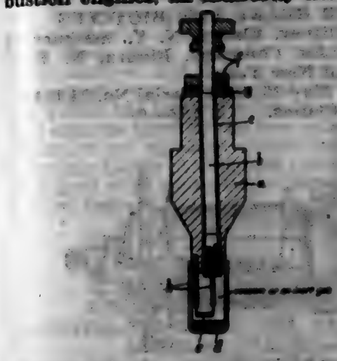
1. In the manufacture of semi-cylindrical bearings and the like, the method of conforming the bearing to a radius equal to that of the completed article and then applying a tangentially directed force against the parting line of the bearing sufficient to mechanically deform and rearrange the grain structure of the bearing material.



2,031,963
WELL POINT
Arthur C. Sase, Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio
Application November 1, 1934, Serial No. 751,017
8 Claims. (Cl. 166—5)

1. A driving and jetting head for a well point comprising an outer substantially cylindrical shell, a driving point of substantially cylindrical form disposed within said shell, means for holding said driving point centrally within the shell in such a manner that an annular space is formed between the outer surface of the driving point and the inner surface of the shell, said driving point projecting out of the lower end of the shell a considerable distance, the lower end of said shell being tapered inwardly almost into contact with the lower end of said driving point so that a narrow annular space is formed between the extreme lower end of the shell and the lower portion of the driving point, the extreme lower end of said driving point being tapered inwardly in all directions to form a sharp point, the extreme lower edge of said shell being bevelled, the angle of bevel of the lower edge of the shell being substantially the same as the angle of taper of the point and being substantially in alignment therewith, a valve chamber formed in the upper end of said shell above the extreme upper end of said driving point, said valve chamber having a ball float valve loosely disposed therein, the upper end

of the driving point being rounded or tapered so that when the ball valve is in its lowermost position it will rest thereagainst at one side of the valve chamber, a valve seat formed in the upper end of said valve chamber on a ring member separate from the shell, the upper portion of the inner wall of said valve chamber being curved inwardly to direct the valve towards its seat.

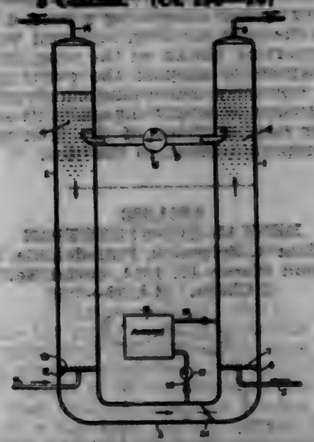


2,031,964
FENDERWELL SUPPORT FOR TIRES
Bladen M. Short, Detroit, Mich., assignor to Lyon Cover Company, Detroit, Mich., a corporation of Michigan
Application October 4, 1934, Serial No. 746,834
3 Claims. (Cl. 224—29)

1. The combination with an automobile fenderwell having a spare tire therein, of a resilient cradle in the well and so arranged as to yieldably engage only one side of the spare tire in the well, said cradle being yieldably disposed in the well to establish a cushion between the tire and the bottom of the well, and including a yieldable support responsive to the weight of a tire inserted in the cradle to cause the cradle to engage a side of the tire and force the tire laterally against and into tight engagement with a side wall of the fenderwell.

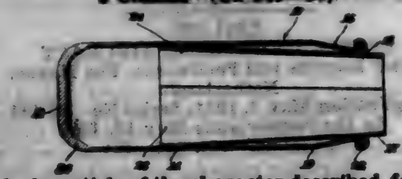
2,031,965
INCANDESCENT IGNITER
Hermann Stoll, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany
Application December 15, 1934, Serial No. 757,677
In Germany February 19, 1934
7 Claims. (Cl. 123—148)

1. In an incandescent igniter for internal combustion engines, an indirectly heated cathode, a



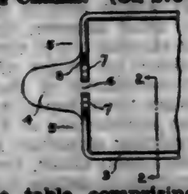
vacuum chamber adjacent said cathode, and a heating element positioned in said chamber.

2,031,966
IMPROVED LUBRICANTS AND PROCESS FOR MANUFACTURING THE SAME
Reginald K. Stratford and Jack L. Huggett, Sarnia, Ontario, Canada, assignors to Standard Oil Development Company
No Drawing. Application July 16, 1931, Serial No. 551,394
6 Claims. (Cl. 87—9)



1. A stable lubricating oil comprising a viscous hydrocarbon base containing 1 to 10% of a soap of a heavy metal and 1 to 3% of a solubilizing agent of phenolic character.

2,031,967
CONVERSION OF HYDROCARBONS
Frederick W. Sullivan, Jr., Hammond, Ind., assignor to Standard Oil Company (Indiana), Chicago, Ill., a corporation of Indiana
Application September 12, 1934, Serial No. 743,734
3 Claims. (Cl. 196—10)



1. In the art of thermally converting dissimilar hydrocarbons, the improvement that comprises carrying on the process in an apparatus comprising separate reaction chambers containing molten material and interconnected to provide for cyclic circulation of the molten material between said chambers, by subjecting a hydrocarbon fluid to an exothermic reaction in contact with the molten material in one of said reaction chambers to thereby elevate the temperature of the molten material, subjecting another hydrocarbon fluid to an endothermic reaction in the other reaction chamber in contact with molten material derived from the exothermic reaction chamber whereby said hydrocarbon fluid absorbs heat from the molten material, effecting a separation of resultant products of reaction from the molten material in each of said reaction chambers, withdrawing products of reaction thus separated and maintaining a cyclic flow of molten material between the exothermic and the endothermic reaction chambers.

2,031,968
CARRIER TUBE
Gustave H. Tebelman, South Orange, N. J., assignor to Bridgeport Brass Company, Bridgeport, Conn., a corporation of Connecticut
Application July 20, 1935, Serial No. 32,519
5 Claims. (Cl. 243—35)

1. An article of the character described, for carrying slips of paper in pneumatic dispatch systems, including a substantially cylindrical carrier tube having a closed end and an open end, said carrier tube having a tapered portion adjacent its open end to provide means for holding a slip of paper within the carrier tube during its transportation through the pneumatic system.

2,031,969
GAME TABLE
William James Turnbull, West Vancouver, British Columbia, Canada
Application October 2, 1934, Serial No. 746,745
4 Claims. (Cl. 273—37)

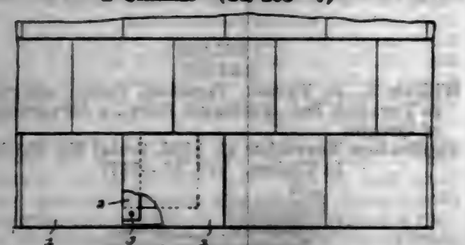
1. A game table comprising a substantially oblong playing surface, a projecting portion at opposite ends of the playing surface, a guard rail extending along both sides of the playing surface and from each corner to one side of a projecting portion, and means for closing off the projecting portions from the playing surface.

2,031,999
BRUSH
William E. D. Turner, Portland, Oreg., assignor to Turgard, Inc., Portland, Oreg., a corporation of Oregon
Application November 17, 1933, Serial No. 643,346
12 Claims. (Cl. 15—167)

1. A brush formed of a blank having portions folded to provide two sides, bristles secured to the inner faces of and extending beyond each of said

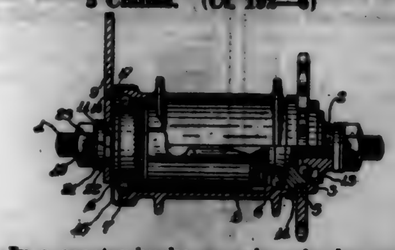
sides, said sides being spaced apart and having therebetween a cavity for the reception of the material to be spread by the bristles, said material being caused to rise to the top of the bristles to position to be spread when simultaneous inwardly-exerted pressure is applied to the sides.

2,031,901
METHOD OF RECOVERING PIGMENTS
Otto Ungnade and William F. Richards, Mason, Mich., assignors to S. M. A. Corporation, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application January 25, 1934, Serial No. 708,314
3 Claims. (Cl. 260—167)



1. The method of obtaining carotene from wet soap containing the same which comprises spraying the soap into the form of droplets, drying the droplets before substantial oxidation of the carotene can occur and then extracting the dried soap with a solvent for the carotene.

2,031,991
STABLE GYROPLANE AIRCRAFT
Pieter Jacobus van Pesiveerde, The Hague, Netherlands
Application May 2, 1934, Serial No. 723,497
In the Netherlands May 18, 1933
2 Claims. (Cl. 244—19)



1. A gyroplane comprising a rigid supporting structure, including a rotatable lifting means on the structure, and a fuselage suspended below said supporting structure by a plurality of laterally spaced forward and rearward connecting members of equal length and in parallel relationship with each other between the lower part of said supporting structure and the upper part of said fuselage above its center of gravity arranged to permit movement of the supporting structure and fuselage with respect to each other whereby the tilting movements of the rotatable lifting means supporting structure and fuselage are balanced against each other, the canting or tilting of the supporting structure being counteracted by the weight of the fuselage.

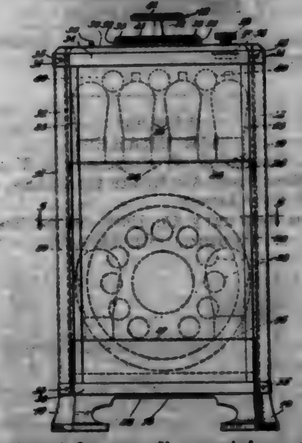
2,031,992
SHINGLE
Patrick S. Vardon, Albany, N. Y.
Application January 20, 1932, Serial No. 587,784
2 Claims. (Cl. 108—7)

1. A flat shingle having one corner provided with a flap folded under the main body and extended beyond the adjacent end edge of said main body to form a nailing tab for the shingle.

2,031,994
COASTER BRAKE FOR BICYCLES
Maurice P. Whitney, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a corporation of New York
Application May 29, 1935, Serial No. 24,154
5 Claims. (Cl. 192—6)

1. In a coaster brake an axle, a brake member mounted thereon, a hub journalled on the brake member, a cap sealing the bearing between the hub and brake member, a brake arm non-rotatably connected to the brake member adjacent said cap, said cap having an opening to admit lubricant into the hub, the opening being normally covered by said arm, said cap being rotatable to permit access to said opening.

2,031,995
PASTRY COOKER
Frank A. Yost, Hopkinsville, Ky.
Application March 7, 1935, Serial No. 9,437
1 Claim. (Cl. 219—35)

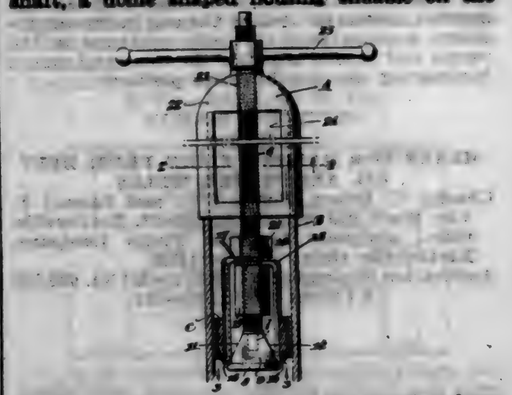


A pastry cooker comprising a base, a shell secured to the base, an oven mounted within the shell, supporting blocks on the base, said blocks being adapted to support the oven, said shell being of upwardly converging construction and of a dimension to snugly engage at its side walls the upper edge portions of the oven when the shell is properly secured to the base.

2,031,996
DENTAL CONSTRUCTION
William A. Zelenick, Philadelphia, Pa.
Application March 17, 1934, Serial No. 716,033
1 Claim. (Cl. 32—39)

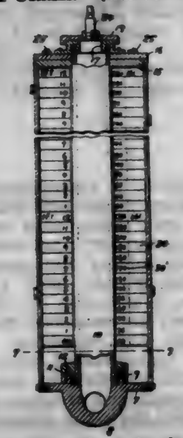
A dental construction adapted to be fitted over the exposed portion of a tooth and comprising a metallic shell having a front opening substantially coextensive with the visible portion of the tooth, a plurality of spaced anchor members extending laterally into said front opening and being formed integral with the vertical edges of said shell around the opening, said anchor members being offset inwardly with respect to the front plane of said shell and having the portions thereof adjacent said shell doubly bent and lying within the vertical edges of said shell around said opening whereby the free ends of said anchor members are disposed within said shell, and a porcelain facing closing said opening and held by said shell with said anchor members firmly embedded therein.

2,031,997
RADIO RECEIVING SET
Edward F. Andrews, Chicago, Ill.
Application February 9, 1931, Serial No. 514,350
10 Claims. (Cl. 250—14)



1. A cabinet for a radio receiving set comprising a rigid top, flared channel strips secured to the top and extending at right angles thereto, a substantially tubular wall member adapted to be slid into engagement with the channel strips, and means for securing the wall member to the channel strips.

7. In a radio receiving set a chassis comprising essentially a channel having its side flanges severed and its base bent to provide an L-shaped member, and plates secured to the severed flanges adapted to maintain the L-shaped relationship.



2,031,998
BEARING PULLING TOOL
Louis Vencil Bliss, Calgary, Alberta, Canada
Application April 26, 1935, Serial No. 18,433
In Canada July 24, 1934
1 Claim. (Cl. 29—88.2)

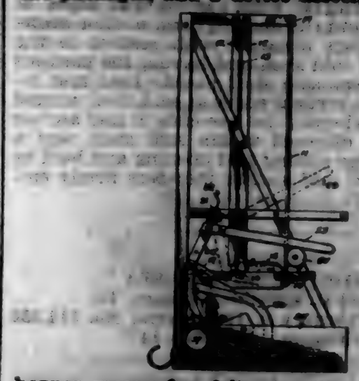
A device for pulling annuli seated in members having cylindrical interiors, comprising a screw-threaded shaft, transversely curved jaws having portions turned in at substantially right angles thereto, said inturned portions having openings therein of a diameter slightly larger than that of the shaft whereby the jaws are slidable on the shaft, the lower ends of the jaws having projecting lugs and being movable toward and away from the shaft, a head mounted on the shaft for spreading the lower ends of the jaws to grip the annulus, said head having parallel sides and transversely curved ends which converge towards the top thereof, a nut threaded on the shaft on the side of the inturned portions removed from the extremities of the jaws and a load taking block threaded in the shaft on the other side of the inturned portions, said nut and load taking block being adapted removably to hold the jaws in expanded position and against longitudinal movement at any desired point on the shaft, a dome shaped housing slidable on the

shaft and adapted to rest on the member from which the annulus is to be pulled, said housing having relatively large openings through which the jaws may be seen, and means for drawing the shaft and thus the annulus outwardly into the housing.

2,031,999
TANK GAUGE
Leonard H. Bogart, Comanche, Okla.
Application March 28, 1934, Serial No. 717,862
1 Claim. (Cl. 73—54)

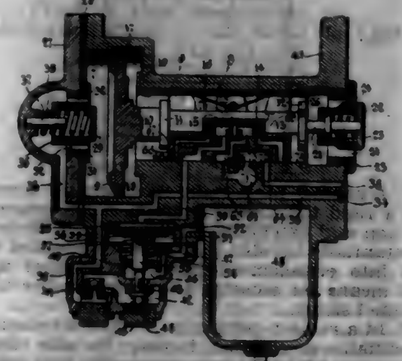
In combination with a tank, a vertically arranged casing supported at a side portion thereof and having its lower end extending below the bottom of the tank, said casing having its front open, a door for closing said front, a bottom member for the lower end of the casing and having a horizontally arranged tubular part thereon and a vertically arranged opening passing from the bore of the tubular part to the upper face of the bottom member, means containing a valve for connecting the tubular part with the bottom of the tank, a transparent tube supported in the casing and vertically arranged therein, the lower end of the tube being in communication with the opening in the bottom member, packing means carried by the bottom member for the lower end of the tube, a top member for the casing having an opening therein in which extends the top of the tube, packing means for the top of the tube,

and bars connecting the upper closure member with the top part of the tank, the upper part of said top closure member having an opening therein in communication with the tube, a cap for closing the opening and hinged to the top member, means for locking the cap in closing position, a gauge strip vertically arranged in the casing and located adjacent the tube, and means for holding the door in closed position.



2,032,000
MEANS FOR RAISING FLUID FROM DEEP OIL AND WATER WELLS
Charley C. Brown, Ponca City, and Samuel N. Van Wert and Armais Arutunoff, Bartlesville, Okla., assignors to Reda Pump Company, Bartlesville, Okla., a corporation
Application September 15, 1933, Serial No. 689,532
4 Claims. (Cl. 103—46)

1. In combination, a submergible electrically driven reciprocating pump unit for oil wells, an oil filled motor unit below said pump unit, an oil filled transmission unit between said pump and motor units, means for operatively connecting said transmission unit to said pump and motor units, a separate oil filled lubricating unit interposed between said motor unit and transmission unit for supplying lubricant to said motor and transmission units, means for securing said units together in axial alignment, and means for creating a pressure in said lubricating unit greater than the submergence pressure.



2,032,001
CIGARETTE VENDING MACHINE
William Hiram Brown, Cleveland, Ohio
Application July 23, 1934, Serial No. 736,596
10 Claims. (Cl. 312—34)

1. In a machine for vending cigarettes singly, a package magazine adapted to receive and guide a plurality of packages of cigarettes, each of said cigarette packages being provided with trunnion-means and each package being slitted so that it will automatically open when suspended by said trunnion-means, means for withdrawing the lowermost package from the stack by means of said trunnion-means, means for suspending said package by said trunnion-means when it is thus withdrawn to thereby permit the slitted package to open and gravitatingly deliver the cigarettes, a hopper means for receiving the cigarettes from the packages, and a device associated with said

hopper means for delivering the cigarettes one by one therefrom.

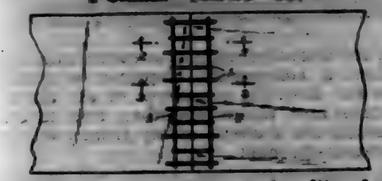
2,032,002
AIR BRAKE
Charles A. Campbell, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application February 23, 1932, Serial No. 594,433
11 Claims. (Cl. 303—29)

1. The combination of a quick service measuring chamber; a triple valve adapted for connection with brake pipe, brake cylinder, and auxiliary reservoir, said triple valve having a release position in which it vents said chamber to atmosphere and a service position in which it establishes a passage through which said chamber is adapted to be connected with auxiliary reservoir; and means rendered active by motion of the triple valve from release toward service position to disconnect said passage from said chamber and connect said chamber with the brake pipe, and then disconnect said chamber from the brake pipe and connect it with said passage.

2,032,003
METHOD OF MAKING A DOUBLE GLAZED UNIT
Robert L. Clause, Sewickley, Pa., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application November 3, 1934, Serial No. 751,285
3 Claims. (Cl. 49—81)

1. A method of making a double glazing unit, which consists in assembling a pair of glass sheets in parallel with a glass spacing strip between the

edges thereof having its surfaces of a composition which will soften at a temperature substantially below the softening temperature of the glass

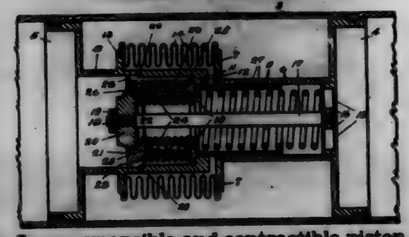


sheets, and heating the unit until said surfaces are softened and adhere to the glass sheets, the degree of heat applied being less than that required to soften the glass sheets.

2,032,004
PRINTER'S GAUGE PIN
Theodore W. Cleveland and Theodore W. Bunten, Weston, W. Va.
Application April 2, 1935, Serial No. 14,268
1 Claim. (Cl. 101—415)

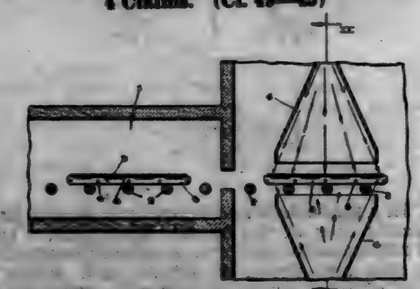
A guage pin of the class described comprising a base, spaced ears rising from said base, a jaw journaled between the ears and cooperable with the base for releasably securing the pin on a tympan, an ear projecting horizontally from one of the first-named ears, a handle extending from the pivoted end of the jaw in opposed relation to the base, and a locking wedge journaled between the second-named ear and the base and engageable between said base and the handle for securing the jaw in closed position, said locking wedge including an upstanding flange constituting an operating handle.

2,032,005
BELT FASTENER
Burton F. Crick, Peers, Alberta, Canada
Application November 7, 1934, Serial No. 751,938
1 Claim. (Cl. 24—30)



A belt fastener comprising a plurality of staples spaced apart, each staple comprising an elongated bight and a pair of limbs, a pair of elongated bars extending at right angles to the bights and contacting the said bight parts adjacent the ends thereof, said bars being welded to the bight parts of the staples.

2,032,006
METHOD OF RECOVERING CAROTENE FROM SOAPS
Robert J. Cross, Mason, Mich., assignor to S. M. A. Corporation, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application April 7, 1934, Serial No. 718,595
7 Claims. (Cl. 260—167)

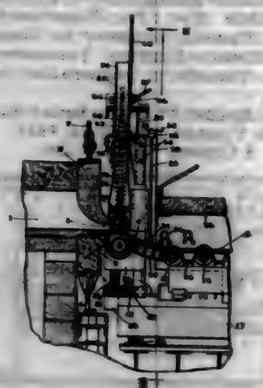


3. The method of producing carotene from a soap containing water, glycerine and carotene which comprises adding a water binding agent to the soap, extracting the carotene with acetone, heating to distill the acetone, agitating petroleum ether with the remaining liquid and then adding a small amount of water to cause stratification of the petroleum ether containing the carotene from the remainder of the liquid.

2,032,007
EXPANSIBLE AND CONTRACTIBLE PISTON FOR LIQUID METERING CYLINDERS
Thomas Arthur Fee, Jr., Vancouver, British Columbia, Canada, assignor to Gasoline Energy Distributors Limited, Vancouver, British Columbia, Canada, a corporation of British Columbia
Application August 27, 1934, Serial No. 741,603
In Canada August 28, 1934
8 Claims. (Cl. 72—30)

1. In an expansible and contractible piston, two piston head members movable toward and away from each other; means operable by a rise in temperature; and piston head moving devices connecting said temperature operable means and said piston head members and relatively moving said piston head members toward each other in response to operation of said temperature operable means by a rise in temperature.

2,032,008
APPARATUS FOR CASE HARDENING GLASS
Henry J. Galey, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application October 13, 1934, Serial No. 748,237
4 Claims. (Cl. 49—45)



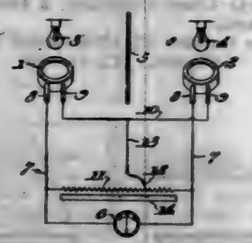
1. Apparatus for case hardening a glass plate comprising a heating chamber and a pair of opposing spaced fluid cooling means which discharge vertically, a horizontal runway extending through the chamber and between the cooling means, and a grid lying upon the runway in a horizontal position and adapted to support the glass plate to be tempered.

2,032,009
APPARATUS FOR MAKING FLAT GLASS
Frederick Geistharp, Tarentum, and John H. Fox, Pittsburgh, Pa., assignors to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application August 14, 1934, Serial No. 739,714
8 Claims. (Cl. 49—33)

8. In combination with a glass melting tank having an outlet and a lower driven sizing roll over which the glass is delivered in molten con-

dition direct from the tank in a continuous sheet, said lower roll having its glass engaging

surface provided throughout with a fine uniform pattern, and an upper driven sizing roll and having its surface polished.



2,032,010

PHOTOELECTRIC CELL CIRCUIT

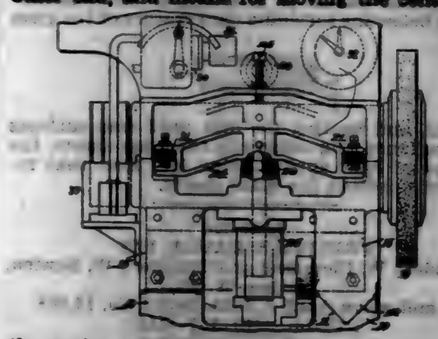
William Nelson Goodwin, Jr., Newark, N. J., assignor to Western Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey

Application June 23, 1933, Serial No. 677,333

8 Claims. (Cl. 250—41.5)

1. In a photoelectric cell circuit, a pair of photoelectric cells of the barrier layer type, a current responsive device, and a network connecting said cells and device to subject said device to the differential action of currents generated by the said cells; said network including a main series circuit comprising circuit elements joining one set of like terminals of said cells and connecting the device between the other set of like terminals, and means forming a shunt path dividing said main series circuit into two loop circuits having the cells in the non-common portions of the respective loop circuits, said means consisting of passive circuit elements connected between the joined terminals of said cells and said device cells are in the non-common portions of two loop circuits.

2,032,011



SELF CONTAINED GRINDING WHEEL HEAD

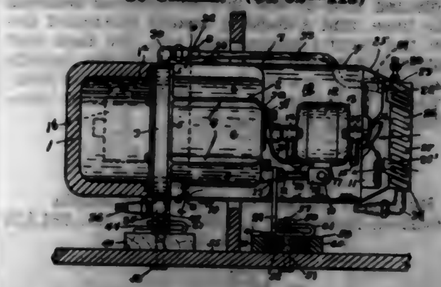
Gardner S. Gould, Lunenburg, Mass.

Application May 7, 1935, Serial No. 20,150

11 Claims. (Cl. 51—168)

1. The combination with a movable support for a metal working tool, of a flexible spring connected at one end therewith, and fixed at the other end, and means for moving the center of

the spring transversely to change the effective length of the spring and move said support.



2,032,012

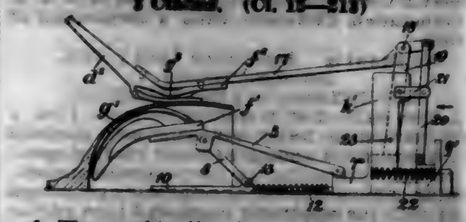
REFRIGERATING APPARATUS

John Alfred Grier, New York, N. Y., assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware

Application March 31, 1927, Serial No. 179,747

30 Claims. (Cl. 62—115)

1. A refrigerating apparatus comprising a motor chamber, a compressor chamber, a condenser, means for directing a current of air about said condenser and motor chamber, and means for preventing the current of air from cooling said compressor chamber.



2,032,013

MACHINE FOR WASHING, DRYING, AND POLISHING TUMBLERS, CUPS, AND LIKE ARTICLES

Alfred Griffiths, London, England, assignor, by mesne assignments, to Kleemgins (1925) Limited, Liverpool, England, a British company

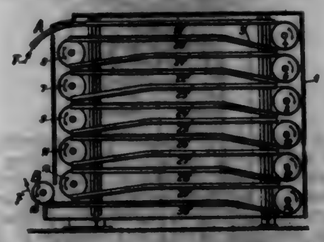
Application January 28, 1931, Serial No. 511,839. Renewed August 8, 1935. In Great Britain November 24, 1930

3 Claims. (Cl. 15—213)

1. The combination in machines for washing, drying and polishing glasses, of a rotating head, and inner and outer squeegees upon said head,

each of said inner squeegees consisting of a rubber base and having a strip with an operative longitudinal edge projecting from said base in the direction in which said head is rotating, the part of said operative longitudinal edge in proximity to the closed end of a glass being washed being angularly in advance of the part in proximity to the mouth of the glass, having regard to the direction of rotation of the head.

2,032,014



TENTERING AND DRYING MACHINE

Mathias Hahn, Aachen, Germany, assignor to H. Krantz Söhne, Aachen, Germany

Application January 15, 1933, Serial No. 586,839

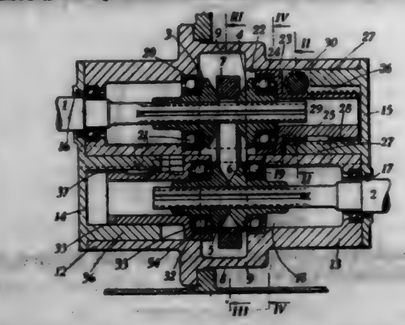
In Germany January 17, 1931

1 Claim. (Cl. 34—48)

In a tentering and drying machine of the type including an enclosure, means for guiding the fabric to and fro through the enclosure on a circuitous path in spaced layers forming successive drying tiers open throughout substantially the length and height of the enclosure, said means including rotating reversing drums at opposite sides of the enclosure, guide rails, chains running in guide rails and over the drums, means for connecting the fabric to the chains, and means for passing air through the respective drying tiers in a direction substantially transverse the direction of travel of the fabric, the reversing drums at each end of the enclosure being of a size to provide proper travel of the chains thereover and arranged relatively close to each other, with their relative spacing maintaining the fabric layers sufficiently close together as to utilize substantially the full volume of drying air passing therebetween for drying purposes to thereby avoid the necessity of projecting a large volume of air transverse the layers, the intermediate portion of which large volume of air is normally without drying effect on the fabric, certain of the guiding rails being in part inclined to permit the fabric layers to be substantially parallel throughout their greater length of travel lengthwise the machine.

2,032,015

FRICTION GEAR TRANSMISSION



David Hans Heynau, London, England

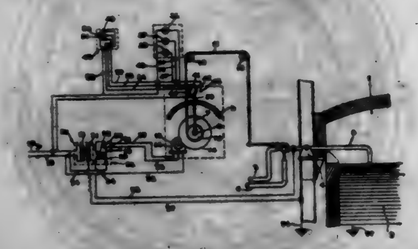
Application January 8, 1935, Serial No. 1,015

In Germany November 9, 1934

4 Claims. (Cl. 74—193)

1. A speed changing mechanism comprising in combination: a casing having a main casing block with bores; a driving shaft and a driven shaft; a pair of bevel discs mounted on each of said shafts for rotation therewith, one disc of each pair being movable axially towards and from the other disc of the same pair; a rigid friction ring engaging the bevelled portion of both pairs of discs for transmitting motion from one pair to the other; means for shifting said movable discs thereby to vary the position of said ring with relation to the centres of rotation of the discs, and means for transmitting radial pressure from said discs directly to the casing, said means consisting

of bearings which carry directly said discs and are all borne in the said bores of the said casing block, substantially as described.



2,032,016

LEVEL INDICATING APPARATUS

Harry F. Hitner, Oakmont, Pa., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania

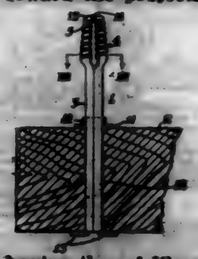
Application May 22, 1933, Serial No. 672,246

4 Claims. (Cl. 177—351)

1. A means responsive to the level of a bath of molten glass comprising, an element mounted for movement toward and from the surface of said bath, motor means for controlling said movement, means for controlling said motor means comprising a circuit including a relay, a source of current at high voltage, the movable element and the bath, whereby, upon close approach of said element to said bath, but before actual contact therewith, a current flows in said circuit causing the element to recede from the bath whereupon the current is sufficiently reduced to again cause the element to approach the bath, and additional means to be controlled operatively connected to said motor means.

2,032,017

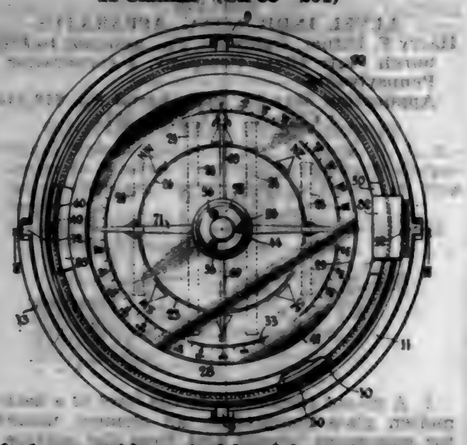
SHEET METAL INSULATOR SUPPORT PIN AND METHOD OF MAKING THE SAME



Andrew A. Hoeber, Etna, and Marshall Lasher, Pittsburgh, Pa., assignors to Hubbard and Company, a corporation of Pennsylvania

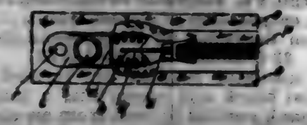
Application December 16, 1935, Serial No. 54,770

23 Claims. (Cl. 29—155.52)



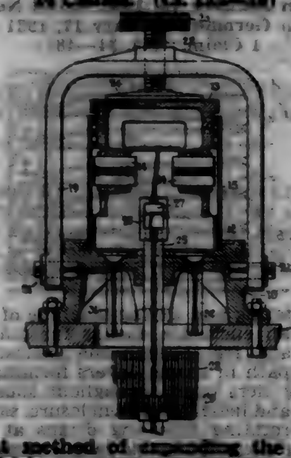
13. An insulator support pin formed from a sheet metal blank and comprising a single piece tubular shank portion formed from an uncut portion of said blank bent to tubular form and a unitary tapered thimble portion formed from strips cut from said blank all unitarily connected together by said tubular shank portion and each deformed so that it extends outwardly beyond

the external surface of said shank portion and then inwardly toward the projected axis of the



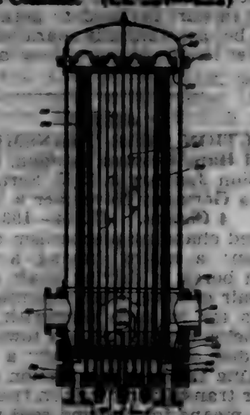
same and each having thread-like ribs formed in the external surface thereof.

2,032,018
CONTROL HEAD FOR INDICATORS
Bradford B. Holmes, Stonington, Conn., assignor to Ruth V. Holmes, Stonington, Conn.
Application November 4, 1932, Serial No. 641,275
11 Claims. (Cl. 33—204)



1. A removable control head for indicating instruments, comprising a pair of spaced parallel transparent plates mounted in watertight relation to an enclosing ring; a plurality of electric contacts mounted concentrically within the space between said plates; a rotatable contact arm adapted for cooperation with said contacts; and an electromagnet mounted between said plates and adapted to lift said contact arm into engagement with said contacts.

2,032,019
LOCK FOR INTERLOCKING FASTENERS
Kurt Robert Jordan, Ludenscheid in Westphalia, Germany
Application June 1, 1932, Serial No. 614,724
In Germany January 28, 1932
1 Claim. (Cl. 70—2)



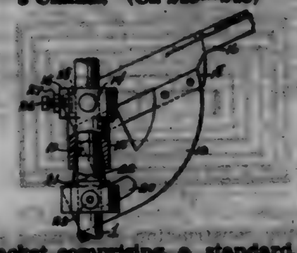
A locking means for the operating slider of a separable fastener means for the opening in a bag or other receptacle; comprising a lockable member rigidly projecting from said slider in the direction of the closing movement thereof, and a lock mounted at the end of the opening, comprising a casing having an aperture adapted to receive the projecting member, upon the operation of the interlocking fastener by the slider to completely close said opening, whereby said slider may be automatically locked in closing position.

2,032,020
METHOD OF EXPANDING PISTONS
Emil A. Koether, Baltimore, Md., assignor, by mesne assignments, to The Bartlett Hayward Company, Baltimore, Md., a corporation of Maryland
Application November 14, 1934, Serial No. 753,025
14 Claims. (Cl. 113—18)

1. That method of expanding the skirt of a piston which consists in projecting a stream of hard bodies against the inner surface of the piston over an area materially in excess of the area of contact of one of said bodies separately considered, the outer surface of the skirt being free of mechanical restraint during such operation, whereby the metal of the skirt is so worked as to definitely expand the same and thereby increase the outer circumference of the skirt.

2,032,021
HEAT EXCHANGE APPARATUS
Charles H. Leach, Roselle, N. J.
Application April 12, 1932, Serial No. 605,912
Renewed May 31, 1935
5 Claims. (Cl. 257—221)

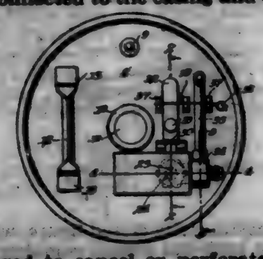
1. Heat exchange apparatus comprising a ring having an integral, transverse and intermediate



web forming a part thereof and providing a collection basin therebelow, partitions located in the basin and welded to the ring, condenser tubes having their lower ends secured in the web, a separate partition assembly received within the ring and forming cooling fluid passages below the web, and a detachable cover member secured to the web and ring for closing the passages.

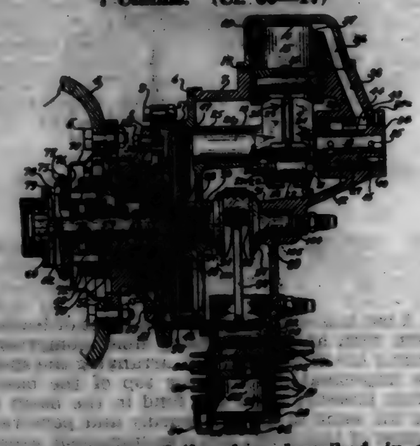
2,032,022
FASTENING BEANS
Beales Lee, Drayton, and Frank Percy Bevis, Wateriooville, England
Application January 14, 1935, Serial No. 1,772
In Great Britain January 18, 1934
3 Claims. (Cl. 292—75)

3. A fastening device comprising a ball mounted within a socket and means for preventing the ball from being urged into a releasing position within its socket, said means comprising a fixed abutment located in alignment with but spaced from said ball, a pivoted abutment capable of being swung into and out of said space, said pivoted abutment substantially filling said space when swung thereinto, and means for actuating said pivoted abutment, said last-mentioned means comprising a pivoted lever making connection with said pivoted abutment in the manner of a toggle whereby to cause said pivoted abutment to move into its limit positions with a snap action.



2,032,023
BRACKET
Paul Lisicke, South Coventry, Conn.
Application January 7, 1935, Serial No. 765
3 Claims. (Cl. 248—245)

1. A bracket comprising a standard, a sleeve mounted on the standard, a foot pivoted on the sleeve and extending laterally therefrom, and a split bushing carried by the foot below the sleeve and carried by pivotal movement of the foot into binding engagement with the sleeve and the standard.



2,032,024
BEER KEG AND DISPENSING MECHANISM
Hubert H. Lacker, Detroit, Mich.
Application June 1, 1934, Serial No. 728,585
6 Claims. (Cl. 225—1)

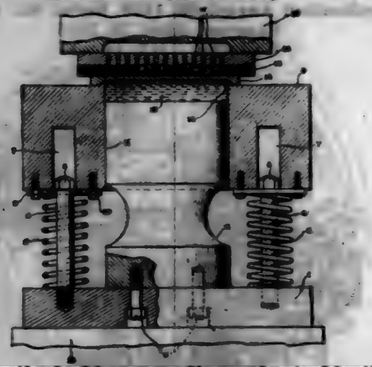
1. In a device of the type described, a keg, said keg having an opening, a valve casing mounted in said opening, a spring-pressed valve in the casing having an actuating stem terminating substantially at the surface of the casing, said casing surface being of sufficient size to permit a revenue stamp to be applied thereto so as to cover the end of the valve stem, and a valve actuator pivotally connected to the casing and constructed

and arranged to cancel or perforate the stamp when brought to bear against the valve stem.

2,032,025
COMBINED ENGINE STARTER AND COMPRESSOR
Romeo M. Nardone, East Orange, N. J., assignor to Bendix Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application August 26, 1930, Serial No. 477,965
Renewed June 24, 1935
7 Claims. (Cl. 60—17)

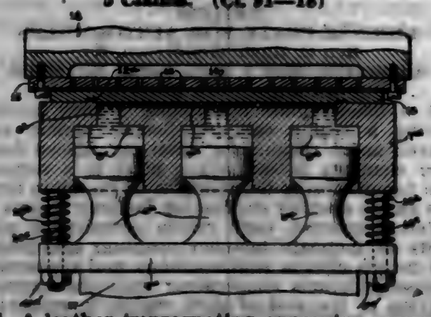
1. In a device of the class described, in combination with an engine member, a power consuming device having a crankshaft in alignment with said engine member, a starter having a crankshaft parallel to said first named crankshaft, and a pair of abutting castings rotatably supporting said crankshafts at opposite sides of the eccentric portions thereof.

2,032,026
LICENSE PLATE FOR AUTOMOBILES
Ben C. Rash, Henderson, Ky.
Application May 7, 1935, Serial No. 20,239
4 Claims. (Cl. 40—125)



3. A license plate comprising a body portion having a region carrying license indicia and spaced apart regions for receiving spaced fastener elements to secure the plate to a support and for disclosing the transfer of the plate from one car to another car having fastener means of different spacing, each region including a plurality of inchoate fastener openings and push-out means closing said openings and presenting exposed portions cooperating with the exposed portion of the rest of such region to present a substantially normal flat face, each inchoate opening and its push-out closing means being

simultaneously formed by partially cutting through the material of the plate along a line

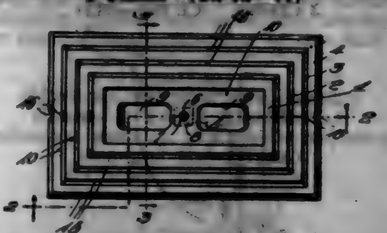


forming a substantially closed figure, whereby removal of the push-out means completes the formation of the opening.

2,032,027
METHOD AND APPARATUS FOR IMPREGNATING LEATHER
Louis du Bois Rees, New York, N. Y., assignor to Hans Rees' Sons, Inc., New York, N. Y.
Application May 25, 1931, Serial No. 539,333
10 Claims. (Cl. 91—48)

1. A method of impregnating a sheet of leather or skin with an impregnating fluid, comprising confining the fluid in a basin, arranging the sheet to be impregnated across the top of the basin, exerting pressure upon the fluid in the basin to cause the same to move upwardly and penetrate the pores of the sheet, and simultaneously exerting pressure on the sheet in the opposite direction.

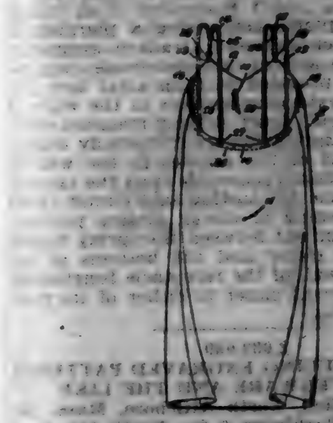
2,032,028
IMPREGNATING APPARATUS
Louis du Bois Rees, New York, N. Y., assignor to Hans Rees' Sons, Incorporated, New York, N. Y.
Application October 12, 1931, Serial No. 568,461
5 Claims. (Cl. 91—18)



1. A leather impregnating apparatus comprising a piston member, a cylinder member, said members forming a variable sized basin and one member being movable relatively to the other, sealing means surrounding the mouth of said basin, means for holding a sheet to be impregnated across the mouth of said basin and in contact with said sealing means, and pressure exerting means for causing one of said members to move relatively to the other for forcing an impregnating substance from the basin through a sheet stretched across the mouth of the same.

2,032,029
DIRECTION INDICATOR
Robert Samuel Stubbs, Hanna, Alberta, Canada
Application July 14, 1933, Serial No. 680,319
6 Claims. (Cl. 177—337)

4. In a direction indicator a casing having one end open, a rotatable housing mounted in the casing on a shaft carried thereby, an indicator carried by the housing and facing the open end of the casing, means for rotating the housing to a plurality of predetermined positions, a lamp carried within the casing, and said housing having openings, each having a different coloured glass panel to co-operate with said lamp for illuminating the indicator in a plurality of colours, one for each position.



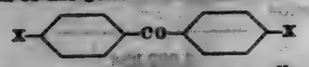
2,032,030
BUILDING CONSTRUCTION
Charles G. W. Talon, New Orleans, La.
Application January 10, 1935, Serial No. 1,203
1 Claim. (Cl. 72—77)

A building construction comprising a series of hollow tile blocks, openings formed in the blocks and adapted to aline with the openings of an abutting block when the blocks are superimposed upon each other, recesses formed in the upper face of the blocks to provide a seat for an abutting block; said blocks being provided further with a central opening adapted to aline itself with the openings of abutting blocks, a rod adapted to pass through the central openings and nuts adapted to be threaded on the rods whereby displacement of the blocks with respect to each other is precluded.

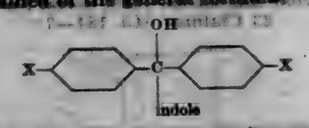
2,032,031
CLOTHING
Harry Weinman, New York, N. Y.
Application February 24, 1934, Serial No. 712,788
3 Claims. (Cl. 2—72)

1. The combination with a feminine undergarment, particularly adapted to be worn and loosely draped or hung from the shoulders of the wearer below evening gowns, of a pair of shoulder straps adjustable both as to length and position so as to lie at different places upon the shoulders of the wearer and to cross the shoulders of the wearer parallelly or to form an X in back of the wearer to conform to the design of the covering garment, said undergarment having a front portion with spaced peaks to be positioned at elevated points on the front of the wearer and a depressed rear portion to extend along the waist of the wearer, said straps taking the form of inverted J's, the ends of the short legs of which are connected to the spaced peaks at front portion

of the undergarment and the rear strap portions being provided each with a single detachable connection element and the rear upper edge of the rear portion of said garment being provided with a line of co-operating detachable connection elements, said detachable connection elements on said straps being formed by attaching tabs of materials to the ear ends of the straps carrying one of the elements of a snap fastener, and the upper rear edge of the back of the undergarment being provided with a plurality of snap receptacles sewed into the garment by circular stitching at spaced intervals, said straps being provided with means to enable adjustment of their length.



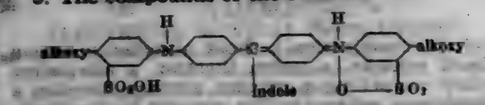
2,032,032
COLLAPSIBLE BOX WITH END WALL LATCHES
Arthur L. Whiten, Evanston, Ill., assignor to Chicago Mill and Lumber Company, Chicago, Ill., a corporation of Delaware
Application April 8, 1935, Serial No. 15,171
4 Claims. (Cl. 217—12)



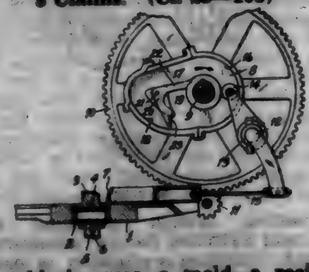
1. A collapsible box including in combination a body including end frame cleats having slots and grooves therein, a pair of end walls, and hooked metal strap springs projecting from the end walls into said slots so as not to project beyond the ends of the box to lockingly engage in the cleat grooves to hold the end walls locked in place.

2,032,033
ACID TRIPHENYLMETHANE DYESTUFFS AND A PROCESS OF PREPARING THEM
Paul Wolff, Frankfort-on-the-Main-Hoechst, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application September 18, 1933, Serial No. 690,038. In Germany September 29, 1932
8 Claims. (Cl. 260—43)

1. The process which comprises condensing a compound of the general formula:



wherein X represents halogen or an alkoxy group, with an indole compound which is substituted in alpha-position by methyl, benzyl or an aryl group of the benzene series, heating the compounds thus obtained of the general formula:

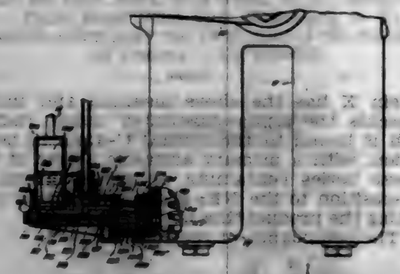


wherein X has the above meaning and indole represents the alpha-substituted indole radical which is bound to the central C-atom in beta-position, with a primary aromatic amine of the benzene series containing an alkoxy group in para-position to the NH_2-group, and finally sulfonating the product thus obtained.

5. The compounds of the formula:

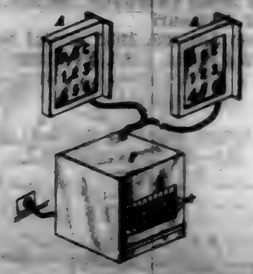
wherein indole represents an indole radical which is bound to the central C-atom in beta-position and which is substituted in alpha-position by methyl, benzyl or an aryl group of the benzene series, being dyestuffs of a very good fastness to light, a clear tint and good color in artificial light.

2,032,034
BLOCK PRESS
Horace Olin Weed, Mexico, Mo., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a corporation of Missouri
Application July 29, 1935, Serial No. 33,695
5 Claims. (Cl. 25—103)



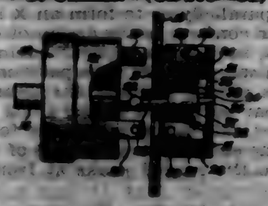
1. In a block press, a mold, a reciprocating charger for charging said mold with material to be molded, a cam operatively connected to said charger for actuating the same, a compacting device operable during each revolution of said cam to compact the material in said mold, and means whereby said charger is moved to charging position during every other revolution only of said cam.

2,032,635
PURIFICATION OF TRINITROTOLUENE
Joseph A. Wyler, Allentown, Pa., assignor to Trojan Powder Company, a corporation of New York
No Drawing. Application January 26, 1935, Serial No. 2,841
4 Claims. (Cl. 260—142)



1. In the preparation of purified trinitrotoluene, the process which comprises treating crude trinitrotoluene with a solvent mixture consisting essentially of dichlorbenzene and carbon tetrachloride.

2,032,636
CENTRALIZED LUBRICATING SYSTEM
Oscar U. Zerk, Chicago, Ill., assignor, by mesne assignments, to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application August 29, 1933, Serial No. 687,151
23 Claims. (Cl. 184—7)



1. In combination a shock absorber having a liquid cylinder, a piston therefor, a lubricating pump comprising a cylinder, a piston therefor, a diaphragm subject to the pressure in the shock absorber cylinder for making the discharge stroke of the pump piston and means for preventing the making of a discharge stroke of the pump unless the pressure in the shock absorber cylinder persists for a predetermined period of time.

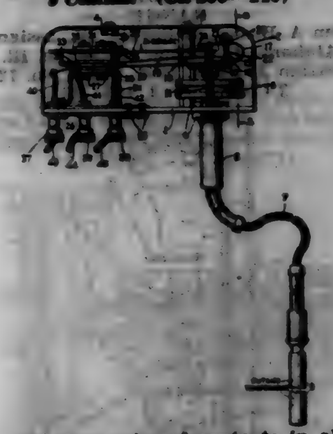
2,032,637
PAGING SYSTEM
Charles Auth, New York, N. Y.
Application June 12, 1931, Serial No. 546,830
6 Claims. (Cl. 177—353)

6. A paging system including electrical switches, said switches having actuating mechanisms each including a plurality of parts movable between active and inactive positions, said last mentioned parts being located in banks, and one or more movable members periodically moving in such relation to said above mentioned banks as to periodically operate each switch whenever its corresponding above mentioned part is in active position, said parts being out of the range of action of said members when in inactive position.

2,032,638
ELECTRIC SIGNAL RECEPTACLE AND PLUG
Charles Auth, New York, N. Y.
Application March 10, 1932, Serial No. 598,321
17 Claims. (Cl. 200—51)

1. In a receptacle comprising a plurality of terminal contact elements arranged symmetrically about the axis of said receptacle, said receptacle being provided with an axial bore and longitudinally extending grooves in the walls of said bore, a circuit closer slidably mounted within and having spring fingers frictionally engaging the bottoms of the grooves in the wall of said bore, and means accessible from the exterior of said receptacle for moving said circuit closer into circuit opening or circuit closing position, the frictional contact between the spring fingers of said circuit closer and the bottoms of the grooves in the wall of the receptacle functioning to hold said circuit closer in either of its positions.

2,032,639
ART OF PRODUCING ENGRAVED PATTERNS FOR SILVERWARE AND THE LIKE
Howard M. Ballou, North Attleboro, Mass., assignor to R. Blackinton & Co., North Attleboro, Mass., a co-partnership
Application August 12, 1934, Serial No. 740,035
3 Claims. (Cl. 41—34)

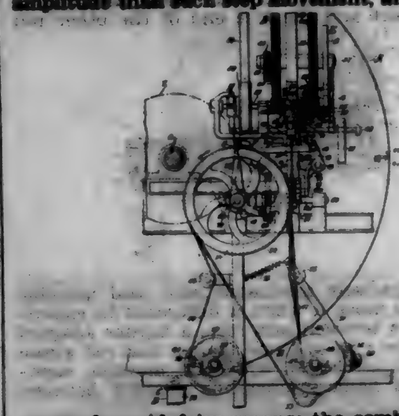


2. The improvement in the art of producing engraved patterns on silverware or the like comprising stamping a selected pattern into the surface of an article, then hand engraving the stamped pattern by cutting away with a hand tool bottom portions of the sunken pattern to form sharply defined cuts resembling those produced in a completely engraved pattern.

2,032,640
BOTTLE FILLING AND CAPPING MACHINE
Walter A. Barrett, Fort Wayne, Ind.
Application June 2, 1932, Serial No. 614,642
3 Claims. (Cl. 226—76)

1. A bottle filling and capping machine comprising a support, a sleeve on the support, a table revolubly mounted on the sleeve, an adjustable member on the sleeve and supporting the table in vertically adjusted position on the sleeve, a reciprocable member in the support and having connection with the sleeve and with the adjustable member; filling and capping mechanisms above the table and arranged in spaced groups, means to support bottles in correspondingly spaced groups on the table, and means to reciprocate the reciprocable member to cause the table to raise the groups of bottles into simultaneous operating engagement with the filling and capping mechanisms.

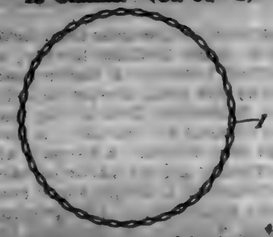
2,032,641
DIFFERENTIAL CONTROL APPARATUS
Rudolf Beck, Bridgeport, Conn., assignor to Consolidated Ashcroft Hancock Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application October 11, 1933, Serial No. 693,859
9 Claims. (Cl. 200—140)



1. A stud, two pairs of contacts in alignment with said stud, means responsive to atmospheric conditions for alternatively making contact between two of said contacts, temperature responsive means for actuating said stud to cause it to vary the position of one pair of said pairs of contacts, and means limiting the movement of said stud in one direction and limiting the movement of said one pair of contacts in the opposite direction.

2,032,642
FINGERNAIL POLISH REMOVER
Clifford E. Bishop, Rego Park, Long Island, N. Y., assignor to Northam Warren Corporation, New York, N. Y., a corporation of New York
No Drawing. Application June 30, 1934, Serial No. 733,241
4 Claims. (Cl. 87—4)

1. A non-leaching finger-nail polish remover for conditioning the nails prior to lacquering, consisting essentially of a solution of lacquer solvent and non-drying nail-softening oil in the proportion of approximately one part of oil to fifty parts of lacquer solvent, said oil, in the said proportion, having the effect of nullifying the affinity of the lacquer solvent for the natural oil of the nails without impairment of its affinity for lacquer.

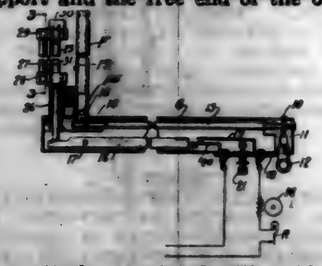


2,032,643
THREAD PRINTING APPARATUS SELECTOR MECHANISM
Daniel Sutter Bonney, Philadelphia, Pa.
Application November 7, 1933, Serial No. 42,658
10 Claims. (Cl. 91—11.81)

1. In selector mechanism for thread printing apparatus having a rotatable thread carrying drum, drive means for imparting step-by-step rotation to the drum in steps of predetermined amplitude, drive means for imparting continuous rotation to the drum through distances of greater amplitude than such step movement, and control

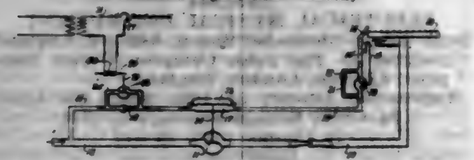
means for said drive means; the combination of a selector wheel, selector devices carried by said wheel, and means for automatically pre-selecting selector devices to operate said control means to effect rotation of the drum through the medium of either of said drive means.

2,032,644
ELECTRICAL MUSICAL INSTRUMENT
Leslie Edwin Alexander Bourn, Ashford, England, assignor to The John Compton Organ Company, Limited, London, England
Application January 31, 1935, Serial No. 4,242
In Great Britain February 8, 1934
15 Claims. (Cl. 84—1)



1. In an electrical musical instrument, an electrostatic generator adapted to electrostatically induce a varying potential for producing a single individual sound tone, comprising two relatively rotatable electrodes in electrostatically inductive relation, one of which constitutes a plurality of wave forms and the other a plurality of scanning forms therefor, both said wave and scanning forms being repeated about the axis of relative rotation at such intervals that, at any given moment, the wave and scanning forms of every inductively cooperating pair are at the same relation.

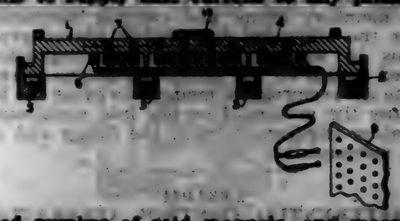
2,032,645
COMPENSATED PILOT-CONTROLLED THERMOSTAT
Nelson T. Branche and Vilym O. Beam, Toledo, Ohio, assignors to Surface Combustion Corporation, Toledo, Ohio, a corporation of New York
Application November 1, 1934, Serial No. 751,063
5 Claims. (Cl. 158—117.1)



1. In apparatus of the class described, the combination of a movable member and a support for

the same, a thermostat for actuating said member and comprising two rods and a cross piece from which the rods extend in spaced relation and in the same direction to form a U-frame, the free end of one of said rods being anchored to said support and the free end of the other rod

being operatively associated with said movable member to move it when a difference in expansion occurs between said rods, a burner adapted to discharge a jet of flame against that rod whose free end is associated with said movable member, and a flame-intercepting member between the rods.

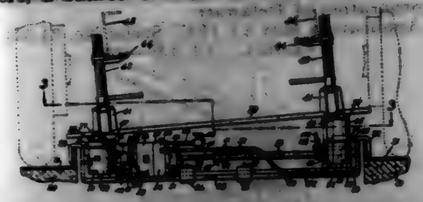


2,032,046
CONTROL MECHANISM FOR BURNERS
Nelson T. Branche, Toledo, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a corporation of New York
Application November 12, 1934, Serial No. 49,337
2 Claims. (Cl. 158—117.1)

1. In apparatus of the class described, the combination of a main heating burner, a pilot for lighting the main burner, a thermostat arranged to be heated by the pilot, means including a shut-off valve for delivering fuel to the main burner, a gas supply conduit for the pilot, a flow-restricting orifice in said conduit, a by-pass around said orifice, a normally closed valve in said by-pass, means controlled by a temperature condition remote from the main burner for opening the valve in the by-pass whereby to increase the amount of gas flowing to said pilot, a movable flow-restricting means in said conduit at a point between said orifice and said pilot and movable by the said thermostat toward flow-restricting position for decreasing the amount of gas flowing to the pilot consequent on the opening of the valve in said by-pass and to build up back pressure in the conduit, and means dependent on a predetermined back pressure in said conduit for opening said shut-off valve.

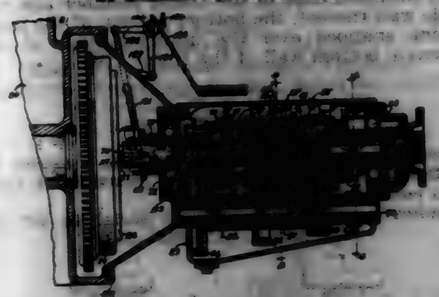
2,032,047
PRINTING PRESS FOR PRINTING SPOTS OF WAX CARBON ON SHEETS OF PAPER
William F. Burke, Albeas, Ohio, assignor to The McBee Company, Athens, Ohio, a corporation of Ohio
Application October 20, 1934, Serial No. 749,351
8 Claims. (Cl. 101—382)

1. In a type bed for printing presses for printing spots of wax carbon on sheets of paper, a plurality of heating elements to heat the bed, a plurality of electric magnets mounted therein, said magnets being spaced from each other, means to supply electric current to said magnets, means to supply said current to any predetermined number of said magnets, and means to protect the winding of said magnets from the heat.



2,032,048
RANGE
William A. Budak, Belleville, Ill., assignor to Alphonse E. Fellner, Belleville, Ill.
Application April 27, 1934, Serial No. 723,646
2 Claims. (Cl. 126—96)

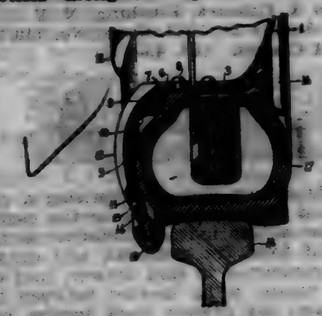
1. In a combination gas and coal range, an oven, a burner, primary and secondary air openings in the bottom of said range, dampers operatively positioned over said primary and secondary air openings, the damper for the primary air opening supported by and in frictional engagement with the damper for the secondary air opening, so that the movement of the secondary damper actuates the primary damper, a rod connected to said secondary damper at one end and to a link at its other end, a triangularly shaped plate pivotally mounted to an end wall of said oven, said link pivotally connected at its free end to said triangularly shaped plate, a second link pivotally secured at one end to said triangularly shaped plate, a gas valve for the control of said burners, a valve stem operatively forming a part of said gas valve, an arm formed on said valve stem, the free end of said second link secured pivotally to the free end of said arm so that a rotation of said valve stem will open and close the dampers for the primary and secondary air openings.



2,032,049
ROCKING DEVICE
Ernst C. Claus, Chicago, Ill.
Application August 9, 1934, Serial No. 738,815
7 Claims. (Cl. 73—61)

1. In a machine as described, the combination with a lifting member, motors for alternately lifting and lowering opposite ends of said member, a shaft, levers mounted at either end of said shaft, for rotating the same when being rocked, sliding members on said motors for rocking said levers, a source of fluid under pressure, means

adapted to provide communication between said fluid source and said motors, and valve mechanism actuated by said shaft for alternately opening and closing said communication.

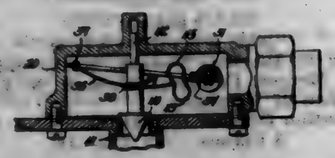


2,032,050
AUTOMOTIVE TRANSMISSION AND BRAKING MECHANISM
Frederick W. Cotterman, Dayton, Ohio, assignor of one-half to Bessie D. Apple, Dayton, Ohio
Application July 28, 1933, Serial No. 682,051
10 Claims. (Cl. 74—472)

1. The combination, in power transmission mechanism, of a rotatable driving member, a rotatable driven member, gearing drivably connecting the two said members, a clutch for connecting the two said members directly, overrunning means in said gear train operative when said members are connected directly, and a centrifugal means operable outwardly to engage said clutch comprising axially parallel governor weights bodily rotatable about the axis of said members pivotally held against centrifugal force near the middle, the one end being lighter than the other, and supplementary weights operative to add their centrifugal force to the said lighter ends but rotatable at a different speed than the governor weights, and means connecting the governor weights to one rotatable member for rotation therewith and the supplementary weights of the other rotatable member for rotation therewith, whereby more force is added to said lighter end as the supplementary weights are revolved faster as compared to the governor weights.

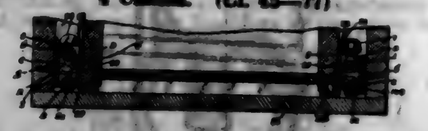
2,032,051
RAIL CAR WHEEL
Carolus L. Ehrergian and Paul E. Baker, Detroit, Mich., assignors to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a corporation of Pennsylvania
Application November 17, 1932, Serial No. 643,470
6 Claims. (Cl. 295—31)

6. A pneumatic tire rail-car wheel comprising a sheet metal wheel body, tire rim and wheel flange secured together to form a flanged wheel and tire rim, said rim and flange being secured together along two spaced annular lines but



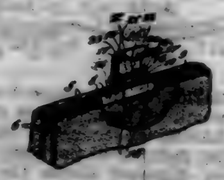
separated from each other between said lines to form an annular closed hollow rib.

2,032,052
SHOE PROTECTING DEVICE
Stanley Friedenberg, New York, N. Y.
Application October 27, 1933, Serial No. 695,472
7 Claims. (Cl. 36—7.3)



1. In combination with a shoe having spiked sole and heel portions, a secondary shoe element for the shoe having a secondary sole, the element comprising peripheral portions having horizontal surfaces disposed above the inner surface of said secondary sole and defining a plurality of recessed areas therein for the reception of the spikes, the depth of the recesses being sufficient to maintain the spikes out of contact with the secondary sole, the shoe sole and heel portions being supported on the horizontal surfaces of said peripheral portions of the shoe element.

2,032,053
SNAP VALVE
Frank A. Gauger, Milwaukee, Wis.
Application March 7, 1932, Serial No. 597,124
5 Claims. (Cl. 137—139)



1. A valve construction comprising a valve seat, a valve cooperating with said seat, a rock shaft spaced laterally from said valve, a rock arm carried by said rock shaft, and a bowed spring carried by said rock arm and operatively connected with said valve adjacent the middle of said bowed spring, said bowed spring having compensating means adjacent one end of said bowed spring, and said rock arm being movable past the dead center position of said bowed spring, whereby a quick opening and quick closing of said valve is provided when said rock arm passes from side to side of the dead center position of said bowed spring.

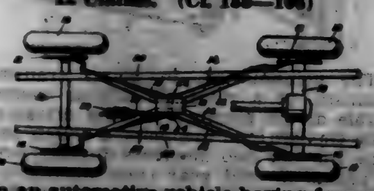
1,899,854
SLIDE DRAWER CONSTRUCTION
Nathan A. Gussack, Flushing, N. Y.
Application August 21, 1924, Serial No. 748,763
4 Claims. (Cl. 45—77)

1. A slidable drawer device comprising a casing, fixed track means connected to the casing, extension slide means movable relative to and guided by said fixed track means, and drawer track means connected to said drawer, said extension slide means being located between the fixed means and the drawer track means, said fixed track means and said extension slide means having cooperating vertical webs, the extension slide means having roller means in rolling contact with both said webs.

1,925,625
BAG FRAME FASTENER
William C. Hiering, Newark, N. J., assignor to The J. E. Mergott Company, Newark, N. J., a corporation of Delaware
Application July 25, 1924, Serial No. 726,814
2 Claims. (Cl. 292—262)

1. A latching device for frame members of a hand bag, said device comprising a ledge attached to one of the frame members, said ledge having upwardly directed ears and a right-angled upwardly directed flange, bosses projecting upwardly from said ledge and spaced from said flange, a bowed spring positioned between said bosses and flange, a latching member pivotally supported by said ears, and a lug on said latching member engaging said bowed spring at all times, said latching member being adapted to frictionally engage the other frame member to hold the two frame members together.

1,932,456
BAG FRAME LATCH
William C. Hiering, Newark, N. J., assignor to J. E. Mergott Company, Newark, N. J., a corporation of Delaware
Application October 6, 1924, Serial No. 747,149
3 Claims. (Cl. 292—19)



1. In a latching device for hand bag frame members, a supporting element adapted to be secured to a frame member, a latching member having a groove therein to receive the supporting element, and tabs cut from the side walls of the groove, said tabs being substantially parallel to the bottom of the groove and engaging the supporting element to securely hold the parts together.

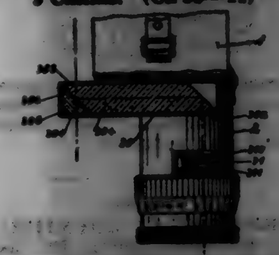
1,932,957
HANDBAG FRAME
William C. Hiering, Newark, N. J., assignor to The J. E. Mergott Company, Newark, N. J., a corporation of Delaware
Application May 15, 1925, Serial No. 31,544
5 Claims. (Cl. 150—29)

1. In a hand bag, a frame member comprising an outwardly opening channel having a side wall, and a top wall bent back upon itself to provide an edge directed towards and spaced from the side wall, said member having an arcuate bottom wall providing an upturned edge, and a channelled inlay having top covering material attached thereto, said inlay having an outer wall, and an inner wall of greater height than the outer wall so that when the inlay is inserted into the frame member, the upper portion of the inner wall of the inlay will be positioned between the inturned edge of the frame member and the side wall thereof, the bottom portion of the inlay being snapped over the upturned edge of the arcuate bottom wall of the frame.

1,933,059
BRAKE
Bryan E. Hoose, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application November 12, 1932, Serial No. 697,767
12 Claims. (Cl. 188—106)

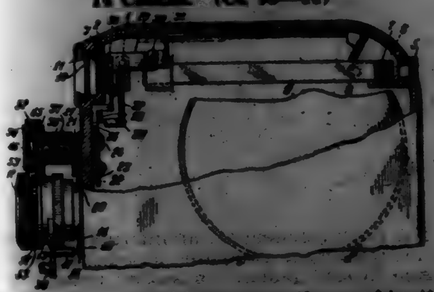
1. In an automotive vehicle having four wheels equipped with brakes, an X-frame including diagonal members, means including a foot pedal and a hand lever to apply the brakes, brake levers pivoted on said diagonal members, connecting means between the foot pedal and the hand lever and opposite ends of one of said levers, and means to vary the effective lever arm of one of said connecting means.

1,933,059
SKATE WHEEL AND METHOD OF PRODUCING SAME
Leland G. Knapp, Chicago, Ill., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill., a corporation of Illinois
Application April 21, 1933, Serial No. 667,189
2 Claims. (Cl. 295—11)



1. In a wheel of the class described, the combination with a sleeve having a ball runway, and a series of balls arranged in said runway, of a rim surrounding said sleeve, and a plurality of disks arranged within the rim and disposed at opposite sides of said ball runway, each of said disks being provided with a peripheral flange extending at an angle to the disk and seated against the inner face of the rim, said disks being provided with contact areas for engagement with said balls to

establish an anti-friction bearing between the disks and said sleeve, one of said disks being fixedly related to said rim, the other disk being detachably related to the rim and to the fixed disk



and serving to clamp the balls in said runway, the inner faces of said disks being provided with projections adapted to contact and space apart said disks in their assembled relation, and means for connecting said disks.

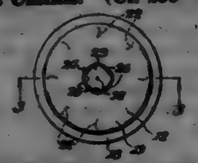
1,933,060
PHOTOGRAPHIC CAMERA
Heinz Kilppenbender, Dresden, Germany
Application September 19, 1924, Serial No. 744,522
In Germany September 22, 1923
9 Claims. (Cl. 95—44)

1. A camera, an objective mounting detachably fastened to it and a telemeter of the home-base type consisting of the ray collecting device separated from the ray deflecting device, said ray collecting device being attached to the camera body and said ray deflecting device being attached to the objective mounting.

1,933,061
PHOTOGRAPHIC CAMERA
Heinz Kilppenbender, Dresden, Germany
Application November 17, 1924, Serial No. 753,421
In Germany November 22, 1923
14 Claims. (Cl. 95—44)

1. In a photographic camera, the combination of a lens system, means for adjusting the same, a finder, optical members forming a single wedge in front of said finder, means for adjusting said wedge forming members angularly to each other, and means operatively connecting said wedge adjusting means with said lens system adjusting means.

1,933,062
APPARATUS FOR ENGRAVING SOUND VIBRATIONS ON FLEXIBLE RECORDS
Maurice A. Lishtan, Fort Howard, Md., assignor, by mesne assignments, to Fidelitone Records, Inc., a corporation of New York
Application February 2, 1931, Serial No. 514,782
7 Claims. (Cl. 274—9)



1. In a machine for engraving sound vibrations on flexible records, a stationary support having a resilient record supporting surface and means to revolve a flexible record on said support.

1,933,063
TELEPHONE PAY STATION APPARATUS
George A. Long, Hartford, Conn., assignor to The Gray Telephone Pay Station Company, Hartford, Conn., a corporation of Connecticut
Application April 4, 1923, Serial No. 664,531
8 Claims. (Cl. 116—149)

1. In combination in a telephone, a gong having a stem, a support in which said stem is secured, a damper positioned for contact with said gong, and means to maintain a variable degree of contact of said damper with said gong.

1,933,064
SPRINKLER HEAD
Harry E. Moag, Oak Park, Ill., assignor to W. D. Allen Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application September 13, 1924, Serial No. 743,786
2 Claims. (Cl. 299—18)

1. A sprinkler head comprising a circular spray chamber having a tangential inlet port and provided at its top with a four-sided, axial outlet port bounded by a vertical wall substantially parallel with the axis of the port and having sharply rounded corners and side edges outwardly bowed to a slight extent, substantially as described.

2,032,065
RADIATOR CORE
Arthur B. Modine, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application November 16, 1932, Serial No. 642,829
3 Claims. (Cl. 257—120)

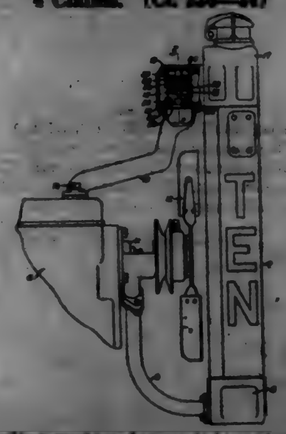
1. A radiator core comprising a plurality of tubes each having inwardly protruding transverse projections upon their opposite sides spaced to form a zigzag channel of substantially uniform width adapted to direct a fluid flowing through said tube alternately from side to side and against the opposite sides and projections of the tube turbulently, in combination with a plurality of fins arranged transversely of said tubes and engaging the walls thereof, said fins being corrugated and spaced to form a zigzag channel of substantially uniform width between said fins, thereby directing the air passing therebetween from side to side of said channel and against said fins turbulently, said corrugations being of maximum amplitude at the forward side of said fins and diminishing toward the rear thereof.

2,032,066
CLUTCH
Henry W. Nieman, Bethlehem, and Garrett B. Linderman, Jr., Pittsburgh, Pa., assignors to Bethlehem Steel Company, a corporation of Pennsylvania
Application November 14, 1933, Serial No. 697,893
8 Claims. (Cl. 192—105)

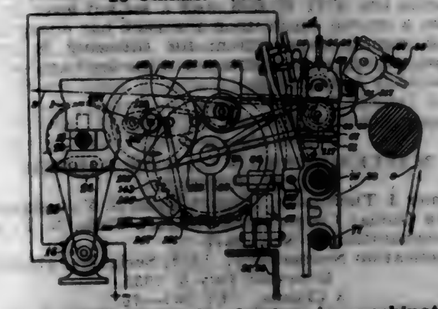
1. In a clutch to transmit rotary motion, a driving member, a driven member, an expansible friction element tractively connected to one of said members, the other of said members having a first internal bearing surface inclined to the plane of rotation of said members and a second bearing surface inclined to said first bearing surface, and means to cause an axial movement of one of said bearing surfaces in relation to the other of said bearing surfaces.

2,032,067
PAPER ENVELOPE
Edwin E. Perkins, Riverside, Ill.
Application October 2, 1934, Serial No. 747,260
3 Claims. (Cl. 229—66)

1. A paper envelope having its face ornamented and coated with a flexible adhesive protective and transparent covering, said coating extending around onto the back of the envelope to reinforce the folds of the paper at the edges.



2,032,068
LOCOMOTIVE CAB CURTAIN
James E. Hooper, Ruxton, Md., assignor to Wm. E. Hooper & Sons Co., Baltimore, Md., a corporation of Maryland
Application November 13, 1934, Serial No. 754,475
14 Claims. (Cl. 105—16)

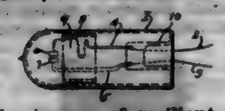


2. A locomotive cab curtain composed of flexible asbestos fabric with reinforcing strips of fabric composed of vegetable fibers secured to the asbestos fabric on the outside.

2,032,069
THERMOSTAT MOUNTING
William H. Rainford, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application November 14, 1933, Serial No. 693,516
4 Claims. (Cl. 236—34)

3. A cooling system for an internal combustion engine comprising a radiator, a passage from said engine to said radiator, a second passage from said engine to said radiator, said passages cooperating to provide for circulation of cooling fluid between said engine and said radiator, one of said passages having a chamber therein and including a detachably secured duct member, the chamber being positioned adjacent a point of connection of said duct member, a thermostat control unit positioned in said chamber adjacent said point of connection of said duct member and including a valve seat member extending across said one passage, and means independent of the securing means for said duct member for holding said valve seat member against an annular abutment in said one passage.

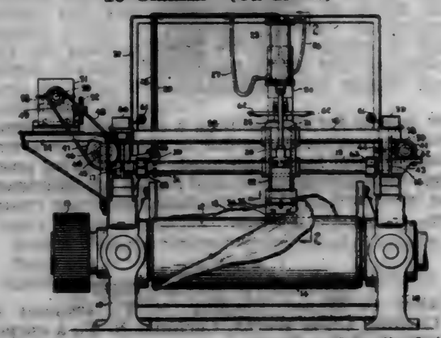
2,032,070
SELVAGE OPENER FOR TENTERING MACHINES
William D. Rundlett, North Adams, Mass., assignor to The James Hunter Machine Company, North Adams, Mass., a corporation of Massachusetts
Application March 18, 1932, Serial No. 599,651
16 Claims. (Cl. 26—65)



1. A cloth expander having in combination rolls compressing the cloth between them and extending at right angles to the travel of the cloth, non-rotating supporting means within the rolls and supported wholly outside the width of the cloth, driving means for the rolls independent of the cloth, and means for varying the compressive force exerted by the rolls on the cloth.

2,032,071
CEMENTITIOUS PAINT AND PLASTIC COMPOSITION
Herman A. Scholz, Oak Park, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
No Drawing. Continuation of application Serial No. 423,490, February 14, 1930. This application September 16, 1934, Serial No. 743,421. In Canada October 30, 1930
10 Claims. (Cl. 134—46)

1. The process of lowering the consistency of a suspension of a hydraulically setting material in a liquid medium which comprises treating the suspension with a composition comprising gum arabic and calcium hydroxide, in amounts to render the composition alkaline.

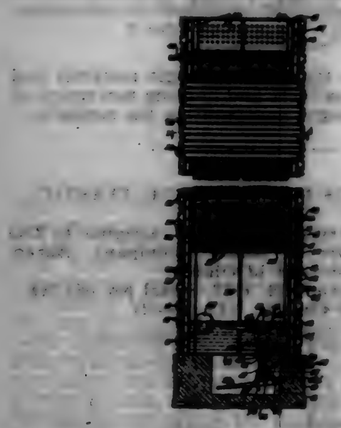


2,032,072
CIRCUIT BREAKER
Ralph M. Smith, Detroit, Mich.
Application February 21, 1934, Serial No. 712,273
7 Claims. (Cl. 200—87)

1. A circuit interrupter comprising a container of insulating material, a pair of lead-in wires, a pair of tongues positioned in parallel relation within the container to which the lead-in wires are respectively connected, one of the tongues being of a spring like conducting material and the other tongue being of comparatively rigid conducting material, an armature of tubular form

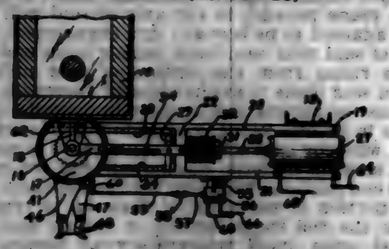
secured to the tongue of resilient material and enclosing the contacts and limiting movement of the resilient tongue in separating the contacts.

2,032,073
APPARATUS FOR TREATING PLASTIC MATERIAL
Horace D. Stevens, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application April 10, 1933, Serial No. 665,398
10 Claims. (Cl. 18—2)



6. In apparatus of the character described, the combination of a pair of driven mill rolls, a scraper comprising a rectangular blade disposed in a plane parallel to the axis of said mill rolls and adapted to be brought into engagement with one of said rolls, said blade having blunt end portions rising from the surface of said mill roll when said blade is in engagement therewith, and means for moving said scraper in opposite directions in its own plane, longitudinally of said mill roll, whereby said scraper may remove a portion of a sheet of material on said mill roll and one of said end portions will move into engagement with the portion of the sheet of material so removed from the roll for gathering or rolling said material upon itself preparatory to feeding the material back in between the mill rolls, and upon movement of the scraper in the opposite direction, the other end portion of said scraper will engage the material removed from the mill roll for the purpose specified.

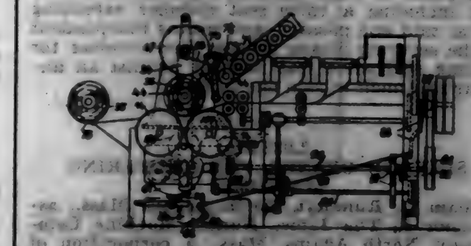
2,032,074
APPARATUS FOR PROCESSING GAS
John C. Swan, Marietta, Ohio; Charles W. Swan executor of said John C. Swan, deceased
Application June 12, 1935, Serial No. 26,223
10 Claims. (Cl. 257—28)



1. Apparatus for processing gas including a jacket, a casing spaced within said jacket and forming a gas receiving chamber therebetween, means for admitting gas under pressure to said receiving chamber, said casing having a condensing chamber at one end communicating with said receiving chamber, an intermediate refrigerant chamber, and a condensed liquid receiving chamber beyond the refrigerant chamber, refrigerant tubes located in the refrigerant cham-

ber and communicating at opposite ends with the condensing chamber and the liquid receiving chamber, means for admitting refrigerant liquid to the refrigerant chamber, means for withdrawing refrigerant vapor from the refrigerant cham-

ber, means for maintaining a constant maximum level of condensed gasoline in the liquid receiving chamber and for continuously withdrawing gasoline from said chamber, and means for withdrawing processed gas from the liquid receiving chamber.



2,032,675
SHEARING MECHANISM
Walter C. Weber, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application April 28, 1933, Serial No. 668,423
1 Claim. (Cl. 49—14)

In a glass shear a shear blade, a brake drum carried thereby, a shear blade driving motor in which energy is stored while the shear blade is at rest at a point beyond which it could absorb heat from a stream of molten glass, a latch for holding the shear blade in such position against the force of the driving motor, said latch being periodically released to permit the shear blade to pass through the glass stream at high speed under the influence of the driving motor and a brake band adapted to be contracted on the drum to retard the motion of the shear blade after it has passed through the glass stream.

2,032,676
LAP FORMING APPARATUS
Jules Weinbrenner, Thann, France
Application June 22, 1934, Serial No. 732,138
In Germany June 24, 1933
1 Claim. (Cl. 19—163)

In an automatic lap-forming apparatus of the type described in which the finished lap roller is expelled under the action of ascending rack-bars, a device for a mechanical braking of the free dropping movement of said rack bars towards the end of the stroke and comprising a pinion meshing with the rack bar, a disc coaxial with said pinion, a brake-shoe acting upon said disc,

a spring-controlled lever system operating the brake-shoe, a catch upon the rack bar timely engaging the lever system, and a second lever system, a second catch upon the rack bar engaging said second lever system for throwing in the main movement transmission of the machine, substantially as described.

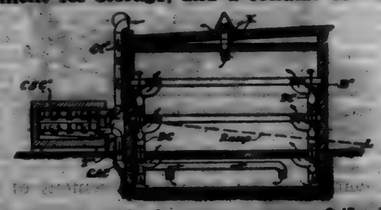
2,032,677
MANUFACTURE OF SILICON CARBIDE RESISTORS
Almer J. Thompson, Niagara Falls, N. Y., assignor to Globar Corporation, Niagara Falls, N. Y., a corporation of New York
Application November 17, 1931, Serial No. 575,699
Renewed July 6, 1935
8 Claims. (Cl. 201—76)

4. The method of producing silicon carbide resistors having different specific resistances which comprises applying to the resistors a slurry containing silica and a conducting material which is a chemical constituent of silicon carbide, curing the resistors by passing an electric current through the said resistors, and producing separate batches of resistors having different specific resistances by changing the ratio of the silica and the said conducting material in the slurry applied to the said batches.

2,032,678
HINGE
Harry B. Adams, Boston, Mass.
Application September 18, 1933, Serial No. 694,200
3 Claims. (Cl. 16—73)

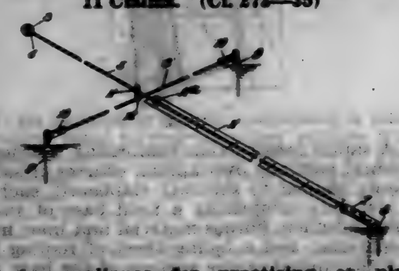
1. A hinge having two interpivoted leaves, an inturned lug at the outer edge of one leaf forming a keeper, a movable catch arm upon the inner face of the other leaf for engaging under said keeper when the leaves are partly closed, and power means activated by said closing of the hinge to a point where said catch arm interengages with said keeper for causing said interen-

gaged members automatically to complete the closing movement.



2,032,679
PUMP OR MOTOR
Elek K. Benedek, Mount Gilead, Ohio, assignor to The Hydraulic Press Mfg. Company, Mount Gilead, Ohio, a corporation of Ohio
Original application April 25, 1933, Serial No. 667,499. Divided and this application September 28, 1933, Serial No. 691,348
1 Claim. (Cl. 103—161)

In a pump or motor, primary and secondary rotors rotatable about individual axes and movable relatively during rotation, radial piston and cylinder assemblies operatively interconnecting the rotors and including crossheads, and crosshead guide blocks secured to said secondary rotor with tangentially disposed grooves for reciprocably receiving said crossheads, said grooves having a clearance over said crossheads sufficient to permit tilting thereof, each said crosshead being connected to each piston by a ball-and-socket joint unit with one portion thereof on said piston and one portion on said crosshead, said ball portion being movable relatively to said socket portion during the operation of said pump or motor, the crosshead portion of said joint unit being positioned eccentrically in said crosshead from front to rear thereof so as to cause said crosshead to tilt relatively to said guide block, whereby to provide a wedge-shaped clearance with a wedge-shaped lubricant film between said crosshead and said tangentially grooved guide block and also to provide self-alignment between said piston and said crosshead.

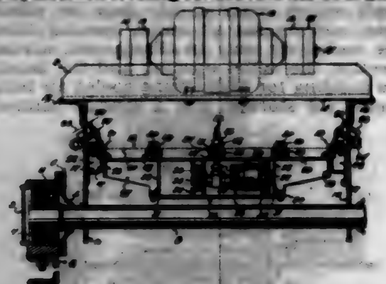


2,032,680
APPARATUS FOR VENTILATING BUILDINGS
Henry M. Chance, Philadelphia, Pa.
Continuation of application Serial No. 713,473, March 2, 1934. This application December 28, 1934, Serial No. 759,585
1 Claim. (Cl. 98—34)

1. The combination with a building having a basement and upper rooms to be ventilated, of apparatus for effecting ventilation comprising a cooling chamber disposed exteriorly of the building and at a height above said basement, means within said chamber for cooling air therein by contact, said chamber having an inlet opening through which external air may be admitted thereto, and having an outlet opening through which cooled air may be discharged, a conduit connecting the outlet opening and the basement of the building for discharging cooled air into the basement for storage, and a conduit connecting

the basement with the upper rooms of the building to be ventilated, said last named conduit opening into the basement at the lower portion thereof and apart from the point at which the conduit from the cooling chamber discharges into the basement, the elevated position of said cooling chamber forcing cooled air into the basement by gravitational action and thence upwardly into the rooms.

2,032,681
APPLIANCE FOR USE IN PRACTICING OR PLAYING GAMES
Harry Cuthbert Deane, Hendon, London, and James Henry Naden, Hampstead, London, England
Application May 12, 1933, Serial No. 670,646
In Great Britain April 1, 1933
11 Claims. (Cl. 273—35)



1. An appliance for practicing or playing games comprising a ball attached to one end of a length of cord, the other end of which is provided with means for anchoring it to a fixed point, a length of rubber connected to and arranged transversely to the said cord and intermediate the ends thereof and means for anchoring the ends of the said length of rubber.

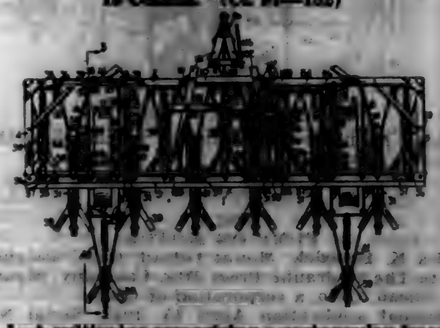
2,032,682
VIBRATORY SCREEN
Emil E. Deister and Irwin F. Deister, Fort Wayne, Ind., assignors to Deister Machine Company, Fort Wayne, Ind.
Application February 16, 1933, Serial No. 657,062
11 Claims. (Cl. 209—332)

1. In a vibrating screen including a vibratory frame and a screening medium carried thereby, a striker carried by said vibratory frame and receiving its impetus from the vibratory action of said frame for imparting tapping action to said screening medium, said striker being weighted adjacent one of its ends and provided with a striker surface adjacent its opposite end, and blocks carried by said frame and formed of re-

silient material for supporting the ends of said striker, and controlling its movement in a definite

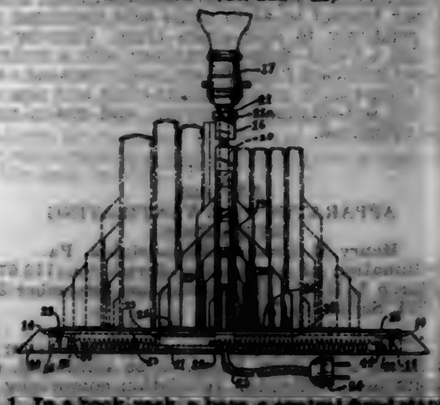
path relative to the path of movement of said screening medium.

2,032,063
BUILDING MATERIAL
William G. Dudleston, Chicago Heights, Ill., assignor to The Patent and Licensing Corporation, Boston, Mass., a corporation of Massachusetts
Application December 12, 1931, Serial No. 580,847
7 Claims. (Cl. 20—5)



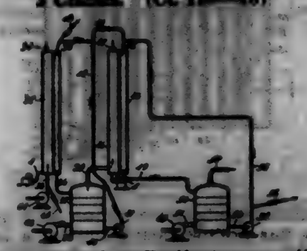
1. A siding construction comprising a series of horizontal partially overlapping courses of siding elements shaped to simulate clapboard, each of said elements comprising a rigid base of intermingled bitumen, fibrous material and inert mineral material, and a facing sheet of roofing felt adhesively united to one surface of the base and folded around and enveloping the lower edge of said base.

2,032,064
BRUSH ASSEMBLY
Irvie H. Dunham, Racine, Wis., assignor to Electric Motor Corporation, Racine, Wis., a corporation of Wisconsin
Application December 24, 1934, Serial No. 759,884
4 Claims. (Cl. 172—324)



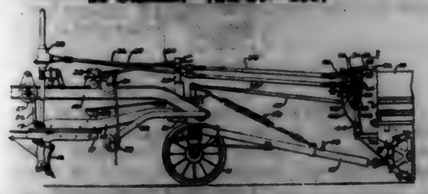
1. In an electric motor, a casing, and a brush assembly therefor including a brush holder, the casing having an opening in alinement with the holder, a cap of insulation adjustably threaded in the opening and movable toward and away from the holder, an expansion spring having its opposite ends fitted within the holder and the cap, and a contact clip carried by the cap and receiving the spring having resilient legs movable into intimate contact with the sides of the holder by said cap.

2,032,065
CULTIVATOR
Theodore J. Erdmann, Horicon, Wis., assignor to The Van Brunt Manufacturing Company, Horicon, Wis., a corporation of Wisconsin
Application March 24, 1934, Serial No. 717,145
12 Claims. (Cl. 97—152)



1. A cultivator comprising a rectangular frame, including transversely extending front and rear frame members and generally longitudinally disposed end members connecting said transverse members, generally forwardly extending members connected at their rear ends to said rear frame member, generally rearwardly extending members connected at their forward ends to said front frame member, said forwardly and rearwardly extending members being disposed at an angle to the plane of said end members, ground engaging supporting means for said frame connected with the adjacent ends of said generally forwardly and rearwardly extending members, and a plurality of cultivator rigs disposed laterally inwardly and outwardly of said ground engaging supporting means and arranged in the same general plane as said rearwardly extending members.

2,032,066
COMBINATION LAMP STAND AND BOOK-RACK
John P. Golden and Joseph F. O'Neil, Waterbury, Conn.
Application October 30, 1934, Serial No. 750,661
9 Claims. (Cl. 211—43)



1. In a book-rack, a base, a central fixed standard, a pair of plates slidable on said base on opposite sides of said standard, a pair of book-ends being mounted on said plates, and means connected to both ends of said base for normally urging said book-ends inwardly toward said standard.

2,032,067
MEANS FOR EVAPORATION
Hans Elis Abraham Odén, Stockholm, Sweden, assignor to Infrotherminka Aktiebolaget, Stockholm, Sweden, a joint-stock company of Sweden
Application February 4, 1931, Serial No. 513,240. Renewed July 25, 1935. In Sweden February 6, 1930
2 Claims. (Cl. 159—18)

1. An apparatus for effecting evaporation without substantial difference in pressure between the interior and the exterior thereof including in combination, a plurality of heating and evaporating chambers arranged in pairs, each heating chamber having a heat transmitting wall, means flowing said liquid to be evaporated over each heat transmitting wall in indirect heat interchanging relation with a heating medium within said chamber, means delivering heated liquid from each heating chamber to the evaporating chamber of the pair, means passing a gas which is non-condensing under the conditions of operation in direct heat interchanging relation with the heated liquid in each evaporating chamber to remove heat and vapor therefrom by contact therewith, means conducting the gas-vapor mixture from an evaporating chamber of one pair through a heating chamber of another pair to provide the heating medium within the latter, and means for circulating said liquid through said heating and evaporating chambers.

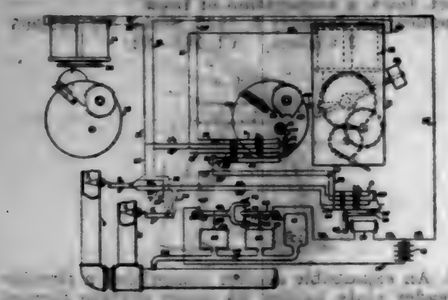
2,032,068
ROAD MACHINE
Carl A. Gustafson, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application December 7, 1932, Serial No. 646,847
12 Claims. (Cl. 37—163)

1. In a road machine, a frame, an earth-engaging tool adjustably mounted on said frame, adjusting mechanisms for said tool, and selective control means for said adjusting mechanisms comprising a housing, a sleeve mounted in aligned bosses in said housing and extending therethrough, a gear fixed on said sleeve, a shaft mounted in a second pair of aligned bosses in said housing and extending therethrough oppositely to said sleeve, a second gear fixed on said shaft and meshing with said first gear, a second shaft journaled in said sleeve and extending therethrough at both ends, connections from the adjacent ends of said shafts to said adjusting mechanisms, a clutch disk mounted on the extending end of said sleeve and having a notched outer periphery, a second clutch disk mounted on said second shaft adjacent the extending end of said sleeve and having a notched outer periphery, a crank rotatably mounted on the extending end of said second shaft adjacent said second disk, a pin slidably and non-rotatably mounted in an apertured boss formed in an end of said crank, said pin being located radially of said crank so that the center line thereof is aligned substantially with the peripheries of said disks and having a notch formed therein adapted to be aligned with one of said disks to permit relative movement thereof with respect to said pin, an adjacent portion of said pin being positioned in a peripheral notch of the other of said disks to establish a driving engagement therebetween, and a spring-pressed ball mounted in said crank and adapted to engage said pin to maintain it resiliently in adjusted position.

2,032,069
EXPANSIBLE ANCHOR
Charles E. Handel, Winterset, Iowa, assignor to Wej-Lock Manufacturing Company, Winterset, Iowa, a corporation of Iowa
Application January 9, 1932, Serial No. 585,965
2 Claims. (Cl. 189—92)

3. An expansible anchor comprising a circular spreader plate having its upper surface formed substantially spherical and provided with a series of annular and concentrically arranged steps, an anchor rod through said plate, a head member slidably mounted on said rod, a series of anchor blades having their upper ends pivoted to said head and their lower ends resting against the periphery of said plate when folded, the inner surfaces of said blades being provided with closely arranged teeth to co-act with said steps when moved to any one of a number of expanded positions to lock the blades against folding when strain is applied to said rod.

2,032,070
CURTAIN STRETCHER
Samuel Hamburger, Newark, N. J., assignor of two-fifths to Sol L. Kemelman, Newark, N. J.
Application March 2, 1934, Serial No. 714,593
7 Claims. (Cl. 45—24)



1. A curtain holder comprising two fixed parallel rails for holding the opposite ends of a cur-

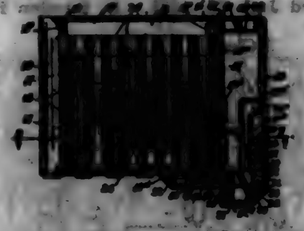
tain, rails extending from aforesaid rails for holding the opposite sides of the curtain, and means for securing the last mentioned rails in oblique position relative to said first mentioned rails.

1,922,691
PLASTICIZED COMPOSITION
Harold S. Holt, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 21, 1926, Serial No. 123,246. In Canada September 13, 1923
9 Claims. (Cl. 106—79)

1. A composition comprising a cellulose derivative and, as a plasticizer therefor, an ester of diethylene glycol wherein both of the hydroxyl groups are esterified by a saturated fatty acid from the group consisting of propionic and butyric acids.

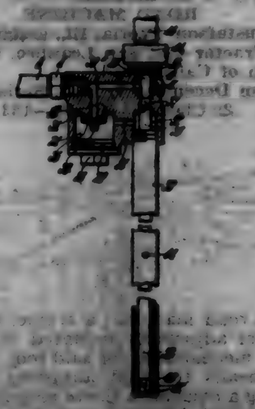
1,922,698
WATERFLOW RETARD ALARM
Clarence C. Johnson, New York, N. Y., Richard M. Hopkins, Rutherford, N. J., and Richard F. Spamer, Lynbrook, N. Y., assignors to American District Telegraph Company, New York, N. Y., a corporation of New Jersey
Application February 24, 1932, Serial No. 594,788
22 Claims. (Cl. 171—252)

1. In combination, a conduit; an alarm; means operated by flow in the conduit to operate the alarm; a surge pipe communicating with the conduit and provided with a substantially closed outer end and an intermediate constriction; closed bellows communicating with said pipe on both sides respectively of the constriction; a pair of electrically conducting levers mechanically connected to the active portions of the bellows respectively and adapted to contact each other when either one of the bellows expands more than the other; and an electro-magnetic means actuated by such contact to disable the alarm.



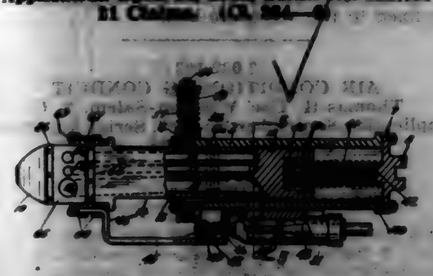
1,922,693
MONOAZO DYES AND METHODS FOR THEIR PREPARATION
Henry Jordan and Miles Augustinus Dahlen, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 30, 1932, Serial No. 608,554
8 Claims. (Cl. 8—5)

1. The process of producing a monoazo dye on a cellulose ester which comprises treating a cellulose ester with a base of the following general formula:



in which R_1 is a radical of the benzene series not containing a free salfo or carboxy group, X is CO or SO_2, and R_2 and R_3 are hydrogen or alkyl groups; diazotizing the treated material and developing with a developer solution.

1,922,694
COMBINED CIGARETTE LIGHTER AND CASE
Frank Le Vool, New York, N. Y.
Application August 24, 1931, Serial No. 558,264
12 Claims. (Cl. 206—41.6)



1. A combined cigarette lighter and case, comprising a flat hollow casing having a large cigarette holding compartment, a small lighter compartment for one cigarette to be lighted, a small door for closing said lighter compartment, a conveyer in said cigarette holding compartment for holding cigarettes and conveying one cigarette at a time into said lighter compartment, an abrasive wheel extending into the lighter compartment for engaging against the cigarette therein to cause lighting of this cigarette, spring means for operating said abrasive wheel, means for releasably holding said small door closed, means for releasing said small door, a depressible button for setting said spring means into operation, means for operating said conveyor operable upon closing of said small door, and means for winding said spring means operable upon closing said small door.

1,922,695
APPARATUS FOR DISPENSING LIQUIDS
Eugene A. O'Leary, Holyoke, Mass.
Application April 8, 1932, Serial No. 604,525
3 Claims. (Cl. 226—3)

1. An apparatus for dispensing beverages comprising in combination, a body provided with an inlet and an outlet and having a chamber, a hollow outer tube member connected to said body for inserting in a container, separate passageways being provided between said chamber and said inlet and between said chamber and said outer tube member, an inner tube within said outer tube member, and a valve rotatable in said body, said valve being provided with passageways which are in communication with one another and arranged whereby the valve may be positioned to alternately provide communication between said inner tube and said outlet and between said inlet and said outlet.

1,922,696
TRAIN PIPE COUPLING
Herman P. Potsnick, Davenport, Iowa
Application April 26, 1924, Serial No. 708,836
21 Claims. (Cl. 284—6)

8. In a train-line coupler, a cylinder having a pair of heads, said cylinder having openings through its lateral wall, arranged peripherally thereof, one head having an opening therethrough, a piston within and sliding within the cylinder and having a shank extending through the opening in said head and being constructed to prevent turning in said opening, said shank having longitudinal openings therein whose ends extend laterally to the surface of the piston and to one face of the shank, the openings to the face of the piston being arranged to register with and cooperate with the openings through the cylinder wall.

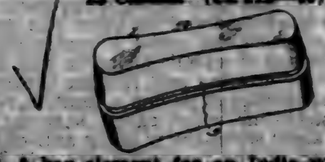
15. In a train pipe coupling comprising a pair of members movable relative to each other and including a fluid passage and means for controlling the flow of fluid therethrough, a valve associated with said control means adapted to close the passage and to restrict fluid from initially flowing in full volume from a charged train pipe into an empty one and causing application of the brakes, a safety valve associated with said valve and adapted to bleed the train line for applying the brakes when the head is accidentally uncoupled, and means for manually opening and closing said safety valve.

1,922,697
WATERPROOFING LEATHER
Henry Alfred Pigrett and George Stuart James White, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, Westminster, England
No Drawing. Application May 6, 1924, Serial No. 724,626. In Great Britain May 13, 1923
3 Claims. (Cl. 149—4)

1. A process of waterproofing vegetable tanned leather which comprises superficially applying an aqueous solution of a salt chosen from the group consisting of quaternary ammonium salts, quaternary phosphonium salts, and sulphonium salts containing an aliphatic chain of not less than ten carbon atoms to a surface of said leather.

1,922,698
LONG STOCK FABRICATING MACHINE
Joseph H. Roberts, Waterbury, Conn., assignor to The F. B. Shaster Company, New Haven, Conn., a corporation of Connecticut
Application February 13, 1931, Serial No. 515,199
43 Claims. (Cl. 164—42)

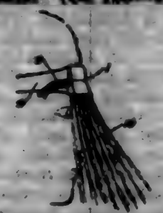
1. In a machine for shearing long relatively narrow stock, the combination with continuously rotated rolls feeding such stock horizontally lengthwise, of two shearing tools and carriers therefor, one of said tools being reciprocable in line with the stock-feed and the other tool being revolvable anti-clockwise about a center above said stock-line and in a plane including said line, and downwardly crossing said line for shearing, said center of revolution having a location relative to the stock-line which causes shearing by said tools at about seven-thirty of the anti-clockwise revolution of the revolvable tool and said revolution having a radius short relative to the length of sheared stock sub-lengths; crank-pin mechanism also located above the line of stock-feed and revolvable about said center of revolution of said revolvable tool-carrier and connected directly to the latter for revolution thereof; said crank-pin mechanism being normally stationary in a position holding said revolvable shearing-tool in a position of rest above its said shearing positions at about seven-thirty and in the path of downward movement of said revolvable tool toward the stock; guide-means movable horizontally with said reciprocable tool and in movable engagement with the revolvable tool causing operation of the reciprocable tool by the revolution of the revolvable tool; a clutch of which the driven member is connected with said normally stationary crank-pin mechanism for intermittent operation thereof; an adjustable target operated by the feeding stock and controlling the operation of said clutch causing starting of both the revolution of said revolvable carrier downwardly toward the feeding stock and of the horizontal movement of the reciprocable carrier forwardly with the feeding-stock by means of said revolution; driving connections respectively for said feed rolls and the driving member of said clutch, said driving connections being coordinated for substantially like rates of horizontal movement of both the stock and the tool-carriers at their shearing positions at about seven-thirty of the anti-clockwise revolution of the revolvable tool-carrier; and a fly-wheel continuously rotated with the driving member of the clutch and rapidly accelerating the rate of revolution of said revolvable tool-carrier during the short arc of its movement after the start of revolution of the crank-pin mechanism by the clutch and the commencement of shearing by the cooperating shearing tools.



1,922,699
FASTENER AND ART OF PRODUCING SAME
Heyman Rosenberg, New York, N. Y.
Application March 3, 1932, Serial No. 596,637
8 Claims. (Cl. 16—161)

1. The art of producing a metal fastener comprising forming a fastener with a head having a

rabbet extending about its periphery and applying a soft metal cushion to the fastener including the rabbet and rendering the material of the cushion commingled with the material head of the fastener including that forming the rabbet.



2,032,100
INDIA RUBBER SPRING
Alexander Spencer, Westminster, London, England
Application November 17, 1934, Serial No. 753,540
In Great Britain October 29, 1931
23 Claims. (Cl. 213—40)

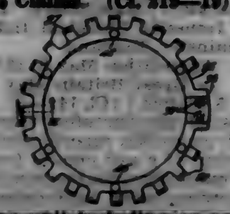
2. A bar element for an India-rubber spring comprising a solid bar of India-rubber of uniform depth in the direction of compression having flat compression surfaces and having its major axis between said surfaces and parallel thereto with the portion at each end of said axis of greater transverse dimension than its centre portion such that under a predetermined compression the side walls of the element become substantially parallel or equidistant from each other throughout their length.

2,032,101
FUME AND DUST ELIMINATOR
William D. Sullivan, West New York, N. J.
Application February 26, 1935, Serial No. 7,371
1 Claim. (Cl. 128—145)

A relatively small flat shield adapted to be placed over the forehead directly above the eyebrows having a continuous chamber therein with perforations extending through the lower edge of the device and communicating with the chamber characterized in that the lower portion of the device is of a triangular shape and the chamber therein is inclined outward toward the lower end with the perforations also inclined and adapted to eject the air in an outward and downward direction, and a connection at one end of the device adapted to extend therefrom to a means for supplying air under pressure.

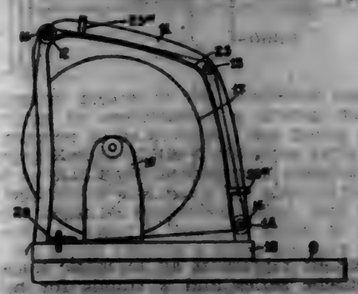
2,032,102
ATTACHMENT FOR ARTIFICIAL TEETH
Junzo Taguchi, Yotsuya-ku, Tokyo-shi, Japan
Application November 1, 1935, Serial No. 47,042
In Japan November 10, 1934
1 Claim. (Cl. 32—5)

An attachment device for artificial teeth comprising a gripping metal member to be fixed to the vulcanite-bed of the artificial teeth, having one end adapted to clasp a pier tooth in the bridge work of the back side and a finger piece forming a clip in connection with the said one end of the gripping member, another gripping metal member rotatably mounted on the first mentioned gripping member, having a front limb adapted to



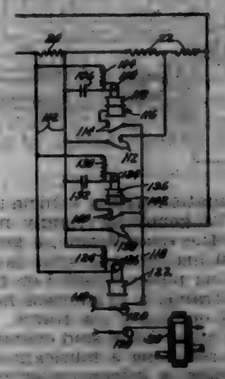
clasp the pier tooth at the front side, a rear limb adapted to be clipped between the said one end and finger piece of the first mentioned gripping member, a projecting lug adapted to engage with the pier tooth at the undercut of its crown and a leg movably mounted thereon and adapted to be fixed to the vulcanite-bed.

2,032,103
AIR CONDITIONING CONDUIT
Thomas H. Tise, Winston-Salem, N. C.
Application September 25, 1931, Serial No. 565,911
20 Claims. (Cl. 138—53)



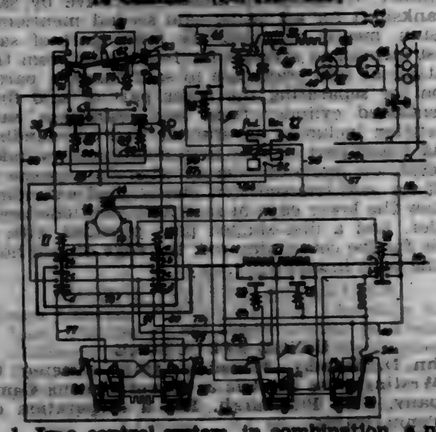
1. A conduit for air conditioning apparatus comprising a tube having opposed side walls, and flexible, foldable walls joining said side walls, said flexible, foldable walls being initially folded upon themselves to bring the opposed side walls into closely spaced relationship, said tube adapted to be expanded to conduit-forming condition, the width of said tube when folded being no greater than when expanded.

2,032,104
WAFFLE IRON HEATER
Harold F. Umstett, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 23, 1933, Serial No. 690,690
5 Claims. (Cl. 219—19)



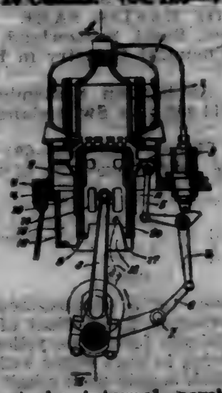
1. A heating unit including an annulus of refractory electric-insulating material having a plurality of spaced, staggered and alternately oppositely-bent radial projections on one peripheral surface and a resistor element extending between the opposite heat projections adjacent said peripheral surface of the annulus.

2,032,105
DISPLAY AND DISPENSING DEVICE FOR RIBBONS AND THE LIKE
Edgar F. Welch, Columbus, Ohio
Application February 25, 1935, Serial No. 7,997
4 Claims. (Cl. 242—55.3)



2. A displaying and dispensing device for a roll of ribbon-like material including a frame having a front side for displaying the ribbon-like material and a rear side opposite said displaying side, and from which rear side the ribbon-like material is dispensed, means within said frame for rotatably supporting a roll of said material, and means within said frame for guiding the free end portion of said roll of material from the rear side of said frame across the display side of said frame and thence to said dispensing side of said frame.

2,032,106
CONTROL CIRCUIT FOR ELECTRIC BRAKES
George W. Baughman, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application December 15, 1933, Serial No. 702,536
12 Claims. (Cl. 303—3)



1. In a vehicle brake apparatus, the combination with a brake cylinder and an electro-dynamic brake, of means for supplying fluid under pressure to said brake cylinder, tuned frequency circuits including sequentially operable relays for controlling said brake, and means preventing fluid under pressure from being supplied to said brake cylinder until said relays have operated.

2,032,107
MOTOR CONTROL SYSTEM
Russell M. Bayle, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application March 24, 1933, Serial No. 661,807
14 Claims. (Cl. 172—239)

1. In a control system, in combination, a plurality of motor-operated work devices, a source of power, a traveling crane associated with the work devices, a plurality of reversing switches for connecting the motor-operated work devices to the power source, means operable independently of the motor and including a light-responsive device for controlling the operation of the reversing switches, said means being disposed to effect a reversal of the motor-operated work device in response to successive operations of the light-responsive device regardless of the position of the work device, and a light source energizable at the will of an operator and carried by the crane for effecting the operation of the light-responsive device, thereby to provide for effecting predetermined operations of the work device without the use of physical electrical connections between the crane and the work devices.

2,032,108
TWO-STROKE ENGINE
Auguste Louis René Bernard, deceased, late of Rueil-Malmaison, France, by Renée Bernard, née Bournenville, executrix, Paris, France
Application January 25, 1935, Serial No. 1,528
In Belgium February 9, 1934
10 Claims. (Cl. 123—71)

1. A two-stroke internal combustion engine which comprises, in combination, at least one

cylinder, a piston in said cylinder, a crankshaft, a connecting rod between said crankshaft and said piston, a crankcase, a pump having an annular cylinder and an annular piston surrounding said first mentioned cylinder, for feeding air to the combustion chamber of the first mentioned cylinder, transmission means operative by said crankshaft for actuating said second mentioned piston, means including the lower part of said first mentioned cylinder for feeding air from the outside of said crankcase to said pump, a partition for separating the lower part of said first mentioned cylinder from said crankcase, said partition including an annular wall surrounding said lower part of the first mentioned cylinder except, on one side thereof where a passage is left for said transmission means, and extending below the lower edge of said first mentioned cylinder, and a disc-shaped part provided with a hole for the connecting rod, the edge of said hole being bent inwardly.

2,032,109

HINGE STRUCTURE

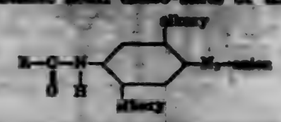
John D. Belusky, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application October 27, 1926, Serial No. 743,383

8 Claims. (Cl. 53—5)

1. A cooking appliance comprising, in combination, a lower casing and an upper casing, hinge brackets on the respective casings, and a substantially flat link connecting the two brackets and having an opening therein adjacent the upper end materially larger than a portion of the upper hinge bracket received therein to permit a loose turning movement thereof in the opening.

2,032,110



STABLE SOLID DIAZO-SALTS AND PROCESS OF MAKING SAME

Gérald Benhôte, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland

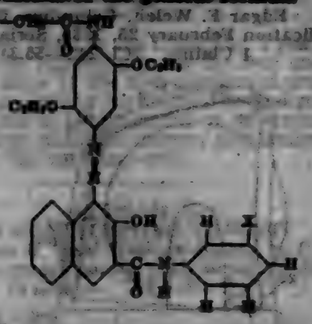
No Drawing. Application September 14, 1934, Serial No. 744,082. In Switzerland September 25, 1933

11 Claims. (Cl. 260—69)

4. The stable solid diazo-salts of the formula

wherein R stands for a phenoxymethyl radical, and anion represents the radical of a mineral acid, which products form pale yellow to yellow powders, dissolving in pure water with formation of solutions which couple with alkali metal salts of arylides of 2,3-hydroxy-naphthoic acid with formation of dyestuffs.

2,032,111



BLUE DYEING ANTHRAQUINONE

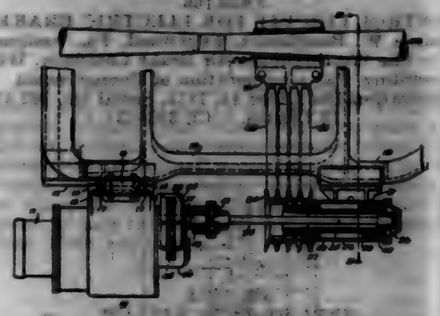
Gérald Benhôte, Basel, and Carl Amsler, Riehen, near Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland

No Drawing. Application March 13, 1935, Serial No. 10,900. In Switzerland April 14, 1934

6 Claims. (Cl. 260—369)

1. The dyestuffs of the general formula

in which R₁ represents an aromatic nucleus of the benzene series and X stands for halogen, alkyl or alkoxy, which products are dark blue powders insoluble in water but dissolving in pyridine to violet solutions, and in sulfuric acid to blue solutions, and dye the cotton fiber fast blue tints.



2,032,112

AXLE GENERATOR DRIVE

Winston A. Brucht, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application March 29, 1934, Serial No. 717,983

6 Claims. (Cl. 105—136)

1. The combination with a vehicle truck and a wheel axle, of a generator rigidly mounted on the exterior of the truck frame, a gear unit enclosed in a housing integral with the generator housing, a driving pulley secured on the axle inside the truck frame, a cylindrical housing pivotally mounted on the truck frame, a countershaft rotatably mounted in said cylindrical housing, means for retaining a lubricant within said cylindrical housing, a driven pulley mounted on the countershaft between the generator and the cylindrical housing, belt means for connecting the pulleys, spring means for maintaining the proper belt tension, a torque shaft for connecting the driven pulley to the gear unit to drive the generator, and a flexible coupling disposed at each end of the torque shaft to permit limited movement between the pulley and the gear unit.

2,032,113

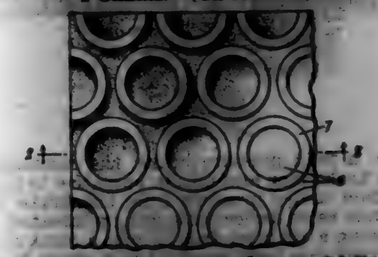
CONTROL MECHANISM

Max E. Brandel, Chicago, Ill., assignor to Standard Asbestos Company, Chicago, Ill., a corporation of Illinois

Application October 5, 1932, Serial No. 636,282

6 Claims. (Cl. 172—239)

1. Control means of the character described comprising in combination a driving motor, a limit member to be moved by the motor on approaching limit position, a reversing switch controlled by said limit member and adapted to reverse said motor and cause the same to return a distance inside its extreme position, said reversing switch having a contact which is opened when the motor returns a short distance to stop said motor, and a pair of contacts operated by said limit member which are left closed when the motor comes to rest to maintain a circuit adapted to actuate the motor in the opposite direction only when power is applied to the motor.



2,032,114

CARPET CUSHION

Arthur L. Clements and Walter H. Gilmer, Chicago, Ill., assignors to American Hair & Felt Company, Chicago, Ill., a corporation of Delaware

Application November 17, 1931, Serial No. 575,450

4 Claims. (Cl. 154—54)

1. A carpet cushion having layers of felted felt-able fibres, one side of said cushion having a surface formed by curved ribs and depressions.

2,032,115

CIRCUIT BREAKER

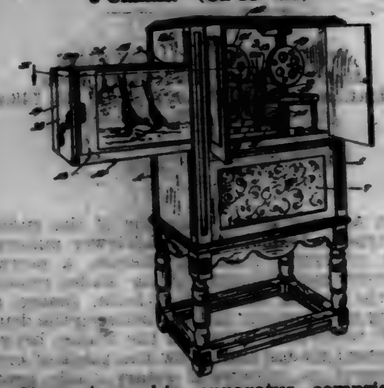
Harold E. Cobb, Montgomery, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application March 8, 1934, Serial No. 715,668

3 Claims. (Cl. 200—116)

1. A thermal responsive switch comprising, in combination, cooperating contacts, a movable contact carrying member supporting one of said contacts and adapted to effect engagement and disengagement of said contacts, a movable pivotal support for said contact carrying member, an operating member for effecting movement of the contact carrying member in one direction, a spring for effecting movement of the contact carrying member in the other direction, a latch portion on one of said members, and a thermostatic member for latchingly engaging said latch portion to hold the contact carrying member in the position to which it is operated by the operating

member, said operating member effecting movement of said movable pivotal support to effect manual disengagement of the latching portion from the thermostatic member.



2,032,116

MOTION PICTURE APPARATUS

Frank Conrad, Wilkinsburg, and Christian Aalberg, Pittsburgh, Pa., and Orville E. French, Collingswood, N. J., assignors to Westinghouse Electric and Manufacturing Company, a corporation of Pennsylvania

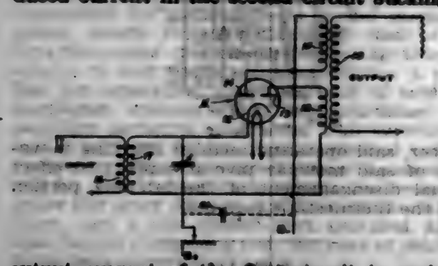
Application May 14, 1930, Serial No. 452,252

8 Claims. (Cl. 88—24)

1. Cinematographic apparatus comprising a cabinet structure having a chamber therein, a mechanism, including means for advancing a film strip having a picture record photographed thereon and means for projecting an image of said picture record, disposed in said chamber in such manner as to substantially fill the available space in said chamber and in a position such that said image is projected in a horizontal direction, said chamber having an opening in a vertical wall thereof, a rigid framework having a translucent screen as a vertical wall thereof normally disposed entirely within said above-mentioned chamber adjacent to said mechanism, means for shifting said framework horizontally through said opening to a position such that said screen is entirely outside of said chamber and means for projecting said image onto said screen when it is in the shifted position.

2,032,117

RADIO VOLUME CONTROL



George Corbett, Tampa, Fla.

Application December 12, 1933, Serial No. 702,535

1 Claim. (Cl. 250—20)

A radio receiving system having a plurality of amplifying stages; a two plate rectifier; a circuit including one plate of said rectifier interposed be-

tween the output of one of said stages and the input of the next succeeding stage to transmit signal energies from said output to said input; and a second circuit including the other plate of said rectifier and operable only by signal energies in excess of a predetermined maximum, the induced current in the second circuit bucking the

output current of the first circuit to maintain constant the volume of signal energies transmitted from the output of the first named stage to the input of the next succeeding stage, said means for varying the potential of the cathode of said rectifier relative to said other plate to secure any potential difference equal to the strength of signal desired.

2,032,118

BREAD SLICING MACHINE

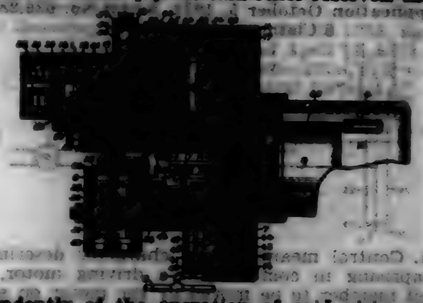
Harry J. Crimar, Davenport, Iowa

Application October 19, 1934, Serial No. 748,011

11 Claims. (Cl. 146—88)

2. In a bread slicing machine of the endless-band type, a frame, upper and lower pulleys or drums revolvably mounted therein, a plurality of narrow endless-band cutting blades mounted upon the drums in figure 8 form, spaced and crossing substantially midway between the drums, a shaft removably united to the frame, between the crossed blades and below the point of crossing thereof, a cylindrical rotary guide revolvably mounted upon the shaft and having a plurality of deep grooves in the periphery thereof equal in number to double the number of band blades, and the alternate grooves being adapted to contact the cutting blades at the front and rear thereof respectively, and means to drive the pulleys in opposite directions.

2,032,119



FLUID PRESSURE BRAKE

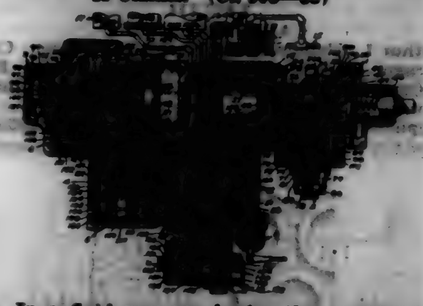
Clyde C. Farmer, Pittsburgh, and Ellis E. Hewitt, Edgewood, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application May 8, 1931, Serial No. 535,956

15 Claims. (Cl. 303—39)

1. In a fluid pressure brake equipment, the combination with a brake pipe, a brake cylinder, an auxiliary reservoir and another reservoir, of valve means, a piston operated upon an increase in brake pipe pressure to establish a communication through which fluid under pressure flows from the brake pipe to the auxiliary reservoir and to actuate said valve means to connect the brake cylinder to the atmosphere and to establish communication through which fluid under pressure is adapted to flow from the auxiliary reservoir to said other reservoir at one time and through which fluid under pressure is adapted to flow from said other reservoir to the auxiliary reservoir at another time, a communication through which fluid under pressure is adapted to flow from the brake pipe to said other reservoir inde-

pendently of the operation of said piston and valve means, and means interposed in the last mentioned communication preventing back flow of fluid under pressure from said other reservoir to the brake pipe.



2,032,120

FLUID PRESSURE BRAKE

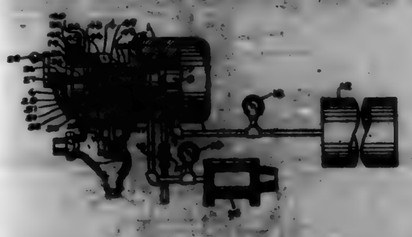
Clyde C. Farmer, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application December 24, 1931, Serial No. 582,985

42 Claims. (Cl. 303—35)

1. In a fluid pressure brake, the combination with a brake pipe and means operative to locally vent fluid under pressure from the brake pipe, of a triple valve device comprising a salvaged casing having a chamber from which a quick action mechanism has been removed and which is open at one end, an annular gasket in said chamber carried by said casing, said gasket having a beveled inner surface, a member in said chamber having a beveled surface adapted to engage the beveled surface of said gasket to form an air-tight seal between said casing and member, and a cap secured to said casing clamping said member in engagement with said gasket and closing the open end of said chamber, said casing, member and cap defining a passage through which fluid under pressure vented from the brake pipe is adapted to flow.

2,032,121



VALVE TESTING DEVICE

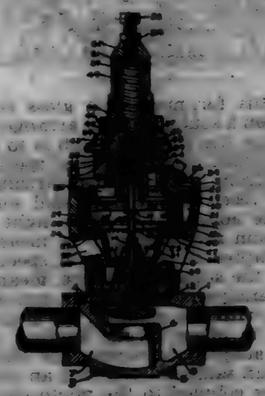
Clyde C. Farmer, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application May 6, 1933, Serial No. 669,765

11 Claims. (Cl. 73—81)

1. A testing device for testing a valve device having valve means and a piston responsive to differences in the pressure of fluid on opposite sides thereof for actuating said valve means, the testing device comprising a base member adapted to be removably attached to said valve device, and an operating stem having screw-threaded engagement with said base member and adapted to engage said piston, said stem being movable back and forth in the direction of its length to vary the position of said piston and valve means.

2. In a testing device for testing a valve device having valve means and a piston for actuating said valve means, a base member adapted to be removably attached to said valve device, an operating stem movably mounted in said base member and adapted to control the operation of said piston, a thrust member carried by said movably mounted member and adapted to engage said piston, and a roller bearing interposed between the thrust member and the movably mounted member.



2,032,122

COMPRESSOR GOVERNOR CONSTRUCTION

Clyde C. Farmer, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application August 2, 1933, Serial No. 683,237

4 Claims. (Cl. 137—153)

1. In a steam pump governor, the combination with a cylinder casing, a bushing mounted in said casing adapted to receive a piston and having one end spaced from said casing, and a barrier plate mounted in said casing and having a flange disposed in the space between the end of the bushing and the casing, and resilient fingers formed in said flange and engaged by the end of the bushing to yieldingly maintain said plate in position with a substantial portion thereof in spaced relation to the end of said bushing.

2,032,123

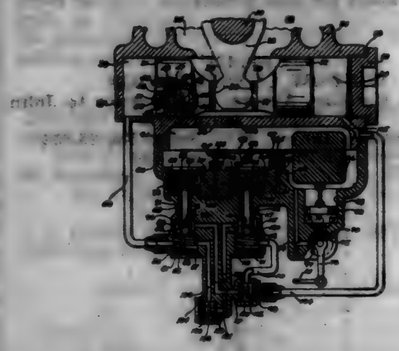
PROCESS OF CONVERTING A FIBROUS MATERIAL

Richard Freudenberg, Hans Freudenberg, Roland Runkel, and Gustav Lange, Weinheim, Germany, assignors to Carl Freudenberg G. m. b. H., Weinheim (Badenia), Germany, a German company

No Drawing. Application August 31, 1934, Serial No. 742,251. In Germany September 5, 1933

7 Claims. (Cl. 92—9)

1. A process of converting a fibrous material, obtained from a skin substance and containing water, into stable transportable fibres, comprising treating the fibrous material with at least one organic liquid miscible with water so that said fibrous material is at least to a large extent freed from water, and directly thereafter drying said fibrous material.



2,032,124

SHOCK ABSORBER

Frederick D. Furniss, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application August 13, 1934, Serial No. 740,343

15 Claims. (Cl. 188—88)

1. A hydraulic shock absorber comprising, in combination, a casing providing a fluid displacement chamber; fluid pressure actuated means for controlling the flow of fluid from said chamber; inertia mass controlled means for regulating fluid flow to vary the controlling effect of the aforementioned means; and manually adjustable means for varying the effect of the inertia mass controlled means.

2,032,125

ELECTRIC WATER HEATER

Mabel S. Castle, Detroit, Mich.

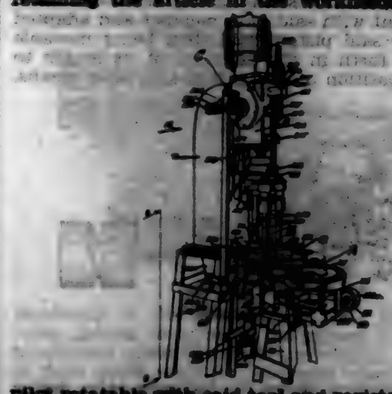
Application September 15, 1934, Serial No. 744,189

4 Claims. (Cl. 219—38)

1. In an electric water heater, a tank, a tube extending upwardly from the bottom of the tank and terminating near the center of the tank, an electric heating element mounted in the tube, a cap on the tube above the heating element, a second tube of smaller diameter than the first tube supported on the cap and communicating with the interior of the first tube, a tubular housing positioned about the second tube and supported on the cap, a bracket in the top of the tank, the upper end of the second tube being supported in the bracket and the tubular housing terminating beneath the bracket and being connected to the second tube beneath the bracket, a discharge pipe opening from the top of the tank, a discharge

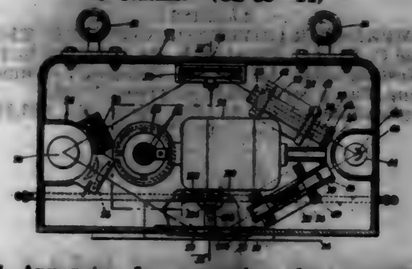
valve rotatably mounted in the top of the second tube within the bracket, a stem on the valve extending through the top of the tank, an insulating housing and cover about the tank, the valve

stem extending through the insulating cover and a handle connected to the upper end of the valve stem above the insulating cover, the insulating cover being provided with open and closed position markings for said handle.



2,032,126
WINDOW CONSTRUCTION
Oscar R. Hankins, Aurora, Ill., assignor to John W. Dwyer, Aurora, Ill.
Application June 6, 1935, Serial No. 25,674
7 Claims. (Cl. 189—69)

1. A window construction comprising: a frame comprising inwardly directed top and side flanges and rearwardly directed side flanges; and a sash having an outwardly directed perimetral flange adapted to fit snugly within said frame; and bear against said inwardly directed frame flanges, said rearwardly directed side flanges being unobstructed except for a pair of inwardly directed studs fixedly mounted thereon to engage the sash flanges and partially support the sash when tilted to open position.

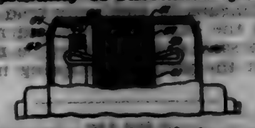


2,032,127
TRIMMING APPARATUS
John Q. Holmes, Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 2, 1932, Serial No. 645,362
17 Claims. (Cl. 29—4)

1. Apparatus for trimming flash from articles having a recess concentrically of the flash comprising, in combination, a workholder for nonrotatably supporting an article; a rotating tool for trimming flash from the article; spring urged means carried by said tool for retaining the article in the workholder and for properly aligning the article with the tool, said means including a member which is not rotated when engaging and retaining the article in the workholders and a

pilot rotatable with said tool and registering with the recess of the article; and means for causing relative bodily movement between the tool and the article for the performance of a trimming operation.

2,032,128
MEANS FOR THE MEASURING OF GLOSS
Walter Reginald Hornfield, London, England
Application May 22, 1933, Serial No. 22,963
In Great Britain May 22, 1934
3 Claims. (Cl. 88—14)

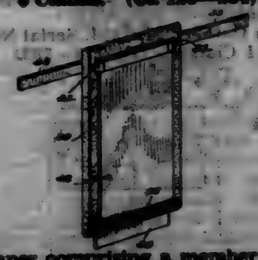


1. Apparatus for measuring gloss comprising in combination a source of light arranged to shine upon a surface the gloss of which is to be measured, said surface polarising light specularly reflected therefrom, a standard polarising surface arranged to receive light from said source, two analysers one adapted to receive light reflected specularly from the surface to be measured and the other adapted to receive light specularly reflected from the standard surface, means for rotating both analysers about their optical axes in synchronism with one another, the analysers being opposite in phase to one another, a photo-electric cell adapted to receive the light transmitted through said analysers and an alternating current meter coupled to the photo-electric cell.

2,032,129
CAPACITOR MOTOR
Ray P. Jackson, Wilkinsburg, and Herman M. Riebel, Oakmont, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1933, Serial No. 697,806
6 Claims. (Cl. 172—238)

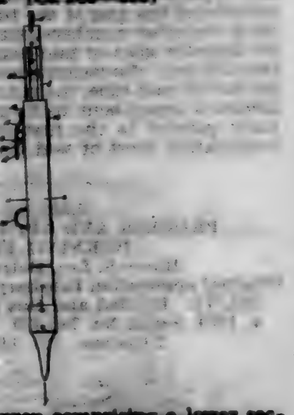
1. In a capacitor motor including a housing, a stator structure and a rotor structure therein,

an annular condenser structure within the housing substantially coaxial with the stator and rotor, and a plurality of substantially radially-ex-



tending leaf springs having their respective ends operatively engaging the housing and the condenser structure.

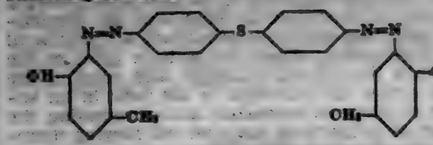
2,032,130
LIQUID COOLING DEVICE
Gerhard Jarint and William A. Ebert, Hoboken, N. J.
Application November 26, 1934, Serial No. 754,887
3 Claims. (Cl. 62—142)



1. A cooling device comprising a shell, base means for closing the lower end of the shell and being detachably secured thereto, liquid receiving means connected to and closing the upper end of the shell and mounted for rotation thereon, said shell being adapted to receive a cooling means and having the liquid receiving means suspended therein, and spring pressed means for retaining the cooling medium about the liquid receiving means and mounted in the base means.

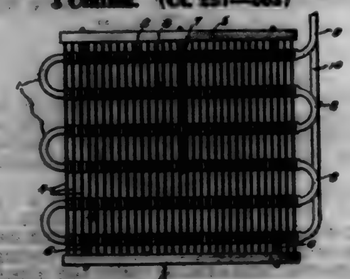
2,032,131
DIAPER
Doris B. Kennard, Tallahassee, Fla.
Application November 28, 1934, Serial No. 755,813
6 Claims. (Cl. 128—284)

3. A diaper comprising a member in the form of a sheet of waterproof material, a second member in the form of a pad of absorbent material supported by the sheet, one of the members being provided with spaced loops, the other member having laterally projecting straps inserted through the loops and extending beyond said loops for supporting one member on the other member, said straps forming means for attaching the diaper to the body of the wearer.



2,032,132
CLOTHESLINE PROP
Anthony Kovalik, Whitaker, Pa.
Application March 30, 1935, Serial No. 12,071
2 Claims. (Cl. 248—355)

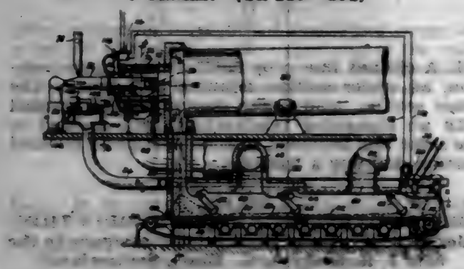
1. A clothes line prop comprising a lower section, an upper section adapted to telescope the lower section, said upper section being provided with an elongated reinforcing strap secured to the same and provided with an outwardly buckled portion defining a handle.



2,032,135
DISAZO DYESTUFF AND ITS PRODUCTION
Adolf Kreis, Basel, Switzerland, assignor to the firm J. R. Geigy A. G., Basel, Switzerland
No Drawing. Application March 30, 1935, Serial No. 12,106. In Germany April 12, 1934
2 Claims. (Cl. 260—77)

2. Disazo dyestuff, insoluble in water, of the following formula

said dyestuff having a great coloring power and a good fastness to light and being suitable for dyeing cellulose ester lacquers, spirit lacquers, oils and fats and also for use in the graphic arts.



2,032,134
HEAT EXCHANGER
Lester U. Larkin, Atlanta, Ga., assignor to Larkin Refrigerating Corporation, Atlanta, Ga., a corporation of Georgia
Application January 5, 1935, Serial No. 274
3 Claims. (Cl. 257—263)

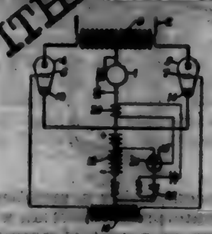
1. In a heat exchanger: a heat conducting tube; a heat conducting plate of resilient material in-

serted lengthwise in said tube; said plate being bent to form a U-shaped member having the bend thereof in contact with the inner surface of said tube and the legs thereof spaced apart and symmetrically arranged relative to a plane containing the axis of the tube; and bent also to form two other members extending symmetrically on opposite sides of said plane from the ends of the said legs into yielding contact with the inner surface of said tube, the outer ends of said other members being bent to form members substantially parallel to the first named members and terminating short of said plane.

2,032,135
PROCESS AND APPARATUS FOR BURNING FUEL
Harry S. Lee, Detroit, Mich.
Original application February 13, 1932, Serial No. 592,774. Divided and this application October 4, 1934, Serial No. 746,329
7 Claims. (Cl. 110—104)

1. That method of forming a fuel mixture and delivering the same into a combustion zone which comprises projecting the fuel by a stream of primary air preheated to a temperature slightly below the ignition point of the fuel into a mixing chamber to flow therethrough into the combustion zone, and delivering secondary air preheated to a temperature above the ignition point of the fuel into the mixing chamber and causing the same to flow therethrough in the form of an annular envelope of secondary air surrounding the stream of primary air and fuel and flowing therewith into the combustion zone.

2,032,136
MANUAL RESET THERMOSTAT
Paul R. Lee, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 12, 1934, Serial No. 743,855
5 Claims. (Cl. 200—122)



1. In combination with a base, fixed contacts thereon, a snap-acting bimetal disc having contacts thereon cooperating with the fixed contacts, means supporting the disc centrally thereof from the base, a plurality of stop pins extending through the disc and the base, a member adjacent to the base at that side opposite to the disc and having the stop pins secured thereto, and spring means to yieldingly hold said member against the base, whereby said member together with said stop pins may be moved as a unit against the pull of the spring means.

2,032,137
UNIFORMLY CONTROLLABLE GAS OR VAPOR DISCHARGE VALVE
Ernst Lübcke, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 24, 1933, Serial No. 695,245
In Germany October 27, 1932
2 Claims. (Cl. 250—27.5)

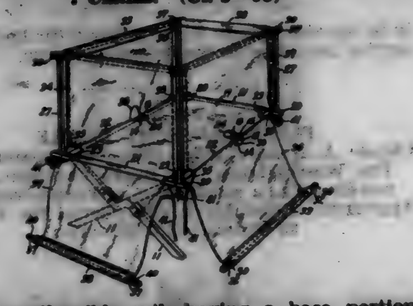
1. A discharge device comprising an indirectly heated cathode, a grid member surrounding said indirectly heated cathode member, a second grid member surrounding said first grid member and an anode surrounding said second grid member, a gaseous medium, said device having a container wall sealing said medium about said electrodes, the openings in said second grid member being smaller than the openings in said first grid member, said first grid member being spaced from said second grid member a distance of the order of the free-mean path of an ion of said gaseous medium.

2,032,138
ELECTRICAL CONVERSION SYSTEM
Leon R. Ludwig, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 10, 1934, Serial No. 747,913
11 Claims. (Cl. 175—363)

1. A vapor electric converter for producing alternating current from direct current comprising a plurality of arc type valves, control grids for said valves, a source of control potential for said grids and means responsive to forward fire in one of said tubes for advancing the firing point for the next succeeding tube.

WITHDRAWN

2,032,139
COLOR SCREEN DEVICE
Alfred J. Mary, Evanston, Ill., assignor to Mary Art Process Corporation, Chicago, Ill., a corporation of Illinois
Application May 26, 1933, Serial No. 727,837
2 Claims. (Cl. 88—39)



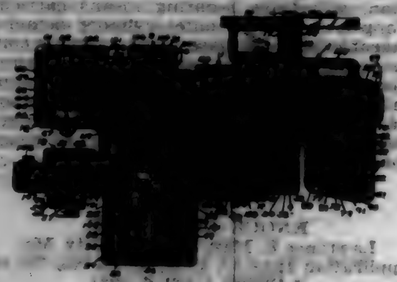
2. Bi-colored spectacles comprising a spectacle frame of cardboard or like material having a nose notch cut in it from one margin thereof, said notch being V-shaped with straight line margins so as to fit any size or shape of nose, said frame having two rhombic eye-openings in it with the opening margins adjacent said notch being parallel to the respective juxtaposed notch margins to assure full vision through said openings irrespective of the height of said frame on a nose, and rhombic eye-pieces of non-hygroscopic transparent material overlying said openings and pasted to the same side of said frame about said openings, said eye-pieces being of different colors.

2,032,140
FILTER DEVICE
Lewis E. Mallery and Joseph T. Nash, Decatur, Ga.
Application October 21, 1933, Serial No. 694,668
4 Claims. (Cl. 210—183)

1. A filter device for oils and the like especially adapted to withstand high pressure comprising a stationary inner cylinder and removable outer cylinder formed, respectively, with completely closed upper ends, said cylinders being so spaced as to provide an intermediate compression and filter cake chamber, said inner cylinder having circumferentially disposed filter means, a base plate having an upstanding annular centrally disposed portion adapted to threadedly engage within the inner cylinder to form a seal connection and support the cylinder in upright position, a centrally disposed outlet opening formed in said base plate, the surface of said upstanding portion being inclined downwardly from its circumferential edge to the outlet opening, an inlet opening for the compression chamber formed in said base plate exterior of the inner cylinder, said base plate having an annular V-shaped recess intermediate its circumferential edge and the inlet opening, said outer cylinder having its lower edge tapered to wedgingly seat in said V-shaped recess and effect a seal connection, adjustable securing means carried by the upper end of the outer cylinder detachably engageable with the base plate, overflow control means adapted for connection with pressure indicating means carried by said outer cylinder, whereby said outer cylinder may be expeditiously lifted and removed from the inner cylinder for effecting removal of the filter cake and cleaning purposes.

2,032,141
KNOCK-DOWN CRIB
Lawrence E. May, Jefferson City, Mo.
Application June 11, 1934, Serial No. 729,989
7 Claims. (Cl. 5—98)

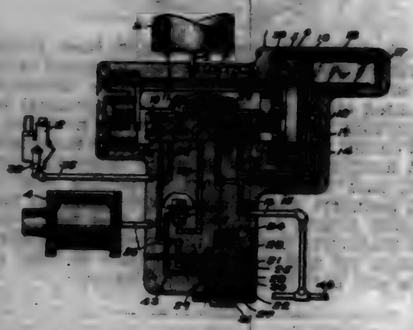
2. A collapsible crib having a base portion, fabric bottom, side and end wall members carried by said base portion, corner posts detachably mounted on said base portion, longitudinal bars supporting said side wall members mounted on said corner posts and transverse bars mounted on said longitudinal bars so as to interlock therewith, said transverse bars supporting said end wall members and said end wall members being of such length as to be stretched tight when said transverse bars are mounted in interlocking relation on said longitudinal bars to hold said posts and bars in assembled relation.



2,032,142
CEMENT
Leon McCulloch, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application October 11, 1934, Serial No. 747,330
4 Claims. (Cl. 106—30)

1. A cement comprising the reaction products of a mixture of about 62% of powdered flint, about 14% of sodium silicate, about 14% of water and about 10% of aluminum fluoride.

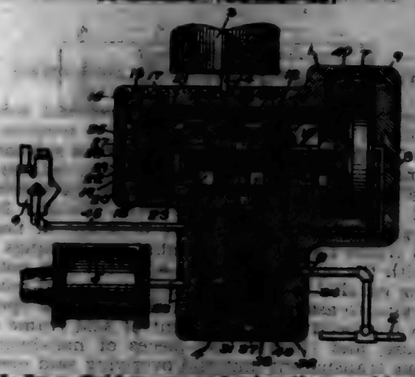
2,032,143
TRIPLE VALVE DEVICE
Joseph C. McCune, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application May 28, 1931, Serial No. 540,260
38 Claims. (Cl. 303—39)



1. In a fluid pressure brake, the combination with a brake pipe and a quick service reservoir, of a valve device operated upon a reduction in brake pipe pressure to vent fluid under pressure from said brake pipe to said reservoir for effecting a quick service reduction in brake pipe pressure, and operative upon a further reduction in

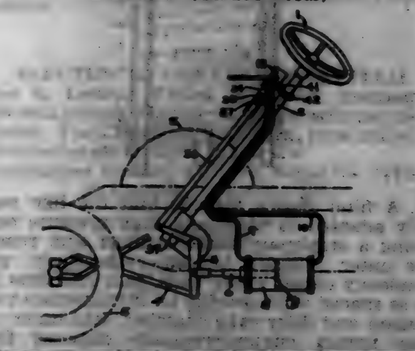
brake pipe pressure to effect an application of the brakes and to connect said brake pipe direct-

ly to the atmosphere for effecting a further quick service reduction in brake pipe pressure.



2,032,144
FLUID PRESSURE BRAKE
Claude A. Nelson, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application December 1, 1931, Serial No. 578,245
33 Claims. (Cl. 303—39)

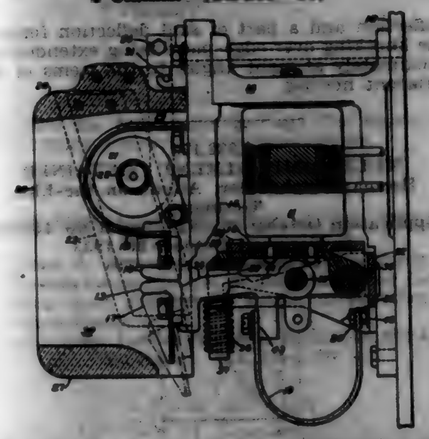
1. In a fluid pressure brake, the combination with a brake pipe and a quick service reservoir having a direct and always open atmospheric vent, of a brake controlling valve device having a quick service position for establishing a communication through which fluid under pressure is adapted to be vented from said brake pipe to said reservoir at a rapid rate and through said vent at a slower rate, and operative upon a reduction in brake pipe pressure effected at one or the other of said rates to effect an application of the brakes.



33. In a fluid pressure brake, the combination with a brake pipe, of a quick service reservoir of a volume which is so limited as to permit equalization of the brake pipe into said reservoir at a rapid rate without causing an emergency rate of reduction in brake pipe pressure of such duration as to cause an emergency operation, said reservoir having an always open restricted connection with the atmosphere of a size to permit continued venting of fluid from the brake pipe at a service rate, and a brake controlling valve device having a quick service position for venting fluid under pressure from said brake pipe to said reservoir at a rapid rate and operative upon a reduction in brake pipe pressure to effect an application of the brakes.

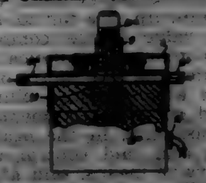
2,032,145
FLUID PRESSURE BRAKE
Claude A. Nelson, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 19, 1932, Serial No. 599,333
19 Claims. (Cl. 303—82)

1. In a fluid pressure brake, the combination with a brake pipe, of a brake controlling valve device comprising a main valve having a loading cavity normally supplied with fluid under pressure, a piston operated upon a reduction in brake pipe pressure for actuating said main valve, and means operating in advance of the movement of the main valve by said piston for venting fluid under pressure from the brake pipe and for establishing a communication through which fluid under pressure is vented from the loading cavity to effect the loading of the main valve.



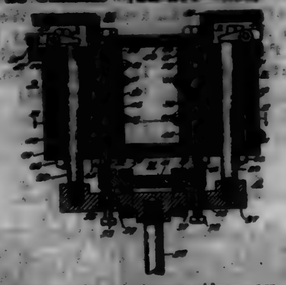
2,032,146
STEERING MECHANISM
Anselme Nevoux, Livry-Gargan, France, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application September 26, 1933, Serial No. 691,614
In France May 12, 1933
1 Claim. (Cl. 180—79.2)

In a power steering mechanism, the combination with a steering column, a steering element, and a fluid pressure operated motor for operating said element, of a pair of cooperating rotatable valve elements for controlling the fluid pressure on said motor, one of said valve elements being operatively connected to and rotatable by said steering column, a screw-threaded spindle rotatable to operate the other of said valve elements, a nut member engaging the screw-threads of the spindle, the pitch of the screw-threads on the spindle being such that axial movement



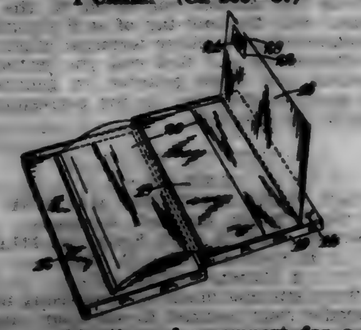
of the nut will rotate said spindle, an arm operated by the movement of the steering element, and links operatively connected to said nut to effect an axial movement of the nut.

2,032,147
ELECTROMAGNETIC CONTACTOR
Lawrence Pierce, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Original application May 28, 1930, Serial No. 453,958, now Patent No. 1,956,217, dated July 10, 1934. Divided and this application February 14, 1934, Serial No. 711,199
6 Claims. (Cl. 200—87)



1. In an electro-magnetic contactor, in combination, an electro-magnet having a pivotally-mounted armature member, said armature having a hammer-like portion, a fixed contact member, a movable contact member disposed to resiliently engage the fixed contact member when the armature is actuated towards the electro-magnet, and a contact-carrying arm pivotally mounted on the armature member for supporting the movable contact member, said contact-carrying arm being so mounted on the armature member that the hammer-like portion of the armature will impinge on the contact-carrying arm when the armature is actuated away from the electro-magnet, thereby causing the contact members to be separated quickly.

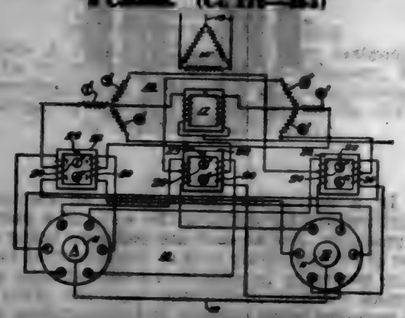
2,032,148
ELECTRICALLY ACTUATED PULSATOR PUMP
Cécile Remigé, Suresnes, France
Application May 29, 1935, Serial No. 24,142
In France June 5, 1934
4 Claims. (Cl. 103—53)



1. A pump comprising a vibrating member, electro-magnetic means, a resilient element between said vibrating member and said electro-magnetic means serving to support said vibrating member in operative relationship to said electro-magnetic means so that when an alternating current is passed through said electro-magnetic means said member is vibrated, said resilient element being hollow and being closed at its ends by said vibrating member and said electro-magnetic member whereby there is provided a pump chamber, and fluid inlet and outlet means leading to and from said pump chamber.

2,032,149
CIRCUIT INTERRUPTER
Herbert L. Rawlins, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 13, 1934, Serial No. 743,845
25 Claims. (Cl. 200—144)

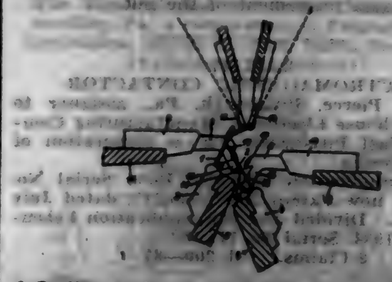
1. In a device for interrupting an electrical circuit; means for defining the walls of a pair of arc passages; one of said arc passages being capable of extinguishing arcs of large current magnitude but being incapable of extinguishing arcs of small current magnitude, and the other of said passages being capable of extinguishing arcs of small current magnitude; and electro-responsive means for causing the arc which is established incident to the opening of said circuit by said interrupter to be initiated and then drawn only within that passage which is best suited for effecting its extinguishment.



2,032,150
MEANS FOR LIFTING SHEET MATERIAL FROM A SUPPORT OR PILE
Conrad Richardson, London, England, assignor to Ring Containers Limited, London, England, a British company
Application February 2, 1933, Serial No. 654,883
In Great Britain October 13, 1932
1 Claim. (Cl. 206—57)

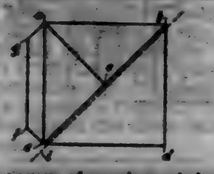
The combination of a support for a pile of sheets of carbon paper or the like, a cover constituted by a sheet of flexible sheet material arranged to extend substantially across the support

from one edge to the opposite edge, which cover is adapted to be pressed down on to and to contact substantially over its entire area with the top sheet of the pile to be lifted, an adhesive member that is carried by the underside of said cover and has on only one side an adhesive face to be applied to the upper surface of the said top sheets, and a tab constituting a handle member attached to the upper side of the cover opposite to the adhesive member, which adhesive member has a flexible portion that is to be temporarily applied to the sheet to be lifted, and lies out of the plane of the under face of the cover, and is unattached to the cover.



2,032,151
IGNITION TRANSFORMER
Herbert A. Rose, Wilkinsburg, and Albert J. Maslin, Sharpsville, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 2, 1933, Serial No. 673,976
8 Claims. (Cl. 175—363)

1. A conversion system comprising a source of alternating current, parallel vapor electric devices, a cathode in each of said devices, said cathodes being connected together, a plurality of anodes in each of said devices, two anodes being connected to a common phase terminal of said current source, said anodes being in separate devices and means to compel parallel operation of the anodes comprising a two-section ignition coil, the terminals of said coil being connected to the parallel anodes, a tap in said coil connected to the phase terminal supplying said anodes, a magnetizable core associated with said coil, each of the sections of said coil being adapted to generate opposing flux in said core, a second two-section coil associated with said core, the terminals being connected to parallel anodes in the same devices as the anodes connected to the first mentioned coil, the mid-tap of said second coil being connected to a phase terminal other than that connected to said first coil, the sections of said second coil being adapted to generate a flux in opposite direction to the corresponding sections of the first coil.

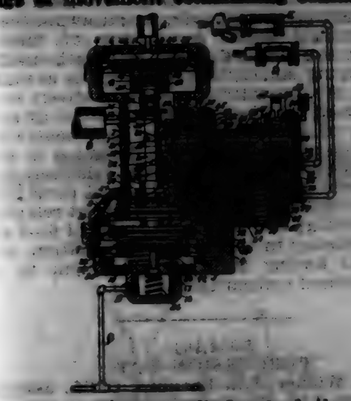


2,032,152
FLAT WARP KNITTING MACHINE
Georg Sappe, Limbach, Germany
Application April 20, 1934, Serial No. 721,616
In Germany May 24, 1933
4 Claims. (Cl. 66—87)

1. A warp knitting machine comprising needle bars; needle rows secured to said bars and at knocking over time being disposed at an acute angle to one another; and sinker bars and sinkers secured to said bars, each of said sinkers having a throat, the lower edge of which forming the upper edge of the beard of the sinkers being arranged approximately parallel to the stems of the opposite needles and being formed with a

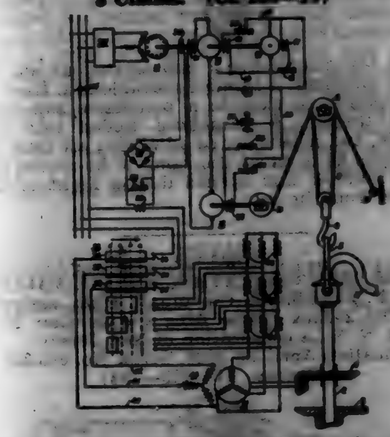
deflection and a part of said deflection forming the knocking over edge-piece being extended approximately at right angles to the stems of the adjacent needles.

2,032,153
MULTICOMPARTMENT CONTAINER
Hermann Schneider, Altona-an-the-Elbe, Germany
Application October 25, 1934, Serial No. 749,597
In Germany October 28, 1933
1 Claim. (Cl. 229—56)



A multiple compartment container comprising a single sheet of paper folded along intersecting lines, the intersections of said folds being located a substantial distance away from the marginal edges of said sheet, adhesive material on the inside surfaces of adjoining folds thereby sealing the folded edge of each compartment on its inside surface against communication with an adjacent compartment, and a flexible member disposed within one of the intersected folds of said container, said flexible member thereby extending along a folded edge of a plurality of compartments.

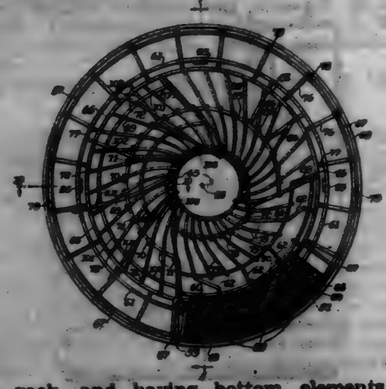
2,032,154
FLUID PRESSURE BRAKE
Arthur William Simmons, King's Cross, London, England, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application July 20, 1934, Serial No. 736,171
In Italy December 2, 1933
12 Claims. (Cl. 303—74)



1. In a fluid pressure brake, the combination with a brake pipe, brake cylinder, and a source of fluid under pressure, of a control reservoir and a distributing valve device comprising valve means for controlling communication between the brake cylinder and said source of fluid under pressure or the atmosphere, a plurality of coaxially disposed movable abutments subject to the pressures obtaining in the brake pipe, the brake cylinder, and said control reservoir for operating said valve means, said abutments being capable of three distinct ranges of movement, the first of which controls the charging of the control reservoir, the second range of movement controlling the graduation of the applica-

tion and release of the brakes, and the third range of movement establishing communication

between the brake cylinder and the source of fluid under pressure or the atmosphere.



2,032,155
ELECTRICAL DIFFERENTIAL OIL WELL DRILLING SYSTEM
Stephen A. Stacey, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 6, 1933, Serial No. 650,461
8 Claims. (Cl. 255—19)

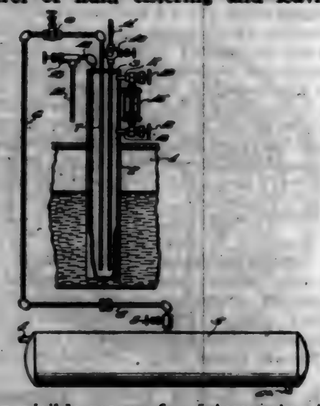
1. In a well-drilling system for a rotary rig, in combination, a drill table, a motor for driving the table, a drill stem operated by the table, a hoist-drum for lowering and hoisting or retrieving the drill stem, a motor for operating the hoist-drum in either direction, a generator for energizing the motor, and means responsive to the torque on the drill motor for varying the voltage of the generator energizing the hoist motor.

2,032,156
DISHWASHING MACHINE
Edgar S. Stoddard, Berwyn, Ill., assignor to The Conover Company, Chicago, Ill., a corporation of Illinois
Application July 16, 1935, Serial No. 31,127
14 Claims. (Cl. 134—9)

4. In a rack for supporting flatware in a dishwashing machine, a plurality of groups of dish holders, said holders being formed in part by inwardly directed upstanding wire partitions arranged in spaced relation about the center of

the rack, and having bottom elements, said groups of holders around the center being progressively smaller in size with their bottoms at progressively greater elevation.

2,032,157
FOOTREST
William C. Van Dresser and Wesley R. Van Dresser, Detroit, Mich., assignors to Van Dresser Specialty Corporation, Detroit, Mich., a corporation of Michigan
Application September 1, 1933, Serial No. 631,430
10 Claims. (Cl. 296—35)



1. In a device of the character described, a foot rest plate hingedly mounted for movement to operative and inoperative positions, toggle links connected to said foot rest plate for actuating the same and for locking the same in its operative position, a shaft connected to said toggle links for actuating the same, resilient means associated with said shaft and tending to rotate the same in a direction to move said foot rest plate to its operative position, and means remote from said foot rest plate and shaft and so associated with said shaft as to rock the same to break the toggle connections when the foot rest plate is in operative position whereby the foot rest plate may be moved to its inoperative position by the exertion of pressure on the same.

2,032,158
APPARATUS FOR REMOVING NONCONDENSIBLE GASES FROM REFRIGERATING SYSTEMS
John P. Weaver, Dallas, Tex.
Application November 2, 1934, Serial No. 751,432
1 Claim. (Cl. 62—115)

In an apparatus for removing non-condensible gases from refrigerating systems, the combination comprising a receiver for refrigerating fluid, a brine tank, a closed vertically disposed cylindrical chamber partially submerged in the brine in said tank and receiving fluid from said receiver, parallel pipes of substantially equal length depending into said chamber whereby to introduce fluid into and discharge the same from said chamber, means above the liquid level in said

chamber to effect escape of non-condensible gases accumulating in said chamber, valve means in control of fluid entering and leaving said

chamber, visible means for determining the level of the liquid in said chamber and means for returning the liquid to said system subsequent to the withdrawal of said non-condensible gases.

2,032,159

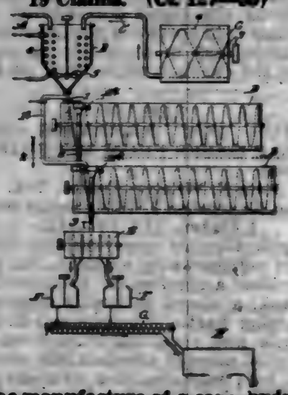
HIGHLY BRANCHED, LONG CHAIN ORGANIC ACIDS

Frank C. Whitmore, State College, Pa., August H. Homeyer, St. Louis, Mo., and David M. Jones, Ferry Fort, and Walter E. Trent, State College, Pa., assignors to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri

No Drawing. Application April 17, 1933, Serial No. 666,513
4 Claims. (Cl. 260—113)

3. An acid corresponding in composition to the type formula:

$$(CH_3)_2C—(CH_2)_n—CXY—COOH$$



where n is equal to or greater than 2, X is hydrogen or an alkyl substituent, and Y is hydrogen or a carboxy substituent.

2,032,160

SUGAR MANUFACTURING PROCESS

John M. Widmer, Cedar Rapids, Iowa, assignor to Penick & Ford, Ltd., Inc., New York, N. Y., a corporation of Delaware

Application April 4, 1932, Serial No. 603,151
19 Claims. (Cl. 127—58)

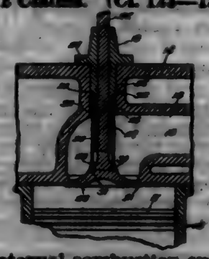
5. In the manufacture of a crystalline carbohydrate sugar, the steps comprising: maintaining under crystal growth-promoting conditions and under continuous mixing and cyclic movement a crystal-laden body of dextrose massecuite; withdrawing therefrom relatively small decrements of finished massecuite as a mixture of crystals and the mother liquor carrying said crystals; and feeding as make-up to and mixing with said body relatively small increments of dextrose solution obtained by acid-hydrolysis of starch which has been neutralized to a pH not above 5, purified, subjected in such acid condition to concentration at relatively high temperatures, then subjected to final concentration to a selected crystallizing density at relatively low temperature and adjusted to a pH of 6—7 as a step preliminary to effecting crystallization, such adjustment having occurred subsequent to the first-mentioned concentration step.

2,032,161

PERCUSSION TOY

Martin L. Wiener, San Leandro, Calif., assignor to Cadaco, Ltd., San Leandro, Calif., a corporation of California

Application June 1, 1935, Serial No. 24,540
2 Claims. (Cl. 46—200)



1. A toy comprising a cup serving as an explosive chamber, a thimble movable into the cup into position to explode a percussive cap contained therein, a parachute folded into the thimble, and means for so admitting air into the parachute as to cause the same to be moved out of the thimble and opened during flight of the thimble from the cup.

2,032,162

INTERNAL COMBUSTION ENGINE VALVE

Victor F. Zaboklicki, Cincinnati, Ohio, assignor to The Z-Flex Piston Ring Corporation, New York, N. Y., a corporation of New Jersey

Application April 10, 1933, Serial No. 665,269
2 Claims. (Cl. 123—188)

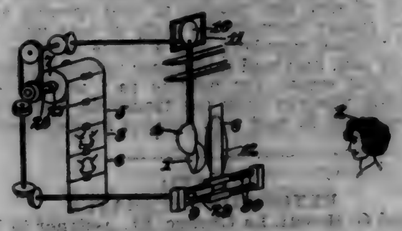
1. In an internal combustion engine, an engine body comprising a cylinder block and head, said body having an exhaust passageway extending from said cylinder, a valve slidably mounted in said engine body, said exhaust passageway including a concentrically formed seat adapted to be engaged by the head of said valve, and a cylindrical shield fixed to the valve and extending along and spaced from the valve stem across the exhaust passageway, said engine body including a bore portion receiving the end of said cylindrical shield, said cylindrical shield therefore having a telescopical movement in said bore and of a length whereby it is disposed in said bore at both open and closed positions of said valve.

2,032,163

FILLING MACHINE

Ralph B. Bagby, Evanston, Ill.

Application September 30, 1932, Serial No. 635,621
2 Claims. (Cl. 221—103)



1. In a filling machine, means for withdrawing a substance from a supply thereof and for discharging it into a container and including a stationary cylinder having a port therein through which the substance may pass into said cylinder and be discharged therefrom, a piston reciprocal in said cylinder, a rotary member, a stud on said member, a pitman having an opening therein adapted to receive said stud, and adjustable means extending into said opening to engage said stud to limit movement thereof in said opening, said stud engaging one end of said opening to effect movement of said piston through said cylinder to discharge the substance through said port, and engaging said adjustable means to effect movement of said piston through said cylinder to draw the substance into said cylinder through said port.

2,032,164

CINEMATOGRAPHIC RECTIFYING SYSTEM

John Logie Baird, London, England

Application January 23, 1935, Serial No. 2,146
In Great Britain January 31, 1934
4 Claims. (Cl. 88—16.8)

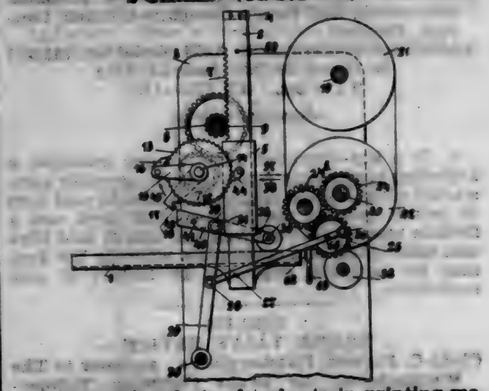
1. In a cinematographic optical system for use with an intermittently movable photographic film, the combination with a fixed objective lens focused on and cooperating with said film while the latter is stationary, of a movable rectifying objective lens focused on the film and means for moving the rectifying objective lens with and in the direction of movement of said film for cooperation with the film during movement of the latter.

2,032,165

METHOD OF EXTRACTING CAROTENE

Harold M. Barnett, Cleveland, William O. Frohring, Shaker Heights, and Albert F. O. Germann, Cleveland, Ohio, assignors to S. M. A. Corporation, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application November 11, 1932, Serial No. 642,272
8 Claims. (Cl. 99—22)



1. A method of producing a fat product rich in carotene, which comprises extracting from plant material both carotene and plant lipoids with a solvent for both, removing a portion of the solvent to cause crystallization in the remaining portion of a part of the carotene, removing the crystallized carotene, removing the remaining solvent to leave as a residue a mixture of carotene and sufficient plant lipoids to maintain the carotene in solution, and mixing such residue with a sufficient amount of fatty base material to produce a solution which is substantially stable against carotene separation at ordinary temperatures.

2,032,166

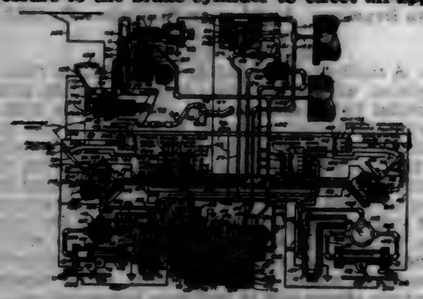
PAPER CONVEYING DEVICE FOR SHEETS, ESPECIALLY FOR USE IN OFFICE PRINTING MACHINES

Armin Breuer, Berlin, Germany

Application December 22, 1933, Serial No. 703,508
In Germany December 29, 1932
2 Claims. (Cl. 271—43)

1. Conveying device for sheets in printing machines with printing rolls, an adjustable table and a driving gear for the table, comprising means for carrying the uppermost sheet of a pile between the printing rolls, and means for automatically moving the adjustable table to exact working level; the said means for automatically moving the table comprising a pressure roll supporting arm, a touching arm arranged on the pressure roll supporting arm, provided with a pin which rests upon a fixed pin on the axle of the pressure roll supporting arm for releasing the pressure roll supporting arm.

2,032,167



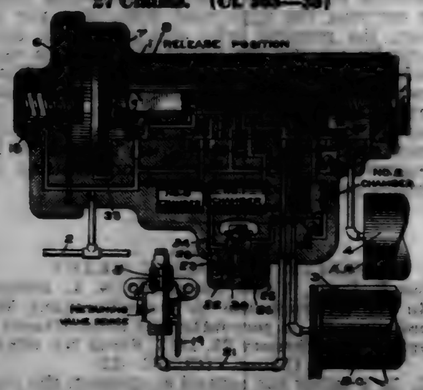
ELECTROPNEUMATIC BRAKE

John F. Craig, Upper Montclair, N. J., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application February 28, 1933, Serial No. 658,924
12 Claims. (Cl. 303—22)

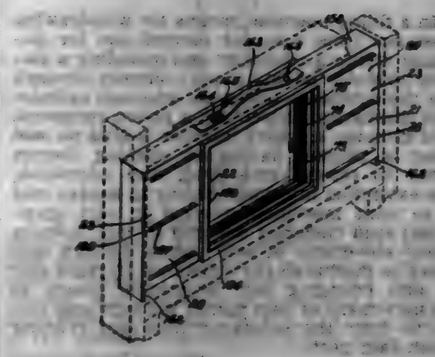
1. In a safety car control equipment, the combination with a brake cylinder, a pipe normally charged with fluid under pressure, electro-re-

sponsive means operative upon energization to supply fluid under pressure to said brake cylinder and operative upon deenergization to release fluid under pressure from said brake cylinder, and an emergency valve device operative upon a reduction in pressure in said pipe to supply fluid under pressure to the brake cylinder to effect an appli-



cation of the brakes, of a combined foot valve and electric circuit controlling device controlled by the pressure of the foot of the operator and operative upon the relief of foot pressure on said foot valve device by the operator to effect energization of said electro-responsive means and to release fluid under pressure from said pipe.

2,032,168
KEYBOARD
Alexander Adolf Carlo Degen, Harrow, England, assignor to Bell Punch Company Limited, London, England
Application September 19, 1934, Serial No. 743,477
In Great Britain June 11, 1934
9 Claims. (Cl. 235—145)

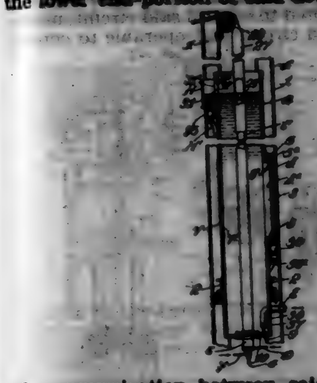


9. In a key-operated ticket issuing machine, a keyboard comprising a plurality of operable keys, a cover plate formed to provide access to said keys to permit manual operation of said keys, and a flexible membrane overlying the tops of said keys and underlying said cover plate whereby the keys may be manually depressed by flexure of said membrane.

2,032,169
TRIPLE VALVE DEVICE
Clyde C. Farmer, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application August 6, 1930, Serial No. 472,333
27 Claims. (Cl. 303—33)

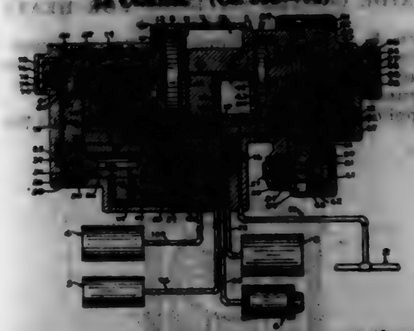
1. In a fluid pressure brake, the combination with a brake pipe, auxiliary reservoir, and brake cylinder, of a triple valve device comprising a main valve, a graduating valve having a movement relative to the main valve, and a piston operated upon a reduction in brake pipe pressure for actuating said valves to effect the supply of fluid from the auxiliary reservoir to the brake cylinder to cause a service application of the brakes, two chambers of constant volumes and separate from the brake cylinder, means operative upon movement of said graduating valve relative to the main valve for venting fluid under pressure from the brake pipe to one of said chambers, and means operative upon movement of said valves to service application position for venting fluid under pressure from the brake pipe to the other of said chambers.

2,032,170
SLIDING WINDOW UNIT
Arthur E. Fisk, Pasadena, Calif., assignor of one-half to Frederick H. Rappel, Pasadena, Calif.
Application March 6, 1933, Serial No. 659,539
19 Claims. (Cl. 189—64)



1. A window structure of the character described, including: a wall frame having an opening formed between a pair of laterally spaced vertical members and upper and lower horizontal members spaced apart vertically; a window unit in said opening of said wall frame, resting on said lower horizontal member, said window unit being of such size relative to said opening as to leave spaces between the ends of said unit and said vertical members and a space between the top of said unit and said upper horizontal member; and means for holding said unit in said opening whereby only the transverse movement of said unit in said wall opening is restrained.

2,032,171
EXTRUSION APPARATUS
Alfred G. Hewitt, La Grange, Ill., assignor to The Viking Corporation, Chicago, Ill., a corporation of Virginia
Application November 2, 1932, Serial No. 637,229
14 Claims. (Cl. 18—15)

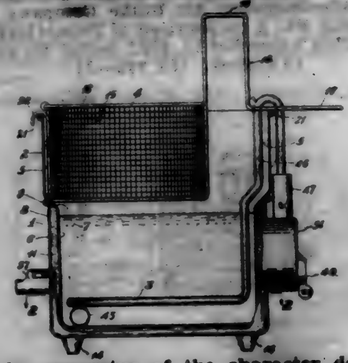


1. An extrusion-device comprising: outer and inner extrusion-members having an annular chamber and an extrusion-orifice between their upper end-portions and having coacting smooth, tapering centering surfaces below said chamber; means for forcing said surfaces into close-fitting relation and securing said extrusion-members

together; a plastic supply-pipe connected with the lower end-portion of said device; and means

of communication between said pipe and said chamber.

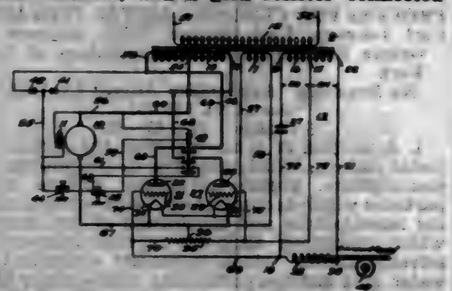
2,032,172
FLUID PRESSURE BRAKE
Ellis E. Hewitt, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application July 12, 1932, Serial No. 622,582
24 Claims. (Cl. 303—24)



1. In a fluid pressure brake equipment, the combination with a brake pipe, a brake cylinder and local storage means normally charged with fluid under pressure, of a valve device normally establishing a communication from the brake cylinder to the atmosphere and operative by fluid under pressure constantly supplied thereto from a source of fluid pressure to close said communication, and a controlling valve mechanism operated upon a reduction in brake pipe pressure to effect the operation of said valve device for closing said communication, to effect a local reduction in brake pipe pressure, to establish a communication through which fluid under pressure is supplied from said storage means to the brake cylinder to effect an application of the brakes and to establish another communication through which fluid under pressure is vented from the brake pipe.

2,032,173
DRY SOLUBLE CHLORINE COMPOUND
Arnold H. Johnson and Hemming A. Trubler, Baltimore, Md., assignors to Sanitest System Laboratories, Inc., New York, N. Y., a corporation of Maryland
No Drawing. Application August 5, 1935, Serial No. 34,624
11 Claims. (Cl. 167—31)
4. A dry water-soluble chlorine compound comprising an alkali earth metal hypochlorite and a solubilising agent for the same comprising an alkali metal phosphate which yields soluble compounds of the cation of the hypochlorite on the alkaline side of neutrality in aqueous solution.

2,032,174
PROCESS FOR CLEANING METAL SURFACES
Carl Johnson, East Orange, N. J., assignor to Oakite Products, Inc., a corporation of New York
No Drawing. Application August 17, 1933, Serial No. 685,251
5 Claims. (Cl. 87—5)
4. A method of removing from the surface of metal objects, which are still in the process of manufacture, grease containing minute solid particles which accumulate on such surfaces during manufacture and fabrication of the objects, which comprises applying to such surfaces a solvent mixture which is readily emulsified in water, said mixture comprising substantially 65% to 95% kerosene, an oleic acid soap, cresylic acid and water, washing off such mixture with water, thereby removing solid particles from the surface while leaving a thin film of grease thereon, and then removing such film of grease from the surface.



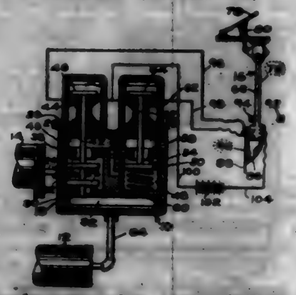
2,032,175
COOKING APPARATUS
Frank E. Jones, West Lafayette, Ohio, assignor to The Jones Metal Products Company, West Lafayette, Ohio, a corporation of Ohio
Application April 12, 1933, Serial No. 665,701
8 Claims. (Cl. 219—43)

1. An apparatus of the character described, having in combination a vessel providing a cooking area adjacent its lower portion and a draining area adjacent its upper portion, insulating means disposed about the sides and bottom of said lower area of said vessel, and a basket having combined supporting and spacing means on the handle and projecting outwardly from the upper margin of the basket opposite the handle adapted to position the same selectively within said cooking area or within said draining area.

2,032,176
CONTROL SYSTEM
Joseph F. Kovalsky, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application April 12, 1932, Serial No. 604,699
1 Claim. (Cl. 172—239)
A motor starting control system comprising, in combination, an electric motor driving a load,

means for energizing the motor, an electric discharge device for controlling the energization of the motor, a bridging circuit for regulating the electric discharge device, said bridging circuit including a transformer winding having a mid-tap, a capacitor, a control winding having a slidably mounted magnetic core all connected in series circuit relation, and a grid resistor connected

between the mid-tap of the transformer winding and a junction point of the capacitor and the control winding, and means responsive to the load on the motor for actuating the slidably mounted magnetic core, an ancillary winding inductively related to the control winding, an adjustable resistor, and means for connecting the ancillary winding and the adjustable resistor in closed circuit relation.



2,032,177

FLUID PRESSURE BRAKE CONTROL

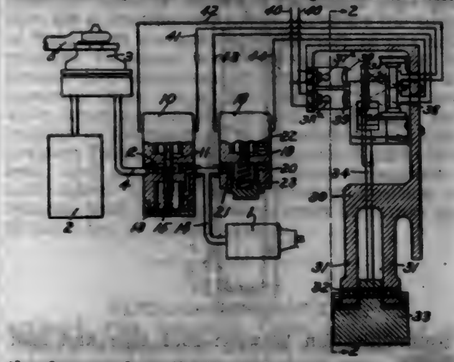
John W. Logan, Jr., Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application November 17, 1933, Serial No. 698,460

19 Claims. (Cl. 303—24)

1. In a brake apparatus, a retardation rate controller device comprising a pair of mutually pivoted elements adapted to have positions of coincidence and non-coincidence, one of said elements being manually positionable and the other being positionable by force of inertia, and means whereby for positions of non-coincidence an application of the brakes is effected and for positions of coincidence a release of the brakes is effected.

2,032,178



RETARDATION CONTROLLER

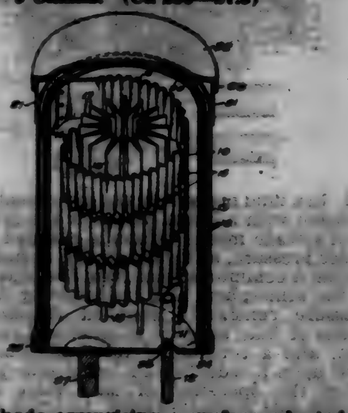
John W. Logan, Jr., Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application December 11, 1934, Serial No. 756,623

24 Claims. (Cl. 303—24)

1. In a vehicle brake apparatus, in combination, brake means; means for effecting an application of the brake means; a control circuit, a source of light, light responsive means responsive to variations in the quantity of light supplied thereto and adapted to control said circuit, means controlled by said circuit and operable to control

the degree of application of the brake means, and means responsive to inertia, said inertia responsive means being adapted when in different positions in its range of movement to vary the quantity of light supplied to the light responsive means.



2,032,179

OXIDE COATED CATHODE FOR HEAVY DUTY SERVICE

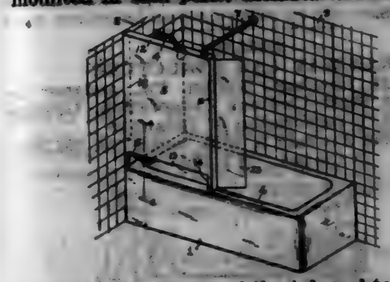
Erwin F. Lowry, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application April 12, 1933, Serial No. 665,754

9 Claims. (Cl. 250—27.5)

5. A cathode comprising a surface adapted to emit electrons freely when heated, and a heater therefor comprising a metallic ribbon having its small thickness relative to its breadth disposed to substantially enclose the major electron emitting portion of said surface so that the thickness of said ribbon has a general radial direction relative to said surface, the major portion of the said surface being exposed to direct radiation from said ribbon.

2,032,180



SHOWER SHIELD

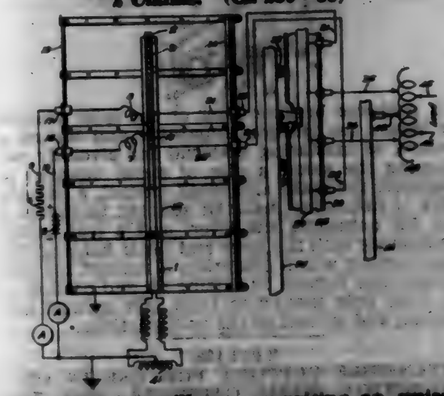
Charles D. McCord, Shaker Heights, Ohio

Application January 12, 1932, Serial No. 586,945

5 Claims. (Cl. 4—144)

1. In a protective shower shield for attachment to an ordinary bath tub, the combination of a vertical panel member, bracket means for holding a floor mat, said bracket means being pivotally mounted in said panel member and adapted to

extend to the bottom of the tub and to be folded vertically against said panel member when said mat is not in use.



2,032,181

STANDING WAVE OSCILLATING SYSTEM

Ilia E. Mouromtseff and Harrell V. Noble, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

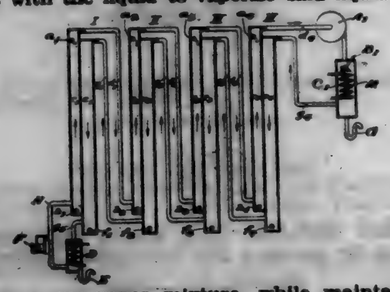
Application August 26, 1932, Serial No. 629,644

2 Claims. (Cl. 250—36)

1. A triode oscillator comprising an emissive cathode, a control electrode having a conducting cylinder connected thereto, a plate electrode having a second conducting cylinder coaxial with the first-named cylinder connected thereto, and a cylindrical conducting shield substantially coaxial with the first-named cylinder and having a diameter substantially equal to a half-wave length of the oscillations produced by said generator.

2,032,182

EVAPORATING METHOD AND MEANS THEREFOR



Erik Öman, Stocksund, near Stockholm, Sweden, assignor to Industriförvaltnings Aktiebolaget, Stockholm, Sweden, a joint-stock company of Sweden

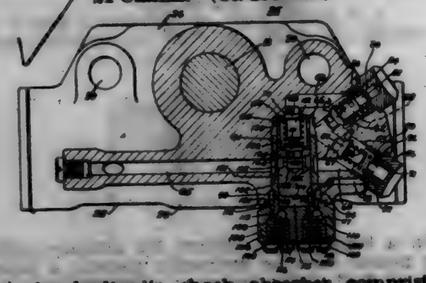
Substitute for application Serial No. 362,976, May 14, 1929. This application April 28, 1934, Serial No. 722,591. In Sweden May 12, 1928

18 Claims. (Cl. 159—16)

1. A method of evaporating liquids under substantially the same pressure inside and outside of the apparatus, which includes indirectly transferring heat through an intervening partition to the liquid to be evaporated by conduct-

ing a heat yielding medium, comprising a mixture of gas which is non-condensing under the conditions of operation and a condensible vapor, along the opposite side of the partition from the liquid to be evaporated to progressively increase the temperature of said liquid and progressively decrease the temperature of said gas-vapor mixture, and passing a heat absorbing medium including a non-condensible gas in direct contact with the liquid to vaporize said liquid and

form a gas-vapor mixture, while maintaining the relative temperatures of said heat yielding medium and said heat absorbing medium and said liquid such that at all points of contact between said liquid and said heat absorbing medium the total heat content of said heat absorbing medium is less than the total heat content which would exist if the gas-vapor mixture constituting said medium were saturated at the temperature of the liquid at said point.



2,032,183

SHOCK ABSORBER

Edwin F. Roesman, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application June 18, 1932, Serial No. 617,948

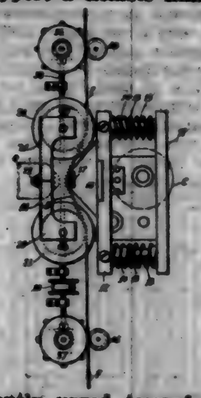
21 Claims. (Cl. 188—88)

1. An hydraulic shock absorber comprising, in combination, means adapted to circulate fluid in two directions within said shock absorber; means adapted to control said fluid circulation, and means adapted to adjust the said control means decreasingly to restrict the circulation in one direction in response to the pressure of the fluid circulation in the other direction.

2,032,184

SOUND GATE

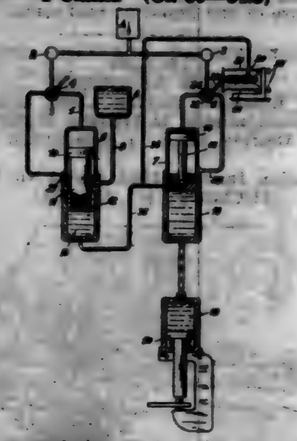
Frank Schiff, Hampstead, London, England, assignor to Radio Corporation of America, a corporation of Delaware



Application June 21, 1930, Serial No. 462,741

In Great Britain December 4, 1929

12 Claims. (Cl. 179—100.2)



12. Photophonographic apparatus including a pair of rollers, flexible means on said rollers

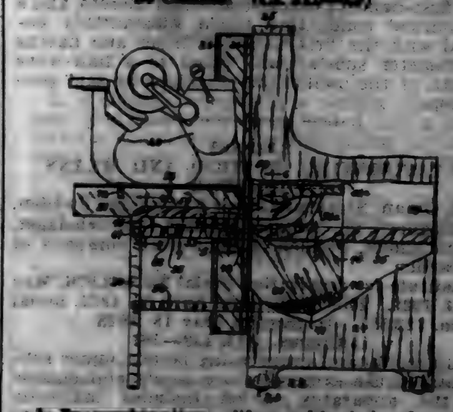
adapted to support a flexible film, and a shoe

member resiliently urged toward said flexible means for placing a film into contact therewith.

2,032,125
TRANSMISSION SYSTEM FOR A PRESSURE-OPERATED MEMBER SUCH AS A HYDRAULIC PRESS
David Selsky, Paris, France
Application April 12, 1935, Serial No. 16,107
In Germany April 18, 1934
1 Claim. (Cl. 60—54.5)

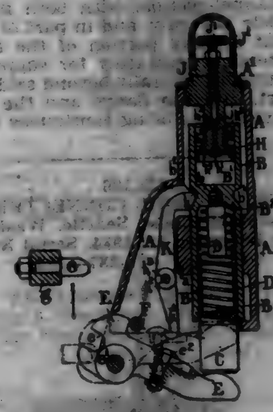
In a transmission system for pressure-utilizing means such as hydraulic presses; a source (A) of fluid under pressure; a low-pressure hydraulic intensifier (6, 13) supplied from the source (A); a high-pressure hydraulic intensifier (7, 16) supplied from the source (A), comprising a cylinder (16) and a movable element such as a piston and ram (14, 15) reciprocating within the said cylinder (16); means of intercommunication (26) between the low-pressure intensifier (6, 13) and the high-pressure intensifier (7, 16), the said means discharging into the cylinder of the high-pressure intensifier and being controlled by the said movable element, such as the piston (14, 15) of the said high-pressure intensifier; an automatic pressure responsive control device (19, 21) controlled by the pressure of the low-pressure intensifier (6, 13) and, in turn, controlling the operation of the movable element of the high-pressure intensifier to bring the said high-pressure relay (7, 16) into operation when the low-pressure intensifier has operated; a receiver (16) actuated, in succession, by the low-pressure intensifier (6, 13) and by the high-pressure intensifier (7, 16) and actuating the pressure-utilizing means.

2,032,126
RAILWAY CAR STRUCTURE
William M. Sheehan, Merion, Pa., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application January 8, 1934, Serial No. 705,364
13 Claims. (Cl. 105—264)



1. In a railway vehicle axle, an open top housing structure extending substantially throughout the depth of the axle for seating a load supporting spring, and a wheel mounting part adjacent said housing structure.

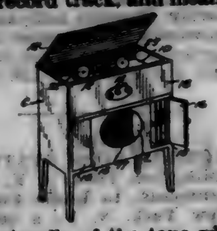
2,032,127
CIRCUIT BREAKER
Rasmus Carl Peter Sørensen, Brooklyn, N. Y.
Application September 21, 1934, Serial No. 744,871
14 Claims. (Cl. 200—18)



1. A circuit breaker lever of the type adapted for timers for ignition apparatus and having a bushing of insulating material for pivotally positioning the same; a disc of metal adapted to constitute the make and break contact, a rubbing block of insulating material adapted to engage a cam for actuating the lever, and a leaf spring cooperating with the lever and timer housing, the improvement which comprises a support for said contact disc formed by slitting an end portion of the lever only enough to form said support and bending and spreading the split portions.

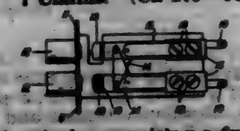
2,032,183
EXTENSIBLE SUPPORT FOR USE IN CONJUNCTION WITH CABINETS AND THE LIKE
Herman A. Sperlich, Highland Park, Mich.
Application March 22, 1933, Serial No. 662,311
29 Claims. (Cl. 312—29)

1. In combination with a cabinet, track means therewithin, a carriage movable on said track means, and additional track means swingable to project from and to lie within said cabinet and forming an extension support for the carriage when projected and actuable by the carriage.



2,032,187
AUTOMATIC TIME RELEASE DEVICE
William Henry Stilling, London, England, assignor to Isaac Braithwaite & Son Engineers Limited, Kendal, England
Application March 9, 1935, Serial No. 10,259
In Great Britain March 22, 1934
7 Claims. (Cl. 161—1)

1. A device for locking the control mechanism of a machine in an operative position and releasing it therefrom only at the end of a predetermined period of time comprising an outer casing, a piston sliding therein, a chamber at one end of the piston, a spring controlled plunger within the chamber, a fluid containing second chamber at the other end of the piston, a stationary apertured piston carried by the outer casing and situated within said second chamber whereby the sliding piston can slide over the stationary piston, means to vary the size of the aperture in the stationary piston so that the fluid may escape from one side thereof to the other at a variable rate of speed, a pivoted lever operated by the control mechanism to move the spring controlled plunger and exert pressure on the sliding piston to expel fluid from one side of the apertured piston to the other, a pivoted catch mounted on the outer casing which when the control mechanism has been moved will engage the said pivoted lever and lock the mechanism in the operative position and means for releasing the pivoted catch when the sliding piston reaches the end of its travel.



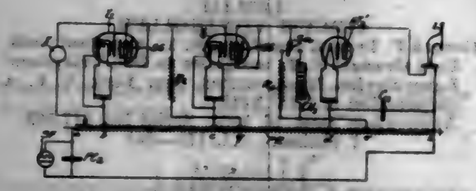
2,032,190
ELECTRIC RECORDING AND REPRODUCING APPARATUS
Adolph A. Thomas, New York, N. Y., assignor to Radia Corporation of America, New York, N. Y., a corporation of Delaware
Application July 15, 1933, Serial No. 680,674
6 Claims. (Cl. 179—100.11)

1. Recording mechanism comprising a magnetic tape mounted to run in alternately opposite directions, an electromagnetic device controlled by electric impulses for making a plurality of magnetic record tracks on said tape, means for automatically reversing the movement of said tape at the end of a record track, and means for shifting

said device laterally of the tape when the latter is reversed.

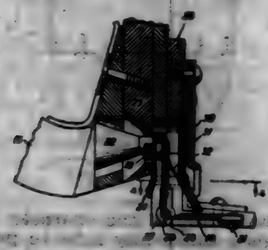
2,032,191
CIRCUIT CONTROLLER
Gerard P. Tremp, Brooklyn, N. Y., and Paul Neill, East Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 16, 1932, Serial No. 617,566
7 Claims. (Cl. 179—96)

1. A spring jack comprising a frame, a pair of parallel springs extending longitudinally thereon and each adapted to be operated independently by plugs, and auxiliary contact springs in contiguous relation with said parallel springs and provided with extensions each normally contacting with the other parallel spring whereby a parallel connection is established over conductors connected to said parallel springs.



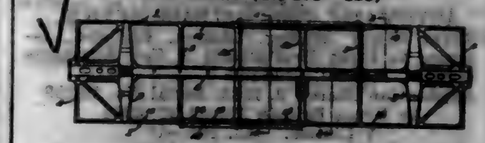
2,032,192
TOY
Frank I. Wheeler, Jr., Glen Ridge, N. J.
Application March 25, 1933, Serial No. 662,671
13 Claims. (Cl. 46—91)

1. In a water toy of the character described, having a mass sufficiently light to permit it to be lifted out of the water manually by a child in order to permit it to be charged with operating air admitted through its bottom portion and having a density greater than water, a hollow casing having an upper portion provided with a relatively small air passage for conducting air from the interior of said casing to the exterior thereof for doing work, said casing having an apertured lower portion adapted to admit operating air to the casing when the toy is lifted clear of the water, and when the toy is lower-



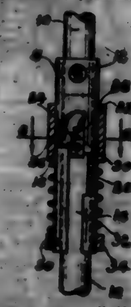
ing itself in the water to admit water into the interior of said casing for displacing the air therein outwardly through said air passage as said casing gravitates in the water, and a weight member connected with the lower portion of said casing to effect gravitation of the latter in the water.

2,032,183
ELECTRON TUBE SYSTEM
Sidney Y. White, New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application July 29, 1929, Serial No. 381,754
27 Claims. (Cl. 179—171)



1. In a direct coupled electron tube system, the combination of a source of energy, a plurality of electron tubes, impedance output and input circuits coupling said tubes in cascade, means for energizing electrodes of said tubes from said source so that the filament-plate impedance of each preceding tube is of the same order as the impedance input to the next succeeding tube of said cascade, a frequency selective impedance within the plate-cathode circuit of the last tube of said cascade, and a non-selective impedance common to at least one of said input and to at least one of said output circuits for producing regeneration of all frequencies as an inverse function of the impedance to said frequencies of said frequency selective impedance.

2,032,184
VIBRATION TRANSLATING DEVICE
Charles F. Wiesmuth, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 2, 1934, Serial No. 713,954
6 Claims. (Cl. 179—100.41)



1. In a vibration translating device, a normally stationary structure including a magnet system having an air-gap, a generating element in the gap, means for vibrating the element, and a damped resilient connection between the stationary structure and the element having its stiffness and damping correlated to the mass of said structure so that said structure vibrates out-of-phase with the element over a portion of the low frequency range.

2,032,185
CAR UNDERFRAME STRUCTURE
William O. Ashe, St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application December 15, 1933, Serial No. 702,447
4 Claims. (Cl. 105—415)

2. A railway car side sill member formed in part of channel-section, with both flanges extending solely inwardly, and in part of Z-section with all but a small portion of the top flange thereof extending outwardly for supporting car flooring extending laterally beyond said channel-section part, said top flange and the upper of said channel flanges being continuous with each other.

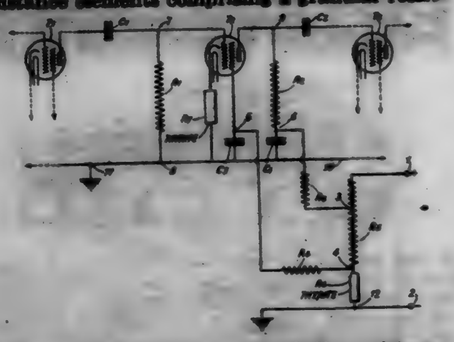
2,032,186
ROD OR TOOL CONNECTER
Joseph H. Blake, Seattle, Wash.
Application February 12, 1934, Serial No. 710,955
2 Claims. (Cl. 287—103)

1. In a coupling for a percussion tool, the combination with a reciprocable striker and a socket-sleeve fixed at one end to the striker, said sleeve having a slot opening at its other end and a lateral locking-recess in the closed end of the slot, of a slidable tool in the sleeve, an exterior lug on the tool seated in said recess and adapted to pass through the open end of the slot, a cam-sleeve slidable and partially rotatable on the socket-sleeve, an inner cam lug rigid with the cam sleeve and engaging the exterior lug, and said slotted sleeve having a release-recess to receive the cam lug to permit detachment of the tool.

2,032,187
COMPARATIVE VISCOSITY DEVICE
Adna F. Blanchard, Providence, R. I., assignor to Tryon Viscostor Corporation, Elmira, N. Y., a corporation of New York
Application July 21, 1933, Serial No. 681,061
9 Claims. (Cl. 265—11)

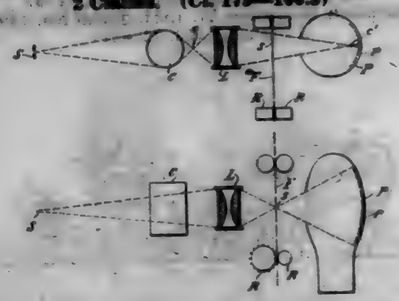
1. A device of the character described comprising two transparent test tubes each having a vent at one end, valve means selectively operable to open and close said vents, a movable indicating means in each tube, a pair of reservoirs, one contained within the other and respectively interconnected with the other ends of said tubes, an inlet port for each reservoir, valve means selectively operable to open and close said ports, a pair of pumps, and means connecting one pump with one reservoir and the other pump with the other reservoir whereby the pumps and valve means may be operated in conjunction

with each other to fill the reservoirs with fluids and thereafter force said fluids from the reservoirs into the test tubes and through their vents after the tubes are completely filled.



2,032,188
THREAD RESTORING TOOL
Gurney A. Boettcher, Richmond Hill, N. Y.
Application November 21, 1933, Serial No. 699,865
1 Claim. (Cl. 10—1)

A solid one-piece thread restoring tool terminating at one end in a long integral handle and at the other end in a relatively short handle also integral therewith, and provided with an intermediate solid thread restoring portion having a plurality of working faces individually disposed upon the sides thereof, each of which working faces comprises a plurality of continuous and unbroken longitudinal rows of cutting teeth having convex and undercut forward cutting faces, which cutting teeth are integral and also transversely arranged in an unbroken and continuous series of forwardly arched rows, and which short handle is provided with a plurality of indicia to correspond with and identify different pitches of the cutting teeth upon the various sides of the intermediate thread restoring portion, the same thread restoring portion being spaced from the handles by reduced portions upon said tool.

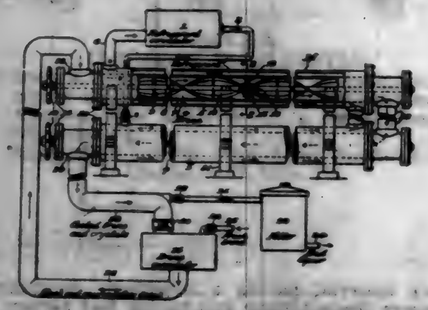


2,032,189
ENERGIZING CIRCUITS FOR SPACE DISCHARGE DEVICES
Rene A. Braden, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 19, 1933, Serial No. 676,462
4 Claims. (Cl. 179—171)

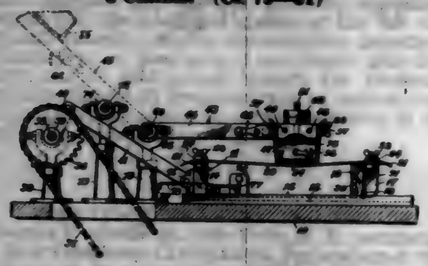
4. An amplifier system including at least one electronic tube having input and output circuits, a source of uni-directional fluctuating current, a distribution circuit connected across said source, said distribution circuit including a voltage divider resistor and independent resistance elements interposed in series between points in the output circuit and input circuit of said tube and points in said distribution circuit for energizing the electronic tube while preventing interference in said tube circuits from the fluctuating component of the uni-directional current, at least one of said resistance elements comprising a granular resist-

ance material having a hyperbolic resistance-ampere characteristic and having free carbon as an ingredient and means for holding the grains together under pressure.

2,032,200
METHOD OF AND SYSTEM FOR REPRODUCING SOUND FROM SOUND FILMS
Oscar Chouinard, New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application October 15, 1929, Serial No. 399,851
2 Claims. (Cl. 179—100.3)



1. An optical system for a photoelectric sound reproducer comprising an elongated light source parallel to the plane of the sound record, a cylindrical lens between said source and the record with its axis parallel to the direction of movement of the sound record and forming a line image of said source between itself and the record, a spherical lens between said line image and the record and forming an image of said line image on a photocell and forming an image of said source in an intermediate plane, and means to guide a film in said intermediate plane with its soundtrack in alignment with said image.



2,032,201
APPARATUS FOR RECOVERING CRYSTALLINE SALTS FROM SOLUTIONS
Sidney H. Davis, Tulsa, Okla., Carl O. Anderson, Baxter Springs, Kans., and Rudolph J. Stengl, Menahema, Tex., assignors to Ozark Chemical Company, Tulsa, Okla., a corporation of Delaware
Original application September 9, 1932, Serial No. 632,272. Divided and this application June 8, 1935, Serial No. 25,674
2 Claims. (Cl. 259—9)

1. In apparatus of the class described, a tubular casing providing a passage adapted to con-

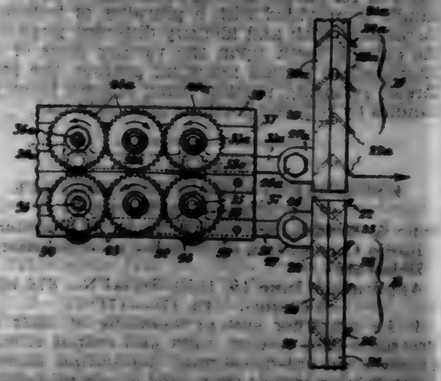
tain a fluid, a shaft extending longitudinally within the casing, means for rotating the shaft, a spiral metal ribbon carried by the shaft and operative to scrape the wall of the casing when the shaft is rotated, cylindrical bearings surrounding the shaft at spaced intervals each provided with a plurality of radially extending legs contacting the casing wall, and means for circulating a fluid through the casing, said shaft having a longitudinal slot adjacent each bearing adapted to form a passage for the fluid from one side of the bearing to the other.

2,032,202
TESTING MACHINE
Calvin E. Dennis, Glen Ridge, N. J.
Application December 27, 1934, Serial No. 759,416
5 Claims. (Cl. 73—51)

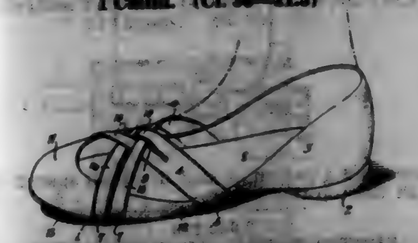
1. In a testing machine, a movable base member, spaced upstanding supports on said base member, cooperative means on said supports to hold a test piece at the ends spanning said supports and exerting a constant tensile stress lengthwise of the test piece, and a structure having means to hold another test piece at its ends under a constant tension, said structure having means bearing on said last test piece between its ends, said structure being so mounted that under its own weight it presses the test piece carried thereby in frictional engagement with the first test piece between the ends of the latter.

2,032,203
PROTECTIVE HEADGEAR
Joseph B. Dyas, Pittsburgh, Pa., assignor to Mine Safety Appliances Co., Pittsburgh, Pa., a corporation of Pennsylvania
Application March 7, 1935, Serial No. 9,713
10 Claims. (Cl. 2—3)

1. A safety head-gear comprising a rigid blow-resistant crown, a head band disposed therein, means for varying the size of the band, and a plurality of members rigidly connected to the head band and connected to the side wall of said crown for movement transversely thereof, whereby the head band is movable inwardly and outwardly relative to the crown throughout the width of said band.



2,032,204
RAILWAY HOPPER CAR
Charles F. Fredo and Harry R. Thiele, St. Louis, Mo., assignors to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application August 13, 1934, Serial No. 739,832
2 Claims. (Cl. 105—249)



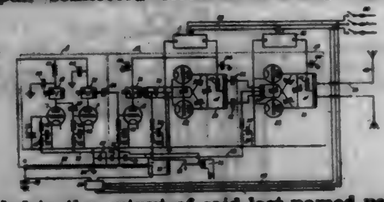
1. A hopper car integral cast structure including adjacent hopper end walls merging in a transverse bracing member, there being longitudinal corrugations in said member extending over the crest thereof and downwardly on each side towards the hopper openings.

2,032,205
METHOD OF AND APPARATUS FOR FINISHING CONCRETE PAVEMENTS
Robert R. Gage, Trenton, N. J.
Application June 8, 1931, Serial No. 543,488
31 Claims. (Cl. 94—39)

1. The method of finishing a concrete pavement which comprises removing the excess concrete from the surface and progressively diverting it laterally in opposite directions from the center of the pavement to the side edges thereof.

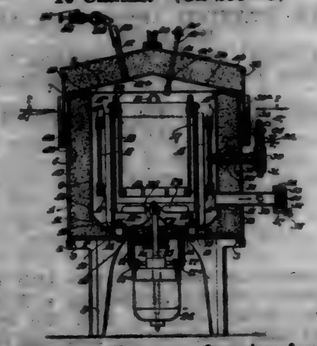
2,032,206
SHOE
Leon Goldberg, New York, N. Y., assignor to Vincent Herwitz Company, Inc., New York, N. Y., a corporation of New York
Application October 26, 1934, Serial No. 750,212
1 Claim. (Cl. 36—11.5)

A sandal or slipper comprising an outer sole and overlapping straps, the forward ends of which are split and interlaced with each other, the rear ends of said straps being secured to the sole at the forward shank portion, a toe pocket surrounding the forward portion of the sole and extending rearwardly along the sides thereof, with the ends of the interlaced straps crossing each other and embracing the rearward extensions of the toe pocket and secured thereto and between the toe pocket and the sole at opposite sides thereof.



2,032,207
TAMPERPROOF CLOSURE SEAL
Solomon Gruner, Brooklyn, N. Y.
Application December 17, 1934, Serial No. 757,856
6 Claims. (Cl. 215—7)

1. A tamper-proof seal for containers comprising a spring member adapted to be inserted in a recess in a container and to extend substantially half way around the circumference of such container; the thickness of the spring member being less than the depth of such recess and the shape of the spring member being substantially the same as the shape of the recess; prongs provided at each end of said spring member and adapted to engage in sockets formed in the ends of the recess; and the spring member adapted to clamp a member secured to the closure device of the container in such a manner that this member will be withdrawn from the clamping engagement when the closure device is removed from the container.

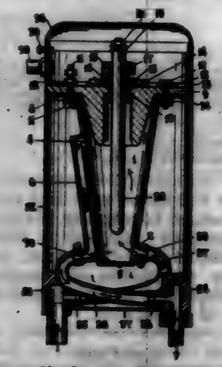


2,032,208
TRANSMITTING SYSTEM
Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 26, 1931, Serial No. 525,419
18 Claims. (Cl. 250—17)

1. In combination, a crystal controlled oscillator including a thermionic discharge device, a frequency multiplier comprising a second single electron discharge device of larger size and rating than the discharge device of said oscillator coupled to the output of said oscillator for frequency multiplying and amplifying the oscillations produced thereby, a pair of pushpull connected electron discharge devices coupled to the output of said last named amplifying and frequency multiplying device and arranged to simultaneously frequency multiply and amplify the oscillations of said frequency multiplier, and a second pair of pushpull connected electron discharge devices

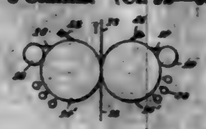
coupled to the output of said last named pair of tubes and arranged to amplify the output of said pushpull connected frequency multiplier and amplifier arrangement of electron discharge devices, whereby oscillation of considerable frequency and amplitude are obtained with a minimum amount of apparatus.

2,032,209
HEAT TREATING APPARATUS
John W. Harsch, Gwynedd, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania
Original application January 30, 1929, Serial No. 336,665. Divided and this application January 28, 1931, Serial No. 511,694. Renewed May 9, 1933
10 Claims. (Cl. 266—5)



7. A diffusion alloy case-forming furnace comprising a chamber in which is disposed in a gaseous atmosphere the metal upon which the case is to be formed, means for generation of heat, a source of diffusion alloy case-forming reagent independent of said generation of heat, means for replenishing said atmosphere with reagent from said source thereof, means for ensuring uniformity of the case comprising mechanism for forcibly stirring said atmosphere, means external to said chamber for driving said stirring mechanism, and means for isolating said chamber to prevent ingress of extraneous gas including sealing means associated with said driving means of said stirring mechanism.

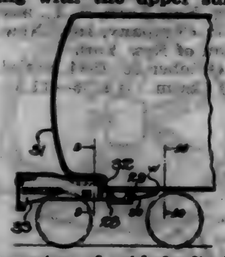
2,032,210
INSTANTANEOUS ELECTRICAL WATER HEATER
Richard Holt, Henley Beach, South Australia, Australia
Application May 6, 1935, Serial No. 20,921
In Australia May 7, 1934
9 Claims. (Cl. 219—44)



1. An instantaneous electrical water heater comprising; a metal cylinder positioned with its

axis vertical, a metal rod positioned within the cylinder, an insulating platform to support the cylinder and the rod, an inlet to the cylinder near the bottom and outlets to the cylinder one a small outlet near the bottom and the other a larger outlet near the top, a container sur-

rounding the cylinder and supporting the platform and having two water-pipe sockets, and rubber tubes one connecting the one water-pipe socket with the inlet to the cylinder and the other connecting the outlets from the cylinder with the other water-pipe socket.



2,032,211
PAPER COATING APPARATUS AND METHOD
Lloyd Hornbostel, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application March 3, 1934, Serial No. 713,870
8 Claims. (Cl. 92—63)

1. Apparatus for coating paper with a thin film of mineral coating comprising a drier cylinder, roller means forming with the cylinder a nip containing fluid coating material for applying said material evenly to the surface of said cylinder at one point, the cylinder being arranged to be heated to dry the film, and means at a point circumferentially spaced from the first point, a distance sufficient to enable partial drying of the film of coating material in its travel therebetween, for transferring the partially dried film directly from the surface of the cylinder to a moving surface to be coated.

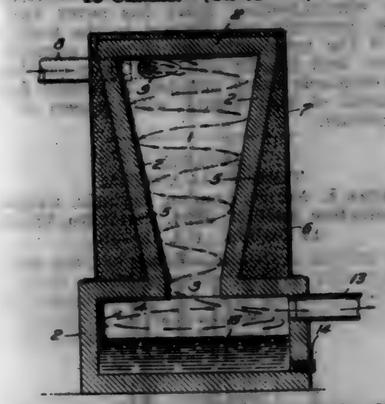
2,032,212
TANK CAR
Karl S. Howard, St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application May 15, 1931, Serial No. 537,721
7 Claims. (Cl. 105—358)

1. In combination in a railway vehicle, a tank including a continuous wall and having an offset in the lower surface thereof, and structure separate from said wall and supporting said tank on each side of said offset and including a bolster, a draft sill, and a saddle forming flange engaging said tank, a portion of the top of said bolster being depressed below the level of the upper surface of said draft sill, and respective portions of said flange merging with the upper surface of said

bolster and a porton of said draft sill spaced beneath the top thereof.

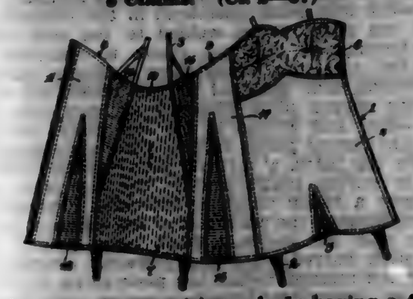
2,032,213
PHOTOGRAPHIC FILM MAGAZINE
Albert S. Howell, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application April 4, 1933, Serial No. 664,890
13 Claims. (Cl. 242—71)

9. In a photographic film magazine the combination with a casing provided with a film opening in the edge wall thereof, of a curved film passage member within the casing and cooperating with a similarly curved edge wall portion of the casing to form a film passage communicating at spaced points with said opening and the interior of the casing, and said edge wall portion having its intermediate longitudinal portion offset outwardly at said film passage.



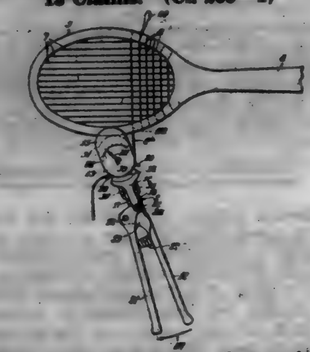
12. In a photographic film magazine the combination with a casing having a transverse wall thereof provided with a bearing opening, of a film spool within the casing and provided with a reduced end bearing portion engaged in said bearing opening, and nested circular ridge and groove formations on said spool and transverse wall and surrounding said bearing opening.

2,032,214
PHOTOGRAPHIC FILM MAGAZINE, SPOOL, AND FILM THEREFOR
Albert S. Howell, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application April 4, 1933, Serial No. 664,891
3 Claims. (Cl. 242—74)



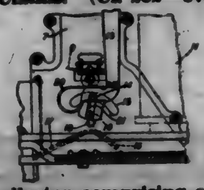
3. In a film spool the combination with a hollow body comprising two cylindrical oppositely disposed cup shaped members having their cylindrical walls telescopically engaged to form the body, of means struck up from the material of the cylindrical wall which overlies the other cylindrical wall for securing a film on the spool, the second mentioned cylindrical wall underlying the resulting opening in the first mentioned cylindrical wall and light trapping the same.

2,032,215
METHOD OF AND APPARATUS FOR TREATING DISCRETE PARTICLES AND VAPORS
Frank B. Kemmer, Larchmont, N. Y., assignor to Magnesium Products, Inc., Pittsburgh, Pa., a corporation of Delaware
Application February 14, 1934, Serial No. 711,114
13 Claims. (Cl. 75—17)



1. A method of treating liquefiable discrete particles to liquefy the same which comprises projecting the same against a surface covered with a film of liquefied substances maintained at a temperature above the melting point and below the boiling point of said substance to be liquefied to form a coherent body thereof.

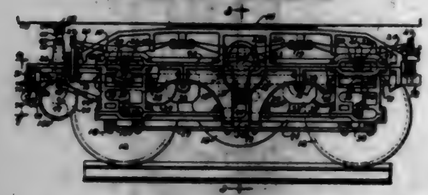
2,032,216
CORSET
Joseph J. Kiepert, Hamden, Conn., assignor to I. Newman & Sons, Inc., New Haven, Conn., a corporation of Connecticut
Application April 29, 1935, Serial No. 18,925
5 Claims. (Cl. 2—57)



1. A corset, comprising a body having a front panel principally of inelastic material, a rear panel extending from the top to the bottom of said body and elastic and stretchable only longitudinally of the body, and a pair of side panels connecting the front and rear panels, one of said side panels having a row of disengageable fastening members, said front panel having a row of disengageable members interlocking with the fastening members of the last-mentioned panel, each of said side panels comprising a section formed of material substantially inelastic and extending from the top to the bottom of the corset and a pair of elastic and circumferentially stretchable gores, one gore having its larger end at the bottom of the body and the other gore having its larger end at the top of the body, with the smaller ends overlapping but spaced apart, one edge of one gore being connected to one edge of said rear panel and the opposite edge connected to one edge of said inelastic section.

2,032,217
TENSIONING DEVICE
Guy L. Matthews and Harry L. Diehl, Chicago, Ill.; said Matthews assignor to said Diehl
Application July 30, 1932, Serial No. 626,343
13 Claims. (Cl. 265—1)

13. In a tensioning device, the combination of a main supporting frame having a hand grip formed thereon, a head formed on said frame and having a flange portion extending longitudinally thereof, a movable hand grip pivotally mounted on said frame, a gripping jaw connected to said movable hand grip and having a rectilinear movement with respect to said supporting frame, said jaw being engageable with said head for securely holding a cord between the jaw and head, a pressure member having a flange formed thereon movably mounted on said frame, a contact portion on said pressure member between said flange and the flange portion of said head, said contact portion being spaced from the engaging portions of said head and jaw and movable with respect to said head, a spring operable between said member and head for resisting the movement of said member and contact portion, a graduated scale formed on said head, a shaft rotatably mounted in said head, an indicator finger secured to said shaft and operatively related to said scale, a pinion secured to said shaft, and a toothed rack carried by said pressure member and operatively connected to said pinion for rotating said shaft and moving said finger along said scale in accordance with the movement of said pressure member with respect to said head.

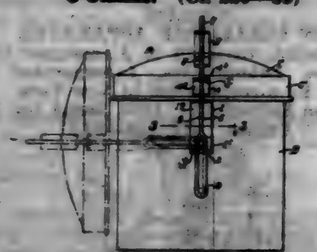


2,032,218
COIN COLLECTOR APPARATUS
John M. Melick, Cresskill, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 21, 1935, Serial No. 7,485
7 Claims. (Cl. 232—57.5)

5. A coin collector comprising a coin chute, a pivoted vane within said chute, an extension pro-

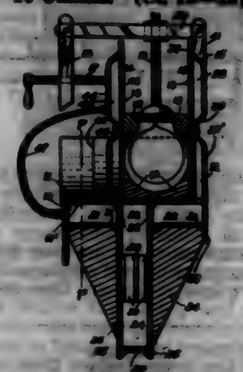
jecting from said vane, a lever engaging said extension, electrical means for operating said lever to deflect said vane from its normal position, and spring means contacting with said extension for supplying a force tending to restore said vane to its normal position.

2,032,219
WHEELED VEHICLE
James C. Mock, Detroit, Mich.
Application November 8, 1932, Serial No. 641,863
7 Claims. (Cl. 105—215)



1. A wheeled vehicle convertible for travel on or off rails, comprising a body, a truck supporting the same, a plurality of axles carried by the truck, a pair of flanged wheels carried by one of said axles, a pair of unflanged wheels carried by another, means for independently raising and lowering each of said axles and the wheels carried thereby, and journaling and supporting means for suspending the vehicle from either pair of axles when lowered.

2,032,220
MANUFACTURE OF GOLF BALLS AND THE LIKE
Edward Arthur Murphy and Douglas Frank Twiss, Erdington, Birmingham, and Robert Gilbert James, Selly Oak, Birmingham, England, assignors to Dunlop Rubber Company Limited, London, England, a British company
No Drawing. Continuation of application Serial No. 543,614, June 8, 1931. This application December 27, 1934, Serial No. 759,388. In Great Britain July 22, 1930
1 Claim. (Cl. 18—59)

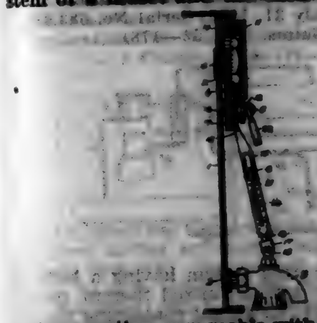


A method of forming gutta containing powders moldable under heat and pressure to form a golf ball cover which comprises reducing the extensibility of a gutta composition by stretching it or extending it while cold, and then sub-dividing it into fine particles.

2,032,221
COVERED RECEPTACLE
Eddie P. Myers, St. Louis, Mo., assignor of forty per cent to Frederick D. Reynolds, University City, Mo.
Application November 18, 1933, Serial No. 698,615
5 Claims. (Cl. 220—33)

1. A receptacle comprising a body portion, a cover for said body portion, means for slidingly connecting said cover to said body portion of said receptacle, said means comprising an inverted U-shaped handle which is rigid throughout its length and is slidingly attached to said body portion at its lower ends at opposite sides thereof of the body portion and extends over the top, means attached to said cover for movably connecting said cover to said handle, and gripping means fixed to said cover and so located that said gripping means and said handle may be grasped by a hand of a user of the receptacle so as to simultaneously move the cover and the handle upwardly with respect to the body portion of the receptacle, the slidable connections between said handle and said body portion of said receptacle being adapted to permit pivotal movement of said handle with respect to said body portion.

2,032,222
TIRE VULCANIZER
Charles E. Norris, London, Ontario, Canada
Application April 12, 1934, Serial No. 722,850
10 Claims. (Cl. 18—18)



10. A sheet metal vulcanizer comprising an upwardly curved top plate, a pair of spaced depending side plates welded to the underside of the top plate, said plates extending in the direction of the curve of the top plate medially of its width and being apertured in the vicinity of said top plate, plates welded to the ends and the bottoms of said side plates to complete a box-like structure constituting a steam boiler, a heating unit disposed in the boiler, an upwardly curved plate disposed at each side of the boiler and welded to the side plates thereof, said curved plates having their ends welded to the top plate, a vertical plate welded to one of the curved plates and to the top plate to compose a steam chamber therewith communicating through the apertures of the adjacent side plate with the boiler, a back plate welded to the other curved plate and upwardly extending in spaced relation to the top plate so as to provide an intervening steam passage, said back plate having its side and top edges inturned, an inner plate welded to said inturned edges of the back plate and to the adjacent edge of the top plate to compose therewith a steam chamber, and a chambered wall rising from the top plate and adapted to be heated by said boiler.

2,032,223
OIL OR GASOLINE BARREL LOCK
Albert Ostgaard, Cadogan, Alberta, Canada, assignor of one-half to Walter Ganzer, Provost, Alberta, Canada
Application December 21, 1934, Serial No. 758,541
In Canada December 30, 1933
5 Claims. (Cl. 70—125)

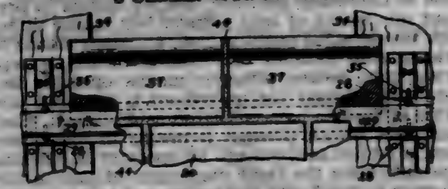
1. A locking bar assembly for barrel locking attachments, said assembly comprising inner and

outer endwise relatively shiftable members, said members including cylindrical portions concentrically arranged, the inner member having one end adapted for pivotal engagement with the valve stem of a faucet and the outer member having

a strap portion engageable with a locking staple, the outer member being formed with opposing longitudinal slotted openings, and the inner member having a laterally projecting guide pin arranged for travel in said openings.

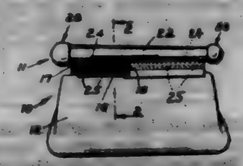
2,032,224
FAN
Clyde R. Paton, Birmingham, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application February 1, 1933, Serial No. 654,669
2 Claims. (Cl. 170—161)

1. A fan comprising a hub, a spider fixed to the hub, flexible laminated blades fixed along one side to the spider, and resilient means associated with the free side of each of the blades holding the laminations in frictional contact.



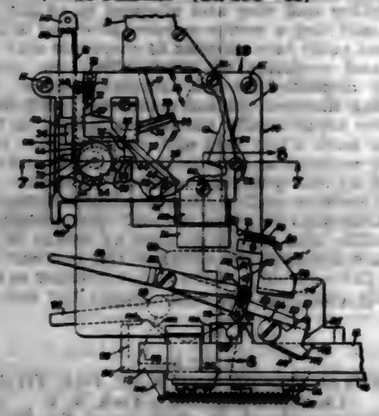
2,032,226
APPARATUS FOR ATTACHING SEAL CAPS ON BOTTLES
Sven Olle Fiehl and Hjalmar Friberg, Stockholm, Sweden
Application October 17, 1934, Serial No. 748,645
In Sweden October 21, 1933
2 Claims. (Cl. 226—86)

1. Apparatus for attaching seal caps on bottles, wherein the seal cap skirt is deformed to enter



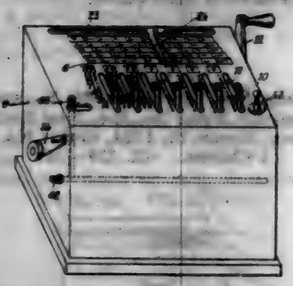
a recess on the bottle head, comprising an abutment member adapted to abut against the top of the seal cap, a ring enclosing the seal cap and adapted to be compressed resiliently in the radial direction around the seal cap, a pressure member supporting said ring and adapted to axially displace said ring, a wedge member provided with an inclined guide face adapted to cooperate with said ring and compress the same when the ring is axially displaced by the pressure member, said abutting member, pressure member, and wedge member being axially movably arranged in relation to each other, said abutment member being axially movable in relation to the bottle and connected to said pressure member by means of a spring member so that upon axial displacement of said abutment member through the pressure of the bottle, said spring member by means of said pressure member will displace the resilient ring along the guide face of the wedge member so as to radially compress the ring around the seal cap skirt.

2,032,228
METAL FRAME AND RAIL FOR TILE
Charles Roeder, New York, N. Y.
Application March 18, 1933, Serial No. 661,428
3 Claims. (Cl. 72—19)



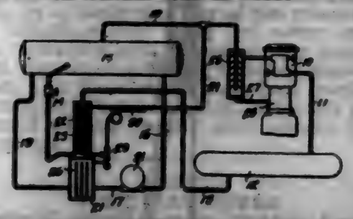
1. A building construction which comprises a plurality of vertically disposed channel-bar supports each having pairs of spaced slots therein at a plurality of levels, a plurality of horizontally disposed flanged tile-supporting track elements, said horizontal tracks having pairs of bolts disposed thereon where the track elements cross the vertical supports, said bolts extending into said slots and permitting fastening of the tracks to the supports and vertical adjustment thereon and with respect to each other.

2,032,227
HANDBAG
Nathan Rosovsky, New York, N. Y., assignor to Elite Specialty Metal Co., Inc., New York, N. Y.
Application March 23, 1934, Serial No. 717,033
4 Claims. (Cl. 150—34)



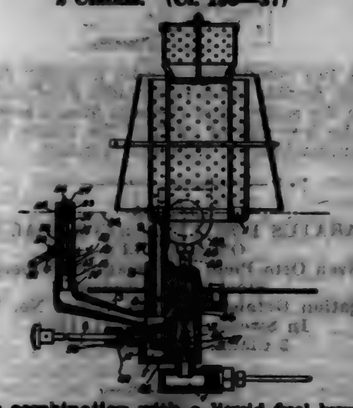
1. In a bag, a member mounted thereon provided with a tubular portion having an open end portion, a hollow cover frictionally fitted over said end portion, a spring having a plurality of curved fingers fixed to the bottom of said cover, and an article having an end portion received between said fingers and extending within said tubular portion, said fingers being disposed between the end portion of said article and the end portion of said tubular portion and frictionally engaging the latter.

2,032,228
MULTIPLE COIN ACTUATED PLUNGER
William H. Rowe, New York, N. Y.
Application December 15, 1933, Serial No. 702,428
16 Claims. (Cl. 194—42)



1. In a coin freed device, a plunger bar movable to operating position, locking means to prevent movement of said plunger bar in one direction to operating position, coin actuated means to release said plunger bar locking means, a separate coin return plunger, means operable before said plunger bar movement is initiated and after said coins have actuated said release, when said coin return plunger is moved in one direction, to return said coins to an operator and means operable upon the same movement of said return plunger to reset said locking means to again prevent movement of said plunger bar.

2,032,229
TELEPHONE CALL APPARATUS
Jacques Serruzier and Jean Marie Consael, Paris, France
Application April 4, 1934, Serial No. 718,986
In France November 24, 1933
12 Claims. (Cl. 179—90)

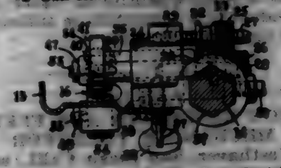


1. In an automatic signal apparatus, two series of call mechanisms, one series having signals composed at the moment of use, the other having call signals prepared in advance, all of the signals being composed along parallel lines, a single slide mounted for reciprocal movement parallel to the signals and carrying two pawls, one pawl acting on the signals prepared in advance and the other pawl acting on the signals composed at the moment of use, means for causing unrestricted movement of the slide in one direction and automatic means for causing controlled movement of the slide at constant speed in the opposite direction.

2,032,230
OIL RECOVERY DEVICE
Norman M. Small and Francis Shenton, Waynesboro, Pa., assignors to Frick Company, Waynesboro, Pa., a corporation of Pennsylvania
Application July 21, 1933, Serial No. 681,047
16 Claims. (Cl. 62—178)

1. In a refrigerating system having a body of liquid refrigerant with oil mixed therein, means for circulating the refrigerant containing the oil, means for heating a portion of the mixture to evaporate the refrigerant from the oil, means for delivering the mixture of evaporated refrigerant and oil to a suction line leading to a compressor, a liquid separator in said line for delivering the oil to some portion of the compressor for lubricating said compressor and for delivering the vaporized refrigerant to the suction of the compressor, substantially as set forth.

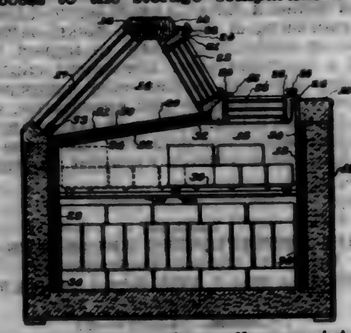
2,032,231
OVERFLOW DEVICE
Walter Carl Soellberg, Quincy, Ill.
Application October 20, 1933, Serial No. 694,476
2 Claims. (Cl. 158—37)



1. In combination with a liquid fuel burner, a constant maximum level fuel feeding means therefor including a housing having an inlet compartment communicating with the source of fuel, a sediment compartment communicating with the burner, a threaded passage connecting said compartments, a detachable cover plate forming a wall of said sediment compartment and having an upwardly extending conduit projecting therefrom in communication with the sediment chamber and an opening in axial alignment with said threaded passage, a valve unit extending through said opening and into engagement with said threaded passage to control the flow of fuel between said compartments and to clamp said cover plate in place, and an overflow device connected to said conduit and operatively positioned relative to said burner to prevent flooding thereof upon the fuel level exceeding said maximum level.

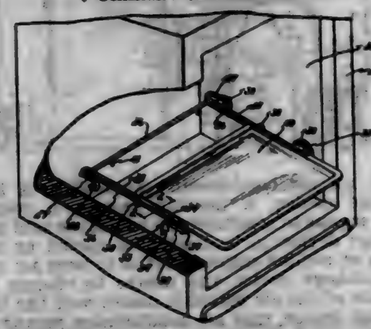
2,032,232
INCANDESCENT LAMP AND METHOD OF MANUFACTURING THE SAME
Royal F. Strickland, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application July 12, 1932, Serial No. 622,268
5 Claims. (Cl. 176—32)

5. An electrical device consisting of a glass enclosure having an electric energy translation element mounted therein and lead wires connected to said element and extending through said enclosure, and a base consisting of an insulating substance molded on said enclosure and having embedded therein the ends of said lead wires, said base having at least one longitudinally extending protuberance at the side thereof, and the embedded end of a lead wire being bent into an angular loop extending outward from the wall of said enclosure and having its midportion exposed at the surface of said protuberance to constitute a terminal.



2,032,233
BAND SAW GUIDE
Herbert E. Tautz, Milwaukee, Wis., assignor to Delta Manufacturing Company, Milwaukee, Wis.
Application August 1, 1933, Serial No. 682,206
5 Claims. (Cl. 143—161)

1. A saw guide comprising a bracket having two bores therein, a rod slidably arranged in each bore, an end-thrust bearing carried by one of said rods, means for positively moving said rod in both directions in its bore, the second rod having a forked end, each arm of the fork having a polygonal bore therein, and having lateral-thrust bearing blocks carried slidably in said polygonal bores, and independent means for positively moving said second rod in both directions in its bore.



2,032,234
LOW TEMPERATURE DISPLAY CASE
Charles C. Thomas and Don G. Ellis, Detroit, Mich., assignors to Kelvinator Corporation, Detroit, Mich., a corporation of Michigan
Application December 13, 1933, Serial No. 702,167
1 Claim. (Cl. 62—93.5)

A unitary refrigerated show and storage case for low temperature refrigeration comprising a cabinet having heat insulating walls, the upper portion of the cabinet walls being transparent for display purposes, an insulated door providing access to the display portion of the cabinet, an impervious refrigerated floor for the display portion forming the ceiling for the lower portion, additional refrigerating means embedded in the lower insulated walls, said lower portion providing a storage compartment for storing a supply of the food displayed, an insulated door providing access to the storage compartment and a

smooth inner lining thermally associated with said refrigerating means whereby frost may be conveniently removed.

2,032,235
REFRIGERATING APPARATUS
Charles C. Thomas, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a corporation of Michigan
Application January 15, 1934, Serial No. 706,686
7 Claims. (Cl. 311—152)

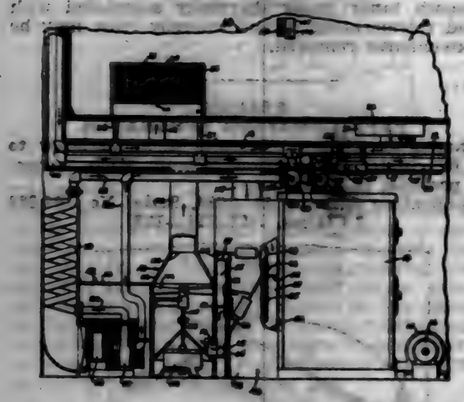
1. In a slidable shelf unit adapted to be conveniently mounted in a refrigerator cabinet upon pins projecting from the vertical side walls thereof the combination of, spaced guides adapted to be mounted horizontally in the cabinet, said guides each including a track member and an overlying retaining member, and a shelf slidably carried by the track members below the retaining members, pin engaging portions at the opposite ends of the guides for mounting the guides, said guides at the rear having means arranged to prevent the upward movement thereof.

2,032,236
METHOD OF PRODUCING DECORATIVE SURFACES
Karl Turk, Baltimore, Md., assignor to The Porcelain Enamel & Manufacturing Company of Baltimore, Baltimore, Md., a corporation of Maryland
No Drawing. Application January 26, 1933, Serial No. 654,114
5 Claims. (Cl. 91—73)

1. The process of producing on a base having a copper surface an article having a gold-like appearing vitreous enamel surface comprising producing an acid resisting vitreous enamel capable of forming on firing an enamel of sufficient

transparency to light rays so that the color of the base is visually apparent through the enamel, and containing a metallic oxide selected from the group consisting of iron oxide, nickel oxide, and manganese oxide functioning to impart to the enamel a potential color component capable of combining with the copper color component of the base to produce the gold appearance, applying to the base a thin coating of said enamel and firing to produce the gold-like color, the color of the base being visually apparent through the enamel.

2,032,237



AIR CONDITIONING APPARATUS

Martin G. Torson, Louisville, Ky.

Application May 2, 1932, Serial No. 608,973

Renewed September 17, 1934

7 Claims. (Cl. 257—8)

1. In an air conditioning apparatus, a heat exchange device, a heating means, a cooling means, means to selectively at will cause said heat exchange device to be heated or cooled by said heating or cooling means, means to pass air over said exchange device and means to change the condition of the air before it passes over the heat exchange device, said air conditioning means including an air cleaner, an air humidifier, and an air de-humidifier, means to control the flow of air through said air cleaner, means to control the flow of air through said humidifier, means to control the flow of air through said de-humidifier, a thermostatic means to control the operation of said heating means and said cooling means, electromagnetic means to control the operation of said air cleaning means, electromagnetic means to control the operation of said humidifying means, electromagnetic means to control the operation of said de-humidifying means, and means adjacent said heat exchange device to control the amount of air passing thereover.

2,032,238

CLOTHES WASHING MACHINE

Noble H. Watts, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York

Application December 1, 1930, Serial No. 498,395

9 Claims. (Cl. 259—101)

1. In a fabric washing machine, the combination of a tub adapted to contain a body of water, an agitator for moving the fabric within the tub, said agitator comprising a body, the top of which approximates the level of the water in the tub, a plurality of spaced blades extending radially from the body, the portion of said body between each two blades being inwardly curved from blade to blade to form a substantially continuous concave surface the radius of

the surface increasing from top to bottom with the sides thereof substantially tangential to the sides of the blades, and a shaft for oscillating the agitator.

2,032,239

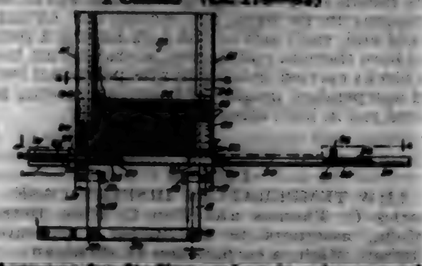
MANUFACTURE OF AN IMPROVED VITREOUS MATERIAL

Albert William Henry Wedlock, Leyton, London, England

No Drawing. Application June 16, 1925, Serial No. 37,394. In Great Britain October 26, 1912

7 Claims. (Cl. 106—39.2)

1. In the method of manufacturing a vitreous material, the steps of reducing predetermined quantities of boric acid and alkali carbonates to comparatively fine powders, mixing said substances and heating the mixture to a temperature sufficiently high to drive off the water of crystallization and produce a frit, but not high enough to produce fusion or vitrification of the frit, reducing said frit to a comparatively fine powder, admixing said frit with powdered mica of substantially the same fineness as said frit in the presence of a small quantity of water, and heating the product to a temperature sufficiently high to initiate plasticity therein.



2,032,240

CARBON RESERVOIR AND FEEDING MECHANISM THEREFOR

John L. Westhaver, San Diego, Calif., assignor of fifty per cent to Robert B. Hill, San Diego, Calif.

Application March 24, 1934, Serial No. 717,862

1 Claim. (Cl. 176—61)

A means for feeding carbon to a lamp mechanism comprising a reservoir for supporting carbon sticks in stacked relation, said reservoir having a vertically extending trackway and a carbon receiving trough at the bottom thereof, supporting means for said reservoir for attaching the same to a lamp mechanism and holding the reservoir in proper electing position for feeding a carbon stick to the lamp mechanism, an ejecting plunger located in alignment with said trough and adapted to move longitudinally of the trough for feeding and ejecting a carbon stick from the bottom of the reservoir and longitudinally of said trough, carbon sticks mounted within the reservoir, each carbon stick having interlocking and interfitting means at the ends thereof whereby the carbon sticks may be locked for uniform rotation when placed end to end and while being fed into the lamp mechanism, legs supporting the reservoir, bolts pivotally connecting said legs to the bottom of said reservoir whereby said reservoir may be swung laterally and adjusted to move the reservoir into proper alignment with a lamp mechanism and also be swung to a dumping position.

2,032,241

CONTACTS FOR ELECTRIC CIRCUIT BREAKERS, SWITCHES, CONNECTERS AND THE LIKE

George Ethelbert Whitehead, Rhiwbina, near Cardiff, South Wales

Application December 19, 1933, Serial No. 703,166

In Great Britain January 6, 1933

6 Claims. (Cl. 200—166)

1. An electrical socket contact member, comprising an annular housing and held therein an annulus of closely packed thin flexible lamina each of which is engageable with the one on each side of it along a plurality of longitudinal lines of contact of which at least one line is adjacent the inner edge of the lamina thereby providing a substantially solid wall adjacent to said inner edge and forming a socket member with an effectively continuous resiliently expansible laminated brush form of female contact surface.

2,032,242

FUELS FOR INTERNAL COMBUSTION ENGINES

Samuel Whyte, Redhill, England

No Drawing. Application January 11, 1934, Serial No. 706,295. In Great Britain January 17, 1933

7 Claims. (Cl. 44—9)

1. As a fuel for internal combustion engines, a mixture of a conventional liquid fuel therefor with not substantially exceeding one percent of a monocyclic ketone having a boiling point within the approximate range of 100° C. to 200° C.

2,032,243

SHEET IRON PILING

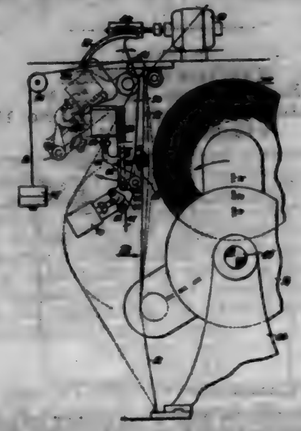
Otto Wolff, Mannheim, Germany

Application August 25, 1934, Serial No. 741,501

In Germany September 7, 1933

1 Claim. (Cl. 61—62)

A steel piling comprising two members having their marginal edges turned back to present oppositely arranged hook-shaped formations in interlocked engagement with each other, the outer piling edge of one portion being inclined inwardly and provided with parallel inner and outer side faces, a thickened portion on the same member opposite the said piling edge and provided with an inclined surface cooperating with the inner side face of the outer piling edge to form a substantially wedge-shaped recess, the outer piling edge of the other marginal edge portion being enlarged into a wedge-shaped form for snugly engaging the wedge-shaped recess, said enlarged wedge-shaped portion cooperating with the member of which it forms a part to provide a parallel sided recess which snugly receives the first-mentioned piling edge.



2,032,244

AUTOMATIC SPLICING MECHANISM

Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia

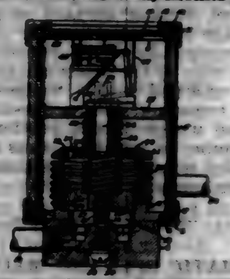
Application August 11, 1931, Serial No. 556,288

21 Claims. (Cl. 242—58)

6. In a web supply mechanism, a web deflector, means for moving the deflector into contact with the running web, a latch adapted to hold the deflector against a bias tending to force it toward the web, and electro-responsive means actuated by a reduction in the diameter of a running roll and in running engagement therewith for releasing the latch.

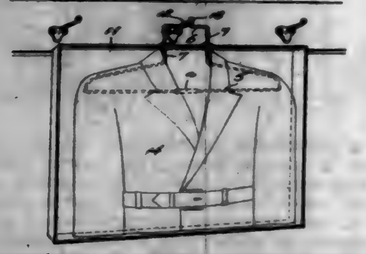
2,032,245

FLOW METER



Gaylord H. Wetring, Scotia, N. Y., assignor to General Electric Company, a corporation of New York

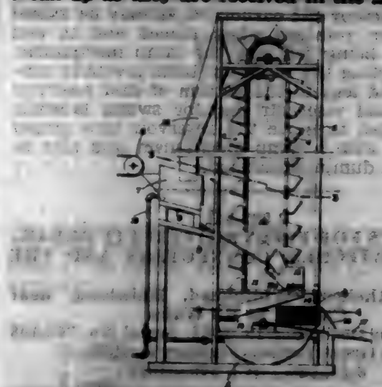
Application February 15, 1933, Serial No. 6,741



1 Claim. (Cl. 73—197)

In a flow meter, the combination of a casing provided with a partition dividing said casing into two chambers, an indicating mechanism in one of said chambers, an expansible walled casing in the second of said chambers, an outlet opening in said second chamber, an inlet opening in said expansible walled casing, said expansible walled casing having one end rigidly attached to the wall of said second chamber and having the other end provided with an orifice, said other end being movable in response to pressure differences built up by fluid flowing between said inlet and outlet openings through said orifice, means for transmitting the movement of

said movable end to said indicating mechanism, means for adjusting the normal position of said movable end including a pair of springs mounted in said second chamber and said expansible walled casing, respectively, arranged to oppositely affect a movement of said end, means for adjusting said springs including a movable base for the spring in said expansible walled casing and means operable through the wall of said second chamber to move said base whereby the indicating mechanism may be set to its zero position.



2,032,246
CLOTHES HANGER
John L. Baum, Ephrata, Pa.
Application April 6, 1935, Serial No. 15,329
1 Claim. (Cl. 206—7)

The combination with a container having separably interfitted box body and cover sections, of a garment hanger comprising a hanger frame formed from a single length of wire, a bail bent from one stretch of the wire of said frame, and reversely disposed gripping jaws struck from the bail at opposite sides thereof to accommodate the sections of the container when interfitted with each other and for projecting the bail exteriorly of the container and the frame interiorly of said container.

2,032,247
ORE CRUSHING MILL
George H. Beers, Wabeuka, Nev.
Application October 30, 1934, Serial No. 750,647
6 Claims. (Cl. 83—46)

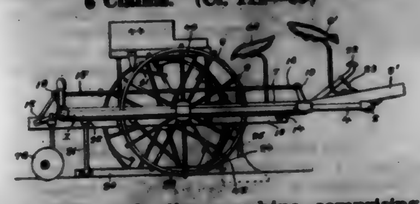
1. An ore treating mill comprising a vertically disposed endless driven chain, buckets on said chain, the buckets on the upwardly moving run of the chain facing upwardly, means to convey ore to be treated toward the upwardly moving buckets and including an initial intake hopper disposed a considerable distance below the upper end of the chain and means to separate the heavy and small particles of ore from the large lumps and deliver the latter to the buckets from opposite sides of the buckets, a water-retaining sump through which the lowermost buckets pass and into the rear portion of which said small particles are delivered by the conveying means, and means to redeliver the lumps in the buckets to the hopper and arranged so that such lumps tend to break up as they are received in the hopper, the

sump having a vertical screened opening in front of the upwardly moving row of buckets, and a shield plate depending into the sump between the opening and the adjacent buckets.

2,032,248
DOG BED OR THE LIKE
John G. Bins, St. Paul, Minn.
Application March 4, 1935, Serial No. 9,233
20 Claims. (Cl. 119—1)

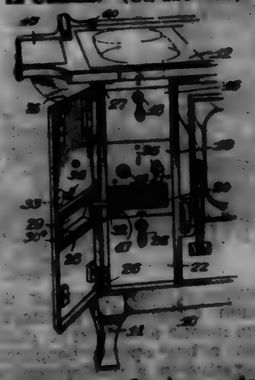
1. A bed for pets comprising a mattress; and an annular bolster on said mattress having an annular pocket receiving the edge portions of the mattress for connecting said members together.

2,032,249
ABRASIVE SUPPORTING MEMBER AND METHOD OF PRODUCING SAME
Kenneth H. Bowen, Auburn, N. Y., assignor to Columbian Rope Company, Auburn, N. Y., a corporation of New York
Application June 10, 1935, Serial No. 25,895
5 Claims. (Cl. 51—197)



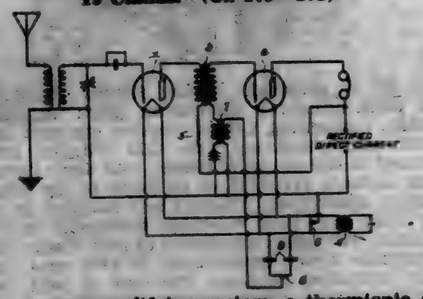
2. An abrasive supporting member comprising a core adapted to be mounted for rotary motion, a fibrous laterally flexible disk-like body extending radially from said core, and a plurality of laterally flexible pins extending radially from said core into said fibrous body.

2,032,250
LEATHER PRODUCT AND A PROCESS OF PRODUCING IT
Bert H. Bower, Gloversville, N. Y.
No Drawing. Application November 14, 1935, Serial No. 49,850
2 Claims. (Cl. 135—6)



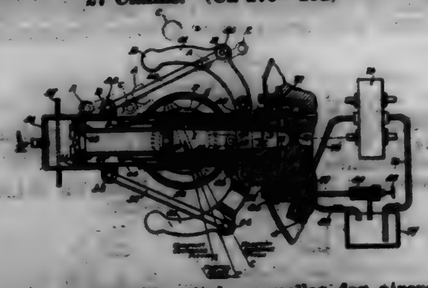
1. A leather product comprising leather treated with a lubricant, an emulsifying agent for the lubricant, glycerin and honey.

2,032,251
POTATO PLANTER
Henry Brooks, Forest Junction, Wis.
Application May 15, 1935, Serial No. 21,629
6 Claims. (Cl. 111—59)



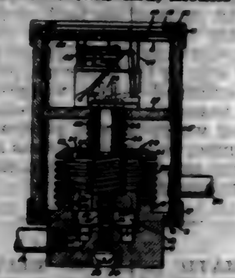
1. A potato planting machine comprising a wheeled frame, a second frame mounted on the first mentioned frame for vertical swinging movement to different horizontal positions, a plow member on said second mentioned frame, a potato planting wheel mounted on said second frame for adjustment by swinging movement of the latter into and out of a furrow dug by said plow and having a relatively fixed axle, and driving connections between one of the frame wheels and said planting wheel rendered effective and ineffective by adjustment of the latter into and out of said furrow, respectively, said connections including a spindle slidable axially of said frame wheel, cooperating clutch members on said spindle and one wheel, respectively, and a universal shaft connection between said spindle and axle.

2,032,252
RANGE
Herbert T. Burrow, Beaver Dam, Wis., assignor to Malleable Iron Range Company, Beaver Dam, Wis., a corporation of Wisconsin
Application May 9, 1935, Serial No. 20,661
12 Claims. (Cl. 126—15)



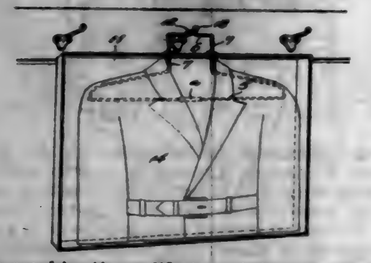
1. A range having a fire box, a draft chamber adjacent the same and in communication therewith, said chamber having a draft opening in the front thereof, a door normally concealing the front of said fire box and of said draft chamber, a draft door in said first mentioned door, a draft door in another wall of said draft chamber and means within said chamber connecting said draft doors, whereby the opening of one of said doors will cause the other door to open simultaneously to admit air to said draft chamber.

2,032,253
AMPLIFYING SYSTEM
Vannevar Bush, Medford, Mass., assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application July 8, 1927, Serial No. 204,280
Renewed June 12, 1931
15 Claims. (Cl. 179—171)



2. In an amplifying system, a thermionic device having a cathode, control electrode and anode, said cathode being energized by alternating current, a potentiometer bridged across the source of said current, means for connecting a tap on said potentiometer with the control electrode of said thermionic device, a reactance net work bridged across said current source, and means for impressing impulses from said net work on the control electrode.

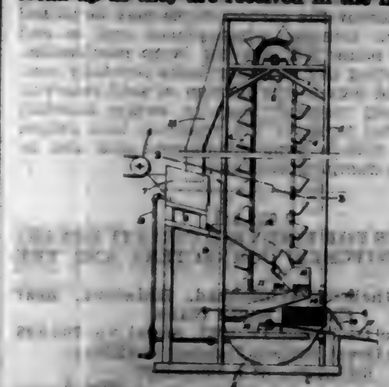
2,032,254
ADJUSTABLE PITCH PROPELLER
Frank W. Caldwell, Pittsburgh, Pa., assignor, by mesne assignments, to United Aircraft Corporation, a corporation of Delaware
Application April 21, 1931, Serial No. 531,685
27 Claims. (Cl. 170—163)



1. A controllable pitch propeller for aircraft, comprising a hub having radially extending arms, propeller blades rotatably journalled around the arms, fluid pressure operated means to move the blades to decrease their pitch at will, and to overcome a contrary tendency of centrifugal force tending to increase the pitch of the blades, and counterweights mounted to revolve with the propeller and operative automatically to increase the pitch of the blades by the action of centrifugal force on the weights when the fluid pressure means is not operative.

said movable end to said indicating mechanism, means for adjusting the normal position of said movable end including a pair of springs mounted in said second chamber and said expansible walled casing, respectively, arranged to oppositely affect a movement of said end, means for adjust-

ing said springs including a movable base for the spring in said expansible walled casing and means operable through the wall of said second chamber to move said base whereby the indicating mechanism may be set to its zero position.



2,032,246
CLOTHES HANGER
John L. Hamm, Ephrata, Pa.
Application April 8, 1935, Serial No. 15,329
1 Claim. (Cl. 206—7)

The combination with a container having separably interfitted box body and cover sections, of a garment hanger comprising a hanger frame formed from a single length of wire, a bail bent from one stretch of the wire of said frame, and reversely disposed gripping jaws struck from the bail at opposite sides thereof to accommodate the sections of the container when interfitted with each other and for projecting the bail exteriorly of the container and the frame interiorly of said container.

2,032,247
ORE CRUSHING MILL
George H. Beers, Wabuska, Nev.
Application October 30, 1934, Serial No. 750,647
6 Claims. (Cl. 83—46)

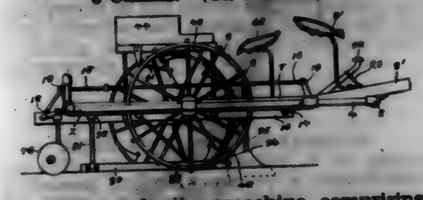
1. An ore treating mill comprising a vertically disposed endless driven chain, buckets on said chain, the buckets on the upwardly moving run of the chain facing upwardly, means to convey ore to be treated toward the upwardly moving buckets and including an initial intake hopper disposed a considerable distance below the upper end of the chain and means to separate the heavy and small particles of ore from the large lumps and deliver the latter to the buckets from opposite sides of the buckets, a water-retaining sump through which the lowermost buckets pass and into the rear portion of which said small particles are delivered by the conveying means, and means to redeliver the lumps in the buckets to the hopper and arranged so that such lumps tend to break up as they are received in the hopper, the

sump having a vertical screened opening in front of the upwardly moving row of buckets, and a shield plate depending into the sump between the opening and the adjacent buckets.

2,032,248
DOG BED OR THE LIKE
John O. Bine, St. Paul, Minn.
Application March 4, 1935, Serial No. 9,238
20 Claims. (Cl. 119—1)

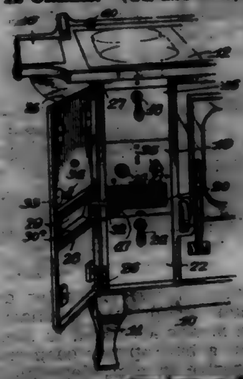
1. A bed for pets comprising a mattress; and an annular bolster on said mattress having an annular pocket receiving the edge portions of the mattress for connecting said members together.

2,032,249
ABRASIVE SUPPORTING MEMBER AND METHOD OF PRODUCING SAME
Kenneth H. Bowen, Auburn, N. Y., assignor to Columbian Rope Company, Auburn, N. Y., a corporation of New York
Application June 10, 1935, Serial No. 25,895
5 Claims. (Cl. 51—197)



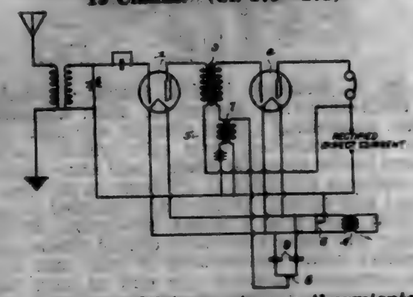
2. An abrasive supporting member comprising a core adapted to be mounted for rotary motion, a fibrous laterally flexible disk-like body extending radially from said core, and a plurality of laterally flexible pins extending radially from said core into said fibrous body.

2,032,250
LEATHER PRODUCT AND A PROCESS OF PRODUCING IT
Bert H. Bower, Gloversville, N. Y.
No Drawing. Application November 14, 1935, Serial No. 49,880
6 Claims. (Cl. 134—6)



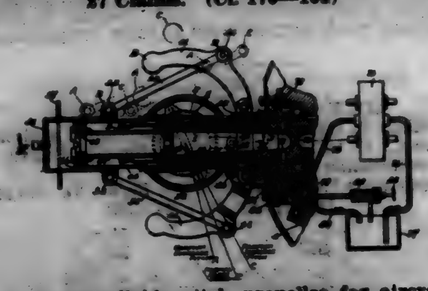
1. A leather product comprising leather treated with a lubricant, an emulsifying agent for the lubricant, glycerin and honey.

2,032,251
POTATO PLANTER
Henry Brooks, Forest Junction, Wis.
Application May 15, 1935, Serial No. 21,619
6 Claims. (Cl. 111—59)



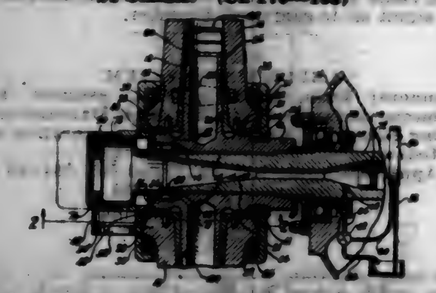
1. A potato planting machine comprising a wheeled frame, a second frame mounted on the first mentioned frame for vertical swinging movement to different horizontal positions, a plow member on said second mentioned frame, a potato planting wheel mounted on said second frame for adjustment by swinging movement of the latter into and out of a furrow dug by said plow and having a relatively fixed axle, and driving connections between one of the frame wheels and said planting wheel rendered effective and ineffective by adjustment of the latter into and out of said furrow, respectively, said connections including a spindle slidable axially of said frame wheel, cooperating clutch members on said spindle and one wheel, respectively, and a universal shaft connection between said spindle and axle.

2,032,252
RANGE
Herbert T. Burrow, Beaver Dam, Wis., assignor to Malleable Iron Range Company, Beaver Dam, Wis., a corporation of Wisconsin
Application May 9, 1935, Serial No. 20,661
12 Claims. (Cl. 126—15)



1. A range having a fire box, a draft chamber adjacent the same and in communication therewith, said chamber having a draft opening in the front thereof, a door normally concealing the front of said fire box and of said draft chamber, a draft door in said first mentioned door, a draft door in another wall of said draft chamber and means within said chamber connecting said draft doors, whereby the opening of one of said doors will cause the other door to open simultaneously to admit air to said draft chamber.

2,032,253
AMPLIFYING SYSTEM
Vannevar Bush, Medford, Mass., assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application July 6, 1927, Serial No. 204,280
Renewed June 13, 1931
15 Claims. (Cl. 179—171)

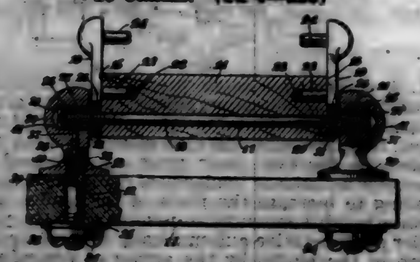


2. In an amplifying system, a thermionic device having a cathode, control electrode and anode, said cathode being energized by alternating current, a potentiometer bridged across the source of said current, means for connecting a tap on said potentiometer with the control electrode of said thermionic device, a reactance net work bridged across said current source, and means for impressing impulses from said net work on the control electrode.

2,032,254
ADJUSTABLE PITCH PROPELLER
Frank W. Caldwell, Pittsburgh, Pa., assignor, by mesne assignments, to United Aircraft Corporation, a corporation of Delaware
Application April 21, 1931, Serial No. 531,685
27 Claims. (Cl. 170—163)

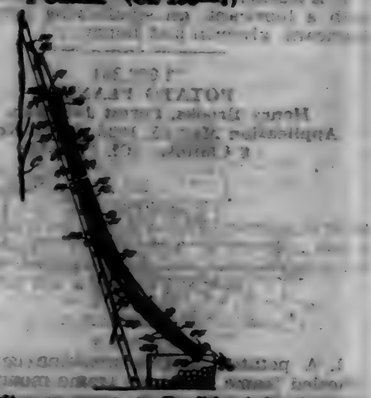
1. A controllable pitch propeller for aircraft, comprising a hub having radially extending arms, propeller blades rotatably journalled around the arms, fluid pressure operated means to move the blades to decrease their pitch at will, and to overcome a contrary tendency of centrifugal force tending to increase the pitch of the blades, and counterweights mounted to revolve with the propeller and operative automatically to increase the pitch of the blades by the action of centrifugal force on the weights when the fluid pressure means is not operative.

2,032,256
PROPELLER
Frank W. Caldwell, West Hartford, Conn., assignor, by mesne assignments, to United Aircraft Corporation, a corporation of Delaware
Application February 13, 1933, Serial No. 656,523
24 Claims. (Cl. 170—163)



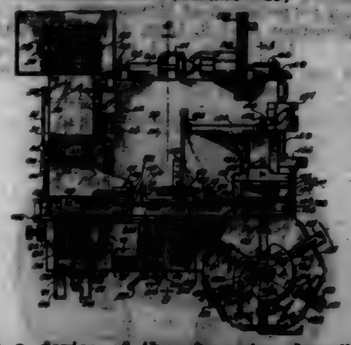
1. In a propeller having blades journaled for pitch-adjusting movement, pitch adjusting means, comprising a fluid pressure operated cylinder, pins projecting from said cylinder, arms secured to the propeller blades, said arms having cam surfaces arranged at an angle to the longitudinal axis of said cylinder and adapted to coact with said pins whereby movement of the cylinder will cause movement of said blades and adjustable stops independent of said cam surfaces arranged adjacent the end of said cam surfaces to limit the movement of said pin.

2,032,256
METAL ARTICLES FOR COATING
Jesse J. Canfield and George W. McGehan, Middletown, Ohio, assignors to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio
No Drawing. Application September 6, 1932, Serial No. 631,754
3 Claims. (Cl. 91—73)



1. An iron or steel article suitable for the reception of vitreous enamel, the surface of which is characterized by deep pits bounded by sharp edged portions and planar type side walls, which is substantially identical with the crystallographic surface produced when an iron or steel article is submerged for forty seconds in eight percent nitric acid solution at room temperature.

2,032,257
LOCK-ON TOILET SEAT HINGE
William A. Carmichael, Hamden, Conn., assignor to C. F. Church Mfg. Co., Chicopee, Mass., a corporation of Massachusetts
Application November 12, 1931, Serial No. 574,583
16 Claims. (Cl. 4—236)



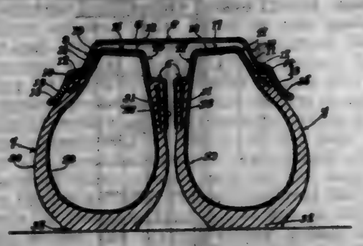
8. A hinge post for a water closet seat comprising an upper body portion and a securing stud threaded into the lower portion of said body portion, said upper portion having a horizontal cylindrical socket therein, and a locking pin concentrically disposed with respect to said stud and extending into said socket.

2,032,258
FRUIT CONVEYER
Thomas Chinn, Millbrook, N. Y.
Application April 18, 1934, Serial No. 16,021
2 Claims. (Cl. 198—7)

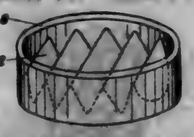
In a fruit conveyer, a flexible tube having openings for a distance thereof, a ladder, means fastening the tube with the ladder for the extent of the same having the openings, a swinging gate carried at the lowermost end of the tube, a spring tensioned cable carried by the ladder and connected with the gate for holding the latter closed, and means opening the gate on relieving tension upon said cable.

2,032,259
RECEPTACLE FILLING AND SEALING MACHINE
Austin S. Chandler, Fitchburg, Mass., assignor to The Brown Bag Filling Machine Company, Fitchburg, Mass., a corporation of Massachusetts
Application September 2, 1932, Serial No. 631,941
13 Claims. (Cl. 226—49)

1. In a device of the character described, a loading station comprising a charge forming and discharge means arranged to discharge at a given location, a bag opener cooperative therewith and operative in a predetermined location with respect thereto, a bag presenting, conveying, scoring and sealing train associated with the charge forming and discharge means and bag opener, said train comprising an endless belt, a bag chute extending laterally therefrom open adjacent the belt, said belt having a supporting roller mounted on an axis fixed with respect to the level of the bag chute, means to support bags upright on the belt, a scoring means comprising a yieldingly mounted anvil member, at one side of the path of the belt and a scorer blade at the other side of said path movable against the anvil and beyond a presser member in the path of the anvil and blade constructed to engage and ride thereover, means to operate the presser blade intermittently, and a gripping and sealing device in operative relation to the path of the belt operative to grip bags set upon the belt simultaneously with operation of the scorer blade; said loading station, said scoring and sealing elements being spaced uniformly along the path of the belt, and means to operate the belt intermittently to travel the distance of said spaces and stop for the period of the operations of loading, scoring and gripping, and means to operate the loading, scoring and gripping and sealing devices simultaneously.



2,032,260
WIRE FEEDING APPARATUS
Verni J. Chapman, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 18, 1934, Serial No. 758,043
6 Claims. (Cl. 140—124)



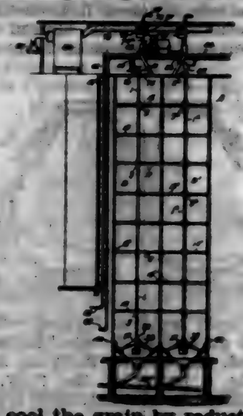
1. Apparatus for feeding wire and the like comprising a support, a plurality of brackets pivotally attached to said support, a plurality of axles rigidly mounted on said support, a plurality of axles mounted on said brackets opposite said axles mounted on said support, feed rolls journaled on said axles, means for positively rotating each of said feed rolls, resilient means for applying pressure to each bracket at a point laterally displaced from its point of pivotal attachment to said support, and means engaging said pressure applying means and said brackets for equalizing the pressures applied to said feed rolls in said brackets by said pressure applying means.

2,032,261
COMBINED FELLY, RIM, AND TIRE STRUCTURE
Floyd N. Clemmons, Collinsville, Ill.
Application September 30, 1935, Serial No. 42,913
11 Claims. (Cl. 152—32)

9. A combined felly, rim and tire structure for a vehicle wheel comprising a felly in the form of an annulus having each of its sides provided with outwardly directed flanges, a rim formed of a pair of oppositely disposed flexible tire elements receiving sections normally spaced from each other and permanently spaced from said annulus, each of said sections formed with an outer and an inner outwardly directed flange, the outer flange of each rim section merging into and encompassed by a flange of the felly, and a tire element mounted in and extended from each rim section.

2,032,262
GAS FILTER
Blanche Ceri, Berlin, Germany
Application February 18, 1935, Serial No. 7,139
In Germany February 13, 1934
4 Claims. (Cl. 183—71)

1. A filter of the character described comprising, in combination, a unitary, hollow, elongated casing composed of hardened moldable material impervious to gas and air; and a filtering layer composed of a single piece of fabric having transverse pleats extending entirely across the layer and secured transversely of said casing intermediate its ends with the edges of the layer imbedded throughout in the wall of said casing to form a gas and air tight seal between said layer and said casing, the imbedded pleated edges maintaining said layer in its pleated form.



2,032,263
ARSENIC DERIVATIVES OF SUGARS
Paul J. Daughenbaugh, New Haven, Conn., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa., a corporation of Maryland
No Drawing. Application February 6, 1933, Serial No. 655,951
8 Claims. (Cl. 260—14)

1. As new products, trivalent compounds of acetone glucose having the arsenic united through oxygen to the third carbon atom of the glucose, and having the arsenic also attached to another oxygen atom by a double bond.

2,032,264
METHOD OF PRESERVING GRAIN IN STORAGE
Jesse H. Davis, Baltimore, Md.
Application January 12, 1933, Serial No. 651,434
10 Claims. (Cl. 99—153)

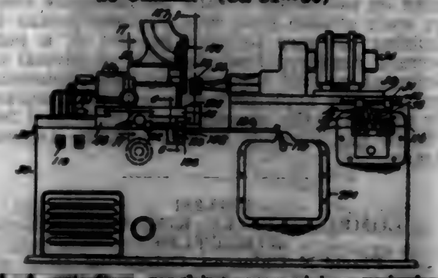
1. The method of aerating stored grain, which consists in injecting and expanding air under pressure into the local hot spots in the grain so

as to stir up the grain and the air therein directly in the hot spot regions under the air pressure and to cool the grain by reduction of temperature due to air expansion.

2,031,961
ELASTIC BRAID
Robert T. Bowen, Hudson, Mass.
Application July 22, 1932, Serial No. 624,019
11 Claims. (Cl. 66—25)

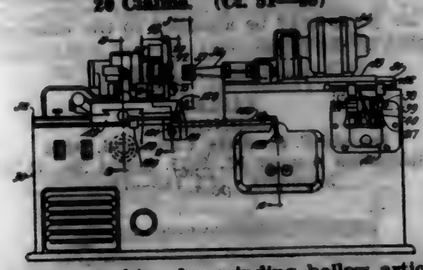
1. An elastic braid comprising interbraided elastic and relatively inelastic strands, the elastic strands extending about the axis of the braid in substantially smooth uninterrupted intertwined helices, the inelastic strands constituting two distinct sets, the strands composing the two sets being disposed in intercrossing relation, the inelastic strands of each set each comprising a series of projecting bights, said bights being disposed in distinct rows collectively covering and substantially concealing the elastic strands.

2,032,266
COLLAR POINT STIFFENER
Joseph Di Benedetti, Oakland, Calif.
Application November 2, 1933, Serial No. 697,744
9 Claims. (Cl. 2—122)



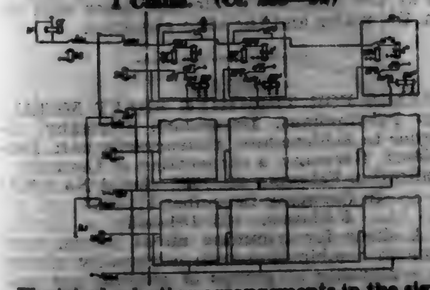
1. In a collar point stretcher for use with different turndown collars having point portions of differing lengths as measured from the fold of the collar, elongated strut members for operative disposal behind collar point portions, a cross-bar element connecting said members in unitary association, and adjustable means to adjust the length of each of said members to conform to the length of the collar point portion to be stretched therewith, and a releasable means for positively maintaining the adjusted length of each of said strut members whereby the member is arranged to operatively extend between the tip of said collar point and said collar fold.

2,032,267
WAGON FOR TRANSPORTATION BY RAIL AND BY ROAD
Julien René Louis Degiorge, Waltrelos, France
Application February 26, 1934, Serial No. 712,224
In France February 27, 1933
7 Claims. (Cl. 105—130)



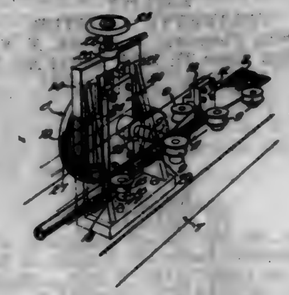
1. A vehicle for transportation by rail and by road comprising in combination a wagon adapted to travel on rail and provided with longitudinal beams, each having upper portions and two downwardly curved portions, two transversal cross members on said wagon carried on said downwardly curved portions, and a removable part comprising a frame, four supports carried by said frame at the corners of a rectangle and rotatably mounted on said frame about vertical axes, a wheel structure carried by each support and rotatably mounted on said support about a horizontal axis, means for rotating said supports, said means being adapted to maintain said supports in two different positions, in which the wheels have their plane in two directions at right angles, one of said directions being parallel to the longitudinal axis of said frame, whereby the removable part is adapted to travel on road, and the other direction being perpendicular to said longitudinal axis, whereby the wheels are adapted to be guided on said transversal cross members on said wagon.

2,032,268
GRINDING MACHINERY
Sol Einstein, Clement Booth, and Frederick S. Haas, Cincinnati, Ohio, assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a corporation of Massachusetts
Application June 28, 1929, Serial No. 372,721
28 Claims. (Cl. 51—50)



1. A grinding machine comprising a bed, a grinding wheel supported thereby for interior engagement with a work piece, means for rotatably supporting a work piece, means for axially advancing the work piece in the direction of the grinding wheel and means for transversely feeding the work piece in opposition to the operative surface of the grinding wheel, a sizing determinator for engagement with the operative surface of the wheel, and means controlled by the size determinator for laterally and axially withdrawing the work when the same has been ground to predetermined size.

2,032,269
GRINDING MACHINE
Sol Einstein, Clement Booth, and Frederick S. Haas, Cincinnati, Ohio, assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a corporation of Massachusetts
Application June 28, 1929, Serial No. 374,556
Renewed October 25, 1932
20 Claims. (Cl. 51—48)

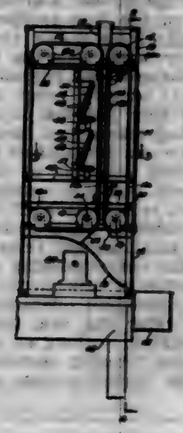


1. In a machine for grinding hollow articles, the combination with a supporting member, of a work rest carried thereby for peripheral engagement with the work piece, a regulating member rotatably mounted on the support in opposition to the work rest for peripheral engagement with the work, means for rotating said member at a slow rate of speed to frictionally control the rotation of the work, a pressure roll in opposition to the work rest and regulating member, means for urging the roll into engagement with a work piece, additional means for urging the pressure roll into released position, an ejector, and connections between the ejector and said additional means for actuating the ejector when the work is released.

2,032,270
ELECTRICAL SELECTING OR CONNECTING DEVICE
John Fredrik Teodor Engblom, Nottingham, England, assignor to Ericsson Telephones Limited, London, England
Application December 29, 1931, Serial No. 583,720
In Great Britain February 28, 1931
1 Claim. (Cl. 225—93)

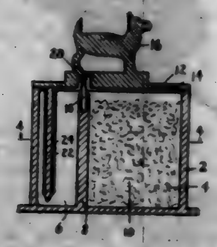
Electrical selecting arrangements in the signalling system of a totaliser comprising a plurality of start relays, a plurality of signal sending relays, and a plurality of hold-off relays; corresponding relays in each plurality being associated to form sets of three relays, the said sets of relays being associated in groups of sets, a group relay associated with each of the said groups, a circuit for each of the said group relays closed upon the operation of any start relay in the associated group and opened upon the operation of the corresponding signal sending relay, means for extending an operating potential to any one of the said signal sending relays, said means comprising a chain of serially related contacts having a trunk portion comprising contacts of the said group relays and branch portions comprising contacts of the said start relays, each of the said group relays having a contact which controls the release of such of the said hold-off relays as are comprised within the corresponding group, so that after the operation of any given signal sending relay and the subsequent operation of the associated hold-off relay the said hold-off relay is maintained energized so long as any start relay in the same group remains operated without the operation of the corresponding signal sending relay.

2,032,271
PIPE FORMING PROCESS
Winford L. Enghauser, Lebanon, Ohio
Application October 25, 1933, Serial No. 695,155
2 Claims. (Cl. 72—94)



2. The process of forming pipe comprising the steps of; bending a flat strip into the form of a tube and incidentally forming adjacently disposed flanged edges; passing said tube thus formed along a support; and engaging said flanged edges under considerable pressure with the periphery of a disc rotating at a speed sufficient for producing a softening heat in the flanges by virtue of friction caused by the speed and pressure of the disc, and swaging and merging the heated edges by virtue of the pressure applied as described to form a seamless tube.

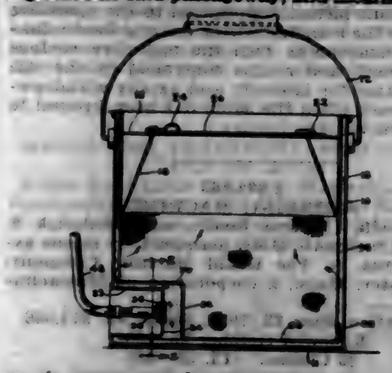
2,032,272
TOASTING AND SIMILAR APPARATUS
Charles A. Feltman, Brooklyn, N. Y.
Application January 31, 1935, Serial No. 4,324
20 Claims. (Cl. 53—5)



1. A machine of the class described comprising a casing, two endless conveyors in said casing having portions thereof arranged adjacent each other, means for maintaining adjacent portions of the separate conveyors in close proximity to each other and in substantially parallel relation throughout a substantial length of the separate conveyors and to prevent displacement of the conveyors throughout such length, means for operating the conveyors at substantially the same speed from a common driving source with

the adjacent portions thereof travelling in the same direction, and means disposed adjacent

said first named means for radiating heat onto said conveyors.



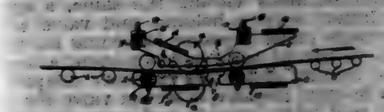
2,032,273
CIGARETTE LIGHTER
Irving Florman, New York, N. Y.
Application June 27, 1934, Serial No. 732,696
4 Claims. (Cl. 67—7.1)

1. A lighter comprising a casing open at its top, smouldering material within said casing accessible for contact by a cigarette through the open top thereof, a striking member carried by said casing adjacent said smouldering material, a cover for closing the open top of said casing and extinguishing said smouldering material, and a flint strip holder extending downwardly from said cover and at an angle thereto, said strip holder being adapted to penetrate into the material through the open top of the casing to rearrange the smouldering material.

2,032,274
LIVE BAIT BUCKET
Peter J. Fenes, Leavenworth, Kans.
Application July 26, 1935, Serial No. 33,227
2 Claims. (Cl. 43—56)

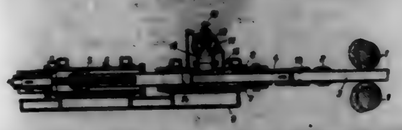
1. A live bait bucket comprising an outer imperforate container, an inner perforate container, an inwardly extending hollow member secured to said outer container, a valve casing secured within said hollow member having a passageway adapted to deliver air directly into water contained in said inner container, an inwardly opening valve in said passageway, and means whereby

an air pump may be attached to the outer end of said valve casing.



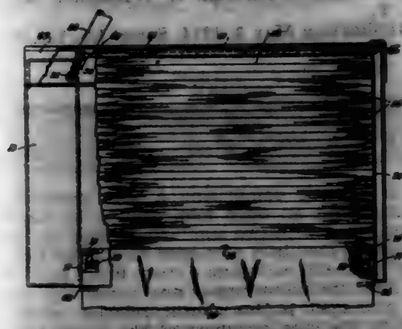
2,032,275
SHINGLE
Donald F. Fradette, Cleveland, Ohio
Application August 12, 1935, Serial No. 35,788
3 Claims. (Cl. 108—17)

1. A roof structure including a felted impervious base layer, plate elements having a hooked-shaped and a notched butt end mounted on said base layer, each plate being provided with a bead adapted to form a dam, intermediate its length and extending the width thereof, hooked-shaped strips, a bead positioned intermediate the length of each strip, and adapted to fit over the bead on the plates to provide a continuous dam, a sound deadener and seal, said sound deadener and seal being associated with the under surface of each strip element, the strip element being superimposed upon the plate elements and covering the joint between the elements, the hook on the strip element engaging a receiving notch provided therefore in the butt of the plate elements, the upper flat portion of the strip element engaging in another receiving notch in the butt of a plate element in the next row above, an edge of the base layer in the row next above overhanging the bead, the bead providing a supporting ledge for said over-hanging edge, the said over-hanging edge adapted to facilitate easy reception of the hooks on the plate elements and the strip elements, and being further adapted to provide a seal at the junction of the base layer with the dam, the plates and the strip elements.



2,032,276
SHEARS FOR TRIMMING SHEET METAL
Louis Frielinghaus, Duesseldorf, Germany, assignor to Schloemann Aktiengesellschaft, Duesseldorf, Germany, a corporation of Germany
Application February 23, 1935, Serial No. 7,859
In Germany December 27, 1933
3 Claims. (Cl. 164—90)

2. A shear for trimming metal sheets, comprising in combination with a plurality of cutters, a plurality of groups of guiding and supporting rollers adapted to engage the sheets from above and below in the direction of feed and disposed along a curve conforming to the longitudinal and transverse curvature of the sheets to be trimmed, and conveying rollers provided in advance of and after said guiding and supporting



rollers and likewise disposed along a curve conforming to the longitudinal curvature of the metal sheets to be trimmed.

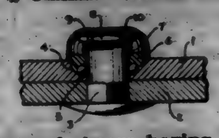
2,032,277
BRAKING DEVICE FOR FEEDING MEANS OF PILGERING MILLS
Josef Gassen, Duesseldorf-Oberkassel, Germany, assignor to Schloemann Aktiengesellschaft, Duesseldorf, Germany, a corporation of Germany
Application July 31, 1934, Serial No. 737,726
In Great Britain August 2, 1933
3 Claims. (Cl. 80—14)

1. In a braking device for the feeding means of pilgering mills, the combination with a cylinder filled with a liquid and a braking plunger adapted to reciprocate in said cylinder and operatively connected with the feeding means, of a closed air-filled vessel in direct communication with said cylinder having a constricted upper portion so disposed as to offer a rapidly increasing powerful resistance to the liquid displaced by said plunger toward the end of the feeding stroke.

2,032,278
MAGAZINE VENDING MACHINE
Andre Grallet, New York, N. Y.
Application May 15, 1934, Serial No. 725,791
3 Claims. (Cl. 312—55)

1. In a machine of the character described, a base the top of which is adapted to support periodicals, a housing telescoping with said base and supported by the periodicals, and means for ejecting the topmost periodical horizontally, said means comprising a U-bar including a cross piece contacting the rear edge of the topmost periodical and means for forwardly shifting said bar to eject the topmost periodical.

2,032,279
TREATMENT OF LUBRICATING OILS
Alan Arnold Griffith and William Helmore, South Farnborough, England, assignors to C. C. Wakefield & Company Limited, London, England, a British company
No Drawing. Application November 9, 1934, Serial No. 752,311. In Great Britain August 1, 1933
2 Claims. (Cl. 87—9)

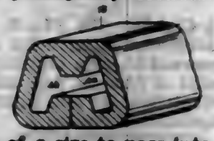


1. A fluid lubricant comprising a lubricating oil having dispersed therein chromium oleate up to 1% by weight of the oil, the said chromium oleate being effective as an anti-sludging agent in an internal combustion engine.

2,032,280
FASTENER
Arthur W. Grosshans and Harry H. Evans, Stockham, Nebr.
Application December 11, 1934, Serial No. 756,897
1 Claim. (Cl. 24—201)

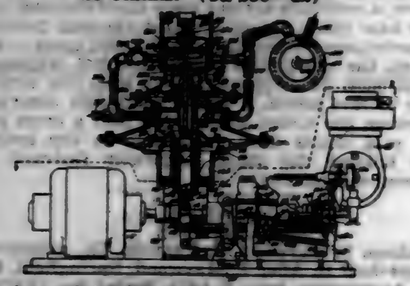
A fastener for garments comprising a flat base piece, a centrally arched piece superimposed upon the base piece, means securing the said pieces in superimposed relation to each other upon a garment, the said pieces having notches registering with each other in alignment with the arch of one of said pieces, a shank releasably insertable between the pieces at the arch and a cross head on said shank and engageable in the notches for holding the shank separably fastened between said pieces.

2,032,281
SHEARS
Jackson S. Haywood, Springfield, Ill., assignor of one-half to Alice E. Haywood, Springfield, Ill.
Application June 6, 1935, Serial No. 25,229
2 Claims. (Cl. 30—13)



1. In a pair of shears having pivoted blades and respectively integral handles, the improvement comprising a threaded stud defining the pivot means, the outer-most blade provided at its pivot point with a cupped circular recess, a plurality of ball bearings rotatably registering within said recess about said stud, a compresion spring registering over said stud and a plate on the stud defining a cover for the ball bearings and a seat for the spring, an adjustment nut for retaining said spring in selected positions of tension adjustment and a dust-cap threadedly engaging said stud to provide a cover for the spring and ball bearings and to provide a lock nut means for holding said adjustment nut in said selected positions.

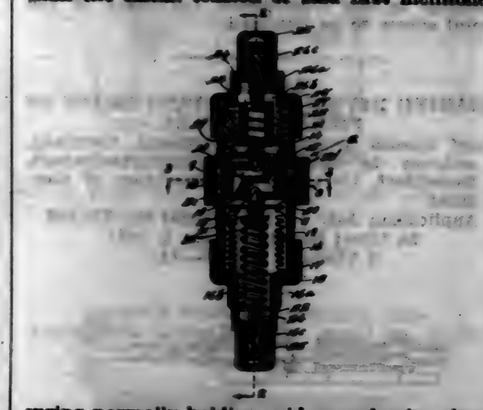
2,032,282
ORTHODONTIC ANCHORAGE
Russell E. Irish, Pittsburgh, Pa.
Application October 31, 1925, Serial No. 66,185
5 Claims. (Cl. 32—14)



1. In an orthodontic anchorage, a socket member comprising a base wall for attachment to a

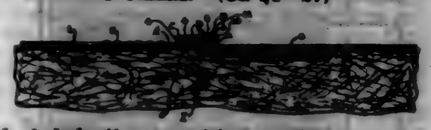
tooth-embracing band and a smooth unbroken outer wall extending from one side to the other side of the base wall and defining therewith an internal socket having an open end, two of the opposite walls of said socket member having opposing inset longitudinal ribs spaced apart and dividing the socket into spaced chambers with a connecting passageway between them, and a

plug member of a size to pass into the open end of the socket, said plug member having spaced longitudinal portions and a reduced neck portion connecting the same, said portions fitting snugly in the chambers and passageway respectively and engaging the walls thereof with sufficient frictional engagement to hold the plug member against normal accidental displacement.



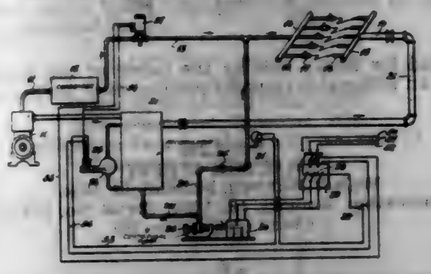
2,032,233
PRESSURE OPERATED REGULATOR FOR BURNERS
Wayburn E. Johnston, Minneapolis, Minn.
Application June 18, 1932, Serial No. 618,077
26 Claims. (Cl. 236—82)

2. A regulator having in combination, a member movable with substantially no friction, a diaphragm surrounding and attached to said member adapted to be moved by air pressure in one direction, a spring against which said member is moved, a second diaphragm coaxial with said member adapted to be moved in one direction by air pressure, a spring for moving said second member in the opposite direction, a valve part carried by said first mentioned member, a cooperating part carried by said second diaphragm, said parts being adapted to be moved out of registry by movement of said first mentioned member and into registry by movement of said second diaphragm whereby said second diaphragm is moved in fixed ratio to the movement of said first mentioned member, means creating a pressure in accordance with the temperature produced by a burner for moving said first mentioned diaphragm and member, and means for regulating the fuel supplied to said burner and/or the air supplied to said burner actuated by said second member.



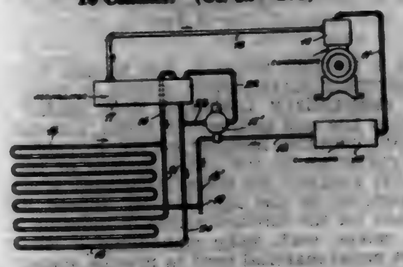
2,032,234
PRESSURE REGULATING VALVE
Wayburn E. Johnston, Minneapolis, Minn.
Application May 6, 1933, Serial No. 669,760
8 Claims. (Cl. 137—153)

1. An oil control valve for an oil burner having in combination, a casing having a chamber therein to which oil is supplied, a passage leading from said chamber adapted to be connected to the nozzle of an oil burner, a valve controlling said passage and normally closing the same, a spring under initial tension holding said valve closed but movable under pressure exceeding its initial tension to permit said valve to open, a second passage leading from said chamber adapted to form a by-pass passage, a second valve for controlling said latter passage and normally closing the same, a spring under initial tension much less than the initial tension of said first mentioned



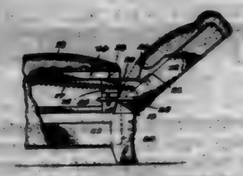
spring normally holding said second valve closed but movable under pressure exceeding its initial tension to permit said second valve to open, said last mentioned spring being of much greater cross-sectional area and of much shorter length than said first mentioned spring, said last mentioned spring thus compressing more slowly than said first mentioned spring whereby said second valve will be permitted to open at a lower pressure than said first mentioned valve and upon decrease of pressure from a point above the opening pressure of said primary valve said primary valve will close before said second valve.

2,032,235
BALE TIE
Ernest F. W. Keibl, Jr., Medina, N. Y., assignor of one-half to Bertram W. O'Donnell, Medina, N. Y.
Application May 3, 1934, Serial No. 723,788
5 Claims. (Cl. 24—37)



1. A bale tie comprising a wire provided at one end with an open loop and at its opposite end provided with two similarly formed oppositely disposed members arranged in side by side relation and each including a front brace portion of loop form including upper and lower side members arranged in horizontal relation with respect to the side members of the front loop of the opposite similarly formed member and a rear upper loop forming upper and lower side members corresponding to the upper and lower side members of the upper rear loop of the opposite similarly formed member to form the bill of the hook, each of said similarly formed members having a shank portion extending rearwardly from substantially the middle of said hook in side by side relation, the lower side members of the upper rear loop being curved and cooperating with said shank portions to provide a restricted throat for the hook to receive said open loop and holding the outer end of the open loop between the same substantially intermediate the ends of the hook, the front brace portions of the hook lying on the bale tie adjacent the loop to brace the bill of the hook against accidental bending when the tie is operatively bound about the bale.

2,032,236
REFRIGERANT LIQUID RETURN SYSTEM
William R. Kitzmiller, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a corporation of Pennsylvania
Application April 30, 1935, Serial No. 19,662
7 Claims. (Cl. 62—115)

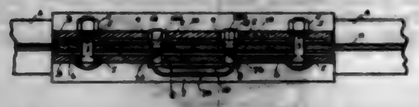


1. In a refrigerating system including an evaporator and a high pressure liquid line for supplying liquid refrigerant to said evaporator, means for separating entrained liquid refrigerant from the suction gas, means in the high pressure line for cutting off the supply of liquid refrigerant to the evaporator, means for returning the accumulated liquid refrigerant to said evaporator, and means subject to the liquid in the accumulator for controlling the supply of liquid refrigerant to the evaporator.

2,032,237
REFRIGERANT FEED CONTROL
William R. Kitzmiller, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a corporation of Pennsylvania
Application April 30, 1935, Serial No. 19,664
10 Claims. (Cl. 62—178)

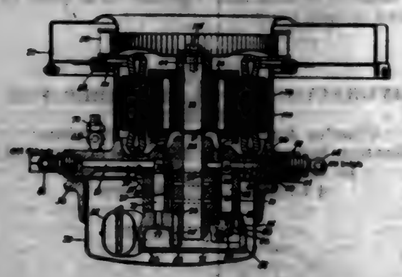
1. A method of refrigeration comprising supplying liquid refrigerant, evaporating a portion of said liquid refrigerant, withdrawing the vaporous and entrained liquid from the place of evaporation, separating liquid from the vapor, evaporating a portion of the separated liquid, withdrawing the vaporous and entrained liquid from the second place of evaporation, separating liquid from the vapor, equalizing the liquid level between the two separated liquids, and utilizing part of the entrained liquid from the second separation for a subsequent evaporation.

2,032,238
RECLINING CHAIR
John Kuss, Chicago, Ill.
Application October 13, 1934, Serial No. 748,332
1 Claim. (Cl. 155—163)



A chair of the class described comprising a frame, an arm rail at one side of said frame, a back hingedly secured to said frame, tension means anchored at one end to said arm rail and secured at its opposite end to the back near the lower end of the back and adapted to normally hold the back in a raised position, a spring metal elongated flat guiding strip engaging the under face of said arm rail and having one end fixedly secured to said back, said guiding strip normally lying flat throughout its entire length against the under face of said arm rail when said back is in a raised position, said strip being longitudinally slotted, a securing pin passing through said slot and engaging said arm rail, said pin limiting the longitudinal movement of said strip as said back is moved to and from a raised position, said spring metal guiding strip being adapted to flex at a point near its connection with said back when the back is swung to a reclining position and when the point of connection of said strip with the back is moved to a plane below the normal position of the strip whereby downward pull upon the securing pin will be minimized, and said frame having a clearance formed therein through which said tension means and guiding strip pass to be secured to said back.

2,032,239
HYDRAULIC SHOCK ABSORBER FOR VEHICLES
Charles Lacroix, Brussels, Belgium
Application November 15, 1934, Serial No. 753,222
In Belgium November 16, 1933
4 Claims. (Cl. 188—89)



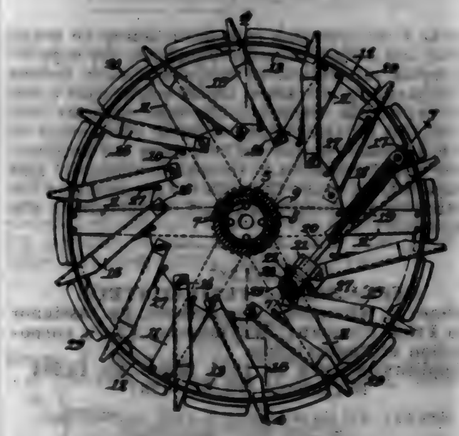
1. In a hydraulic shock absorber for vehicles, the combination of a casing, a shaft in said casing, a circular wall dividing the inside of said casing into a central circular chamber and an outer annular chamber, two pairs of blades mounted for independent limited angular motion on said shaft, the outer ends of said blades having a substantially fluid-tight engagement with the inner surface of said circular wall, a pair of arms pivoted on said shaft and connected each to one of said pairs of blades, means for closing both said chambers in a fluid tight manner, and a permanently open passage connecting said chambers with each other through constricted holes on either side of each of said pairs of blades.

2,032,250
RAIL BOND
Arthur L. Lee, Gibsonia, Pa.
Application August 30, 1933, Serial No. 687,418
3 Claims. (Cl. 173—283)

1. In a conducting assembly for electrical current flow from rail to rail, the combination of two abutting rails having each an opening in the web thereof adjacent the end of the rail, a conducting U-bolt having a hight spanning the interval between the web openings of adjacent rails and shanks extended through said openings, a nut on each of said shanks in the region which is projected through the web opening of a rail, a tapered rail-contacting portion on each nut terminally of a cross-sectional area to enter the web opening of the rail contacted by it, the nuts being of a conductive metal which is of a hardness sufficiently greater than the hardness of the rail to cause deformation of the rail metal rather than deformation of the nut metal when the nuts are forced at high pressure into contact with the wall of the web opening, and resilient means exerting a constant force adequate to maintain a high pressure contact between the nuts and the rails.

2,032,291
PUMPING APPARATUS
Walter O. Lum, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 26, 1934, Serial No. 737,643
12 Claims. (Cl. 103—7)

1. Pumping apparatus including a cylindrical tank, a pump mounted eccentrically inside the tank on the top wall thereof for pumping liquid into the tank, and a liquid by-pass control valve mechanism for the pump having a sector shaped float nested in the space provided between the pump and the tank.

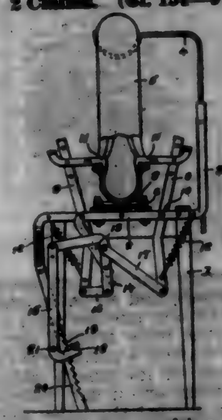


2,032,292
SLEEVE HOLDER
John B. Mease, Lawrence, Mass.
Application September 13, 1934, Serial No. 743,967
2 Claims. (Cl. 24—14)

2. In combination with a band having a relatively thin elongated shank rigid longitudinally and yieldable transversely, spaced heads carried by the shank at its respective ends, each head having a reduced neck for securing the head to the shank, the heads being adapted to fit under the fabric of a sleeve to permit the holding of the sleeve in an adjusted length, and a spring clip removably fitted about the shank of each

head for firmly holding the fabric of the sleeve in an adjustable clamped position over the heads.

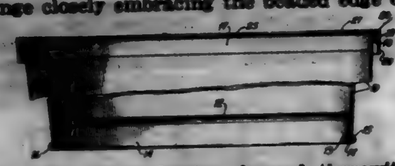
2,032,293
TRACTOR WHEEL
Walter Maxwell, Marshfield, Wis.
Application January 19, 1934, Serial No. 707,461
1 Claim. (Cl. 301—46)



In a traction wheel, a hub section having a transversely curved outer surface, a felloe having substantially U-shaped slots, spokes connecting the hub section and felloe, a circumferentially movable member curved to conform to the curvature of the outer surface of the hub section whereby the movable member is secured in position on the hub section, spaced flanges formed on the circumferentially movable member, spikes, each spike embodying a length of sheet metal material bent to provide spaced longitudinal flanges, said flanges tapering towards the inner ends thereof, said spikes having cutaway portions accommodating the flanges of the circumferentially movable member, the flanges of the spikes resting on opposite sides of the flanges of the circumferentially movable member, coiled springs connected to the flanges of the circumferentially movable member, the outer ends of the springs being connected to the spikes and mounted within the spikes, and means to retain the circumferentially movable member for extending or retracting the spikes.

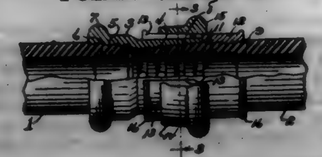
2,032,294
ELECTRIC HEATING PAD
Chester R. McDonald, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 11, 1933, Serial No. 693,118
2 Claims. (Cl. 219—46)

1. An electric heating pad comprising a supporting body made of flexible waterproof material, a resistance heating element secured to said body, a flange extending around the periphery of said body, said flange being integral with said body and made of the same material as said body, and a liquid absorbent pad secured to said body by said flange.



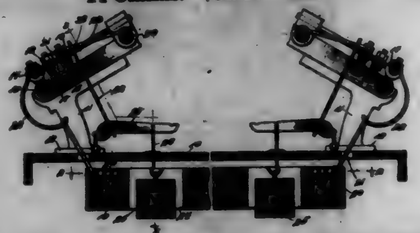
2,032,295
TIRE SPREADING MACHINE
Alfred Molmert, Roscobel, Wis.
Application June 8, 1934, Serial No. 729,711
Renewed June 26, 1935
2 Claims. (Cl. 154—9)

1. A tire spreading machine comprising a bench, a horizontally arranged member secured to the bench, tire supporting means carried by said member, levers pivoted to said member and extending above and below the latter, jaws to engage opposite walls of the tire adjustably connected to said levers, springs between the levers and the member for urging the jaws towards each other, a rack bar carried by said member, an operating lever associated with the rack bar, a bracket carried by said member, an L-shaped arm pivoted to said bracket, links pivotally connecting the arm to said first-named levers, and a pivotal connection between the operating lever and said arm.



2,032,296
CONTAINER
Anton M. Meier, Menasha, and Ronald L. Drake, Appleton, Wis., assignors, by mesne assignments, to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application February 12, 1931, Serial No. 517,344
2 Claims. (Cl. 220—43)

1. In a container of the class described, the combination of a body provided around the exterior of its upper edge with a marginal bead, and a cover consisting of a disk-shaped body portion and a downwardly extending converging flange closely embracing the beaded edge of the

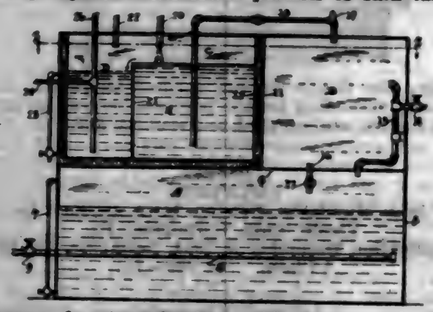


body, the flange having formed therewith inwardly extending tongue portions bent at an angle thereto and secured to the cover disk.

2,032,297
COUPLING
John Mikulasek, Newton, Iowa, assignor to Vaclav Lesa, Coraopolis, Pa.
Application December 3, 1934, Serial No. 755,804
1 Claim. (Cl. 285—75)

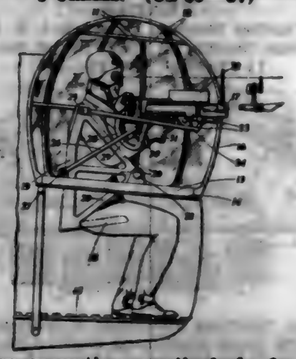
A coupling comprising a sleeve having a flared bore, a tapered elastic nipple to fit within the tapered bore of the sleeve, a perforated ferrule fitted in the nipple and having transverse corrugations, a collar fitted around the base of the nipple, resilient fingers extending from the collar to encircle the sleeve, and means to compress the fingers about the sleeve.

2,032,298
WEIGHTING MEANS FOR SPINNING FRAMES
Charles Merten, Pawtucket, R. I.
Application March 24, 1932, Serial No. 600,869
14 Claims. (Cl. 19—135)



1. In a spinning machine, a support, a pair of spinning units positioned back to back on said support, each having pairs of draft rolls, a common weight extending between said units and below said support for applying pressure to one of the pairs of rolls of each unit, and additional weighting means for one of the other pairs of draft rolls located horizontally below said support and having its center of mass in a plane passing vertically through the center of mass of said common weight.

2,032,299
SOLVENT RECOVERY DEVICE
George A. Mott and Celia C. Jones, Santa Monica, Calif.; said Jones assignor of his right to Harry H. Lynn, Los Angeles, Calif.
Application December 11, 1934, Serial No. 757,027
2 Claims. (Cl. 196—15)



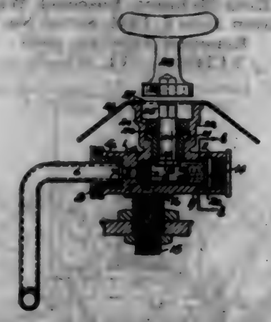
1. In a device of the character described, capable of separating a solvent from sludge, a

tank, a horizontal partition formed in said tank, a portion of said tank above said partition being divided into a pair of chambers, one of said chambers being insulated from the other of said chambers, live steam heating means for generating vapors in the lower portion of said tank,

means for transferring said steam and said vapors to the un-insulated chamber of said tank, means for passing said steam and said vapors to said insulated chamber, and washing means for separating said steam and said vapor so as to wash and remove the lighter solvents from said steam.

2,032,560
GUN MOUNTING, PARTICULARLY FOR AIRCRAFT
Clifford Vernon Murray and John Lloyd, Coventry, England, assignors to Sir W. G. Armstrong Whitworth Aircraft Limited, Coventry, England
Application July 3, 1935, Serial No. 29,716
In Great Britain November 8, 1933
5 Claims. (Cl. 89—37)

1. A gun mounting, particularly for an aircraft, comprising a shell through which the gun can be fired, a frame for supporting the gun, a seat for the gunner pivotally mounted for support directly upon said shell, said frame being pivotally mounted directly upon said seat, and a link interconnecting said frame and shell such that the weight of said seat is opposed to that of said gun and frame.

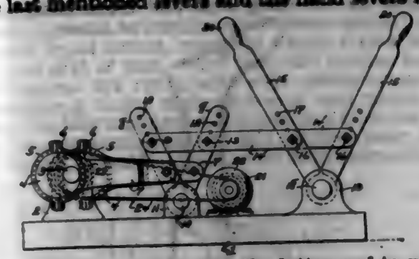


2,032,561
METER TEST BLOCK
Thomas J. Newman, Canton, Ohio
Application January 20, 1932, Serial No. 587,892
7 Claims. (Cl. 200—162)

7. An electrical terminal block comprising a base, two conducting fingers mounted on said base with their ends spaced from each other, and two plates slidable on one of said fingers, one on each side of the finger upon which it slides,

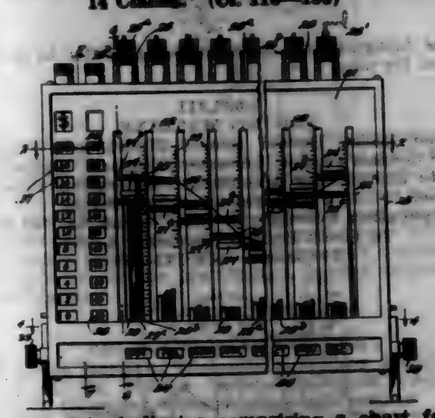
and a single means for binding said plates and fingers into electrical connection in circuit closing position.

2,032,562
VALVE
Anton Novotny, Detroit, Mich., assignor to Detroit Gray Iron Foundry Company, Detroit, Mich., a corporation of Michigan
Application August 8, 1934, Serial No. 738,994
2 Claims. (Cl. 251—46)



1. A valve comprising an apertured body having an inlet passage and an outlet passage angularly disposed to one another and a valve seat formed within the body around the outlet passage, a plunger having a peripheral cavity therein intermediately of its length slidable in said body, a valve member on one extremity of the plunger to bear against the valve seat and close the outlet passage, a tubular branch opening into the hollow body farther from the outlet passage than the inlet passage is from the latter, said member being resilient and having a sliding fit in the body aperture so that when said member is moved from its seat and a flow of liquid passes from the inlet to the outlet passage the liquid forces the member into intimate contact with the enclosing wall of the aperture and prevents an escape of the liquid to the branch, a spindle rotatable in the branch, and an eccentric on the inner extremity of the spindle resting in the plunger cavity so that rotation of the spindle moves the plunger axially.

2,032,563
EXERCISING MACHINE
Nick Orgitano, Lebanon, Pa.
Application December 4, 1934, Serial No. 755,964
3 Claims. (Cl. 272—56)



2. An exercising machine comprising a base, a pair of hand levers pivotally secured and rising from the base, a shaft journaled with respect to the base, arms eccentrically mounted with respect to the shaft, levers pivotally mounted and rising from the base and having the arms pivotally connected thereto, and links adjustably secured to

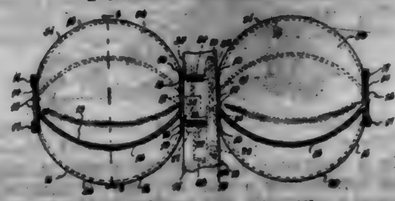
the last mentioned levers and the hand levers re-

spectively for reciprocating the latter and to vary the throw thereof.

2,032,564
DATA INDICATOR
Benjamin Lewis Padgett, Brooklyn, N. Y.
Application January 30, 1932, Serial No. 654,899
14 Claims. (Cl. 116—135)

1. A data indicator comprising a chart face having slots, coordinate-indicating means, a series of movable point-indicating devices, screw means arranged at the rear of the respective slots, nuts on the screw means and a carrier arm extending through a slot and connecting each nut with its point-indicating device.

2,032,565
DISPENSING DEVICE FOR COLLAPSIBLE TUBES
François Poulin, Sherbrooke, Quebec, Canada, assignor of one-half to Leopold Chevalier, Sherbrooke, Quebec, Canada
Application October 2, 1935, Serial No. 43,461
In Canada September 3, 1935
2 Claims. (Cl. 251—90)

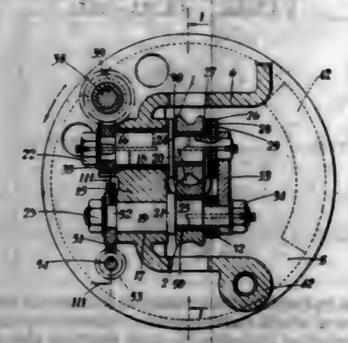


1. In a collapsible tube having an opening in its top, a cap rotatably connected with the top and having an opening in its top, a longitudinally movable closure member in the cap having a part for closing the opening in the cap and means whereby rotary movement of the cap in one direction will move the closure member to closing position and rotary movement in the opposite direction will move said closure member to open position.

2,032,566
POINTER MOUNTING ARRANGEMENT FOR MEASURING INSTRUMENTS
William H. Pratt, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application November 12, 1931, Serial No. 574,607
1 Claim. (Cl. 73—151)

In an indicating instrument, a moving element therefor, a shaft carrying said moving element, a control spring attached to said shaft, a sleeve surrounding said shaft, a pointer carried by said sleeve, a spring of greater stiffness than said control spring and having one end attached to said sleeve and the other end attached to said shaft, thereby serving as a yieldable connection between said sleeve and said shaft, biasing said pointer to a given position with respect to said moving element, and means preventing said pointer from overhauling said moving element in a given direction comprising a pin attached to said shaft and a second pin attached to said sleeve, said pins being in contact in the normal relative position of said sleeve with respect to said shaft to which the sleeve is biased.

2,032,567
FOLDING AEROPLANE WING
Leander F. Prevette, Thomasville, N. C., assignor of one-half to B. T. Prevette, Lexington, N. C.
Application September 5, 1935, Serial No. 39,324
4 Claims. (Cl. 244—12)



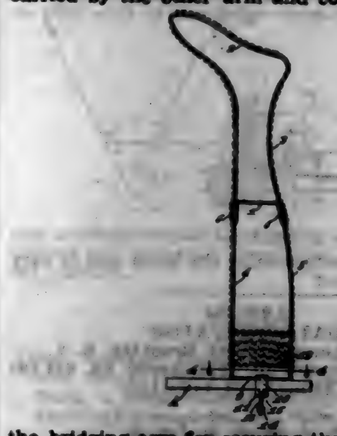
1. An aeroplane wing or the like comprising a continuous frame, frames engaged therewith and movable in opposite directions, means operable to maintain the frames in folded condition, a covering passing through the first mentioned frame and secured adjacent its margin to each of the other frames, cranks on the movable frames, a pitman connecting said cranks, and spring means urging closing movement of the movable frames.

2,032,568
ROLLER CLOSING DIE ARRANGEMENT FOR USE IN STRANDING MACHINES
Reginald Edward Pritchard, Old Trafford, and Isaac James McAlpine, Urmston, England, assignors to W. T. Glover and Company Limited, Manchester, England, a British company
Application May 1, 1935, Serial No. 19,248
In Great Britain May 4, 1934
9 Claims. (Cl. 117—50)

1. In a rotating stranding head for use in a

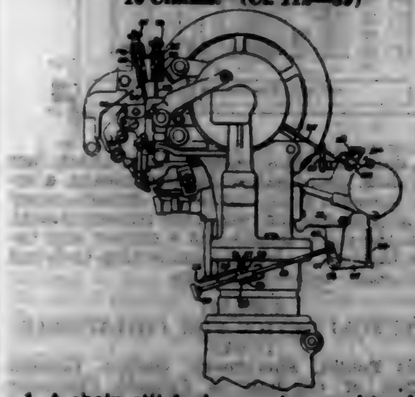
machine for the manufacture of pre-spiralled non-circular strand, a bearing, a roll shaft rotatably mounted in said bearing with one end overhanging the bearing, a roll in the form of a ring rotatably mounted on the overhanging end

of the said roll shaft, a slipping coupling interposed between the roll shaft and the roll, means for imparting rotation to the roll shaft, and at least one other roll rotatably mounted in the head and co-operating with the first said roll to form a closing die.



2,032,309
SERVICE JACK
Ottis H. Rechard and Oscar F. Kuhlman, York, Pa., assignors, by mesne assignments, to American Chain Company, Inc., New York, N. Y., a corporation of New York
Application January 26, 1932, Serial No. 588,970
28 Claims. (Cl. 254—2)

1. In a hydraulic jack having a ram, a single casting comprising a ram cylinder, a pump cylinder and a reservoir, the bottom of the reservoir being integral with the bases of the two cylinders, said casting having a single bore therein for connecting the pump and ram cylinders, and valves in one end of said bore for controlling the flow of fluid between the reservoir, the pump and the ram.

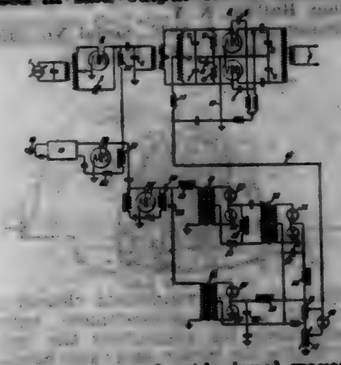


2,032,310
HOSIERY DRIER
Joseph F. Reinert, Quakertown, Pa.
Application August 6, 1934, Serial No. 738,749
1 Claim. (Cl. 223—75)

A hosiery drier comprising a frame including upper and lower sections and shaped to conform to the shape of a stocking, means for detachably securing the sections together, a substantially rectangular base frame formed on the lower end of the lower section and extending at right angles thereto, a bracket including spaced parallel arms and having one of the arms bridging and secured to the base frame, and screw clamping means carried by the other arm and cooperating with

the bridging-arm for securing the drier in position for use.

2,032,311
SEWING MACHINE
Fred Hicks, Harold Ernest Elliott, and Frank Coleman Chaloe, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application February 6, 1934, Serial No. 706,910
In Great Britain November 4, 1933
10 Claims. (Cl. 112—59)



1. A chain stitch shoe sewing machine having, in combination, stitch forming devices, a thread tension wheel located at the back of the machine, a spring to restrain the rotation of the tension wheel, means acting in timed relation to the stitch forming devices for connecting and disconnecting the wheel and spring during each stitch forming cycle, means extending to the front of the machine conveniently accessible to the operator for adjusting the tension of the spring, and an indicating device visible to the operator while at the front of the machine and actuated by said adjusting means for indicating the amount of tension placed on the spring.

2,032,312
CARRIER WAVE SIGNALING SYSTEM
Andrew D. Ring, Washington, D. C., assignor to General Electric Company, a corporation of New York
Application May 19, 1927, Serial No. 871,857
9 Claims. (Cl. 179—171)

1. In combination, an electron discharge device

having an input circuit, a grid and an output circuit, means to supply carrier wave oscillations to said input circuit, means to supply a fixed bias to said grid of such value that said carrier wave oscillations are reproduced with relatively small intensity, a source of signal waves, and means to vary the bias supplied to said grid in a direction to increase the intensity of said carrier wave reproduced in said output circuit in accordance

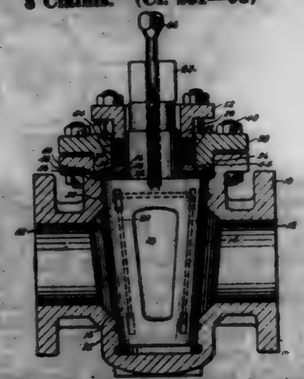
with the envelope of said signal waves, means whereby the carrier wave is modulated with the form of said signal wave, whereby the constant component of the modulated carrier wave is limited to said relatively small intensity and means whereby when the envelope of said signal waves exceeds a predetermined amplitude said constant component of the transmitted carrier becomes modulated.

2,032,313
PRODUCTION OF ESTERS
Heinrich Bertsch, Chemnitz, Germany, assignor to H. Th. Böhme Aktiengesellschaft, Chemnitz, Germany, a corporation of Germany
No Drawing. Application January 29, 1930, Serial No. 424,456. In Germany February 6, 1929
15 Claims. (Cl. 260—99.12)

1. The process of producing esters of sulphonated carboxylic acids comprising reacting a carboxylic acid having not less than 10 carbon atoms and selected from the group consisting of unsaturated and hydroxy fatty acids, a monohydroxy alcohol of low molecular weight and an intensive sulphonating agent at a temperature less than 15° C.

6. The process of producing esters of sulphonated carboxylic acids, comprising sulphonating and sulphating a carboxylic acid having not less than 10 carbon atoms and selected from the group consisting of unsaturated and hydroxy fatty acids by means of an intensive sulphonating agent and esterifying said carboxylic acid with a monohydroxy alcohol, the sulphonation and sulphation being effected in the presence of an anhydrous lower fatty acid radical compound selected from the group consisting of lower fatty acids, their anhydrides and chlorides.

2,032,314
ESTERS OF SULPHONATED CARBOXYLIC ACIDS
Heinrich Bertsch, Chemnitz, Germany, assignor to the firm H. Th. Böhme Aktiengesellschaft, Chemnitz, Germany
No Drawing. Original application January 29, 1930, Serial No. 424,456. Divided and this application September 1, 1933, Serial No. 687,913. In Germany February 6, 1929
9 Claims. (Cl. 87—13)



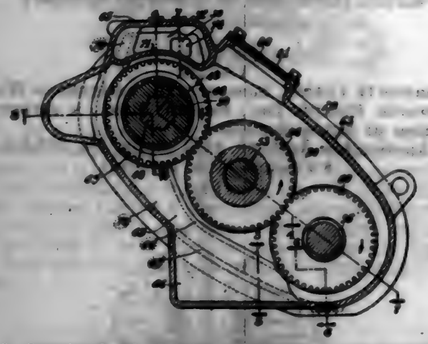
1. The process of producing esters of sulphonated carboxylic acids, which comprises reacting an alkyl derivative of sulphuric acid with a carboxylic acid having more than 10 carbon atoms at a relatively low temperature, whereby products which are esterified in both the sulpho and carboxyl groups are obtained.

2,032,315
ROTARY OPERATIVE FASTENER INSTALLATION AND FASTENER FOR THE SAME
Raymond O. Chaffee, Belmont, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application June 12, 1933, Serial No. 675,586
2 Claims. (Cl. 85—5)

3. The combination with a pair of relatively thin superposed apertured members of a rotary operating sheet metal fastener member, said fastener member having a body portion located at one side of one of said apertured members, and yieldable finger members located beneath said body portion and securing said members together, said fingers being located directly opposite each other and extending toward each other from adjacent to an edge of said body portion inwardly beneath and spaced from it except where they join the body portion, and then through the apertures in said apertured members and being face to face in contact with each other and then extending outwardly from each other to form hook-like portions engaging and overlying one of said apertured members the intermediate bent portions of said opposed fingers being in contact with each other to prevent the ends thereof from moving toward each other a sufficient distance to allow the fastener to be withdrawn when in locked position, said finger members together with said hook-like portions being yieldable as a whole relative to the body portion and throughout their lengths to adjust the fastener member to various thicknesses of apertured members.

2,032,316
VALVE
Charles H. Cotten, Kewanee, Ill., assignor to Walworth Patents Inc., Boston, Mass., a corporation of Massachusetts
Application April 28, 1934, Serial No. 722,840
8 Claims. (Cl. 251—93)

1. A valve comprising a casing having a valve seat, a valve member engaging said seat, a cover

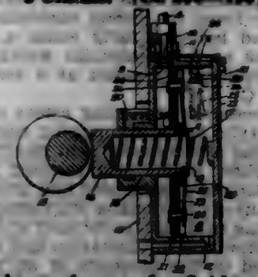


secured to the casing, a stem extending from the valve member adjacent said cover and defining a shoulder on said valve member, sealing means interposed between the casing and the cover and extending to the valve stem, means for seating the sealing means against the shoulder, and means adapted to engage the cover and maintain the sealing means seated independently of the first said means.

2,032,317
COFFEE MAKER
Hugo Frank, Hartford, Conn., assignor to The Silex Company, a corporation of Connecticut
Application February 5, 1935, Serial No. 5,087
25 Claims. (Cl. 53—3)

1. A seal for coffee makers or the like comprising a seal body of yieldable material having an external sealing area receivable in a lower bowl neck and having an axial passage adapted to receive and seal on upper bowl stem, said passage having a sealing portion and having a lower portion of increasing diameter extending to the lower end of said passage.

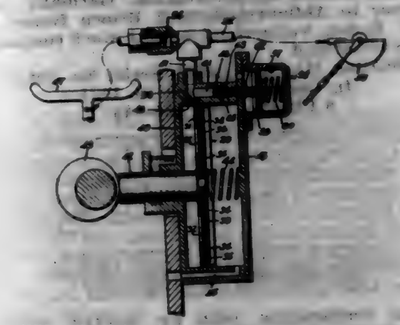
2,032,318
TRANSMISSION GEARING
Arthur W. Herrington, Indianapolis, Ind., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind., a corporation of Indiana
Application February 25, 1935, Serial No. 7,978
1 Claim. (Cl. 184—11)



A front-wheel driving train for automobiles comprising, a casing embodying an oil retaining sump, a multiplicity of gear-carrying shafts arranged in an inclined series, a train of successively meshing gears carried by said shafts with the lower portion of the lowest gear in said sump, an oil passage formed within said casing with its lower end in the plane of and tangentially to the periphery of the lowermost gear, in position to receive oil discharged tangentially therefrom and to deliver said oil to the periphery of the uppermost gear, a wall hugging the periphery of the uppermost gear with its upper end above said uppermost gear, said wall forming an upwardly directed continuation of said oil passage toward bearings within the casing.

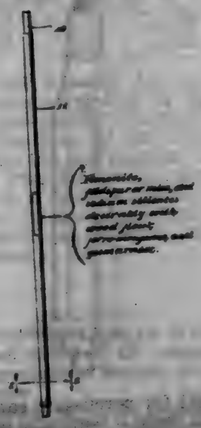
2,032,319
WINDSHIELD CLEANER
Erwin C. Herton, Hamburg, and Henry Hueber, Buffalo, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y.
Application June 2, 1932, Serial No. 615,249
3 Claims. (Cl. 121—97)

1. A fluid operated windshield cleaner motor provided with a valve compartment, automatic valve mechanism for controlling the operative supply of fluid to the motor, said valve mechanism including an oscillatable valve member having spaced movement limiting portions, means for operating the valve member back and forth, a stop pin disposed on the motor in the path of movement of and between said limiting portions, and a ring of cushioning and sound deadening material loosely mounted upon the stop pin and between said limiting portions for alternate engagement and movement thereby on said stop pin whereby to silence the arresting action of said valve member at the end of each oscillation thereof.



2,032,320
PUMP
Henry Hueber, Buffalo, and Erwin C. Herton, Hamburg, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y.
Application February 11, 1933, Serial No. 656,439
5 Claims. (Cl. 230—190)

1. A high speed pump for fluid operated automotive accessories, comprising a piston, a cylinder casing therefor having an inlet port at one side of the piston and an outlet port at the opposite side thereof, said piston comprising a fixed plate, a relatively movable cup packing in which the plate is normally nested for pumping, said packing having its flange in packing engagement with the inner wall of the casing and yieldable therefrom to by-pass fluid from the inlet side to the outlet side of the piston on one stroke of the latter, and resilient means holding the plate and cup packing in nested relation but permitting movement of the packing from the plate to form a passage through the piston to avoid an abnormal pressure differential on the

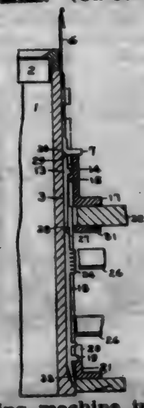


piston, said cup packing having an opening normally closed by seating on the fixed plate of the piston.

2,032,321
ACCESSORY SYSTEM FOR MOTOR VEHICLES
Henry Hueber, Buffalo, and Erwin C. Herton, Hamburg, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y.
Application March 9, 1932, Serial No. 597,865
10 Claims. (Cl. 230—190)

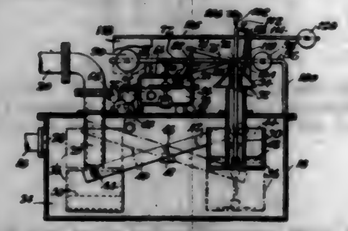
1. A pump for exhausting fluid from a conduit, said pump comprising a casing having a cylinder, a check valved connection from the conduit to the cylinder, a piston in said cylinder permitting uni-directional fluid flow therethrough, a second cylinder on said pump casing, a piston in said second cylinder having a rod controlling the passage of fluid through said first piston, resilient means for moving said second piston in one direction, and fluid connection with said conduit to said second cylinder for moving said second piston against said resilient means.

2,032,322
FLUX-COATED ELECTRODE
Paul R. Judy, Muncie, Ind., assignor to Indiana Steel & Wire Company, Muncie, Ind., a corporation of Indiana
Application April 10, 1934, Serial No. 719,846
2 Claims. (Cl. 219—8)



1. A weld-rod having a coating containing ilmenite, mica, and a binder silicate, with each of the first two forming from 10% to 40% of the total of the three.

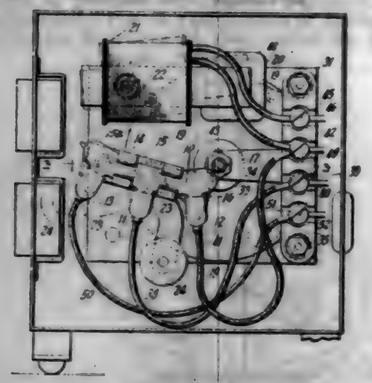
2,032,323
LADY'S GARMENT
Harriet S. Kohler, Larchmont, N. Y., and Frances R. MacKinnon, Westport, Conn.
Application September 23, 1935, Serial No. 41,646
5 Claims. (Cl. 2—73)



1. A body garment having waist and skirt portions made from a blank having a central portion and side portions, the grain of the central portion of said blank being substantially on the straight, a plurality of elongated darts extending inwardly and convergingly from the side edges of said blank, the side edges being secured together so as to form a waist-encircling portion, the darts extending from the rear of the garment and through the underarm sections in the waist section of said garment, the material between said darts being disposed on the bias with respect to the front median line of the garment.

2,032,324
KNITTING MACHINE AND METHOD OF KNITTING
Robert H. Lawson, Pawtucket, and Arthur N. Cloutier, Lonsdale, R. I., assignors to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts
Application May 28, 1931, Serial No. 540,774
18 Claims. (Cl. 66—50)

1. In a knitting machine including a needle bed, means for selecting needles including jacks mounted within the slots of the needle bed, said jacks adapted to be laterally displaced whereby the needles, companion to the jacks laterally displaced, are not selected, while the needles companion to the jacks not laterally deflected are selected, means movable with each needle, and cooperating means formed on each jack, one of the two means last mentioned having a cam formation whereby the jacks are laterally displaced upon relative movements of the two last mentioned means.



1,032,325
PRESSURE RELIEF VALVE
Wilbur G. Laird, Pleasantville, N. Y., assignor to Doherty Research Company, New York, N. Y., a corporation of Delaware
Original application June 15, 1931, Serial No. 544,484. Divided and this application January 12, 1935, Serial No. 1,545
4 Claims. (Cl. 277—13)

1. A valve structure comprising a gas chamber, an inlet to said chamber, a normally closed outlet from said chamber and a normally open outlet therefrom, two upright bucket containers for sealing liquid, each adapted to serve as a sealing valve for one of said outlets, a diaphragm movable in response to pressure variations within said gas chamber, and means responsive to a movement of said diaphragm operatively connected to said buckets for simultaneously sealing the normally open outlet and opening said normally closed outlet.

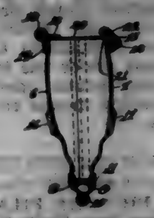
2,032,326
OSCILLATORY MOTOR
George H. Leland, Dayton, Ohio, assignor to The Leland Electric Company, a corporation of Ohio
Application November 10, 1928, Serial No. 494,570
37 Claims. (Cl. 172—126)

1. In a device of the character described, a

mercury tube switch mounted for oscillating movement under electrical power controlled by its own circuits, and an inertia wheel operatively connected with said switch to control the frequency of said oscillations.

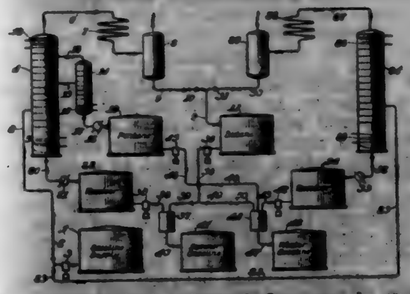
23. In a device of the character described, a mercury tube switch, a supporting member for said switch mounted for tilting movement, an induction motor comprising a rotatable disk and an electro-magnet for rotating said disk, said disk being arranged to function as an inertia wheel when said electro-magnet is deenergized, and means for operatively connecting said disk with said supporting member, said electro-magnet being adapted to be so connected with said switch that the circuit through the same will be broken by the movement of said supporting member in one direction and said disk caused to function as an inertia wheel to control the movement of said supporting member after said circuit has been broken.

2,032,327
ELECTRIC LOCOMOTIVE WITH INDIVIDUAL AXLE DRIVE
Wilhelm Oerlel, Berlin-Steglitz, Germany, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a joint-stock company of Switzerland
Application March 14, 1932, Serial No. 598,718
In Germany March 14, 1931
6 Claims. (Cl. 105—49)



2. In combination with an electric vehicle having a plurality of driving axles journaled in a non-swiveling frame in such manner as to subject the intermediate ones of said axles to greater load pressures than the load pressures exerted on the end ones of said axles, of motors for driving each of said axles, and means for causing the motors for driving the intermediate ones of said axles to exert a materially greater driving torque thereon than the driving torques exerted on the end ones of said axles by the motors for driving the latter of said axles whereby the guiding of said vehicle is facilitated during propulsion thereof.

2,032,328
DRILL BIT
Melvin E. Reedy, Tulsa, Okla., assignor to Franklin G. Reedy, Warren, Ind.
Application December 19, 1933, Serial No. 703,118
15 Claims. (Cl. 255—61)



5. A drill bit for percussion earth boring comprising a drill body, a conically tapered end surface, arcuate projections triangular in radial cross section permanently attached to and projecting from a portion of the conical surface in stepped relation to act as cutters.

2,032,329
MOLD
Karl Anton Max Reiche, Dresden, Germany, assignor to T. C. Weygandt Company, New York, N. Y., a corporation of New York
Application June 29, 1935, Serial No. 29,962
2 Claims. (Cl. 107—19)

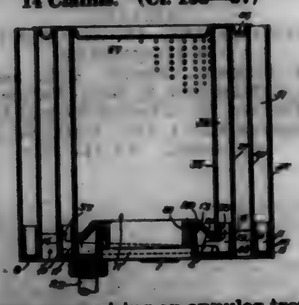
1. A mold for melted chocolate comprising a pair of relatively thin sheet-metal mold sections hingedly secured to each other and having their edges in generally abutting relation to each other when the mold is closed, and a relatively thin sealing strip, distinct from the sheet-metal of the mold sections, secured to and extending around the marginal zone of one of the sections at said edge thereof, overlapping said edge and adapted, when the mold is closed, to overlap said edge of the other section.

2,032,330
GASOLINE MANUFACTURING PROCESS
Joseph K. Roberts and Morris T. Carpenter, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application March 30, 1934, Serial No. 718,257
14 Claims. (Cl. 196—11)

2. A motor fuel adapted for use in warm weather comprising a mixture of hydrocarbons boiling within the gasoline boiling range and containing hydrocarbons of the aliphatic series beginning with butane and pentane and substantially free from propane contamination, characterized by having a ratio of pentane hydrocarbons to butane hydrocarbons less than one and more than 0.11 and between about 7 and 18 percent evaporated at 158° F.

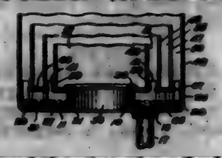
2,032,331
DISPLAY CONTAINER FOR WRENCHES
Theodore O. Raub, Chicago, Ill., assignor to Sherman-Klove Company, Chicago, Ill., a corporation of Delaware
Application October 22, 1931, Serial No. 570,562
5 Claims. (Cl. 206—34)

1. A container of the character set forth, having a bottom and upwardly projecting walls, one of said walls having inwardly projecting means for engagement with sockets or the like, a retainer and means for securing the retainer to the bottom whereby it will move laterally when moved lon-



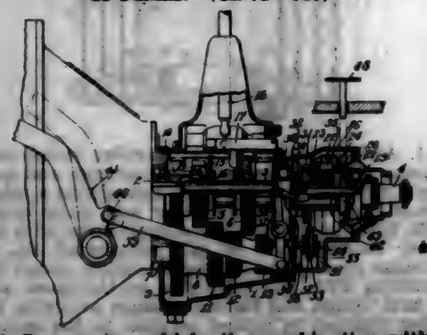
gitudinally, said retainer serving to assist in holding parts in the container.

2,032,332
LIQUID FUEL BURNER
Ralston M. Sherman, Glastonbury, Conn., assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn., a corporation of Connecticut
Application November 24, 1928, Serial No. 321,624
23 Claims. (Cl. 158—87)



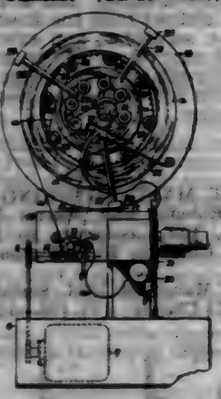
1. A liquid fuel burner comprising a burner base having inner and outer fuel grooves therein, an open duct connecting said grooves, means for supplying fuel to said grooves, said base having air supply openings between said fuel grooves and also an air supply opening within said inner groove, a removable cover for said base having openings registering with said air openings and said fuel grooves and adapted to cover said duct, and pairs of spaced, perforated, continuous walls presenting between them a combustion chamber registering with each of said fuel grooves, said walls being supported by said removable cover.

2,032,333
RANGE BURNER
Ralston M. Sherman, Glastonbury, and Frederick F. Neumann, West Hartford, Conn., assignors to The Silent Glow Oil Burner Corporation, Hartford, Conn., a corporation of Connecticut
Application December 20, 1929, Serial No. 415,470
14 Claims. (Cl. 158—97)



1. A burner comprising an annular trough body having a central opening therethrough and having a dividing wall, the latter comprising a raised arc-shaped lip forming inner and outer channels, fuel supply means communicating with the inner channel back of said arc-shaped lip, an annular cover plate having a portion closely interfitting with and supported by the inner wall of said trough and having a flange overlying the inner channel in spaced relation to the bottom wall of said inner channel and to the dividing wall to form a relatively narrow opening therebetween, a foraminate chimney erected on and supported by the overhanging peripheral edge of the flange, and a second foraminate chimney erected at the outer side of the trough.

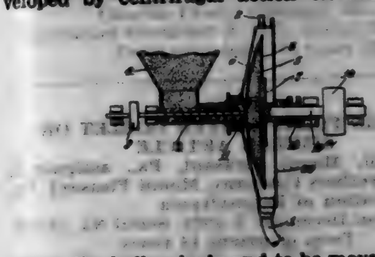
2,032,334
LIQUID FUEL BURNER
Ralston M. Sherman, Glastonbury, Conn., assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn., a corporation of Connecticut
Original application November 24, 1928, Serial No. 321,624. Divided and this application February 17, 1931, Serial No. 516,396
14 Claims. (Cl. 158—37)



1. A burner of the class described having pairs of spaced concentric annular combustion tubes forming spaced inner and outer combustion chambers with an intermediate air chamber and an inner air chamber enclosed by the inner combustion tube, a base having spaced annular upstanding walls presenting between them concentric, spaced, inner and outer fuel chambers underlying and communicating each with one of said combustion chambers, the inner one of said fuel chambers being of greater width than the outer one and extending laterally beyond the limits of the inner combustion chamber said base having openings for admitting air to the said air chambers, a removable wall overlying and forming with the laterally extending part of said wider fuel chamber a covered vaporizing space with its removable wall exposed to heat from the walls of the overlying air chamber, said removable wall having its peripheral edge adjacent the inner combustion chamber in spaced relation to the wall of said wider fuel chamber to provide an annular opening establishing the communication between said inner fuel and combustion chambers, and means for supplying fuel to said outer fuel chamber through said inner fuel chamber and vaporizing space.

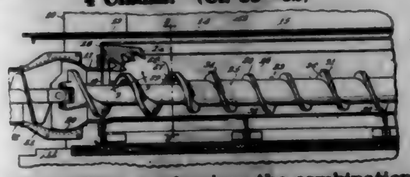
2,032,335
FREEWHEELING ATTACHMENT FOR AUTOMOBILES
John M. Simpson, Muncie, Ind., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application May 4, 1931, Serial No. 534,849
15 Claims. (Cl. 74—243)

1. In a motor vehicle, the combination with a power plant, of a propeller shaft, an engine clutch interposed between said power plant and said propeller shaft, a transmission for operating said propeller shaft at a plurality of speeds and in a reverse direction interposed between said power plant and propeller shaft, means for affording a one-way drive from said power plant to the propeller shaft, means for locking out said last mentioned means to effect a two-way drive between the power plant and the propeller shaft, means biasing said lock out means in one direction, means operated by either the operating means for the engine clutch or for the transmission for placing said biasing means under tension, means for restraining the operation of said lock out means under the influence of said biasing means and means operated from the transmission operating means for releasing said restraining means.



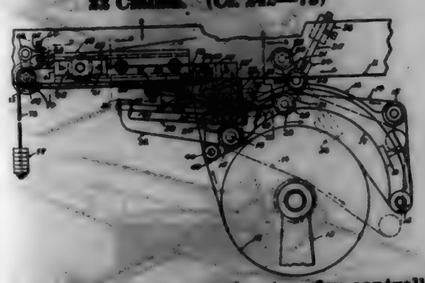
2,032,336
MOVING PICTURE FILM REEL
Theodore O. Strauss, New York, N. Y., assignor to Casteel Research Laboratories, Inc., New York, N. Y., a corporation of New York
Application May 5, 1934, Serial No. 724,176
4 Claims. (Cl. 88—18.7)

2. In motion picture film reels, the combination of a projector, an upright supporting plate carried by said projector, a series of rollers journalled in a circle about a common centre on said plate, an endless film carried as a coil on said series of rollers, means for rotating said rollers to wind the coil, means feeding the film from said coil through the projector, a second series of rotating rollers on the supporting plate journalled concentrically with the first series of rollers having an annular space between the two sets of rollers and adapted to wind a second coil of the film from the projector and to feed said second coil to the first coil, and means for feeding the film from the projector to the said second coil.



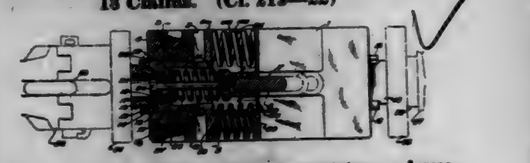
2,032,337
CONVEYING PULVERULENT MATERIAL
Mikael Vogel-Jørgensen, Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a corporation of New Jersey
Application June 22, 1933, Serial No. 27,877
In Great Britain July 6, 1932
5 Claims. (Cl. 302—36)

1. In an apparatus for conveying pulverulent material, the combination of a housing, a conveying conduit connected to the housing, means to supply fluid under pressure to the housing, a hollow body mounted within the housing, means to rotate the hollow body, means to supply the material to the hollow body at the central portion thereof, and a valve applied at the outer edge of the hollow body and adapted to yield outwardly under the influence of the pressure developed by centrifugal action on the material



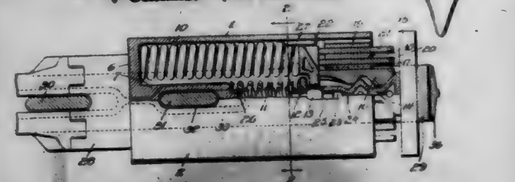
within the hollow body and to be moved to closed position by pressure in the chamber of the hollow body.

2,032,338
STOKER CONVEYER
Howard P. Anderson, Erie, Pa., assignor to The Standard Stoker Company, Incorporated, a corporation of Delaware
Application January 3, 1933, Serial No. 649,851
4 Claims. (Cl. 88—52)



1. In a stoking mechanism, the combination of a trough having a fuel receiving opening, a crusher member in said trough at the forward end thereof, a conveyer screw mounted in said trough for advancing fuel therethrough, said conveyer screw adjacent said crusher member having a bead formed on its impelling face extending outwardly from its peripheral edge and a bead formed on its impelling face radially inward of said peripheral bead.

2,032,339
WEB ROLL CONTROLLING MECHANISM FOR PRINTING MACHINES
Harry V. Ball, Concord, Mass., assignor to Irving Trust Company, permanent trustee for R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application December 9, 1931, Serial No. 701,618
22 Claims. (Cl. 242—75)



17. Web tensioning mechanism for controlling the web feed to a printing machine, comprising a roller engaging a loop in the web, means for carrying the roller and biasing same to press against the web, a movable support, friction means movable with the support and engaging the peripheral surface of a web roll, a lever connected to move the support, and a weight movable on the lever and connected to the roller carrying means.

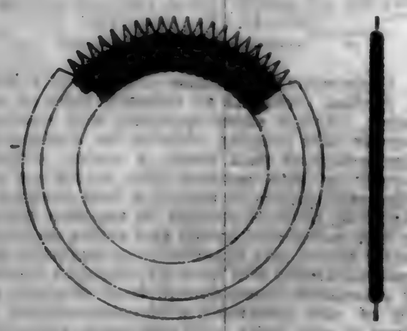
2,032,340
DRAFT RIGGING
Donald S. Barrows, Rochester, N. Y., assignor to The Symington Company, Rochester, N. Y., a corporation of Maryland
Application July 12, 1929, Serial No. 378,694
13 Claims. (Cl. 213—22)

2. Cushioning mechanism comprising a housing with a pair of side walls connected by a transversely extending partition disposed intermediate the ends thereof, a longitudinal partition connecting said pair of side walls and merging with said transverse partition, the ends of said housing being open, friction elements in each end of said housing, spring means for resisting movement of said elements, said friction elements comprising a central wedge member and wedge means engaging opposite sides thereof, said spring means comprising release springs acting on said central wedge member and engaging the end of said longitudinal partition, and means for holding the parts of the mechanism assembled with the housing.

2,032,341
CUSHIONING MECHANISM
Donald S. Barrows, Rochester, N. Y., assignor to The Symington Company, Rochester, N. Y., a corporation of Maryland
Application January 23, 1931, Serial No. 510,791
7 Claims. (Cl. 213—22)

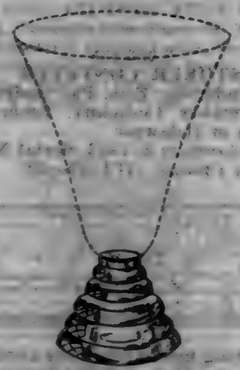
7. Cushioning mechanism comprising a housing, friction elements at opposite sides of said housing, friction shoes engaging said elements, means in said housing forming an abutment, a wedge engaging said shoes, a spring disposed centrally of said housing and acting on said wedge, said abutment having a face engaged by said spring, pairs of springs on opposite sides of said first-mentioned spring and acting on the respective shoes, and extensions on opposite sides of said abutment and merging into said housing, said extensions being spaced from opposite side walls of said housing for accommodating the springs of said pairs, said abutment, extensions, and portions of the housing into which said extensions merge being apertured for receiving a connecting draft key.

DESIGNS



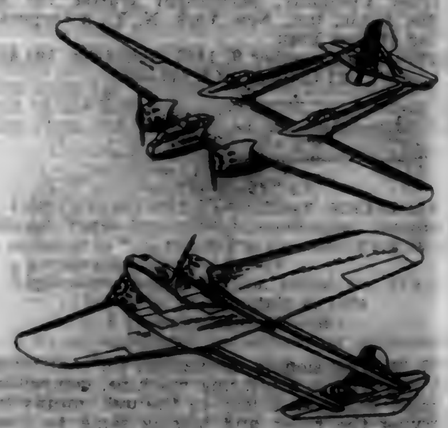
FEBRUARY 25, 1936

96,637
DESIGN FOR A SHOE
Thomas E. Atkins, Cliftondale, Mass., assignor to Schoinick Shoe Co., Jamaica Plain, Mass., a corporation of Massachusetts
Application January 13, 1936, Serial No. 60,553
Term of patent 3½ years



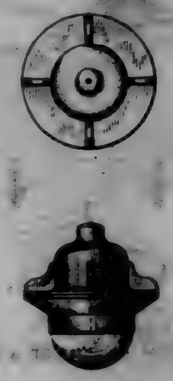
The ornamental design for a shoe, substantially as shown and described.

96,638
DESIGN FOR A WREATH
Abraham J. Barsean, Brooklyn, N. Y.
Application May 21, 1935, Serial No. 54,929
Term of patent 14 years



The ornamental design for a wreath, as shown.

96,639
DESIGN FOR A FOOTED GOBLET OR SIMILAR ARTICLE
Elmer Bell, Mount Pleasant, Pa., assignor to Bryce Brothers Company, Mount Pleasant, Pa., a corporation of Pennsylvania
Application December 3, 1935, Serial No. 59,961
Term of patent 14 years



The ornamental design for a footed goblet or similar article, substantially as shown and described.

96,640
DESIGN FOR AN AIRPLANE
Vincent J. Burnelli, Keyport, N. J., assignor to Burnelli Aircraft, Ltd., a corporation of Delaware
Application February 19, 1935, Serial No. 55,491
Term of patent 3½ years

The ornamental design for an airplane, as shown.

96,641
DESIGN FOR A BALL FLOAT VALVE
Charles Crary, Chicago, Ill.
Application December 9, 1935, Serial No. 59,959
Term of patent 3½ years

The ornamental design for a ball float valve, substantially as shown.

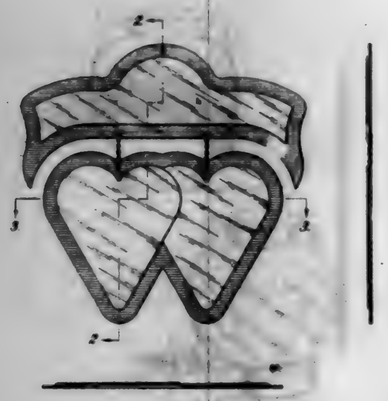
96,642
DESIGN FOR A BOX
Ira Cole, Park Ridge, N. J., assignor to Mittag & Volger, Incorporated, Park Ridge, N. J., a corporation of New Jersey
Application December 28, 1935, Serial No. 60,219
Term of patent 14 years

The ornamental design for a box, substantially as shown.

96,643
DESIGN FOR A DISPLAY LIGHT FOR AN AUTOMOBILE
Doyle Duff, Burrton, and John C. Elliott and Jacob J. Flickinger, Halstead, Kans.
Application November 5, 1935, Serial No. 59,397
Term of patent 14 years

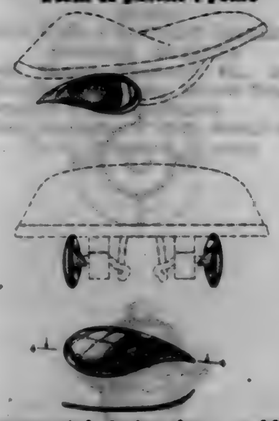
The ornamental design for a display light for an automobile, as shown.

96,644
DESIGN FOR AN ELECTRICAL HUMIDIFIER
Philip E. Edelman, Chicago, Ill.
Application November 6, 1935, Serial No. 59,463
Term of patent 3½ years



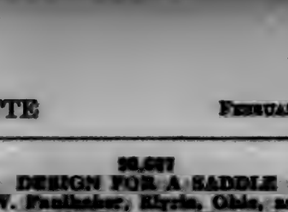
The ornamental design for an electrical humidifier, as shown.

98,665
DESIGN FOR A PLANT CONTAINER
Leon H. Elmer, San Jose, Calif.
Application December 16, 1935, Serial No. 60,606
Term of patent 7 years



The ornamental design for a plant container, substantially as shown and described.

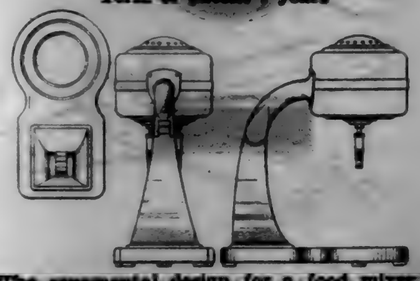
98,666
DESIGN FOR A BROOCH
Louis Fago, Chicago, Ill.
Application June 4, 1935, Serial No. 57,125
Term of patent 3½ years



The ornamental design for a brooch, as shown.

98,667
DESIGN FOR A SADDLE
Roland W. Faulhaber, Elyria, Ohio, assignor to The Troxel Mfg. Company, Elyria, Ohio, a corporation of Ohio
Application December 11, 1935, Serial No. 60,615
Term of patent 7 years

The ornamental design for a saddle substantially as shown.



98,668
DESIGN FOR A BUCKLE
John B. Freysinger, New Britain, Conn.
Application January 14, 1936, Serial No. 60,577
Term of patent 3½ years

The ornamental design for a buckle as shown.

98,669
DESIGN FOR A FOOD MIXER
Alfred F. Fuhrs, Chicago, Ill.
Application April 13, 1935, Serial No. 56,341
Term of patent 7 years

The ornamental design for a food mixer, as shown and described.

98,670
DESIGN FOR A SHOE
Anne Gordon, New York, N. Y.
Application January 14, 1936, Serial No. 60,574
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

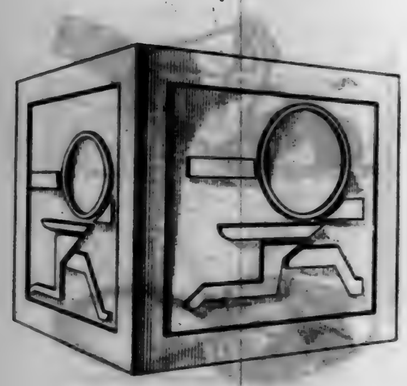
98,671
DESIGN FOR A TEXTILE FABRIC
August Hafner, Flushing, N. Y.
Application August 27, 1935, Serial No. 58,328
Term of patent 3½ years

The ornamental design for a textile fabric substantially as shown and described.

98,672
DESIGN FOR LACE
Hage W. Hucknall, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a corporation of Ohio
Application October 14, 1935, Serial No. 58,976
Term of patent 3½ years

The ornamental design for lace, substantially as shown and described.

98,673
DESIGN FOR A SHOE OR ARTICLE OF ANALOGOUS NATURE
Ralph A. Hyde, Brookline, Mass.
Application January 21, 1936, Serial No. 60,705
Term of patent 3½ years



The ornamental design for a shoe or article of analogous nature, substantially as shown.

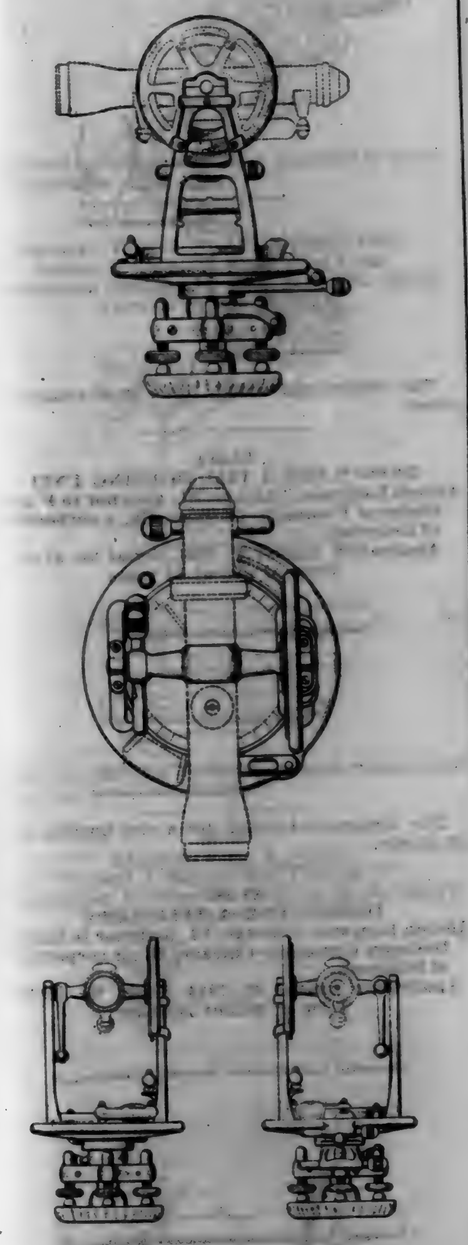
96,674
DESIGN FOR A SHOE OR ARTICLE OF ANALOGOUS NATURE
Ralph A. Hyde, Brookline, Mass.
Application January 30, 1936, Serial No. 60,962
Term of patent 3½ years

The ornamental design for a shoe or article of analogous nature, substantially as shown.

96,675
DESIGN FOR A BATTERY BOX
Walter Joy, Belmont, Mass., assignor to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application September 6, 1935, Serial No. 58,459
Term of patent 14 years

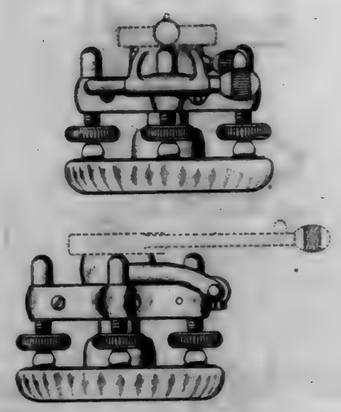
The ornamental design for a battery box as shown and described.

96,676
DESIGN FOR A SHOE OR ARTICLE OF ANALOGOUS NATURE
Hyman Klein, Lynn, Mass., assignor to S. H. Hyde & Sons Co., Cambridge, Mass., a corporation of Massachusetts
Application August 28, 1935, Serial No. 58,632
Term of patent 3½ years



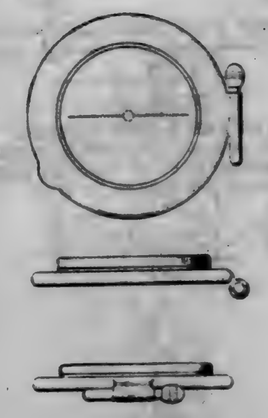
The ornamental design for a shoe or article of analogous nature, substantially as shown.

96,677
DESIGN FOR A SHOE OR ARTICLE OF ANALOGOUS NATURE
Samuel L. Kleven, Swampscott, Mass.
Application January 16, 1936, Serial No. 60,635
Term of patent 3½ years



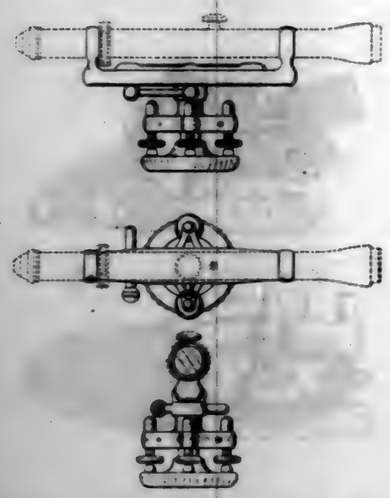
The ornamental design for a shoe or article of analogous nature, substantially as shown.

96,678
DESIGN FOR A TRANSIT
Adolph Langmaer, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1934, Serial No. 53,656
Term of patent 14 years



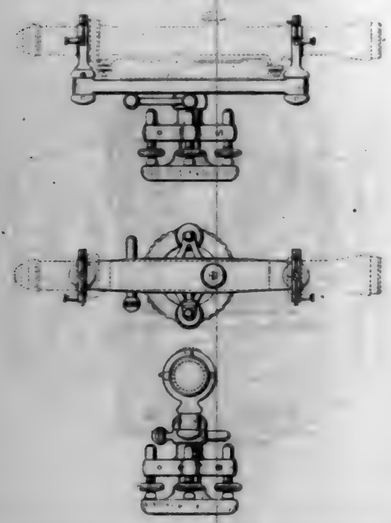
The ornamental design for a transit as shown.

96,679
DESIGN FOR A TRANSIT SUPPORT
Adolph Langmaer, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1934, Serial No. 53,657
Term of patent 14 years



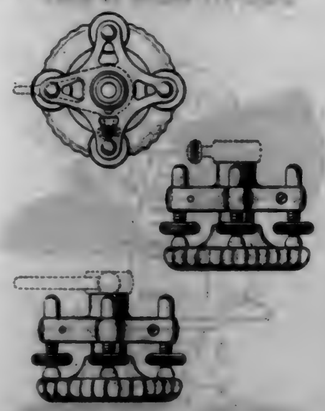
The ornamental design for a transit support as shown.

96,680
DESIGN FOR A TRANSIT PLATE
Adolph Langmaer, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1934, Serial No. 53,658
Term of patent 14 years



The ornamental design for a transit plate as shown and described.

98,681
DESIGN FOR A DUMPY LEVEL
Adolph Langsner, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1934, Serial No. 53,059
Term of patent 14 years

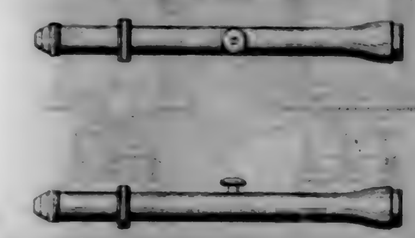


The ornamental design for a dumpy level as shown.

98,682
DESIGN FOR A Y LEVEL
Adolph Langsner, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1934, Serial No. 53,060
Term of patent 14 years

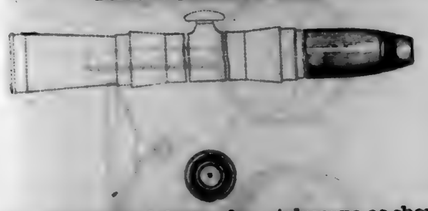
The ornamental design for a Y level as shown.

98,683
DESIGN FOR A LEVEL SUPPORT
Adolph Langsner, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1934, Serial No. 53,061
Term of patent 14 years



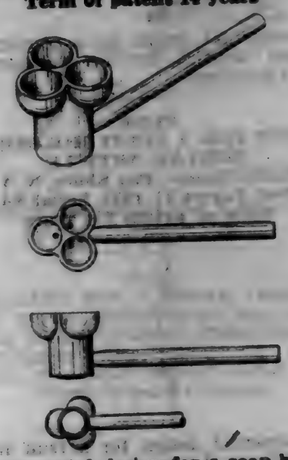
The ornamental design for a level support as shown.

98,684
DESIGN FOR A VIAL HOUSING UNIT
Adolph Langsner, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1934, Serial No. 53,062
Term of patent 14 years



The ornamental design for a vial housing unit as shown.

98,685
DESIGN FOR A TELESCOPE
Adolph Langsner, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application August 25, 1934, Serial No. 53,063
Term of patent 14 years



The ornamental design for a telescope as shown and described.

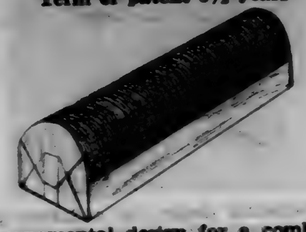
98,686
DESIGN FOR A TELESCOPE
Adolph Langsner, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a corporation of Delaware
Application November 8, 1935, Serial No. 59,456
Term of patent 14 years

The ornamental design for a telescope as shown and described.

98,687
DESIGN FOR A SOAP BUBBLE PIPE
George A. Maunsell, Waterbury, Conn.
Application January 16, 1936, Serial No. 60,510
Term of patent 14 years

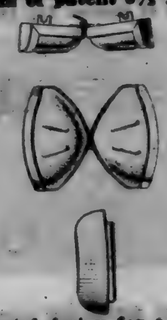
The ornamental design for a soap bubble pipe as shown.

98,688
DESIGN FOR A SHOE
Samuel J. Meyer, New York, N. Y.
Application January 15, 1936, Serial No. 60,500
Term of patent 3½ years



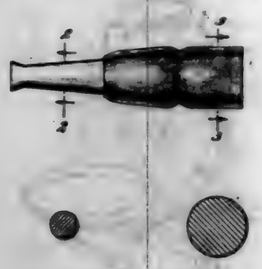
The ornamental design for a shoe substantially as shown.

98,689
DESIGN FOR A PORTABLE ELECTRIC FOOD MIXING DEVICE
Raymond E. Patten, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application August 8, 1935, Serial No. 58,009
Term of patent 14 years



The ornamental design for a portable electric food mixing device substantially as shown, and described.

98,690
DESIGN FOR A COMBINED SUPPORTING TRAY AND POWDER PAD DISPLAY
Samuel L. Pomerantz, New York, N. Y.
Application May 25, 1935, Serial No. 57,011
Term of patent 3½ years

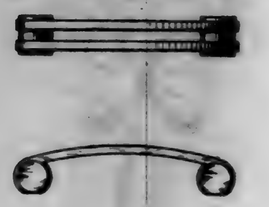


The ornamental design for a combined supporting tray and powder pad display as shown and described.

98,691
DESIGN FOR A BUCKLE
Solomon Putman, Newark, N. J.
Application January 14, 1936, Serial No. 60,575
Term of patent 3½ years

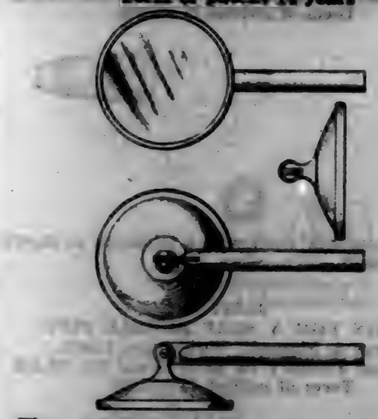
The ornamental design for a buckle as shown.

96,692
DESIGN FOR A RAZOR HANDLE
Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Company, North Attleboro, Mass., a corporation of Massachusetts
Application October 19, 1935, Serial No. 59,151
Term of patent 14 years



The ornamental design for a razor handle as shown.

96,693
DESIGN FOR A DRAWER PULL OR SIMILAR ARTICLE
Kurt Rettich, Grand Rapids, Mich., assignor to Keeler Brass Company, Grand Rapids, Mich.
Application November 4, 1935, Serial No. 59,377
Term of patent 3½ years



The ornamental design for a drawer pull or similar article as shown and described.

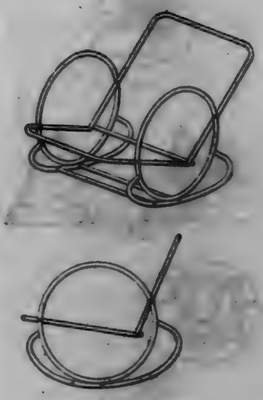
96,694
DESIGN FOR A DRAWER PULL OR SIMILAR ARTICLE
Kurt Rettich, Grand Rapids, Mich., assignor to Keeler Brass Company, Grand Rapids, Mich.
Application November 4, 1935, Serial No. 59,378
Term of patent 3½ years

The ornamental design for a drawer pull or similar article, as shown and described.

96,695
DESIGN FOR A COMBINED TRUCK MIRROR AND SUPPORT THEREFOR
Oliver G. Rite-Weiler, Chicago, Ill.
Application January 7, 1935, Serial No. 58,763
Term of patent 14 years

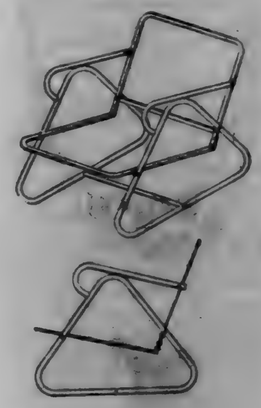
The ornamental design for a combined truck mirror and support therefor substantially as shown and described.

96,696
DESIGN FOR A FRUIT HOLDER OR SIMILAR ARTICLE
Walter Rogers, Bay Shore, N. Y.
Application August 27, 1935, Serial No. 58,231
Term of patent 3½ years



The ornamental design for a fruit holder or similar article, as shown.

96,697
DESIGN FOR A BABY'S CRIB
Edward S. Swasey, Rochester, N. Y., assignor to Trimble Nurseryland Furniture, Inc., Rochester, N. Y., a corporation of New York
Application November 21, 1935, Serial No. 59,492
Term of patent 14 years



The ornamental design for a baby's crib, as shown and described.

96,698
DESIGN FOR A CHAIR FRAME
Harry J. Terker, Philadelphia, Pa., assignor to Bunting Glider Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 30, 1935, Serial No. 59,542
Term of patent 7 years

The ornamental design for a chair frame as shown.

96,699
DESIGN FOR A CHAIR FRAME
Harry J. Terker, Philadelphia, Pa., assignor to Bunting Glider Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 30, 1935, Serial No. 59,545
Term of patent 7 years

The ornamental design for a chair frame as shown.

96,700
DESIGN FOR A SHOE
Carlisle V. Watson, Auburn, Maine
Application November 18, 1935, Serial No. 59,432
Term of patent 3½ years

The ornamental design for a shoe, as shown.

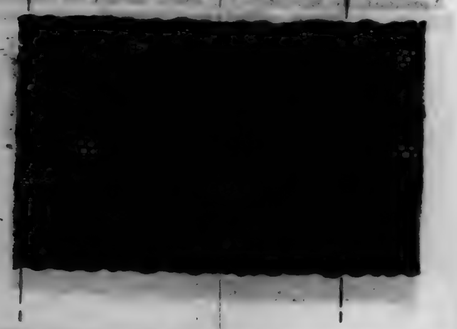
96,701
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application January 15, 1936, Serial No. 60,596
Term of patent 3½ years

The ornamental design for a lace substantially as shown and described.

96,702
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application January 15, 1936, Serial No. 60,597
Term of patent 3½ years

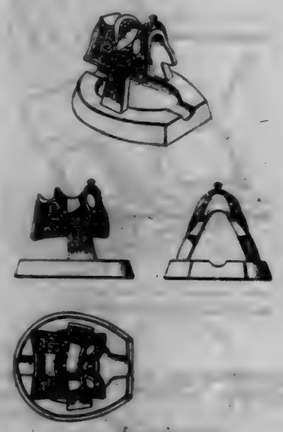
The ornamental design for a lace substantially as shown and described.

88,702
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application January 15, 1936, Serial No. 60,598
Term of patent 3½ years



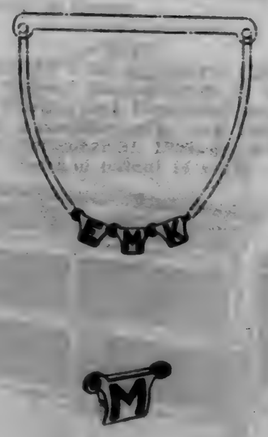
The ornamental design for a lace substantially as shown and described.

88,704
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application January 15, 1936, Serial No. 60,600
Term of patent 3½ years



The ornamental design for a lace substantially as shown and described.

88,705
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application January 13, 1936, Serial No. 60,654
Term of patent 3½ years

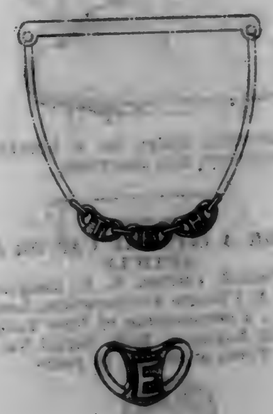


The ornamental design for a lace substantially as shown and described.

88,706
DESIGN FOR AN ASH TRAY
Lillian S. Whidden, El Paso, Tex.
Application December 16, 1935, Serial No. 60,161
Term of patent 7 years

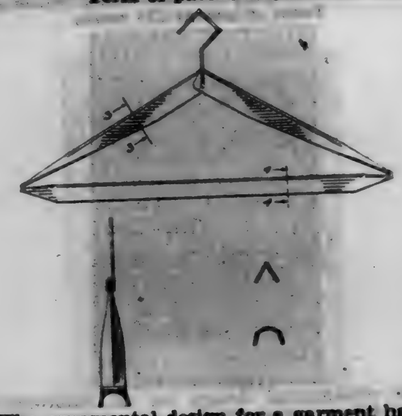
The ornamental design for an ash tray as shown.

88,707
DESIGN FOR A CHARACTER BEARING LINK FOR CRAVAT HOLDERS OR ANALOGOUS ARTICLES
Harry G. Anderson, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a corporation of New York
Application December 12, 1935, Serial No. 60,057
Term of patent 2½ years



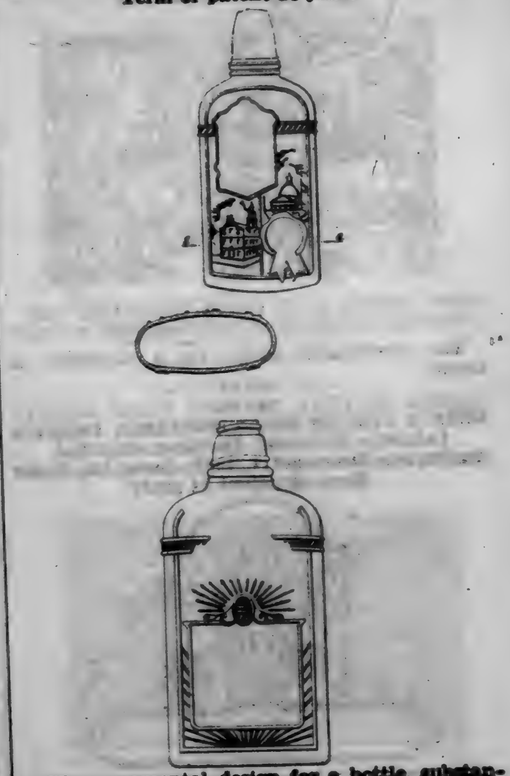
The ornamental design for a character bearing link for cravat holders or analogous articles, as shown and described.

88,708
DESIGN FOR A CHARACTER BEARING LINK FOR CRAVAT HOLDERS OR ANALOGOUS ARTICLES
Harry G. Anderson, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a corporation of New York
Application December 12, 1935, Serial No. 60,058
Term of patent 3½ years



The ornamental design for a character bearing link for cravat holders or analogous articles, as shown and described.

88,709
DESIGN FOR A CHARACTER BEARING LINK FOR CRAVAT HOLDERS OR ANALOGOUS ARTICLES
Harry G. Anderson, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a corporation of New York
Application December 12, 1935, Serial No. 60,059
Term of patent 3½ years

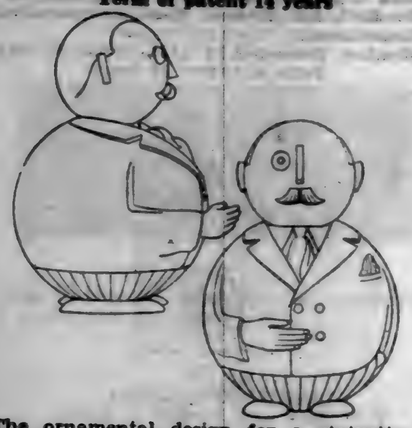


The ornamental design for a character bearing link for cravat holders or analogous articles as shown and described.

88,710
DESIGN FOR A GARMENT HANGER
George J. Bachmeyer, Kalamazoo, Mich.
Application January 8, 1936, Serial No. 60,474
Term of patent 14 years

The ornamental design for a garment hanger, as shown.

88,711
DESIGN FOR A BOTTLE
Hyman C. Berkowitz, Boston, Mass., assignor to Ben-Burk, Inc., Boston, Mass., a corporation of Massachusetts
Application December 14, 1935, Serial No. 60,084
Term of patent 14 years



The ornamental design for a bottle, substantially as shown.

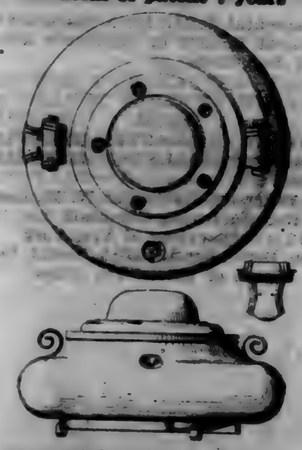
98,712
DESIGN FOR AN EMBROIDERED TEXTILE FABRIC
George Bischof, New York, N. Y.
Application January 6, 1936, Serial No. 60,426
Term of patent 3½ years

The ornamental design for an embroidered textile fabric, substantially as shown.

98,713
DESIGN FOR A STATUETTE
Dena Brimer, Chicago, Ill.
Application November 23, 1935, Serial No. 59,717
Term of patent 14 years

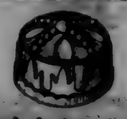
The ornamental design for a statuette, as shown.

98,714
DESIGN FOR AN IDENTIFICATION EMBLEM
Lafayette F. Cargill, Michigan City, Ind.
Application December 4, 1935, Serial No. 59,907
Term of patent 14 years



The ornamental design for an identification emblem as shown and described.

98,716
DESIGN FOR A LOUDSPEAKER FACEPLATE
Bernard A. Engheim, Shaker Heights, Ohio, assignor to The Rola Company, Cleveland, Ohio, a corporation of Ohio
Application December 27, 1935, Serial No. 60,308
Term of patent 7 years

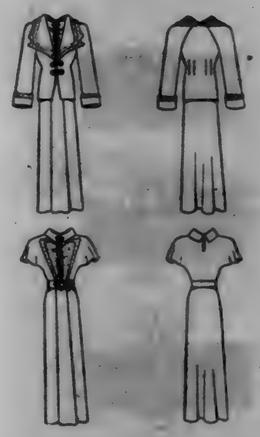


The ornamental design for a loudspeaker face plate substantially as shown.

98,716
DESIGN FOR A HUMIDIFIER
William Feldermann, South Orange, N. J.
Application December 31, 1935, Serial No. 60,369
Term of patent 7 years

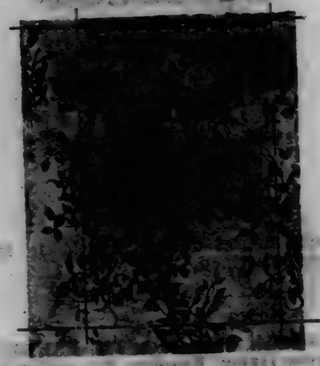
The ornamental design for a humidifier substantially as shown and described.

98,717
DESIGN FOR A CLOSURE CAP OR SIMILAR ARTICLE
Joseph R. Fleisch, Clifton, N. J., assignor to Archer Cap & Closure Corporation, Long Island City, N. Y., a corporation of New York
Application August 5, 1935, Serial No. 57,950
Term of patent 14 years



The ornamental design for a closure cap or similar article, substantially as shown.

98,718
DESIGN FOR A COMBINED FISH BOWL AND STAND
Lester K. Franklin, Chicago, Ill.
Application January 15, 1936, Serial No. 60,502
Term of patent 3½ years



The ornamental design for a combined fish bowl and stand substantially as shown.

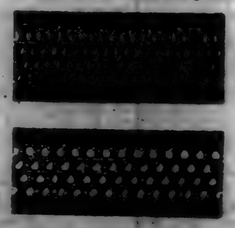
98,719
DESIGN FOR AN ENSEMBLE DRESS
Abraham Grossman, New York, N. Y.
Application January 29, 1936, Serial No. 60,867
Term of patent 3½ years

The ornamental design for an ensemble dress, substantially as shown.

98,720
DESIGN FOR A PRINTED TEXTILE FABRIC OR SIMILAR ARTICLE
Marion E. Hamre, Brooklyn, N. Y.
Application January 13, 1936, Serial No. 60,542
Term of patent 3½ years

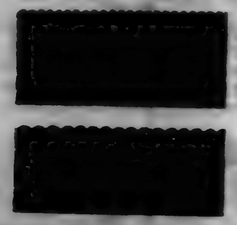
The ornamental design for a printed textile fabric or similar article, as shown and described.

98,721
DESIGN FOR A PRINTED TEXTILE FABRIC OR SIMILAR ARTICLE
Marion E. Hamre, Brooklyn, N. Y.
Application January 15, 1936, Serial No. 60,594
Term of patent 3½ years



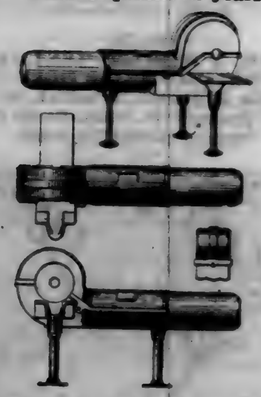
The ornamental design for a printed textile fabric or similar article, as shown and described.

98,722
DESIGN FOR A PRINTED TEXTILE FABRIC OR SIMILAR ARTICLE
Marion E. Hamre, Brooklyn, N. Y.
Application January 15, 1936, Serial No. 60,595
Term of patent 3½ years



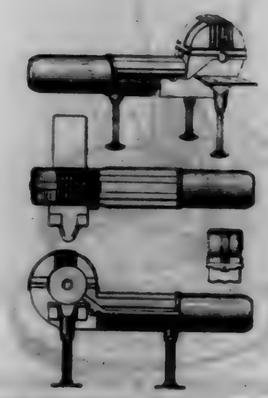
The ornamental design for a printed textile fabric or similar article, as shown and described.

98,723
DESIGN FOR ELASTIC FABRIC
Otto Eugene Huber, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application January 4, 1936, Serial No. 60,408
Term of patent 14 years



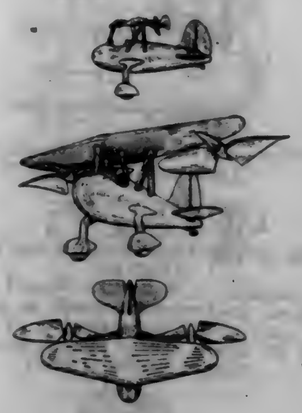
The ornamental design for elastic fabric as shown and described.

98,724
DESIGN FOR ELASTIC FABRIC
Otto Eugene Huber, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application January 4, 1936, Serial No. 60,409
Term of patent 14 years



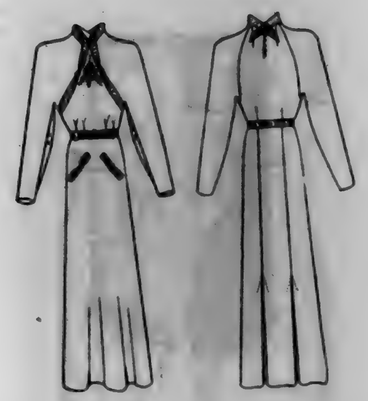
The ornamental design for elastic fabric as shown and described.

98,725
DESIGN FOR A COMBINED OIL BURNER CASING AND SUPPORT THEREFOR
Malcolm R. Knez, Hartford, Conn., assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn., a corporation of Connecticut
Application January 3, 1936, Serial No. 60,462
Term of patent 14 years



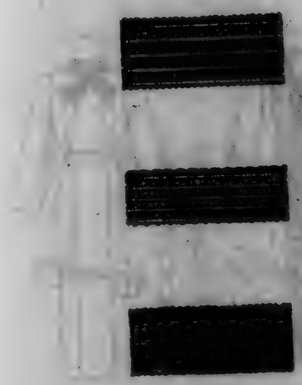
The ornamental design for a combined oil burner casing and support therefor, substantially as shown.

98,726
DESIGN FOR A COMBINED OIL BURNER CASING AND SUPPORT THEREFOR
Malcolm R. Knez, Hartford, Conn., assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn., a corporation of Connecticut
Application January 3, 1936, Serial No. 60,463
Term of patent 14 years



The ornamental design for a combined oil burner casing and support therefor, substantially as shown.

98,727
DESIGN FOR AN AIRPLANE
Paul M. Lewis and Fred Lundgraf, Denver, Colo., assignors to Lewis-American Airways, Inc., Denver, Colo., a corporation of Colorado
Application July 1, 1935, Serial No. 57,483
Term of patent 14 years



The ornamental design for an airplane, as shown.

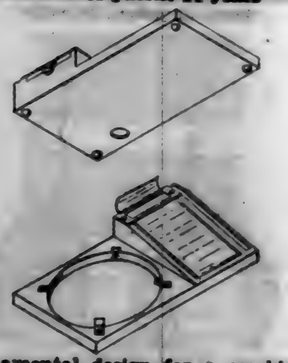
98,728
DESIGN FOR A DRESS
Abe Markowitz, New York, N. Y., assignor to Franklin Simon & Co. Inc., New York, N. Y.
Application January 21, 1936, Serial No. 60,703
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

98,729
DESIGN FOR ELASTIC FABRIC
Clarence D. Maurer, West Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application January 4, 1936, Serial No. 60,411
Term of patent 14 years

The ornamental design for elastic fabric, as shown and described.

98,730
DESIGN FOR A BOTTLE
Edward J. McCullough, New York, N. Y., assignor to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 20, 1935, Serial No. 60,210
Term of patent 14 years



The ornamental design for a bottle substantially as shown.

98,731
DESIGN FOR A DOLL
Frankie L. McCulloch, Branson, Mo.
Application October 28, 1935, Serial No. 59,503
Term of patent 7 years

The ornamental design for a doll, as shown.

98,732
DESIGN FOR A COMBINED TELEPHONE BASE AND PAD HOLDER
Lee A. Meltzer, Seattle, Wash.
Application April 12, 1935, Serial No. 54,346
Term of patent 14 years

The ornamental design for a combined telephone base and pad holder, as shown.

98,733
DESIGN FOR A DISPENSING DEVICE
Edgar B. Nichols, Moorestown, N. J.
Application August 7, 1935, Serial No. 57,986
Term of patent 7 years

The ornamental design for a dispensing device substantially as shown.

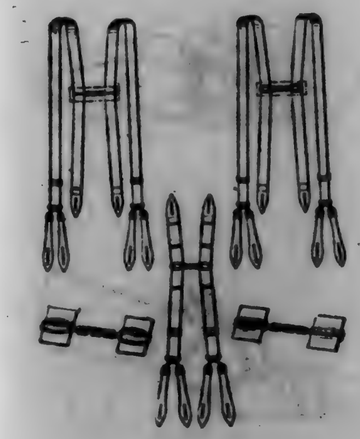
98,734
DESIGN FOR A DENTAL FLOSS MAGAZINE
Chester E. Orrison, Chicago, Ill., assignor of one-half to Joel E. Reed, Chicago, Ill.
Application November 16, 1935, Serial No. 59,669
Term of patent 14 years

The ornamental design for a dental floss magazine as shown.

98,735
DESIGN FOR A BOTTLE
Fred J. Petty, Muncie, Ind., assignor to Ball Brothers Company, Muncie, Ind., a corporation of Indiana
Application December 18, 1935, Serial No. 60,149
Term of patent 7 years

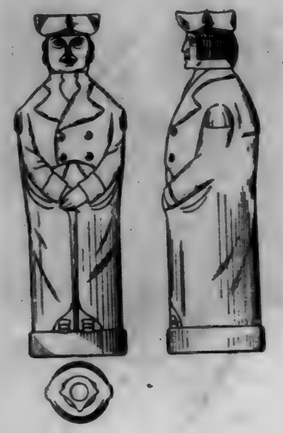
The ornamental design for a bottle, substantially as shown.

98,736
DESIGN FOR A DRESS
Mary Porpora, New York, N. Y., assignor to Franklin Simon & Co. Inc., New York, N. Y.
Application December 31, 1935, Serial No. 60,349
Term of patent 3½ years



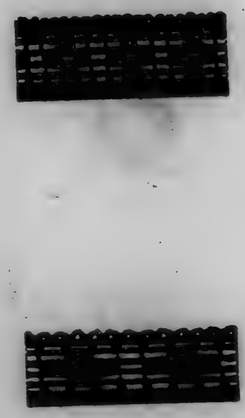
The ornamental design for a dress, substantially as shown, and described.

98,737
DESIGN FOR A COIN CONTROLLED PHONOGRAPH
Bayard H. Richardson and Richard W. Willey, Grand Rapids, Mich.
Application July 13, 1935, Serial No. 57,621
Term of patent 3½ years



The ornamental design for a coin controlled phonograph as shown and described.

98,738
DESIGN FOR A SUSPENDER
Hyman Schiller, New York, N. Y.
Application December 23, 1935, Serial No. 60,241
Term of patent 3½ years



The ornamental design for a suspender, as shown.

98,739
DESIGN FOR A BOTTLE
George Smith, Jr., Olean, N. Y., assignor to Olean Glass Company, Olean, N. Y., a corporation of New York
Application August 5, 1935, Serial No. 57,947
Term of patent 14 years

The ornamental design for a bottle substantially as shown.

98,740
DESIGN FOR ELASTIC FABRIC
August K. Strupp, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application January 11, 1936, Serial No. 60,528
Term of patent 14 years

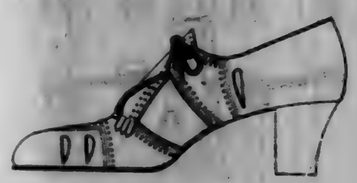
The ornamental design for elastic fabric as shown and described.

98,741
DESIGN FOR A TOILET POWDER CONTAINER
Gaston Taich, New York, N. Y.
Application October 19, 1935, Serial No. 59,129
Term of patent 14 years

The ornamental design for a toilet powder container substantially as shown and described.

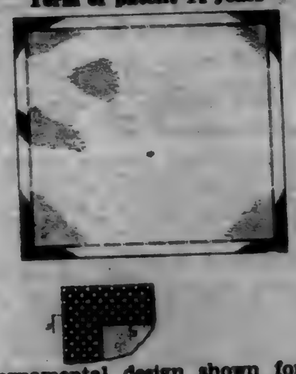
98,742
DESIGN FOR A SETTING FOR PRECIOUS STONES
Mitchell Waldman, New York, N. Y.
Application December 10, 1935, Serial No. 59,995
Term of patent 7 years

The ornamental design for a setting for precious stones, substantially as shown.

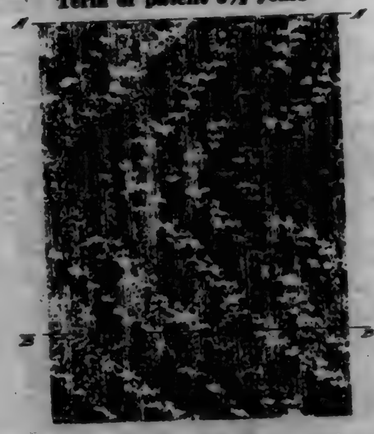


98,743
DESIGN FOR A SETTING FOR PRECIOUS STONES
Mitchell Waldman, New York, N. Y.
Application December 10, 1935, Serial No. 59,996
Term of patent 7 years

The ornamental design for a setting for precious stones, substantially as shown.

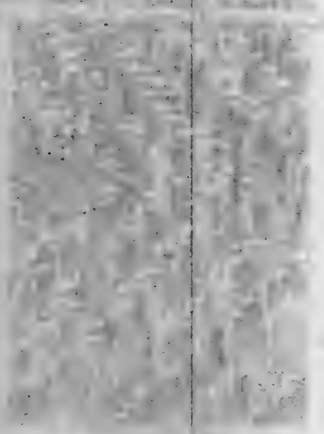


98,744
DESIGN FOR A SHOE
Haviland D. Baldwin, Auburn, Maine, assignor to Ault-Williamson Shoe Co., Auburn, Maine, a corporation of Maine
Application January 20, 1936, Serial No. 60,071
Term of patent 3½ years



The ornamental design for a shoe substantially as shown and described.

98,745
DESIGN FOR A PAPER HANDKERCHIEF OR SIMILAR ARTICLE
Charles A. Fournese, Appleton, Wis., assignor to International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware
Application November 13, 1935, Serial No. 59,524
Term of patent 14 years



The ornamental design shown for a paper handkerchief or similar article substantially as shown and described.

98,746
DESIGN FOR A CARPET
Michael S. Miller, Thompsenville, Conn.
Application October 16, 1935, Serial No. 59,086
Term of patent 3½ years

The ornamental design for a carpet substantially as shown and described.

Candy-like product for treatment of minor throat irritations and coughs due to colds. H. & C. Scientific Products, Inc. 332,703; Feb. 25; Serial No. 369,002; published Dec. 10, 1935.

Canned bird deterrent. H. C. Harting. 332,850; Feb. 25, 1936.

Carbon-dioxide, Solid. Liquid Carbonic Corporation. 332,781; Feb. 25; Serial No. 369,955; published Dec. 17, 1935.

Castor oil. Spencer Kellogg & Sons, Inc. 332,823; Feb. 25; Serial No. 370,383; published Dec. 10, 1935.

Chemical compound. E. W. Quinlan. 332,796; Feb. 25; Serial No. 356,687; published Dec. 10, 1935.

Chemical product. H. Seydel. 332,812; Feb. 26; Serial No. 370,202; published Dec. 10, 1935.

Chemical wood preservatives. Ira Parker & Sons Company. 332,788; Feb. 25; Serial No. 368,980; published Dec. 17, 1935.

Chemicals and pharmaceutical preparations. J. D. Riedel, Aktiengesellschaft. 106,267; renewed Jan. 28, 1936.

Cleaners and water softener crystals, Drain pipe. Red Head Products, Incorporated. 332,799; Feb. 25; Serial No. 369,587; published Dec. 10, 1935.

Compounding agent for use in rubber, etc., and an impregnating agent for waterproofing or otherwise protecting cloth. Standard Oil Development Company. 332,828; Feb. 26; Serial No. 369,112; published Dec. 10, 1935.

Cosmetics and toilet preparations. Sentag Chain Stores Co. 332,820; Feb. 25; Serial No. 368,961; published Dec. 10, 1935.

Cough drops. General Food Products Co. 332,735; Feb. 25; Serial No. 368,691; published Dec. 10, 1935.

Electrolytes. American Chemical Paint Company. 332,693; Feb. 25; Serial No. 357,337; published Dec. 17, 1935.

Fumigating compositions. Carbide and Carbon Chemicals Corporation. 332,715; Feb. 25; Serial No. 370,457; published Dec. 17, 1935.

Gas for heating and illuminating purposes, Liquefied petroleum. J. J. Armour. 332,697; Feb. 25; Serial No. 368,677; published Dec. 10, 1935.

Gas for household usage, Natural. Western Light & Supply Corporation. 332,844; Feb. 25; Serial No. 369,285; published Dec. 10, 1935.

Gases, Compressed. Linde Air Products Company. 109,183; renewed Mar. 28, 1936.

Hair tinting preparations. Beauty Products, Inc. 332,705; Feb. 25; Serial No. 362,507; published Dec. 10, 1935.

Hair tonic. Cheesbrough Manufacturing Company, Consolidated. 332,718; Feb. 25; Serial No. 370,157; published Dec. 10, 1935.

Hair tonic. I. Circkirillo. 332,719; Feb. 25; Serial No. 370,458; published Dec. 17, 1935.

Hair wave setting solution. La Fain Sales Co. 332,760; Feb. 25; Serial No. 370,400; published Dec. 17, 1935.

Insecticides and rodent exterminators. M. G. Neumann. 332,777; Feb. 25; Serial No. 362,201; published Dec. 10, 1935.

Laxative preparation. G. Knewitt. 332,785; Feb. 25; Serial No. 370,145; published Dec. 10, 1935.

Laxative tablets. D. B. Belli Inc. 332,700; Feb. 25; Serial No. 370,396; published Dec. 10, 1935.

Lotion, Hair. R. Briggs. 332,711; Feb. 11; Serial No. 369,908; published Dec. 10, 1935.

Medicinal preparation. McKerk Laboratories. 332,766; Feb. 25; Serial No. 368,235; published Dec. 10, 1935.

Medicinal preparations and pharmaceuticals. Crookes Laboratories, Incorporated. 332,857; Feb. 25.

Medicine, Additive Medicine Company. 108,458; renewed Feb. 8, 1936.

Medicines. D. E. Bort. 332,710; Feb. 25; Serial No. 370,333; published Dec. 10, 1935.

Naphthenate which is added to drying oils in order to increase their viscosity, Advance Solvents & Chemical Corporation. 332,689; Feb. 25; Serial No. 369,520; published Dec. 17, 1935.

Ointment or unguent. Dermal Chemical Company, Inc. 332,725; Feb. 25; Serial No. 368,520; published Dec. 10, 1935.

Ointment, Pile. D. F. George. 332,735; Feb. 25; Serial No. 370,096; published Dec. 10, 1935.

Parasiticides for poultry, veterinary and insecticide purposes. Tobacco By-Products and Chemical Corporation. 332,838; Feb. 25; Serial No. 365,534; published Dec. 10, 1935.

Perfumes, toilet water, face powder, etc. Houbigant, Inc. 332,749; Feb. 25; Serial No. 370,831; published Dec. 17, 1935.

Pharmaceutical preparation for the treatment of ringworm of the feet. J. F. Allison. 332,690; Feb. 25; Serial No. 369,429; published Dec. 17, 1935.

Pharmaceutical preparation rich in vitamins and calcium. Hoffmann-La Roche, Inc. 332,747; Feb. 25; Serial No. 369,573; published Dec. 3, 1935.

Pharmaceutical preparations. G. F. Harvey Company. 332,746; Feb. 25; Serial No. 368,886; published Dec. 17, 1935.

Pharmaceutical preparations. Heywood Toilet Specialties Co. 104,886; renewed May 26, 1935.

Powder, Deodorant. Krane Products. 332,759; Feb. 25; Serial No. 369,890; published Dec. 10, 1935.

Preparation for an iron tonic in fluid form. Wm. S. Merrell Company. 332,773; Feb. 26; Serial No. 369,998; published Dec. 10, 1935.

Preparation for coughs, colds in the head, throat and chest; etc. J. V. Ritz. 332,843; Feb. 26; Serial No. 365,013; published July 23, 1935.

Preparation for hay fever, asthma, anemia, and nervousness. D. Rassert. 332,800; Feb. 25; Serial No. 370,374; published Dec. 10, 1935.

Preparation for parenteral use as a bacterial antigen in veterinary practice. Spicer and Company. 332,834; Feb. 25; Serial No. 370,535; published Dec. 10, 1935.

Preparation for reducing weight. M. Thomas. 332,836; Feb. 26; Serial No. 369,923; published Dec. 10, 1935.

Preparation for the relief of rheumatism, arthritis, lumbago, etc. A. E. Johns. 332,753; Feb. 26; Serial No. 370,388; published Dec. 17, 1935.

Preparation for the restoration and regulation of sexual organs and dribbling urine, External. F. Sifford. 332,814; Feb. 25; Serial No. 366,897; published Dec. 10, 1935.

Preparation for the treatment of coughs, colds, and minor irritations of the nose, etc. Spohn Medical Company. 332,525; Feb. 25; Serial No. 368,004; published Dec. 17, 1935.

Preparation for the treatment of coughs, cold, etc., Liquid. Ernst Bischof Company. 332,709; Feb. 25; Serial No. 370,985; published Dec. 17, 1935.

Preparation for the treatment of piles. S. B. Rumrill. 332,905; Feb. 25; Serial No. 369,762; published Dec. 17, 1935.

Preparation recommended as a spur for wet cleaning. Sterling Products Company. 332,833; Feb. 25; Serial No. 370,137; published Dec. 10, 1935.

Preparation to sweeten the breath. Pinbrol Mfg. Co. 332,793; Feb. 25; Serial No. 369,489; published Dec. 17, 1935.

Preparations and compounds in form of drops, bonbons or tablets. Dr. Hillers Aktiengesellschaft Nahr-und Heilmittelwerk. 332,739; Feb. 25; Serial No. 369,962; published Dec. 17, 1935.

Remedy for ailments and diseases, External. Prima-Cura Company. 110,681; renewed June 6, 1936.

Remedy, put up in gelatin capsules. H. A. Plaster. 108,941; renewed Jan. 25, 1936.

Sachet. B. Harris. 332,745; Feb. 25; Serial No. 369,220; published Dec. 17, 1935.

Solution and an ointment for infected wounds. Table Rock Laboratories, Inc. 332,824; Feb. 26; Serial No. 360,311; published Dec. 10, 1935.

Tablet adapted to overcome bad or undesirable breath. Nu-Breath Corporation. 332,779; Feb. 25; Serial No. 369,226; published Dec. 10, 1935.

Tonic, nose drops, a laxative, etc., General. Green Cross Pharmaceutical Products, Inc. 332,740; Feb. 25; Serial No. 368,414; published Dec. 17, 1935.

Ware set and hair tonic. L. Walters. 332,841; Feb. 26; Serial No. 370,589; published Dec. 10, 1935.

Zinc oxide. American Zinc Sales Company. 332,806-4; Feb. 25; Serial Nos. 370,492-8; published Dec. 17, 1935.

CLASS 6

Pipes, Smoking. J. F. McConnachie. 332,702-6; Feb. 25; Serial Nos. 368,419-20; published Dec. 17, 1935.

CLASS 13

Mortar, High temperature. A. P. Green Fire Brick Company. 332,858; Feb. 26.

CLASS 15

Pipe, well casing, tubing, etc., Butt-welded. Youngstown Sheet and Tube Company. 332,647; Feb. 25; Serial No. 369,258; published Dec. 17, 1935.

Plates for shoes, Toe. L. Weinstein. 332,842; Feb. 25; Serial No. 370,816; published Dec. 17, 1935.

Screws, stripper bolts and pipe plugs. Hale-Kroms Screw Corporation. 332,748; Feb. 25; Serial No. 367,129; published Dec. 17, 1935.

Strapping, Box. Stanley Works. 332,829; Feb. 25; Serial No. 370,843; published Dec. 17, 1935.

Strapping, Metal box, bale, and package. C. Tennant, Sons & Co. of New York. 332,835; Feb. 25; Serial No. 360,136; published Sept. 3, 1935.

Valves and reseating blow-off steam-valves, Renewable blow-off steam. Homestead Valve Manufacturing Company. 109,007; renewed Mar. 21, 1936.

CLASS 14

Bendix Brake Company. (See Sanford, Roy S., assignor.)

Hiebtreu, Herman, Darmstadt, Germany, and L. B. Eberlein, Chicago, Ill., assignors to Freyn Engineering Company, Chicago, Ill. Fine gas cleaning apparatus. 19,865; Feb. 25.

Desmond, John J. Hubbard Woods, Ill., assignor to Line Material Company, South Milwaukee, Wis. Gang operated switch. 19,864; Feb. 25.

Eastman, Joseph P., Manitowoc, Wis. Hose coupling. 19,869; Feb. 25.

Eberlein, John B. (See Hiebtreu, H., and Eberlein.)

Eberly Register Company, The. (See Pfeiffer, William C., assignor.)

Epstein, Alex, assignor to Epstein & Hammer, Inc., Brooklyn, N. Y. Knitted cap or similar article. 19,866; Feb. 25.

Epstein & Hammer, Inc. (See Epstein, Alex, assignor.)

Freyn Engineering Company. (See Hiebtreu, H., and Eberlein, assignors.)

Goder, Max, Nonza, Germany, assignor to United States Envelope Company, Springfield, Mass. Folding of envelope blanks and the like. 19,867; Feb. 25.

Grindrod, George, Oconomowoc, Wis., assignor to Grindrod Process Corporation, Waukesha, Wis. Food product and manufacturing the same. 19,863; Feb. 25.

Grindrod Process Corporation. (See Grindrod, George, assignor.)

Jones, Leo D., assignor to The Sharples Specialty Company, Philadelphia, Pa. Method and apparatus for avoiding shock chill in precipitating substances from liquids. 19,869; Feb. 25.

Lederer, Ernest A., Glen Ridge, and J. W. Marden, East Orange, N. J., assignors to Westinghouse Lamp Company. Electron discharge device with indirectly heated cathode. 19,870; Feb. 25.

Line Material Company. (See Desmond, John J., assignor.)

Marden, John W. (See Lederer, E. A., and Marden.)

Pfeiffer, William C., assignor to The Eberly Register Company, Dayton, Ohio. Apparatus for handling multiple paper strips. 19,871; Feb. 25.

Sanford, Roy S., New York, N. Y., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill. Vehicle brake. 19,872; Feb. 25.

Sharples Specialty Company, The. (See Jones, Leo D., assignor.)

Skorstad, James B. (See Adsit, Frank W., assignor.)

Thrush, H. A., & Co. (See Thrush, Homer A., assignor.)

Thrush, Homer A., assignor to H. A. Thrush & Co., Peru, Ind. Hot water heating system. 19,873; Feb. 25.

United States Envelope Company. (See Goder, Max, assignor.)

Victor, John H., Wilmette, Ill., assignor to Victor Manufacturing & Gasket Company, Chicago, Ill. Skeleton metal-backed gasket. 19,874; Feb. 25.

Victor Manufacturing & Gasket Company. (See Victor, John H., assignor.)

Westinghouse Lamp Company. (See Lederer, E. A., and Marden, assignors.)

LIST OF PLANT PATENTEES

Spandikow, William, Jr., assignor to William Spandikow & Sons, Maywood, Ill. Rose. 167; Feb. 25.

Spandikow, William, & Sons. (See Spandikow, William, Jr., assignor.)

LIST OF DESIGN PATENTEES

American Lace Mfg. Co., The. (See Hucknall, Hage W., assignor.)

Anchor Cap & Closure Corporation. (See Fleisch, Joseph R., assignor.)

Anderson, Harry G., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Character bearing link for cravat holders or analogous articles. 98,707; Feb. 25.

Anderson, Harry G., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Character bearing link for cravat holders or analogous articles. 98,708; Feb. 25.

Anderson, Harry G., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Character bearing link for cravat holders or analogous articles. 98,709; Feb. 25.

Atkins, Thomas R., Cliftondale, assignor to Schoinick Shoe Co., Jamaica Plain, Mass. Shoe. 98,657; Feb. 25.

Ault-Williamson Shoe Co. (See Baldwin, Haviland D., assignor.)

Bachmeyer, George J., Kalamazoo, Mich. Garment hanger. 98,710; Feb. 25.

Baldwin, Haviland D., assignor to Ault-Williamson Shoe Co., Auburn, Maine. Shoe. 98,744; Feb. 25.

Ball Brothers Company. (See Petty, Fred J., assignor.)

Barocas, Abraham J., Brooklyn, N. Y. Wreath. 98,658; Feb. 25.

Bell, Elmer, assignor to Bryce Brothers Company, Mount Pleasant, Pa. Footed goblet or similar article. 98,659; Feb. 25.

Ben-Burk, Inc. (See Berkowitz, Hyman C., assignor.)

Berkowitz, Hyman C., assignor to Ben-Burk, Inc., Boston, Mass. Bottle. 98,711; Feb. 25.

Bischof, George, New York, N. Y. Embroidered textile fabric. 98,712; Feb. 25.

Briner, Donn, Chicago, Ill. Statuette. 98,713; Feb. 25.

Bryce Brothers Company. (See Bell, Elmer, assignor.)

Bunting Glider Company. (See Terker, Harry J., assignor.)

Burnelli Aircraft, Ltd. (See Burnelli, Vincent J., assignor.)

Burnelli, Vincent J., Keyport, N. J., assignor to Burnelli Aircraft, Ltd. Airplane. 98,660; Feb. 25.

Cargill, Lafayette F., Michigan City, Ind. Identification emblem. 98,714; Feb. 25.

Cole, Ira, assignor to Mittag & Volger, Incorporated, Park Ridge, N. J. Box. 98,662; Feb. 25.

Crary, Charles, Chicago, Ill. Ball float valve. 98,661; Feb. 25.

Dietzgen, Eugene, Company. (See Langaner, Adolph, assignor.)

Duff, Doyle, Burrton, J. C. Elliott, and J. J. Flickinger, Halstead, Kans. Display light for an automobile. 98,663; Feb. 25.

Edelman, Philip E., Chicago, Ill. Electrical humidifier. 98,664; Feb. 25.

Elliott, John C. (See Duff, D., Elliott, and Flickinger.)

Elmer, Leon H., San Jose, Calif. Plant container. 98,665; Feb. 25.

Englehm, Bernard A., Shaker Heights, assignor to The Rola Company, Cleveland, Ohio. Loudspeaker faceplate. 98,715; Feb. 25.

Evans Case Company. (See Reilly, Alfred F., assignor.)

Fago, Louis, Chicago, Ill. Brooch. 98,666; Feb. 25.

Faulhaber, Roland W., assignor to The Troxel Mfg. Company, Elyria, Ohio. Saddle. 98,667; Feb. 25.

Feldermann, William, South Orange, N. J. Humidifier. 98,716; Feb. 25.

Fleisch, Joseph R., Clifton, N. J., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y. Closure cap or similar article. 98,717; Feb. 25.

Flickinger, Jacob J. (See Duff, D., Elliott, and Flickinger.)

Fourness, Charles A., Appleton, Wis., assignor to International Cellucotton Products Company, Chicago, Ill. Paper handkerchief or similar article. 98,745; Feb. 25.

Franklin, Lester K., Chicago, Ill. Combined fish bowl and stand. 98,718; Feb. 25.

Franklin Simon & Co. (See Markowitz, Abe, assignor.)

Franklin Simon & Co. (See Porpora, Mary, assignor.)

Freysinger, John B., New Britain, Conn. Buckle. 98,668; Feb. 25.

Fukal, Alfred F., Chicago, Ill. Food mixer. 98,669; Feb. 25.
General Electric Company. (See Patten, Raymond E., assignor.)
Gordon, Anne, New York, N. Y. Shoe. 98,670; Feb. 25.
Greenspan, Abraham, New York, N. Y. Ensemble dress. 98,719; Feb. 25.
Harner, August, Flushing, N. Y. Textile fabric. 98,671; Feb. 25.
Hamre, Marion R., Brooklyn, N. Y. Printed textile fabric or similar article. 98,720; Feb. 25.
Hamre, Marion R., Brooklyn, N. Y. Printed textile fabric or similar article. 98,721; Feb. 25.
Hamre, Marion R., Brooklyn, N. Y. Printed textile fabric or similar article. 98,722; Feb. 25.
Hickok Manufacturing Company. (See Anderson, Harry G., assignor.)
Hood Rubber Company. (See Jay, Walter, assignor.)
Huber, Otto E., Reading, assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,723; Feb. 25.
Huber, Otto E., Reading, assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,724; Feb. 25.
Hucknall, Hage W., assignor to The American Lace Mfg. Co., Elyria, Ohio. Lace. 98,672; Feb. 25.
Hyde, A. R., & Sons Co. (See Klein, Hyman, assignor.)
Hyde, Ralph A., Brookline, Mass. Shoe or article of analogous nature. 98,673; Feb. 25.
Hyde, Ralph A., Brookline, Mass. Shoe or article of analogous nature. 98,674; Feb. 25.
International Cellucotton Products Company. (See Fourness, Charles A., assignor.)
Joy, Walter, Belmont, assignor to Hood Rubber Company, Inc., Watertown, Mass. Battery box. 98,675; Feb. 25.
Keeler Brass Company. (See Rettich, Kurt, assignor.)
Klein, Hyman, Lyn, assignor to A. R. Hyde & Sons Co., Cambridge, Mass. Shoe or article of analogous nature. 98,676; Feb. 25.
Kleven, Samuel L., Swampscott, Mass. Shoe or article of analogous nature. 98,677; Feb. 25.
Knox, Malcolm R., assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn. Combined oil burner casing and support therefor. 98,725; Feb. 25.
Knox, Malcolm R., assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn. Combined oil burner casing and support therefor. 98,726; Feb. 25.
Landgraf, Fred. (See Lewis, P. M., and Landgraf.)
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Transit. 98,678; Feb. 25.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Transit support. 98,679; Feb. 25.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Transit plate. 98,680; Feb. 25.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Dumpy level. 98,681; Feb. 25.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Y level. 98,682; Feb. 25.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Level support. 98,683; Feb. 25.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Vial housing unit. 98,684; Feb. 25.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Telescope. 98,685; Feb. 25.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Telescope. 98,686; Feb. 25.
Lewis-American Airways, Inc. (See Lewis, P. M., and Landgraf, assignors.)
Lewis, Paul M., and F. Landgraf, assignors to Lewis-American Airways, Inc., Denver, Colo. Airplane. 98,727; Feb. 25.
Markewitz, Abe, assignor to Franklin Simon & Co. Inc., New York, N. Y. Dress. 98,728; Feb. 25.
Maurer, Clarence D., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,729; Feb. 25.
Mausolf, George A., Waterbury, Conn. Soap bubble pipe. 98,687; Feb. 25.
McCulloch, Frankie L., Branson, Mo. Doll. 98,731; Feb. 25.
McCullough, Edward J., New York, N. Y., assignor to Owens-Illinois Glass Company, Toledo, Ohio. Bottle. 98,732; Feb. 25.
Meltzer, Leo A., Seattle, Wash. Combined telephone base and pad holder. 98,732; Feb. 25.
Meyer, Samuel J., New York, N. Y. Shoe. 98,688; Feb. 25.
Miller, Michael S., Thompsonville, Conn. Carpet. 98,746; Feb. 25.
Mittag & Volger, Incorporated. (See Cole, Ira, assignor.)
Narrow Fabric Company, The. (See Huber, Otto E., assignor.)
Narrow Fabric Company, The. (See Maurer, Clarence D., assignor.)
Narrow Fabric Company, The. (See Strupp, August K., assignor.)
Nichols, Edgar B., Moorestown, N. J. Dispensing device. 98,733; Feb. 25.
Olean Glass Company. (See Smith, George, Jr., assignor.)
Orrison, Chester E., assignor of one-half to J. E. Reed, Chicago, Ill. Dental floss magazine. 98,734; Feb. 25.
Owens-Illinois Glass Company. (See McCullough, Edward J., assignor.)
Patten, Raymond E., Bridgeport, Conn., assignor to General Electric Company. Portable electric food mixing device. 98,689; Feb. 25.
Petty, Fred L., assignor to Ball Brothers Company, Muncie, Ind. Bottle. 98,735; Feb. 25.
Pomerantz, Samuel L., New York, N. Y. Combined supporting tray and powder pad display. 98,690; Feb. 25.
Porpora, Mary, assignor to Franklin Simon & Co. Inc., New York, N. Y. Dress. 98,736; Feb. 25.
Putman, Solomon, Newark, N. J. Buckle. 98,691; Feb. 25.
Reed, Joel E. (See Orrison, Chester E., assignor.)
Reilly, Alfred F., assignor to Evans Case Company, North Attleboro, Mass. Razor handle. 98,692; Feb. 25.
Rettich, Kurt, assignor to Keeler Brass Company, Grand Rapids, Mich. Drawer pull or similar article. 98,693; Feb. 25.
Rettich, Kurt, assignor to Keeler Brass Company, Grand Rapids, Mich. Drawer pull or similar article. 98,694; Feb. 25.
Richardson, Bayard E., and E. W. Willey, Grand Rapids, Mich. Coin controlled phonograph. 98,737; Feb. 25.
Ritz-Woller, Oliver C., Chicago, Ill. Combined truck mirror and support therefor. 98,695; Feb. 25.
Rogers, Walter, Bay Shore, N. Y. Fruit holder or similar article. 98,696; Feb. 25.
Rola Company, The. (See Magheim, Bernard A., assignor.)
Schiller, Hyman, New York, N. Y. Suspender. 98,738; Feb. 25.
Scholnick Shoe Co. (See Atkins, Thomas B., assignor.)
Silent Glow Oil Burner Corporation, The. (See Knox, Malcolm R., assignor.)
Smith, George, Jr., assignor to Olean Glass Company, Olean, N. Y. Bottle. 98,739; Feb. 25.
Strupp, August K., Reading, assignor to The Narrow Fabric Company, West Reading, Pa. Elastic fabric. 98,740; Feb. 25.
Swasey, Edward S., assignor to Trimble Nurseryland Furniture, Inc., Rochester, N. Y. Baby's crib. 98,697; Feb. 25.
Thieb, Gaston, New York, N. Y. Toilet powder container. 98,741; Feb. 25.
Terker, Harry J., assignor to Bunting Glider Company, Philadelphia, Pa. Chair frame. 98,698; Feb. 25.
Terker, Harry J., assignor to Bunting Glider Company, Philadelphia, Pa. Chair frame. 98,699; Feb. 25.
Trimble Nurseryland Furniture, Inc. (See Swasey, Edward S., assignor.)
Troxel Mfg. Company, The. (See Faulhaber, Roland W., assignor.)
Waldman, Mitchell, New York, N. Y. Setting for precious stones. 98,742; Feb. 25.
Waldman, Mitchell, New York, N. Y. Setting for precious stones. 98,743; Feb. 25.
Watson, Carlisle V., Auburn, Maine. Shoe. 98,700; Feb. 25.
Wiener, Joseph D., New York, N. Y. Lace. 98,701; Feb. 25.
Wiener, Joseph D., New York, N. Y. Lace. 98,702; Feb. 25.
Wiener, Joseph D., New York, N. Y. Lace. 98,703; Feb. 25.
Wiener, Joseph D., New York, N. Y. Lace. 98,704; Feb. 25.
Wiener, Joseph D., New York, N. Y. Lace. 98,705; Feb. 25.
Willey, Richard W. (See Richardson, E. E., and Willey.)
Winkler, Lillian S., El Paso, Tex. Ash tray. 98,706; Feb. 25.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 25TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Aalberg, Christian. (See Conrad, F., Aalborg, and French.)
Abbott, Edward J., assignor to Abbott Machine Company, Wilton, N. H. Apparatus for fluid treating fibrous materials. 2,031,626; Feb. 25.
Abbott Machine Company. (See Abbott, Edward J., assignor.)
Abrams, Jack B., Chicago, Ill. Framed mirror. 2,031,627; Feb. 25.
Ach, Lorenz, Mannheim-Waldhof, and W. Dircoherl, Heidelberg, Germany, assignors to Rare Chemicals, Inc., Nepera Park, N. Y. Sexual hormone derivatives. 2,031,561; Feb. 25.
Adair, Samuel E. (See Jenkins, J. E., and Adair.)
Adams, Harry D., Boston, Mass. Hinge. 2,032,078; Feb. 25.
Aherne, Francis E., Tufts College, Mass., Road surface mixing device. 2,031,628; Feb. 25.
Air Reduction Company. (See Anderson, James L., assignor.)
Air-Way Electric Appliance Corporation. (See Riebel, F., Jr., Dow, and Child, assignors.)
Ajax Electrothermic Corporation. (See Northrup, Edwin F., assignor.)
Aktiengesellschaft Brown Boveri & Cie. (See Oertel, Wilhelm, assignee.)
Allegheny Steel Company. (See Porter, Harry F., assignee.)
Allen, W. D., Manufacturing Company. (See Meng, Harry R., assignor.)
Alm, Johan R., assignor to Baltzar Carl von Platen, Stockholm, Sweden. Conversion of alternating currents into direct current or vice versa. 2,031,562; Feb. 25.
American Cast Company. (See Wardell, William J., assignor.)
American Chain Company. (See Rothard, O. H., and Kuhlman, assignors.)
American District Telegraph Company. (See Johnson, C. C., Hopkins, and Spamer, assignors.)
American Floor Surfacing Machine Company. (See Myers, Harry L., assignor.)
American Hair & Felt Company. (See Clements, A. L., and Calsmer, assignors.)
American Radiator Company. (See Cornell, Edward S., Jr., assignor.)
American Rolling Mill Company, The. (See Caufield, J. J., and McGohan, assignors.)
American Telephone & Telegraph Company. (See Carson, Arthur, assignor.)
American Telephone and Telegraph Company. (See Espenschied, L., and Monk, assignors.)
American Telephone and Telegraph Company. (See Kyquist, Harry, assignor.)
Andersen, Harvey E. (See Veysey, V. V., and Andersen.)
Anderson, Carl O. (See Davis, E. H., Anderson, and Stengl.)
Anderson, Howard P., Erie, Pa., assignor to The Standard Stoker Company, Incorporated. Stoker conveyer. 2,032,336; Feb. 25.
Anderson, James L., Closter, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Torch for welding seams along curving surface. 2,031,583; Feb. 25.
Anderson Orchard Company. (See Anderson, W. Charles, assignor.)
Anderson, W. Charles, assignor to Anderson Orchard Company, Linden, Calif. Walnut huller. 2,031,810; Feb. 25.
Andrews, Edward F., Chicago, Ill. Radio receiving set. 2,031,997; Feb. 25.
Ansonia O & C Company, The. (See Fassett, Wallace F., assignor.)
Apotheker, Carl. (See Beahöte, G., and Apotheker.)
Apple, Reesie D. (See Cotterman, Frederick W., assignor.)
Armour and Company. (See Potts, Ralph H., assignor.)
Armstrong, Sir W. G., Whitworth Aircraft Limited. (See Murray, C. V., and Lloyd, assignors.)
Armstrong, Walter J., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Rotary reducing machine. 2,031,693; Feb. 25.
Arnold, Arthur A. (See Gilbert, A. C., and Arnold.)
Artcraft Venetian Blind Company. (See Victori, August T., assignor.)
Artcraft Venetian Blind Company. (See Woodruff, George, assignor.)
Arutunoff, Armais. (See Brown, C. C., Van Wert, and Arutunoff.)
Asbury, Arthur B. (See Smith, H., Schiedel, and Asbury.)
Ashe, William O., St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill. Car underframe structure. 2,032,195; Feb. 25.
Associated Inventions, Inc. (See Kern, William H., assignor.)
Atkins, Stuart A., Westfield, N. J., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Coated textile material. 2,031,629; Feb. 25.
Atmospheric Nitrogen Corporation. (See O'Leary, John J., assignor.)
Auditone Company. (See Kiel, John R., assignor.)
Austin, Walter S., Grand Rapids, Mich. Axle driving construction. 2,031,584; Feb. 25.
Austin, William W., et al. (See Tiedemann, Clinton C., assignor.)
Auth, Charles, New York, N. Y. Paging system. 2,032,037; Feb. 25.
Auth, Charles, New York, N. Y. Electric signal receptacle and plug. 2,032,038; Feb. 25.
Autographic Register Company. (See Brenn, Carl W., assignor.)
Azzaro, Eugenio A., San Francisco, Calif. Surf fishing device. 2,031,811; Feb. 25.
Baciagalupi, Joseph M., Oakland, assignor to E. J. Sweetland, Piedmont, Calif. Extensible coupling. 2,031,754; Feb. 25.
Barby, Ralph R., Evanston, Ill. Filling machine. 2,032,163; Feb. 25.
Bailleul, Gustav. (See Jaenicke, M., and Bailleul.)
Baird, John L., London, England. Cinematographic rectifying system. 2,032,164; Feb. 25.
Bakelite Building Products Co. Inc. (See Harshberger, Norman P., assignor.)
Baker, Paul R. (See Ekserdjian, C. L., and Baker.)
Baker, Roy J. (See North, G. H., and Baker.)
Baldwin-Southward Corporation. (See McKee, G. S., and Galson, assignors.)
Ball, Harry V., Concord, Mass., assignor to Irving Trust Company, Permanent Trustee for R. Hoe & Co., Inc., New York, N. Y. Web roll controlling mechanism for printing machines. 2,032,339; Feb. 25.
Ballou, Howard M., assignor to E. Blackinton & Co., North Attleboro, Mass. Producing engraved patterns for silverware and the like. 2,032,039; Feb. 25.
Baranowski, Charles L., South Bend, Ind. Combined salt and pepper shaker. 2,031,755; Feb. 25.
Barnett, Harold M., Cleveland, W. O. Frahring, Shaker Heights, and A. F. O. Germann, assignors to S. M. A. Corporation, Cleveland, Ohio. Extracting carotene. 2,032,165; Feb. 25.
Barrett, Arthur M., and L. N. Udell, Chicago, Ill. Method of and apparatus for making ice. 2,031,812; Feb. 25.
Barrett, Walter A., Fort Wayne, Ind. Bottle filling and capping machine. 2,032,040; Feb. 25.
Barrows, Donald S., assignor to The Symington Company, Rochester, N. Y. Draft rigging. 2,032,340; Feb. 25.
Barrows, Donald S., assignor to The Symington Company, Rochester, N. Y. Cushioning mechanism. 2,032,341; Feb. 25.
Bartlett, C. O., & Snow Company, The. (See Goodell, F. H., and Ross, assignors.)
Bartlett Hayward Company, The. (See Koether, Emil A., assignor.)
Batsel, Cecil N., Collingswood, and E. W. Kellogg, Moorestown, N. J., assignors to Radio Corporation of America. Phonophotographic apparatus. 2,031,813; Feb. 25.
Baughman, George W., Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control circuit for electric brakes. 2,032,106; Feb. 25.
Baum, John L., Ephrata, Pa. Clothes hanger. 2,032,248; Feb. 25.
Bayle, Russell M., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Motor control system. 2,032,107; Feb. 25.
Beam, Vilynn O. (See Branche, N. T., and Beam.)
Beck, Rudolf, assignor to Consolidated Ashcroft Hancock Company, Inc., Bridgeport, Conn. Differential control apparatus. 2,032,041; Feb. 25.
Bedford, Reginald A., Stumperlowe, Sheffield, England. Device for removing drills or other articles from their shafts. 2,031,814; Feb. 25.
Beers, George H., Wabuska, Nev. Ore crushing mill. 2,032,247; Feb. 25.
Belknap, William L., Stratford, Conn. Heat responsive valve. 2,031,630; Feb. 25.
Bell & Howell Company, The. (See Howell, Albert S., assignor.)

Bell Punch Company Limited. (See Degen, Alexander A. C., assignor.)

Bell Telephone Laboratories, Incorporated. (See Bennett, A. F., and Gordon, Jr., assignors.)

Bell Telephone Laboratories, Incorporated. (See Bonomi, Felix A., assignor.)

Bell Telephone Laboratories, Incorporated. (See Corwin, Thomas L., assignor.)

Bell Telephone Laboratories, Incorporated. (See Dugald, J. M., and Sole, assignors.)

Bell Telephone Laboratories, Incorporated. (See Glunt, Omer M., assignor.)

Bell Telephone Laboratories, Incorporated. (See Gray, Frank, assignor.)

Bell Telephone Laboratories, Incorporated. (See Harrison, Henry C., assignor.)

Bell Telephone Laboratories, Incorporated. (See Hartley, Ralph V. L., assignor.)

Bell Telephone Laboratories, Incorporated. (See Horton, Joseph W., assignor.)

Bell Telephone Laboratories, Incorporated. (See Mellick, John M., assignor.)

Bell Telephone Laboratories, Incorporated. (See Romnes, Haakon I., assignor.)

Bell Telephone Laboratories, Incorporated. (See Tromp, G. P., and Neill assignors.)

Bell Telephone Laboratories, Incorporated. (See Wiebusch, Charles F., assignor.)

Beloit Iron Works. (See Hornbostel, Lloyd, assignor.)

Bemis, Albert F., Newton, assignor to Bemis Industries, Incorporated, Boston, Mass. Building construction. 2,031,831; Feb. 25.

Bemis Bro. Bag Co. (See Hanneweld, B. A., and Ingstad, assignors.)

Bemis Industries, Incorporated. (See Bemis, Albert F., assignor.)

Bendix Aviation Corporation. (See House, Bryan E., assignor.)

Bendix Aviation Corporation. (See Kohr, Robert F., assignor.)

Bendix Brake Company. (See Dodge, Adiel Y., assignor.)

Bendix Brake Company. (See Parker, H. F., and House, assignors.)

Bendix Brake Company. (See Turgot, Robert C. L. P., assignor.)

Bendix Products Corporation. (See Budd, Clarence E., assignor.)

Bendix Products Corporation. (See Hunt, Scott F., assignor.)

Benedek, Elek K., assignor to The Hydraulic Press Mfg. Company, Mount Gilead, Ohio. Pump or meter. 2,031,079; Feb. 25.

Bennett, Arthur F., Richmond Hill, N. Y., and M. K. Gordon, Jr., Newark, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Amplifying system. 2,031,919; Feb. 25.

Benshimol, Ernest, Arlington, Mass. Geometric tool. 2,031,920; Feb. 25.

Berger, Fred H., Los Angeles, Calif. Tile spacer. 2,031,054; Feb. 25.

Berman, Louis C., assignor to Depict Tool Co., Chicago, Ill. Lifting jack. 2,031,815; Feb. 25.

Bernard, Auguste L. R., deceased, late of Rueil-Malmaison, France, by R. Bernard, née Bournonville, executrix, Paris, France. Two-stroke engine. 2,032,108; Feb. 25.

Bernard, Rene, née Bournonville, executrix. (See Bernard, Auguste L. R.)

Berthold, Edward H. (See Buckels, Christopher C., assignor.)

Bertsch, Heinrich, Chemnitz, assignor to H. Th. Böhme Aktiengesellschaft, Chemnitz, Germany. Production of esters. 2,032,813; Feb. 25.

Bertsch, Heinrich, assignor to the firm H. Th. Böhme Aktiengesellschaft, Chemnitz, Germany. Esters of sulphonated carboxylic acids. 2,032,814; Feb. 25.

Best Brothers Keene's Cement Company, The. (See Best, J. C., and Marsh, assignors.)

Best Brothers Keene's Cement Company, The. (See Marsh, Frank L., assignor.)

Best, John C., and F. L. Marsh, assignors to The Best Brothers Keene's Cement Company, Medicine Lodge, Kans. Producing light weight plasters. 2,031,836; Feb. 25.

Bethlehem Steel Company. (See Nieman, H. W., and Linderman, assignors.)

Bevis, Frank P. (See Lee, B., and Bevis.)

Biebel, Herman M. (See Jackson, B. P., and Biebel.)

Binapel, Josef, and J. Kuchenbuch, Krefeld-Uerdingen, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Manufacture of condensation products. 2,031,580; Feb. 25.

Bingham Stamping & Tool Company, The. (See Snell, Samuel A., assignor.)

Bins, John G., St. Paul, Minn. Dog bed or the like. 2,032,348; Feb. 25.

Bishop, Clifford E., Rego Park, assignor to Northam Warren Corporation, New York, N. Y. Fingernail polish remover. 2,032,042; Feb. 25.

Blackinton, E., & Co. (See Ballou, Howard M., assignor.)

Blake, Eli J. (See Pipkin, M. E., and Blake.)

Blake, Joseph H., Seattle, Wash. Rod or tool connector. 2,032,196; Feb. 25.

Blakeslee, Edward L., Oak Park, assignor to G. S. Blakeslee & Co., Cicero, Ill. Dishwashing machine. 2,031,816; Feb. 25.

Blakeslee, G. S., & Co. (See Blakeslee, Edward L., assignor.)

Blanchard, Adna F., Providence, R. I., assignor to Tryon Viscometer Corporation, Elmira, N. Y. Comparative viscosity device. 2,032,197; Feb. 25.

Blewett, John, assignor to The Murray Company, Dallas, Tex. Machine for cleaning seed cotton and for extracting the seed cotton from burrs and bolls. 2,031,887; Feb. 25.

Bliss, Louis V., Calgary, Alberta, Canada. Bearing pulling tool. 2,031,966; Feb. 25.

Bloomer Bros. Company. (See Klefeker, Charles B., assignor.)

Blue Moon Cheese Products, Inc. (See Speer, Lambert R., assignor.)

Bodendieck, Henry W., assignor to Tipe Tool Company, Inc., Taylorville, Ill. Grounding set. 2,031,921; Feb. 25.

Boesching, Ewald, Brooklyn, assignor to International Projecter Corporation, New York, N. Y. Film feeding mechanism for films having sound track. 2,031,756; Feb. 25.

Boettcher, Gustav A., Richmond Hill, N. Y. Thread restoring tool. 2,032,198; Feb. 25.

Bogart, Leonard H., Comanche, Okla. Tank gauge. 2,031,909; Feb. 25.

Böhme, H. Th., Aktiengesellschaft. (See Bertsch, Heinrich, assignor.)

Bolesky, John D., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Hinge structure. 2,032,109; Feb. 25.

Bomber, William J., Green Bay, Wis. Lingerie clasp. 2,031,685; Feb. 25.

Bonhôte, Gérald, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Stable solid diazosalts and making same. 2,032,110; Feb. 25.

Bonhôte, Gérald, Basel, and C. Apotheker, Riehen, near Basel, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Blue dyeing azodyestuffs. 2,032,111; Feb. 25.

Bonner, Daniel M., Philadelphia, Pa. Thread printing apparatus selector mechanism. 2,032,043; Feb. 25.

Bonomi, Felix A., St. Albans, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,031,922; Feb. 25.

Booth, Clement. (See Einstein, E., Booth and Haas.)

Borel, Charles, Geneva, Switzerland. Installation for compiling and collaborating statistical data. 2,031,686; Feb. 25.

Boren, Clarence H. (See McCarty, Madison P., assignor.)

Borg-Warner Corporation. (See Simpson, John M., assignor.)

Boriski, Martin J., Houston, Tex. Pressing machine. 2,031,687; Feb. 25.

Bosch, Robert, Aktiengesellschaft. (See Stoll, Hermann, assignor.)

Bottoms, Robert R., assignor to The Girdler Corporation, Louisville, Ky. Recovering acidic gases from gaseous mixtures. 2,031,632; Feb. 25.

Boura, Leslie E. A., Ashford, assignor to The John Compton Organ Company, Limited, London, England. Electrical musical instrument. 2,032,044; Feb. 25.

Bowen, Kenneth H., assignor to Columbian Rope Company, Auburn, N. Y. Abrasive supporting member and producing same. 2,032,249; Feb. 25.

Bowen, William S., Westfield, N. J. Fan and motor construction. 2,031,688; Feb. 25.

Bower, Bert H., Gloversville, N. Y. Leather product and producing it. 2,032,250; Feb. 25.

Bowles, Edward L., Watertown, Mass. Measuring dynamic characteristics. 2,031,923; Feb. 25.

Bowles, Edward L., Wellesley Farms, Mass. Measuring dynamic characteristics. 2,031,924; Feb. 25.

Bowles, Edward L., Wellesley Farms, Mass. Measuring dynamic characteristics. 2,031,925; Feb. 25.

Bowles, Edward L., Wellesley Farms, Mass. Electric meter. 2,031,926; Feb. 25.

Boynton, Arthur J., Winnetka, assignor to H. A. Brassert & Company, Chicago, Ill. Apparatus for burning fuel. 2,031,757; Feb. 25.

Brackett Stripping Machine Company, The. (See Daneke, D., and Williams, assignors.)

Braden, Rene A., Merchantville, N. J., assignor to Radio Corporation of America. Energizing circuits for space discharge devices. 2,032,199; Feb. 25.

Bradford, Arthur J., Alpiaus, N. Y., assignor to General Electric Company. Film driving apparatus. 2,031,817; Feb. 25.

Bragg-Kliesrath Corporation. (See Kliesrath, Victor W., assignor.)

Braithwaite, Isaac, & Son Engineers Limited. (See Stillfox, William H., assignor.)

Branche, Nelson T., and V. O. Beam, assignors to Surface Combustion Corporation, Toledo, Ohio. Compensated pilot-controlled thermostat. 2,032,045; Feb. 25.

Branche, Nelson T., assignor to Surface Combustion Corporation, Toledo, Ohio. Control mechanism for burners. 2,032,046; Feb. 25.

Braselton, Chester H., New York, N. Y., assignor to Sirian Lamp Company, Newark, N. J. Lamp. 2,031,927; Feb. 25.

Brassert, H. A., & Company. (See Boynton, Arthur J., assignor.)

Brecht, Winston A., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Axle generator drive. 2,032,112; Feb. 25.

Brendel, Max E., assignor to Streeter-Amet Company, Chicago, Ill. Control mechanism. 2,032,113; Feb. 25.

Brens, Carl W., Montclair, assignor to Autographic Register Company, Hoboken, N. J. Typewriting machine. 2,031,928; Feb. 25.

Breuer, Armin, Berlin, Germany. Paper conveying device for sheets, especially for use in office printing machines. 2,032,166; Feb. 25.

Breuers, Wilhelm, Ludwigshafen-on-the-Rhine, H. Mark, Mannheim, and E. Konrad, Leverkusen, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Impregnation of materials. 2,031,929; Feb. 25.

Bridgeport Brass Company. (See Tobelman, Gustave H., assignor.)

Briggs Manufacturing Company. (See Ross, F. M., and Johnson, assignors.)

Briggs Manufacturing Company. (See Tjaarda, John, assignor.)

Brillhart, George A., Indianapolis, Ind. Golf ball scrubber. 2,031,683; Feb. 25.

Brooks, Henry, Forest Junction, Wis. Potato planter. 2,032,251; Feb. 25.

Brown Bag Filling Machine Company, The. (See Chandler, Austin S., assignor.)

Brown, Charley C., Ponca City, S. N. Van Wert, and A. Arutunoff, assignors to Reda Pump Company, Bartlesville, Okla. Raising fluid from deep oil and water wells. 2,032,000; Feb. 25.

Brown Company. (See Moore, Hugh K., assignor.)

Brown Company. (See Richter, George A., assignor.)

Brown, Theophilus, assignor to Deere & Company, Moline, Ill. Tractor. 2,031,758; Feb. 25.

Brown, William H., Cleveland, Ohio. Cigarette vending machine. 2,032,001; Feb. 25.

Bryan, Charles S. (See Fiske, A. H., and Bryan.)

Buc, Hyym B., Roselle, N. J., assignor to Standard Oil Development Company. Stabilized refined mineral, vegetable, and animal oils. 2,031,930; Feb. 25.

Buckels, Christopher C., assignor of one-half to E. E. Berthold, Chicago, Ill. Outlet box. 2,031,689; Feb. 25.

Buckeye Steel Castings Company, The. (See Johnson, George T., assignor.)

Buckwalter, Tracy V., assignor to The Timken Roller Bearing Company, Canton, Ohio. Roller bearing axle. 2,031,818; Feb. 25.

Budd, Clarence E., assignor to Bendix Products Corporation, South Bend, Ind. Brake shield. 2,031,690; Feb. 25.

Budd, Edward G., Manufacturing Co. (See Ekvergian, C. L., and Baker, assignors.)

Budd Wheel Company. (See Tarbox, John P., assignor.)

Bungartz, Everhard. (See Kaufmann, W., and Bungartz.)

Bunten, Theodore W. (See Cleveland, T. W., and Bunten.)

Burckhalter, Robert N., and J. M. Osburn, Michigan City, Ind., assignor to Michiana Products Corporation. Filter. 2,031,589; Feb. 25.

Burke, William F., assignor to The McBee Company, Athens, Ohio. Printing press for printing spots of wax carbon on sheets of paper. 2,032,047; Feb. 25.

Burnelli Aircraft, Ltd. (See Burnelli, Vincent J., assignor.)

Burnelli, Vincent J., Keyport, N. J., assignor to Burnelli Aircraft, Ltd. Airplane. 2,031,876; Feb. 25.

Burrow, Herbert T., Beaver Dam, assignor to Malleable Iron Range Company, Beaver Dam, Wis. Range. 2,032,252; Feb. 25.

Bush, Vannevar, Medford, Mass., assignor, by mesne assignments to Raytheon Manufacturing Company, Newton, Mass. Amplifying system. 2,032,253; Feb. 25.

Budek, William A., assignor to A. E. Fellner, Belleville, Ill. 2,032,048; Feb. 25.

Butler, James C., Vancouver, British Columbia, Canada. Shake splitting machine. 2,031,877; Feb. 25.

Butler, Joseph D. (See Butler, Ludovica and J. D.)

Butler, Ludovica and J. D., San Francisco, Calif. Bird feed receptacle. 2,031,874; Feb. 25.

Cadaco, Ltd. (See Wiener, Martin L., assignor.)

Caldwell, Frank W., Pittsburgh, Pa., assignor, by mesne assignments to United Aircraft Corporation. Adjustable pitch propeller. 2,032,254; Feb. 25.

Caldwell, Frank W., West Hartford, Conn., assignor, by mesne assignments to United Aircraft Corporation. Propeller. 2,032,255; Feb. 25.

Calsmer, Walter H. (See Clements, A. L., and Calsmer.)

Campbell, Charles A., Watertown, N. Y., assignor to The New York Air Brake Company. Air brake. 2,032,002; Feb. 25.

Campbell, Sterling H., and F. H. Pietzsch, assignors to Railway Devices Company, St. Louis, Mo. Brake beam safety support. 2,031,691; Feb. 25.

Canfield, Jesse J., and G. W. McGohan, assignors to The American Rolling Mill Company, Middletown, Ohio. Metal articles for coating. 2,032,256; Feb. 25.

Carbo-Norit-Union Verwaltungs-Gesellschaft m. b. H. (See Jaenicke, M., and Bailleul, assignors.)

Carlson, William. (See Patton, Cleon E., assignor.)

Carmichael, William A., assignor to C. F. Church Mfg. Co., Hamden, Conn. Lock-on toilet seat hinge. 2,032,257; Feb. 25.

Carpenter, Morris T. (See Roberts, J. K., and Carpenter.)

Carson, Arthur, Richmond, Va., assignor to American Telephone & Telegraph Company. Telephone system. 2,031,692; Feb. 25.

Cartin, James D., Watertown, N. Y., assignor to The New York Air Brake Company. Reservoir mounting. 2,031,693; Feb. 25.

Case, J. I., Company. (See Geraldson, Gerald, assignor.)

Case, J. I., Company. (See Hendricks, S. B., and Markel, assignors.)

Casper, Frank L., Howes Cave, N. Y. Table leaf support. 2,031,759; Feb. 25.

Casteel Research Laboratories, Inc. (See Strauss, Theodore O., assignor.)

Caterpillar Tractor Co. (See Gustafson, Carl A., assignor.)

Caterpillar Tractor Co. (See Radford, William H., assignor.)

Caton, Thomas, Millbrook, N. Y. Fruit conveyer. 2,032,258; Feb. 25.

Celanese Corporation of America. (See Hale, Frank C., assignor.)

Celanese Corporation of America. (See Jabouley, Joanny, assignor.)

Celanese Corporation of America. (See Jones, John H., assignor.)

Celanese Corporation of America. (See Seymour, George W., assignor.)

Celanese Corporation of America. (See Taylor, W. I., and Woodruff, assignors.)

Celanese Corporation of America. (See Taylor, William L., assignor.)

Chaffee, Raymond O., Belmont, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Rotary operative fastener installation and fastener for the same. 2,032,315; Feb. 25.

Champion Fibre Company, The. (See Murdock, Harold R., assignor.)

Chance, Henry M., Philadelphia, Pa. Apparatus for ventilating buildings. 2,032,080; Feb. 25.

Chandler, Austin S., Fitchburg, assignor to The Brown Bag Filling Machine Company, Fitchburg, Mass. Receptacle filling and sealing machine. 2,032,259; Feb. 25.

Chapman, Verni J., Schenectady, N. Y., assignor to General Electric Company. Wire feeding apparatus. 2,032,260; Feb. 25.

Chevalier, Leopold. (See Poulin, Francis, assignor.)

Chiasson, Placid N., Griggsville, Ill. Combined felly, rim, and tire structure. 2,032,261; Feb. 25.

Chicago Flexible Shaft Company. (See Jeppesen, Ivar, assignor.)

Chicago Mill and Lumber Company. (See Whiton, Arthur L., assignor.)

Child, Lachlan W. (See Riebel, F., Jr., Dow, and Child.)

Choice, Frank C. (See Ricks, F., Elliott, and Choice.)

Chouinard, Oscar, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Method of and system for reproducing sound from sound films. 2,032,200; Feb. 25.

Chrysler Corporation. (See Lee, R. K., and McCortney, assignors.)

Church, C. F., Mfg. Co. (See Carmichael, William A., assignor.)

Church, Walter L., Houston, assignor of one-half to W. L. Pearce, Harris County, Tex. Well drilling apparatus. 2,031,931; Feb. 25.

Claus, Ernest C., Chicago, Ill. Rocking device. 2,032,049; Feb. 25.

Clause, Robert L., Sewickley, Pa., assignor to Pittsburgh Plate Glass Company. Making a double glazed unit. 2,032,003; Feb. 25.

Clegg, Harry B., Attleboro, Mass. Vanity case or compact. 2,031,933; Feb. 25.

Clements, Arthur L., and W. H. Calsmer, assignors to American Hair & Felt Company, Chicago, Ill. Carpet cushion. 2,032,114; Feb. 25.

Cleveland Graphite Bronze Company, The (See Salzman, George S., assignor.)

Cleveland, Theodore W., and T. W. Bunten, Weston, W. Va. Printer's gauge pin. 2,032,004; Feb. 25.

Cloutier, Arthur N. (See Lawson, R. H., and Cloutier.)

Cobb, Harold E., Montgomery, Ohio, assignor to General Motors Corporation, Detroit, Mich. Circuit breaker. 2,032,115; Feb. 25.

Coffelder, Thomas N., Pittsburgh, Pa. Hair curling device. 2,031,760; Feb. 25.

Columbian Rope Company. (See Bowen, Kenneth H., assignor.)

Compo Shoe Machinery Corporation. (See Smith, John F., assignor.)

Compton, John, Organ Company, The. (See Bourn, Leslie E. A., assignor.)

Conover Company, The. (See Stoddard, Edgar S., assignor.)

Conrad, Frank, Wilkinsburg, C. Aalborg, Pittsburgh, Pa., and O. B. French, Collingswood, N. J., assignor to Westinghouse Electric and Manufacturing Company. Motion picture apparatus. 2,032,116; Feb. 25.

Conradty, C. (See Conradty, Ottmar, assignor.

Conradty, Ottmar, assignor to C. Conradty, Nuremberg, Germany, a firm. (Collecting member for trolley systems. 2,031,819; Feb. 25.

Conseil, Jean M. (See Scranton, J., and Conseil.)

Consolidated Ashcroft Hancock Company. (See Beck, Rudolf, assignor.)

Consolidated Car-Heating Company. (See Hyatt, Louis C., assignor.)

Continental Motors Corporation. (See Vincent, Edward T., assignor.)

Corbett, George, Tampa, Fla. Radio volume control. 2,032,117; Feb. 25.

Cori, Blanche, Berlin, Germany. Gas filter. 2,032,262; Feb. 25.

Cornell, Edward S., Jr., Larchmont, assignor to American Radiator Company, New York, N. Y. Combined diverting and hot-cold control fixture. 2,031,932; Feb. 25.

Corning Glass Works. (See Weber, Walter C., assignor.)

Corvington, Oscar H. (See Helfrich, Lewis and W., and Corvington.)

Corwin, Thomas L., Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Printing telegraph system. 2,031,934; Feb. 25.

Cotterman, Frederick W., assignor of one-half to Bessie D. Apple, Dayton, Ohio. Automotive transmission and braking mechanism. 2,032,050; Feb. 25.

Cotton, Charles H., Kewanee, Ill., assignor to Walworth Patents Inc., Boston, Mass. Valve. 2,032,816; Feb. 25.

Costa, Alfred J., Detroit, Mich. Angular ball swivel union. 2,031,878; Feb. 25.

Craig, John F., Upper Montclair, N. J., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Electropneumatic brake. 2,032,167; Feb. 25.

Crawford, Harvey E., La Canada Township, Los Angeles County, Calif. Dispensing device. 2,031,820; Feb. 25.

Crick, Burton F., Peers, Alberta, Canada. Belt fastener. 2,032,005; Feb. 25.

Criner, Harry J., Davenport, Iowa. Bread slicing machine. 2,032,118; Feb. 25.

Croce, Richard D., New York, N. Y. Lining for fruit boxes and the like. 2,031,804; Feb. 25.

Cross, Robert J., Mason, Mich., assignor to S. M. A. Corporation, Cleveland, Ohio. Recovering carotene from soaps. 2,032,006; Feb. 25.

Cuno, Charles H., assignor to The Cuno Engineering Corporation, Meriden, Conn. Filter. 2,031,935; Feb. 25.

Cuno, Charles H. assignor to The Cuno Engineering Corporation, Meriden, Conn. Forming filters. 2,031,936; Feb. 25.

Cuno Engineering Corporation, The. (See Cuno, Charles H., assignor.)

Dahlen, Miles A. (See Hitch, E. F., Dahlen, and Friedrich.)

Dahlen, Miles A. (See Jordan, H., and Dahlen.)

Dahlen, Miles A., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Water soluble diazoimino compounds. 2,031,634; Feb. 25.

Daman, Arthur C., Denver, Colo. Flotation apparatus. 2,031,500; Feb. 25.

Daneke, Dietrich, Topeka, Kans., and L. C. Williams, Pearl River, N. Y., assignors to The Brackett Stripping Machine Company, Topeka, Kans. Folding and gluing mechanism. 2,031,879; Feb. 25.

Daughenbaugh, Paul J., New Haven, Conn., assignor to Sharp & Dohme Incorporated, Philadelphia, Pa. Arsenic derivatives of sugars. 2,032,263; Feb. 25.

Daugherty, James F., Jr., Woodbury, N. J., assignor to Houdry Process Corporation, Dover, Del. Conversion of hydrocarbons. 2,031,591; Feb. 25.

Davidson, Louis, Hewlett, N. Y. Arch building construction. 2,031,937; Feb. 25.

Davis, Jesse H., Baltimore, Md. Preserving grain in storage. 2,032,264; Feb. 25.

Davis, Sidney H., Tulsa, Okla., C. O. Anderson, Baxter Springs, Kans., and R. J. Stengl, Monahans, Tex. Apparatus for recovering crystalline salts from solutions. 2,032,201; Feb. 25.

Dawes, Robert T., Hudson, Mass. Elastic braid. 2,032,265; Feb. 25.

Deane, Harry C., Hendon, London, and J. H. Naden, Hampstead, London, England. Appliance for use in practicing or playing games. 2,032,061; Feb. 25.

Deanesly, Richard M., and G. Hearne, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Halogenation of organic fluids. 2,031,938; Feb. 25.

De Benedetti, Joseph, Oakland, Calif. Collar point stiffener. 2,032,266; Feb. 25.

Decatur Brick Manufacturing Company. (See Mattes, Edward D., assignor.)

Deere & Company. (See Brown, Theophilus, assignor.)

Degea Aktiengesellschaft (Auergesellschaft). (See Frey, Kurt, assignor.)

Degen, Alexander A. C., Harrow, assignor to Bell Punch Company Limited, London, England. Keyboard. 2,032,168; Feb. 25.

Degiarge, Julien R. L., Wattrelos, France. Wagon for transportation by rail and by road. 2,032,267; Feb. 25.

Deister, Emil E. and I. F., assignors to Deister Machine Company, Fort Wayne, Ind. Vibrator screen. 2,032,032; Feb. 25.

Deister, Irwin F. (See Deister, Emil E. and I. F.)

Deister Machine Company. (See Deister, Emil E., and I. F., assignors.)

Delis Libera y Silicani, Juan B., Habana, Cuba. Automatic bottle stopper. 2,031,821; Feb. 25.

Delta Manufacturing Company. (See Tank, Herbert E., assignor.)

Deanis, Calvin L., Glen Ridge, N. J. Tuning machine. 2,032,202; Feb. 25.

Denver Patent Company. (See Logue, Leland H., assignor.)

Detroit Gray Iron Foundry Company. (See Novotny, Anton, assignor.)

De Vry, Herman A., Chicago, Ill. Film reel. 2,031,685; Feb. 25.

Dewey and Almy Chemical Company. (See Tucker, G. R., and Kennedy, and Reanee, assignors.)

Diehl, Harry L. (See Matthews, G. L., and Diehl.)

Diescher, August P., assignor to Diescher Tube Mills, Inc., Pittsburgh, Pa. Demountable guide disk for cross rolls. 2,031,761; Feb. 25.

Diescher Tube Mills, Inc. (See Diescher, August P., assignor.)

Dimmick, Glenn L., Westmont, N. J., assignor to Radio Corporation of America. Phonographic apparatus. 2,031,822; Feb. 25.

Dircherl, Wilhelm. (See Ach, L., and Dircherl.)

Doble, Harry O., Superior, Wis. Combination storm window and screen. 2,031,876; Feb. 25.

Dobson, William A., Wethersfield, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,031,593; Feb. 25.

Dodge, Adiel Y., assignor to Bendix Brake Company, South Bend, Ind. Brake. 2,031,762; Feb. 25.

Dodge, Arthur E., Lancaster, Pa. Bottle stopper. 2,031,880; Feb. 25.

Doherty Research Company. (See Laird, Wilbur G., assignor.)

Donlan, Theodore E., Irvington, N. J., assignor to Standard Oil Development Company. Treating hydrocarbons. 2,031,939; Feb. 25.

Dow, Dewey M. (See Riebel, F., Jr., Dow, and Child.)

Drake, Ronald I. (See Meier, A. M., and Drake.)

Dreyer, John W. (See Hankins, Oscar E., assignor.)

Dreyfus, Henry, London, England. Manufacture and treatment of materials. 2,031,594; Feb. 25.

Dreyfus, Henry, London, England. Manufacture of artificial ribbons, straw, and the like. 2,031,636; Feb. 25.

Dreyfus, Henry, London, England. Azeotropic dehydration of aqueous mixtures of lower aliphatic acids and anhydrides. 2,031,637; Feb. 25.

Drysdale, William D., Buffalo, N. Y., assignor to W. J. Sugden, Boston, Mass. Compressor. 2,031,940; Feb. 25.

Drysdale, William D., Mount Clemens, Mich., assignor to W. J. Sugden, Boston, Mass. Refrigerant compressor. 2,031,941; Feb. 25.

Dudleston, William G., Chicago Heights, Ill., assignor to The Patent and Licensing Corporation, Boston, Mass. Building material. 2,032,683; Feb. 25.

Dudley, James F. (See Winning, C., Sargent, and Dudley.)

Dugniß, James M., Springfield, N. J., and J. R. Sola, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Control circuit. 2,031,942; Feb. 25.

Dunham, Irvie H., Racine, Wis., assignor to Electric Motor Corporation. Brush assembly. 2,032,084; Feb. 25.

Dunlop Rubber Company Limited. (See Murphy, E. A., Twiss, and James, assignors.)

Duplex Tool Co. (See Berman, Louis C., assignor.)

Du Pont, E. I., de Nemours & Company. (See Atkins, Stuart A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Dahlen, Miles A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Hitch, E. F., Dahlen, and Friedrich, assignors.)

Du Pont, E. I., de Nemours & Company. (See Holt, Harold S., assignor.)

Du Pont, E. I., de Nemours & Company. (See Jordan, H., and Dahlen, assignors.)

Du Pont, E. I., de Nemours & Company. (See Lindsley, Milton F., Jr., assignor.)

Du Pont, E. I., de Nemours & Company. (See Franke, Edward J., assignor.)

Du Pont, E. I., de Nemours & Company. (See Spaeth, Charles P., assignor.)

Dura Company. (See Miller, Dorr, assignor.)

Dyer, Frederick C., and H. L., McClelland, Toronto, Ontario, Canada. Separating seeds. 2,031,943; Feb. 25.

Dym, Joseph E., assignor to Mine Safety Appliances Co., Pittsburgh, Pa. Protective headgear. 2,032,203; Feb. 25.

Eastman, Joseph P., Manitowoc, Wis. Pressed-on hose coupling. 2,031,823; Feb. 25.

Eastman, Joseph P., Manitowoc, Wis. Pressing a coupling on to a hose. 2,031,824; Feb. 25.

Eastman, Joseph P., Manitowoc, Wis. Renewable hose coupling. 2,031,825; Feb. 25.

Eastman Kodak Company. (See Malm, C. J., and Fletcher, assignors.)

Eastman Manufacturing Company. (See Hutchinson, George, assignor.)

Eaton, Charles F., West Newbury, Mass., assignor, by mesne assignments, of one-half to North American Holding Corporation and one-half to Parshad Holding Corporation, Syracuse, N. Y. Marking machine. 2,031,763; Feb. 25.

Ebert, William A. (See Jurkat, G., and Ebert.)

Eclipse Aviation Corporation. (See Lansing, Raymond P., assignor.)

Eclipse Aviation Corporation. (See Linder, Francis, assignor.)

Eclipse Aviation Corporation. (See McNeil, Charles I., assignor.)

Eclipse Aviation Corporation. (See Nardone, Romeo M., assignor.)

Eclipse Machine Company. (See Whitney, Maurice P., assignor.)

Eggert, Joseph, deceased, Columbus, Ohio, E. L. Keny, administratrix. Machine for tamping earth. 2,031,695; Feb. 25.

Einstein, Sol, C. Booth, and F. S. Haas, Cincinnati, Ohio, assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass. Grinding machinery. 2,031,943; Feb. 25.

Einstein, Sol, C. Booth, and F. S. Haas, Cincinnati, Ohio, assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass. Grinding machine. 2,032,269; Feb. 25.

Eksergian, Caroius L., and P. R. Baber, Detroit, Mich., assignors to Edward G. Budd Manufacturing Co., Philadelphia, Pa. Rail car wheel. 2,032,061; Feb. 25.

Ekstromer, Edward C., assignor of one-half to H. J. Lloyd, Los Gatos, Calif. Protecting means for mechanisms. 2,031,826; Feb. 25.

Electric Motor Corporation. (See Dunham, Irvie H., assignor.)

Electro-Chemical Engineering Corporation. (See Gunderson, Lewis O., assignor.)

Electrolux Corporation. (See Karistrom, Fredrik J. E., assignor.)

Elite Specialty Metal Co. (See Resovsky, Nathan, assignor.)

Elliott, Harold M. (See Ricks, F. Elliott, and Choice.)

Ellis, Don G. (See Thomas, C. C., and Ellis.)

Emery, Charles F., Jr., Houston, Tex. Sanitary appliance. 2,031,638; Feb. 25.

Engblom, John F. T., Nottingham, assignor to Ericsson Telephones Limited, London, England. Electrical selecting or connecting device. 2,032,270; Feb. 25.

Engbauer, Winford L., Lebanon, Ohio. Pipe forming process. 2,032,271; Feb. 25.

Erdman, Theodore J., assignor to The Van Brunt Manufacturing Company, Horicon, Wis. Cultivator. 2,032,085; Feb. 25.

Eremeeff, Ivan, Philadelphia, Pa. Photoelectric musical system. 2,031,764; Feb. 25.

Ericsson Telephones Limited. (See Engblom, John F. T., assignor.)

Espenschied, Lloyd, Kew Gardens, and N. Monk, New York, N. Y., assignors to American Telephone and Telegraph Company. Switching arrangement for four-wire circuits. 2,031,696; Feb. 25.

Etablissements Pompes Guinard (Pompes Guinard & Etablissements Cahendet Reunis). (See Poillot, Jean P. E., assignor.)

Evans, Harry H. (See Greenhagn, A. W., and Evans.)

Evinrude, Ole, assignor to Outboard Motors Corporation, Milwaukee, Wis. Motor bicycle. 2,031,881; Feb. 25.

Fahrenwald, Arthur W., Moscow, Idaho. Grinding mill. 2,031,697; Feb. 25.

Fanzoi, John, West Hartford, Conn. Book end. 2,031,698; Feb. 25.

Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,032,120; Feb. 25.

Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Valve testing device. 2,032,121; Feb. 25.

Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Compressor governor construction. 2,032,122; Feb. 25.

Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Triple valve device. 2,032,169; Feb. 25.

Farmer, Clyde C., Pittsburgh, and E. R. Hewitt, Edgewood, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,032,119; Feb. 25.

Fassett, Wallace F., Derby, assignor to The Ansonia O & C Company, Ansonia, Conn. Hose supporter grip. 2,031,699; Feb. 25.

Federal Glass Company, The. (See Kundts, Theodore A., assignor.)

Fee, Thomas A., Jr., assignor to Gasoline Energy Distributors Limited, Vancouver, British Columbia, Canada. Expansible and contractible piston for liquid metering cylinders. 2,032,007; Feb. 25.

Fellner, Alphonse E. (See Buniß, William A., assignor.)

Feltman, Charles A., Brooklyn, N. Y. Toasting and similar apparatus. 2,032,272; Feb. 25.

Ferguson, John A., assignor of one-third to T. B. Sturges, Pittsburgh, Pa. Metallic structural framework. 2,031,765; Feb. 25.

Fidelitone Records, Inc. (See Lichten, Maurice A., assignor.)

Fiedler, William J., Milltown, assignor to Adolph Schelske, Parkston, S. Dak. Lifting jack. 2,031,700; Feb. 25.

Finch, James L., Rocky Point, N. Y., assignor to Radio Corporation of America. Modulation. 2,031,639; Feb. 25.

Finck, Hu'da E., St. Charles, Mo. Ironing board cover. 2,031,896; Feb. 25.

Firestone Tire & Rubber Company, The. (See Stevens, Horace D., assignor.)

Fisk, Arthur K., assignor of one-half to F. H. Ruppel, Pasadena, Calif. Sliding window unit. 2,032,170; Feb. 25.

Fiske, Augustus H., Warren, and C. S. Bryan, Providence, assignors to Rumford Chemical Works, Rumford, R. I. Making tetraphosphates. 2,031,827; Feb. 25.

Fletcher, Charles L. (See Malm, C. J., and Fletcher.)

Flexible Steel Lacing Company. (See Olsen, John C., assignor.)

Florman, Irving, New York, N. Y. Cigarette lighter. 2,032,273; Feb. 25.

Fonos, Peter J., Leavenworth, Kans. Live bait bucket. 2,032,274; Feb. 25.

Food Machinery Corporation. (See Jones, Lloyd E., assignor.)

Fornthoefel, Gregg F., Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Cabinet construction. 2,031,701; Feb. 25.

Fort Pitt Bedding Company. (See Stubnitz, Maurice, assignor.)

Fox, John H. (See Gelsthorp, F., and Fox.)

Fradette, Donald F., Cleveland, Ohio. Shingle. 2,032,275; Feb. 25.

Frank, Hugo, Hartford, Conn., assignor to The Silex Company. Coffee maker. 2,032,317; Feb. 25.

Frede, Charles F., and H. E. Thiele, St. Louis, Mo., assignors to General Steel Castings Corporation, Granite City, Ill. Railway hopper car. 2,032,204; Feb. 25.

Freeman, Arthur C., Norfolk, Va. Heating of radiators. 2,031,882; Feb. 25.

French, Orville B. (See Conrad, F., Aalborg, and French.)

Freudenberg, Carl, G. m. b. H. (See Freudenberg, Richard and H., Runkel, and Lange, assignors.)

Freudenberg, Hans. (See Freudenberg, Richard and H., Runkel, and Lange.)

Freudenberg, Richard and H., R. Runkel, and G. Lange, Weinheim, assignors to Carl Freudenberg G. m. b. H., Weinheim (Badenia), Germany. Converting a fibrous material. 2,032,123; Feb. 25.

Frey, Kurt, Oranienburg, near Berlin, assignor to Degea Aktiengesellschaft (Auergesellschaft), Berlin, Germany. Silencer for internal combustion engines. 2,031,702; Feb. 25.

Friberg, Hjalmar. (See Fiehl, S. O., and Friberg.)

Frick Company. (See Kitzmiller, William R., assignor.)

Frick Company. (See Small, N. M., and Shenton, assignors.)

Friedenberg, Stanley, New York, N. Y. Shoe protecting device. 2,032,052; Feb. 25.

Friedrich, Martin E. (See Hitch, E. F., Dahlen, and Friedrich.)

Frielinghaus, Louis, assignor to Schloemann Aktiengesellschaft, Dusseldorf, Germany. Shears for trimming sheet metal. 2,032,276; Feb. 25.

Fries, Peter P. (See Loewe, S., and Fries.)

Frohring, William O. (See Barnett, H. M., Frohring, and Germann.)

Frolich, Per K., Roselle, N. J., assignor to Standard Oil Development Company. Rubber composition containing petroleum resins. 2,031,944; Feb. 25.

Fulbright, Clarence C., Pine Bluff, Ark. Floor block. 2,031,566; Feb. 25.

Funston, Frederick D., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Shock absorber. 2,032,124; Feb. 25.

G. B. G. Corporation. (See Graf, Elmer J., assignor.)

Gage, Robert B., Trenton, N. J. Method of and apparatus for finishing concrete pavements. 2,032,205; Feb. 25.

Gair, Robert, Company. (See Weiss, Arthur J., assignor.)

Galey, Henry J., Tarentum, Pa., assignor to Pittsburgh Plate Glass Company. Apparatus for case hardening glass. 2,032,008; Feb. 25.

Galligan, James J., and W. J. Robinson, Providence, R. I., assignors, by mesne assignments, to United States Rubber Company, New York, N. Y. Crinkled elastic material. 2,031,703; Feb. 25.

Gallusser, Hans, Geneva, Switzerland. Automatic slack adjuster. 2,031,704; Feb. 25.

Galson, Henry L. (See McKee, G. S., and Galson.)

Ganser, Walter. (See Ostgaard, Albert, assignor.)

Gardner, George D., assignor to H. E. Gray, San Jose, Calif. Coring knife. 2,031,766; Feb. 25.

Garrison, Marion A., Alhambra, Calif. Booster. 2,031,828; Feb. 25.

Gasoline Energy Distributors Limited. (See Fee, Thomas A., Jr., assignor.)

Gassen, Josef, Dusseldorf-Oberkassel, assignor to Schloemann Aktiengesellschaft, Dusseldorf, Germany. Braking device for feeding means of pilgering mills. 2,032,277; Feb. 25.

Gauger, Frank A., Milwaukee, Wis. Snap valve. 2,032,053; Feb. 25.

Gazelle, Michel S., Detroit, Mich. Electric water heater. 2,032,125; Feb. 25.

Gebhard, Louis A., Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y. Electromechanical oscillator circuit. 2,031,767; Feb. 25.

Gebhard, Louis A., Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y. Electromechanical oscillator circuit. 2,031,768; Feb. 25.

Gedris, William A., Grand Rapids, Mich. Upholstery for seat backs. 2,031,888; Feb. 25.

Geigy, J. R., A. G. (See Kreteer, Adolf, assignor.)
Gelstharp, Frederick, Tarentum, and J. H. Fox, Pittsburgh, Pa., assignors to Pittsburgh Plate Glass Company. Apparatus for making flat glass. 2,032,000; Feb. 25.
General Aniline Works, Inc. (See Wolff, Paul, assignor.)
General Electric Company. (See Bradford, Arthur J., assignor.)
General Electric Company. (See Chapman, Verni J., assignor.)
General Electric Company. (See Lum, Walter O., assignor.)
General Electric Company. (See McDonald, Chester E., assignor.)
General Electric Company. (See Pratt, William H., assignor.)
General Electric Company. (See Ring, Andrew D., assignor.)
General Electric Company. (See Strickland, Royal F., assignor.)
General Electric Company. (See Watts, Noble H., assignor.)
General Electric Company. (See Wotring, Gaylord H., assignor.)
General Fire Extinguisher Company. (See Loepsinger, Albert J., assignor.)
General Motors Corporation. (See Cobb, Harold E., assignor.)
General Motors Corporation. (See Funston, Frederick D., assignor.)
General Motors Corporation. (See Grier, John A., assignor.)
General Motors Corporation. (See Holmes, John Q., assignor.)
General Motors Corporation. (See Housman, Edwin F., assignor.)
General Spring Bumper Corporation. (See Jandus, Herbert S., assignor.)
General Steel Castings Corporation. (See Ashe, William O., assignor.)
General Steel Castings Corporation. (See Frede, C. F., and Thiele, assignors.)
General Steel Castings Corporation. (See Howard, Karl S., assignor.)
General Steel Castings Corporation. (See Sheehan, William M., assignor.)
Geraldson, Gerald, assignor to J. I. Case Company, Racine, Wis. Tractor planter. 2,031,640; Feb. 25.
Germann, Albert F. O. (See Barnett, H. M., Frohring, and Germann.)
Gilbert, A. C., Company, The. (See Gilbert, A. C., and Arnold, assignors.)
Gilbert, Alfred C., North Haven, and A. A. Arnold, assignors to The A. C. Gilbert Company, New Haven, Conn. Kitchen utility device. 2,031,769; Feb. 25.
Gilbert, Alfred C., North Haven, and A. A. Arnold, assignors to The A. C. Gilbert Company, New Haven, Conn. Kitchen utility device. 2,031,770; Feb. 25.
Girdler Corporation, The. (See Bottoms, Robert R., assignor.)
Globar Corporation. (See Thompson, Almer J., assignor.)
Glover, W. T. and Company Limited. (See Pritchard, R. E., and McAlpine, assignors.)
Glunt, Omer M., Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical device. 2,031,945; Feb. 25.
Godsey, George W., Elizabeth, N. J. Brake lock. 2,031,829; Feb. 25.
Goelitz, Henry G., et al. (See Ingels, James J., assignor.)
Goldberg, Leon, assignor to Vincent Horwitz Company, Inc., New York, N. Y. Shoe. 2,032,206; Feb. 25.
Golden, John P., and J. F. O'Neil, Waterbury, Conn. Combination lamp stand and book-rack. 2,032,086; Feb. 25.
Goodell, Frank H., East Cleveland, Ohio, and C. W. Ross, Philadelphia, Pa., assignoors to The C. O. Bartlett & Snow Company, Cleveland, Ohio. Skip loading mechanism. 2,031,946; Feb. 25.
Goodwin, William N., Jr., assignor to Weston Electrical Instrument Corporation, Newark, N. J. Photoelectric cell circuit. 2,032,010; Feb. 25.
Gordon, Malcolm K., Jr. (See Bennett, A. F., and Gordon.)
Göth, Hans E. A., assignor to Industrikemiska Aktiebolaget, Stockholm, Sweden. Evaporation. 2,032,087; Feb. 25.
Gould Coupler Company, The. (See Richards, Willard F., assignor.)
Gould, Gardner S., Lunenburg, Mass. Self contained grinding wheel head. 2,032,011; Feb. 25.
Graf, Elmer J., Roselle Park, assignor to G. B. G. Corporation, Newark, N. J. Illuminated decorative device. 2,031,641; Feb. 25.
Graf, Elmer J., Roselle Park, assignor to G. B. G. Corporation, Newark, N. J. Illuminated decorative device. 2,031,642; Feb. 25.
Graillat, Andre, New York, N. Y. Magazine vending machine. 2,032,278; Feb. 25.
Granovsky, Albert A., New York, N. Y. Combination chair and lamp. 2,031,643; Feb. 25.
Grassby, Robert C., New Malden, England. Timepiece and the like. 2,031,705; Feb. 25.
Grasselli Chemical Company, The. (See Lawrence, Ralph E., assignor.)
Grasselli Chemical Company, The. (See Perry, J. R., and Ridler, assignors.)
Grasselli Chemical Company, The. (See Schweitzer, William K., assignor.)
Grasselli Chemical Company, The. (See Taylor, Edward A., assignor.)
Grauer, Solomon, Brooklyn, N. Y. Temperproof closure seal. 2,032,207; Feb. 25.
Gray, Frank, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrooptical system. 2,031,598; Feb. 25.
Gray, Herbert E. (See Gardiner, George D., assignor.)
Gray, Jesse L., Dallas, Tex. Short wave sound system for visually observing. 2,031,884; Feb. 25.
Gray Telephone Pay Station Company, The. (See Long, George A., assignor.)
Gray, Thomas J., Milwaukee, Wis. Gummed strip moistener. 2,031,597; Feb. 25.
Gredell, Otton N., Kansas City, assignor to Standard Steel Works, North Kansas City, Mo. Closure member for fill openings. 2,031,885; Feb. 25.
Green, A. P., Fire Brick Company. (See Wood, Horace O., assignor.)
Grier, Frank L., Milford, Del. Temple for eyeglasses. 2,031,771; Feb. 25.
Grier, John A., New York, N. Y., assignor, by mesne assignments, to General Motors Corporation. Refrigerating apparatus. 2,032,012; Feb. 25.
Griffith, Alan A., and W. Helmore, South Farnborough, assignor to C. C. Wakefield & Company Limited, London, England. Treatment of lubricating oils. 2,032,279; Feb. 25.
Griffiths, Alfred, London, assignor, by mesne assignments, to Kleenglas (1935) Limited, Liverpool, England. Machine for washing, drying, and polishing tumblers, cups, and like articles. 2,032,013; Feb. 25.
Grosshans, Arthur W., and H. H. Evans, Steckham, Nebr. Fastener. 2,032,280; Feb. 25.
Gudmundsen, Austin, Wauwatosa, assignor of one-half to Rudolph L. Hasche, Milwaukee, Wis. Drinking water dispenser. 2,031,599; Feb. 25.
Gunderson, Lewis O., assignor to Electro-Chemical Engineering Corporation, Chicago, Ill. Water level indicator for steam boilers. 2,031,644; Feb. 25.
Gussack, Nathan A., Flushing, N. Y. Slide drawer construction. 2,032,054; Feb. 25.
Gustafson, Carl A., Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Road machine. 2,032,086; Feb. 25.
Gutmann, Ferdinand, & Co. (See Rasmussen, Charles H., assignor.)
Haas, Frederick S. (See Einstein, S., Booth, and Haas.)
Haas, Paul, Maspeth, assignor to United Research Corporation, Long Island City, N. Y. Mounting for light sensitive devices. 2,031,646; Feb. 25.
Hadaway, John B., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Making shoes. 2,031,645; Feb. 25.
Haglund, Ture R., Stockholm, Sweden. Refining of alloys. 2,031,947; Feb. 25.
Hahn, Mathias, Aachen, assignor to H. Krantz Söhne, Aachen, Germany. Tentering and drying machine. 2,032,614; Feb. 25.
Hale, Frank C., Spondon, near Derby, England, assignor to Celanese Corporation of America. Manufacture of spun yarns. 2,031,647; Feb. 25.
Hall, Frank J., San Francisco, Calif. Toilet paper holder and dispenser. 2,031,772; Feb. 25.
Hallanger, William N., St. Clair Shores, Mich. Wick feed oiler. 2,031,648; Feb. 25.
Halperin, Robert L., Los Angeles, Calif. Currency holder. 2,031,773; Feb. 25.
Hambrecht, George D., and J. W. Paine, Canajoharie, N. Y. Stringed musical instrument. 2,031,706; Feb. 25.
Handel, Charles R., assignor to Wej-Lock Manufacturing Company, Winterset, Iowa. Expansible anchor. 2,032,089; Feb. 25.
Hanff, Ferdinand, Berlin-Charlottenburg, Germany, assignor to Sinfra A. G. St. Gallen (Switzerland), Glarus, Switzerland. Device for simultaneously twisting and winding knitted threads. 2,031,707; Feb. 25.
Hanking, Oscar R., assignor to J. W. Dreyer, Aurora, Ill. Window construction. 2,032,126; Feb. 25.
Hannewald, Burton A., and R. Ingstad, Indianapolis, Ind., assignors to Bemis Bro. Bag Co., St. Louis, Mo. Apparatus for filling bags. 2,031,708; Feb. 25.
Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Transmitting system. 2,032,208; Feb. 25.
Hansmann, Elwood, Glencoe, assignor to Stewart-Warner Corporation, Chicago, Ill. Windshield cleaner. 2,031,830; Feb. 25.
Harrington, William B., Milan, Ind. Extensible table. 2,031,649; Feb. 25.
Harrison, Henry C., Port Washington, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Vibration damping device. 2,031,948; Feb. 25.
Harrison, James W., and T. B. Prickett, Woodbury, N. J., assignors to Houdry Process Corporation, Dover, Del. Control of catalytic reactions. 2,031,600; Feb. 25.

Harsch, John W., Gwynedd, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa. Heat treating apparatus. 2,032,209; Feb. 25.
Harshberger, Norman P., Scarsdale, assignor to Bakelite Building Products Co. Inc., New York, N. Y. Building material. 2,031,950; Feb. 25.
Hartley, Ralph V. L., South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Burglar alarm system. 2,031,951; Feb. 25.
Hartman, William W., Los Angeles, Calif. Mechanism to assemble a composite loaf. 2,031,949; Feb. 25.
Hasche, Rudolph L. (See Gudmundsen, Austin, assignor.)
Hausbeck, Charles J., Queens Village, N. Y., assignor to Julius Kayser & Co., New York, N. Y. Stitch finger for sewing machines. 2,031,831; Feb. 25.
Hausbach, Samuel, assignor of two-fifths to S. L. Kesselman, Newark, N. J. Curtain stretcher. 2,032,090; Feb. 25.
Haywood, Alice R. (See Haywood, Jackson S., assignor.)
Haywood, Jackson S., assignor of one-half to A. E. Haywood, Springfield, Ill. Shears. 2,032,281; Feb. 25.
Hazel-Atlas Glass Company. (See Shaffer, Hosea, assignor.)
Heald Machine Company, The. (See Einstein, S., Booth, and Haas, assignors.)
Hearne, George. (See Deansely, R. M., and Hearne.)
Hegenberger, Albert F., and A. W. Knisley, Dayton, Ohio. Sextant. 2,031,601; Feb. 25.
Heifetz, Solomon A., Milwaukee, Wis. Dispensing container. 2,031,886; Feb. 25.
Heifetz, Solomon A., Milwaukee, Wis. Collapsible container. 2,031,887; Feb. 25.
Helfrich, Lewis, W. Helfrich, and O. H. Corvington, Akron, Ohio. Fountain comb. 2,031,774; Feb. 25.
Helfrich, William. (See Helfrich, Lewis and W., and Corvington.)
Helmore, William. (See Griffith, A. A., and Helmore.)
Hemphill Company. (See Lawson, R. H., and Cloutier, assignors.)
Hendricks, Simeon B., and J. M. Markel, Rockford, Ill., assignor to J. I. Case Company, Racine, Wis. Listerplanter. 2,031,650; Feb. 25.
Henschel, Chas. J., & Co. (See Mead, Samuel S., assignor.)
Herriger, Felix. (See Kühle, W. E., Prins, and Herriger.)
Herrington, Arthur W., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind. Transmission gearing. 2,032,818; Feb. 25.
Hewitt, Alfred G., La Grange, assignor to The Visking Corporation, Chicago, Ill. Extrusion apparatus. 2,032,171; Feb. 25.
Hewitt, Ellis E. (See Farmer, C. C., and Hewitt.)
Hewitt, Ellis E., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,031,172; Feb. 25.
Heynau, David H., London, England. Friction gear transmission. 2,032,015; Feb. 25.
Hiering, William C., assignor to The J. E. Mergott Company, Newark, N. J. Bag frame fastener. 2,032,055; Feb. 25.
Hiering, William C., assignor to J. E. Mergott Company, Newark, N. J. Bag frame latch. 2,032,056; Feb. 25.
Hiering, William C., assignor to The J. E. Mergott Company, Newark, N. J. Handbag frame. 2,032,057; Feb. 25.
Higgins, Gilbert H., Mountain Lakes, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y. Irving Trust Company, permanent trustee. Chase. 2,031,602; Feb. 25.
Hill Engineering Company. (See Hill, Myron F., assignor.)
Hill, Myron, Lansdowne, Pa., assignor to Hill Engineering Company, Inc. Tooth curve for rotors and gears. 2,031,889; Feb. 25.
Hill, Robert B. (See Westhaver, John L., assignor.)
Himberger, Earl W., assignor to Pacific Marine Supply Company, Seattle, Wash. Coupling link. 2,031,890; Feb. 25.
Hinchen, Donald T., Sydney, New South Wales, Australia, assignor to The Magnavox Company, Fort Wayne, Ind. Electrodynamic sound reproducing apparatus. 2,031,775; Feb. 25.
Hitch, Emmet F., and M. A. Dahlen, Wilmington, Del., and M. E. Friedrich, Carneys Point, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Azo dyes and their preparation. 2,031,651; Feb. 25.
Hitner, Harry F., Oakmont, Pa., assignor to Pittsburgh Plate Glass Company. Level indicating apparatus. 2,032,016; Feb. 25.
Hocher, Andrew A., Etna, and M. Lasher, Pittsburgh, Pa., assignors to Hubbard and Company. Sheet metal insulator support pin and making the same. 2,032,017; Feb. 25.
Hoe, R., & Co. (See Ball, Harry V.)
Hoe, R., & Co. (See Higgins, Gilbert H., assignor.)
Hoe, R., & Co. (See Lamatsch, Frederick, assignor.)
Hogan, Lemley C., Spokane, Wash. Spool holder. 2,031,890; Feb. 25.
Holden, Harold C., Philadelphia, Pa., assignor to Radio Corporation of America. Portable talking motion picture apparatus. 2,031,832; Feb. 25.
Holmes, Bradford B., assignor to R. V. Holmes, Stealing ton, Conn. Control head for indicators. 2,032,018; Feb. 25.
Holmes, John Q., Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Trimming apparatus. 2,032,127; Feb. 25.
Holmes, Ruth V. (See Holmes, Bradford B., assignor.)
Holt, Harold S., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Propionic acid esters and their production. 2,031,603; Feb. 25.
Holt, Harold S., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Plasticized composition. 2,032,091; Feb. 25.
Holt, Richard, Henley Beach, South Australia, Australia. Instantaneous electrical water heater. 2,032,210; Feb. 25.
Homeyer, August H. (See Whitmore, F. C., Homeyer, Jones, and Trent.)
Hönigsberg, Robert, Vienna, Austria. Stiffening of double collars. 2,031,776; Feb. 25.
Hookless Fastener Company. (See Kelley, Roland S., assignor.)
Hooper, James B., Ruxton, assignor to Wm. E. Hooper & Sons Co., Baltimore, Md. Locomotive cab curtain. 2,032,068; Feb. 25.
Hooper, Wm. E., & Sons Co. (See Hooper, James E., assignor.)
Hoover Company, The. (See Smellie, Donald G., assignor.)
Hopkins, Richard M. (See Johnson, C. C., Hopkins, and Spamer.)
Hopping, Alvin S., Verona, N. J. Thermostatically controlled damper device. 2,031,652; Feb. 25.
Hornbostel, Lloyd, assignor to Beloit Iron Works, Beloit, Wis. Paper coating apparatus and method. 2,032,211; Feb. 25.
Horsfield, Walter R., London, England. Measuring of gloss. 2,032,128; Feb. 25.
Horton, Erwin C. (See Hueber, H., and Horton.)
Horton, Erwin C., Hamburg, and H. Hueber, Buffalo, assignors to Trico Products Corporation, Buffalo, N. Y. Windshield cleaner. 2,032,319; Feb. 25.
Horton, Joseph W., Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrooptical system. 2,031,952; Feb. 25.
Horwitz, Robert, New York, N. Y. Cooler for refrigerators. 2,031,653; Feb. 25.
Horwitz, Vincent, Company. (See Goldberg, Leon, assignor.)
Houdry Process Corporation. (See Daugherty, James P., Jr., assignor.)
Houdry Process Corporation. (See Harrison, J. W., and Prickett, assignors.)
House, Bryan B. (See Parker, H. F., and House.)
House, Bryan K., South Bend, assignor to Bendix Aviation Corporation, South Bend, Ind. Brake. 2,032,058; Feb. 25.
Howard, James H., Houston, assignor to J. H. McEvoy & Company, Sherman, Tex. Tubing support. 2,031,654; Feb. 25.
Howard, Karl S., St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill. Tank car. 2,032,212; Feb. 25.
Howell, Albert S., assignor to the Bell & Howell Company, Chicago, Ill. Photographic film magazine. 2,032,213; Feb. 25.
Howell, Albert S., assignor to The Bell & Howell Company, Chicago, Ill. Photographic film magazine, spool, and film therefor. 2,032,214; Feb. 25.
Hubbard and Company. (See Hocher, A. A., and Lasher, assignors.)
Hueber, Henry. (See Horton, E. C., and Hueber.)
Hueber, Henry, Buffalo, and E. C. Horton, Hamburg, assignors to Trico Products Corporation, Buffalo, N. Y. Pump. 2,032,320; Feb. 25.
Hueber, Henry, Buffalo, and E. C. Horton, Hamburg, assignors to Trico Products Corporation, Buffalo, N. Y. Accessory system for motor vehicles. 2,032,321; Feb. 25.
Huggett, Jack L. (See Stratford, R. K., and Huggett.)
Hunt, Scott F., assignor to Bendix Products Corporation, South Bend, Ind. Carburetor. 2,031,709; Feb. 25.
Hunter, James, Machine Company, The. (See Rundlett, William D., assignor.)
Hutchinson, George, Manitowoc, assignor to Eastman Manufacturing Company, Manitowoc, Wis. Pressed-on hose coupling. 2,031,833; Feb. 25.
Hyatt, Louis C., assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y. Steam line water relief valve. 2,031,983; Feb. 25.
Hydraulic Press Mfg. Company, The. (See Benedek, Elek K., assignor.)
Hygrade Sylvania Corporation. (See Thomas, Ralph B., assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Binapfl, J., and Kuchenbuch, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Breuers, W., Mark, and Konrad, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Kaufmann, W., and Bungartz, assignors.)
Ihlefeldt, Johannes, Dessau, assignor to the firm G. Polysius, Aktiengesellschaft, Dessau, Germany. Pulverizing apparatus. 2,031,710; Feb. 25.
Imperial Chemical Industries Limited. (See Piggott, H. A., and White, assignors.)
Imperial Chemical Industries, Limited. (See Tyrer, Daniel, assignor.)

Indiana Steel & Wire Company. (See Judy, Paul R., assignor.)

Industrikemiska Aktiebolaget. (See Göth, Hans R. A., assignor.)

Industrikemiska Aktiebolaget. (See Öman, Erik, assignor.)

Ingels, James J., assignor of one-half to E. Purnell and one-half to H. G. Goelitz, Chicago, Ill. Sheet metal cutter and edger. 2,031,604; Feb. 25.

Ingstad, Edward. (See Hannewald, B. A., and Ingstad.)

International Projector Corporation. (See Boecking, Ewald, assignor.)

Irgens, Finn T., Wauwatosa, assignor to Outboard Motors Corporation, Milwaukee, Wis. Internal combustion engine engine. 2,031,891; Feb. 25.

Irish, Russell E., Pittsburgh, Pa. Orthodontic anchorage. 2,032,282; Feb. 25.

Irving Trust Company, Permanent Trustee. (See Ball, Harry V., assignor.)

Irving Trust Company, Permanent Trustee. (See Higgins, Gilbert H.)

Irving Trust Company, Permanent Trustee. (See Lamatsch, Frederick.)

Jabouley, Joanny, London, England, assignor, by mesne assignments, to Celanese Corporation of America. Textile machinery. 2,031,655; Feb. 25.

Jackson, Ray P., Wilkinsburg, and H. M. Biebel, Oakmont, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Capacitor motor. 2,032,129; Feb. 25.

Jaeger Machine Company, The. (See Saxe, Arthur C., assignor.)

Jaenicke, Max, and G. Baillieul, assignors to Carbo-Norit-Union Verwaltungs-Gesellschaft m. b. H., Frankfort-on-the-Maine, Germany. Purifying of water. 2,031,711; Feb. 25.

James, Robert G. (See Murphy, E. A., Twiss, and James.)

Jandus, Herbert S., assignor to General Spring Bumper Corporation, Detroit, Mich. Vehicle bumper. 2,031,954; Feb. 25.

Jandus, Herbert S., assignor to Lyon Cover Company, Detroit, Mich. Valve cap for use with wheel or tire covers. 2,031,955; Feb. 25.

Jannin, Marcel, Meudon, France. Multiple groove expanding pulley. 2,031,712; Feb. 25.

Jeffrey Manufacturing Company, The. (See Armstrong, Walter J., assignor.)

Jenkins, John E., and S. E. Adair, Chicago, Ill., assignors, by mesne assignments, to Visomatic Systems, Inc., New York, N. Y. Record and making and using same. 2,031,606; Feb. 25.

Jeppsson, Ivar, assignor to Chicago Flexible Shaft Company, Chicago, Ill. Electric toaster. 2,031,656; Feb. 25.

Johnson, Arnold H., and H. A. Trebler, Baltimore, Md., assignors to Sealtest System Laboratories, Inc., New York, N. Y. Dry soluble chlorine compound. 2,032,173; Feb. 25.

Johnson, Carl, East Orange, N. J., assignor to Oakite Products, Inc. Cleaning metal surfaces. 2,032,174; Feb. 25.

Johnson, Clarence C., New York, N. Y., R. M. Hopkins, Rutherford, N. J., and R. F. Spamer, Lynbrook, N. Y., assignors to American District Telegraph Company, New York, N. Y. Waterflow retard alarm. 2,032,092; Feb. 25.

Johnson, Edward, Montclair, N. J., assignor to Meinecke & Company, New York, N. Y. Medicine glass cover. 2,031,892; Feb. 25.

Johnson, George T., Columbus, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Car truck. 2,031,777; Feb. 25.

Johnson, Horace L. (See Ross, F. N., and Johnson.)

Johnson, Lloyd A., Hillsborough, Calif. Oil retainer. 2,031,856; Feb. 25.

Johnson, Theodore E., Fort Lauderdale, Fla. Automatically operable seed planter. 2,031,713; Feb. 25.

Johnston, Edward F., Wilmington, Del. Lacquer. 2,031,606; Feb. 25.

Johnston, Wayburn E., Minneapolis, Minn. Pressure operated regulator for burners. 2,032,283; Feb. 25.

Johnston, Wayburn E., Minneapolis, Minn. Pressure regulating valve. 2,032,284; Feb. 25.

Jones, Colin C. (See Mott, G. A., and Jones.)

Jones, David M. (See Whitmore, F. C., Homeyer, Jones, and Trent.)

Jones, Frank E., West Lafayette, assignor to The Jones Metal Products Company, West Lafayette, Ohio. Cooking apparatus. 2,032,178; Feb. 25.

Jones, John E., Spondon, near Derby, England, assignor to Celanese Corporation of America. Production of immunized cotton or other cellulose fibers. 2,031,637; Feb. 25.

Jones, Lloyd E., Pasadena, assignor to Food Machinery Corporation, San Jose, Calif. Brush making machine. 2,031,653; Feb. 25.

Jones Metal Products Company, The. (See Jones, Frank E., assignor.)

Jordan, Henry, and M. A. Dahlen, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Monazo dyes and their preparation. 2,032,003; Feb. 25.

Jordan, Kurt E., Ludenscheid in Westphalia, Germany. Lock for interlocking fasteners. 2,032,019; Feb. 25.

Judy, Paul R., assignor to Indiana Steel & Wire Company, Muncie, Ind. Pitch-coated electrode. 2,032,222; Feb. 25.

Jurtat, Gerhard, and W. A. Ebert, Hoboken, N. J. Liquid cooling device. 2,032,130; Feb. 25.

Kalliner, Gerhard, assignor to Silesia, Verein Chemischer Fabriken, Ida- und Marienhutte, near Saarau, Germany. Production of disulphides from mercaptothiazoles. 2,031,714; Feb. 25.

Kane, James M., U. S. Navy, Washington, D. C. Static and interference balance system. 2,031,907; Feb. 25.

Karlström, Fredrik J. E., Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del. Suction nozzle. 2,031,957; Feb. 25.

Kaufmann, Waldemar, and E. Bungarts, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Glass permeable to ultraviolet rays. 2,031,958; Feb. 25.

Kawneer Company, The. (See Plym, Francis J., assignor.)

Kayser, Julius, & Co. (See Hausbeck, Charles J., assignor.)

Keibl, Ernest F. W., Jr., assignor of one-half to B. W. O'Donnell, Medina, N. Y. Bale tie. 2,032,285; Feb. 25.

Kelley, Roland S., Meadville, Pa., assignor to Hookless Fastener Company. Fastener. 2,031,950; Feb. 25.

Kellogg, Edward W. (See Batsel, C. N., and Kellogg.)

Kellogg, Edward W., Moorestown, N. J., assignor to Radio Corporation of America. Recording and reproduction of electrical impulses. 2,031,835; Feb. 25.

Kellogg, Edward W., Moorestown, and S. Read, Jr., Haddonfield, N. J., assignors to Radio Corporation of America. Sound and picture camera. 2,031,836; Feb. 25.

Kelvinator Corporation. (See Thomas, Charles C., assignor.)

Kelvinator Corporation. (See Thomas, C. C., and Ellis, assignors.)

Kemmer, Frank R., Larchmont, N. Y., assignor to Magnesium Products, Inc., Pittsburgh, Pa. Method of and apparatus for treating discrete particles and vapors. 2,032,215; Feb. 25.

Kemp, Archie R. (See Williams, H. R., and Kemp.)

Kempel, Arthur B., assignor to Rex-Lide, Incorporated, East Brady, Pa. Rubber repair material. 2,031,960; Feb. 25.

Kennard, Doris B., Tallahassee, Fla. Diaper. 2,032,131; Feb. 25.

Kennedy, Henry L. (See Tucker, G. R., Kennedy, and Renner.)

Keny, Emma L., administratrix. (See Eggert, Joseph.)

Kern, William H., assignor to Associated Inventions, Inc., Jersey City, N. J. Nonrefillable bottle stopper. 2,031,715; Feb. 25.

Kesselman, Sol L. (See Hausbeck, Samuel, assignor.)

Kidde, Walter & Company. (See Mapes, Daniel, assignor.)

Kiel, John R., assignor to Auditone Company, Chicago, Ill. Talking motion picture apparatus. 2,031,606; Feb. 25.

King, Everett W., Norwalk, Conn., assignor to The Lerschedler-Schang Co., Inc., Rochester, N. Y. Merchandise container. 2,031,885; Feb. 25.

Kispert, Joseph J., Hamden, assignor, to I. Newman & Sons, Inc., New Haven, Conn. Corset. 2,032,216; Feb. 25.

Kiss, Stephen A., Brooklyn, N. Y., assignor to Standard-I. G. Company. Destructive hydrogenation. 2,031,961; Feb. 25.

Kitchen Art Foods, Inc. (See McKinney, W. A., and Lorenzen, assignors.)

Kitzmiller, William R., assignor to Frick Company, Waynesboro, Pa. Refrigerant liquid return system. 2,032,286; Feb. 25.

Kitzmiller, William R., assignor to Frick Company, Waynesboro, Pa. Refrigerant feed control. 2,032,287; Feb. 25.

Kleenglas (1935) Limited. (See Griffiths, Alfred, assignor.)

Klefecker, Charles E., Newark, assignor to Bloomer Bros. Company, Newark, N. Y. Ice cream pail. 2,031,834; Feb. 25.

Kliesrath, Victor W., assignor to Brarg-Kliesrath Corporation, South Bend, Ind. Clutch control mechanism. 2,031,716; Feb. 25.

Knapp, Leland G., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill. Skate wheel and producing same. 2,032,089; Feb. 25.

Knisley, Andrew W. (See Hegenberger, A. F., and Knisley.)

Koecher, Emil A., assignor, by mesne assignments, to The Bartlett Hayward Company, Baltimore, Md. Method of expanding pistons. 2,032,020; Feb. 25.

Kohler, Harriet S., Larchmont, N. Y., and F. R. MacKinnon, Westport, Conn. Lady's garment. 2,032,823; Feb. 25.

Kohr, Robert F., assignor to Bendix Aviation Corporation, South Bend, Ind. Brake. 2,031,717; Feb. 25.

Kollsman, Paul, Woodhaven, N. Y. Lag compensating device. 2,031,837; Feb. 25.

Konrad, Erich. (See Breuers, W., Mark, and Konrad.)

Korschan, Heinz. (See Rittershausen, F., and Korschan.)

Kovalik, Anthony, Whitaker, Pa. Clothesline prop. 2,032,132; Feb. 25.

Kovalsky, Joseph F., Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system. 2,032,176; Feb. 25.

Krakauer, Samuel, and S. S. Marcus, New York, N. Y. Apparatus for tying coil springs together. 2,031,894; Feb. 25.

Krantz, H., Söhne. (See Hahn, Mathias, assignor.)

Krauth & Benninghofen. (See Krauth, Marie W., assignor.)

Krauth, Marie W., assignor to Krauth & Benninghofen, Hamilton, Ohio. Typewriter attachment. 2,031,963; Feb. 25.

Krebs Pigment and Color Corporation. (See von Bichowsky, Foord, assignor.)

Krebser, Adolf, assignor to the firm J. R. Geigy, A. G., Basel, Switzerland. Diane dyestuff and its production. 2,032,133; Feb. 25.

Kress, Claude W., New York, N. Y. Display device for merchandise. 2,031,718; Feb. 25.

Krupp, Fried., Aktiengesellschaft. (See Rittershausen, F., and Korschan, assignors.)

Kuchenbuch, Johannes. (See Binapfl, J., and Kuchenbuch.)

Kühle, Wilhelm E. D. Prinz, and F. Herriger, Berlin, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Magnetron. 2,031,778; Feb. 25.

Kuhlman, Oscar F. (See Rechard, O. H., and Kuhlman.)

Kundtz, Theodore A., assignor to The Federal Glass Company, Columbus, Ohio, Carton. 2,031,968; Feb. 25.

Küppenbender, Heinz, Dresden, Germany. Photographic camera. 2,032,060; Feb. 25.

Küppenbender, Heinz, Dresden, Germany. Photographic camera. 2,032,061; Feb. 25.

Kuss, John, Chicago, Ill. Reclining chair. 2,032,288; Feb. 25.

Lacroix, Charles, Brussels, Belgium. Hydraulic shock absorber for vehicles. 2,032,289; Feb. 25.

Ladd, Walter P., Gary, Ind. Grating and making same. 2,031,779; Feb. 25.

Laird, Wilbur G., Pleasantville, assignor to Doherty Research Company, New York, N. Y. Pressure relief valve. 2,032,325; Feb. 25.

Lamatsch, Frederick, Grantwood, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., Irving Trust Company, permanent trustee. Rotary cutting and folding mechanism for printing machines. 2,031,780; Feb. 25.

Lange, Gustav. (See Freudenberg, Richard and H., Runkel, and Lange.)

Langwell, Herbert, and C. B. Maddocks, Epsom, England. Manufacture of condensation products from alcohols and phenols. 2,031,719; Feb. 25.

Lansing, Raymond P., Montclair, assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J. Engine starting apparatus. 2,031,781; Feb. 25.

Lansing, Raymond P., Montclair, assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J. Engine starting mechanism. 2,031,782; Feb. 25.

La Radiotechnique. (See Rocard, Yves, assignor.)

Larkin, Lester U., assignor to Larkin Refrigerating Corporation, Atlanta, Ga. Heat exchanger. 2,032,134; Feb. 25.

Larkin Refrigerating Corporation. (See Larkin, Lester U., assignor.)

Lasher, Marshall. (See Hooker, A. A., and Lasher.)

Lawrence, Ralph H., Wickliffe, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Carboxylic acid derivatives of sulphurized cinchona bark alkaloids. 2,031,896; Feb. 25.

Lawson, Robert H., Pawtucket, and A. N. Cloutier, Lonsdale, assignors to Hemphill Company, Central Falls, R. I. Knitting machine and method of knitting. 2,032,324; Feb. 25.

Leach, Charles H., Roselle, N. J. Heat exchange apparatus. 2,032,021; Feb. 25.

Lee, Arthur L., Gibsonia, Pa. Rail bond. 2,032,290; Feb. 25.

Lee, Beales, Drayton, and F. P. Bevis, Waterlooville, England. Fastening means. 2,032,022; Feb. 25.

Lee, Harry S., Detroit, Mich. Process and apparatus for burning fuel. 2,032,135; Feb. 25.

Lee, Paul R., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Manual reset thermostat. 2,032,136; Feb. 25.

Lee, Roger K., Highland Park, and W. J. McCortney, Royal Oak, assignors to Chrysler Corporation, Detroit, Mich. Making bonded rubber and metal articles. 2,031,720; Feb. 25.

Leeds & Northrup Company. (See Harsch, John W., assignor.)

Leland Electric Company, The. (See Leland, George H., assignor.)

Leland, George H., Dayton, Ohio, assignor to The Leland Electric Company. Oscillatory motor. 2,032,326; Feb. 25.

Lenke, George H., Elmhurst, Ill. Supporting skylight glasses and the like. 2,031,890; Feb. 25.

Leonhart, William F., St. Louis County, Mo. Attaching spouts to containers. 2,031,838; Feb. 25.

Le Voci, Frank, New York, N. Y. Combined cigarette lighter and case. 2,032,094; Feb. 25.

Lichten, Maurice A., Fort Howard, Md., assignor, by mesne assignments, to Fidelitone Records, Inc. Apparatus for engraving sound vibrations on flexible records. 2,032,062; Feb. 25.

Limbach, Alex, Carmel, N. Y. Container for lip sticks and the like. 2,031,839; Feb. 25.

Linder, Francis, assignor to Eclipse Aviation Corporation, East Orange, N. J. Driving mechanism. 2,031,783; Feb. 25.

Linderman, Garrett B., Jr. (See Sleeman, H. W., and Linderman.)

Lindsley, Milton F., Jr., Kings Mills, Ohio, assignor, by mesne assignments, to E. I. du Pont de Nemours and Company. Making smokeless powder. 2,031,659; Feb. 25.

Lisicke, Paul, South Coventry, Conn. Bracket. 2,032,023; Feb. 25.

Lloyd, Homer J. (See Ekstromer, Edward C., assignor.)

Lloyd, John. (See Murray, C. V., and Lloyd.)

Loepsinger, Albert J., assignor to General Fire Extinguisher Company, Providence, R. I. Sealing charged glass bulbs. 2,031,660; Feb. 25.

Loewe, Siegmund, Berlin-Steglitz, Germany. Manufacturing highly emissive cathodes. 2,031,721; Feb. 25.

Loewe, Siegmund, and P. P. Fries, Berlin, Germany. Braun tube. 2,031,722; Feb. 25.

Logan, John W., Jr., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake control. 2,032,177; Feb. 25.

Logan, John W., Jr., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Retardation controller. 2,032,178; Feb. 25.

Logue, Leland H., assignor to Denver Patent Company, Denver, Colo. Pump. 2,031,609; Feb. 25.

Long, George A., assignor to The Gray Telephone Pay Station Company, Hartford, Conn. Telephone pay station apparatus. 2,032,063; Feb. 25.

Lorenzen, Heinz G. (See McKinney, W. A., and Lorenzen.)

Lorscheider-Schang Co., The. (See King, Everett W., assignor.)

Losa, Vaclav. (See Mikulasek, John, assignor.)

Lowry, Erwin F., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Oxide coated cathode for heavy duty service. 2,032,179; Feb. 25.

Lübcke, Ernst, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Uniformly controllable gas or vapor discharge valve. 2,032,137; Feb. 25.

Luce, Albert L., Fort Valley, Ga. Window sash fastener. 2,031,897; Feb. 25.

Lucker, Hubert H., Detroit, Mich. Beer keg and dispensing mechanism. 2,032,024; Feb. 25.

Ludwig, Leon R., Forest Hills, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical conversion system. 2,032,138; Feb. 25.

Lum, Walter O., Schenectady, N. Y., assignor to General Electric Company. Pumping apparatus. 2,032,291; Feb. 25.

Lynn, Harry S. (See Mott, G. A., and (Jones, assignor).)

Lyon Cover Company. (See Jandus, Herbert S., assignor.)

Lyon Cover Company. (See Short, Bladen M., assignor.)

Macbeth-Evans Glass Company. (See McGregor, R. H., and Tillotson, assignors.)

MacKinnon, Frances R. (See Kohler, H. S., and MacKinnon.)

Macy, Albert J., Evanston, assignor to Macy Art Process Corporation, Chicago, Ill. Color screen device. 2,032,139; Feb. 25.

Macy Art Process Corporation. (See Macy, Alfred J., assignor.)

Maddocks, Charles B. (See Langwell, H., and Maddocks.)

Magnavox Company, The. (See Hinchen, Donald T., assignor.)

Magnesium Development Corporation. (See Paine, Roy R., assignor.)

Magnesium Products, Inc. (See Kemmer, Frank R., assignor.)

Maker, Frank L., Berkeley, assignor to Standard Oil Company of California, San Francisco, Calif. Apparatus for fractional distillation. 2,031,610; Feb. 25.

Malleable Iron Range Company. (See Burrow, Herbert T., assignor.)

Mallinckrodt Chemical Works. (See Whitmore, F. C., Homeyer, Jones, and Trent, assignors.)

Mallory, Lewis E., and J. T. Nash, Decatur, Ga. Filter device. 2,032,140; Feb. 25.

Malm, Carl J., and C. L. Fletcher, assignors to Eastman Kodak Company, Rochester, N. Y. Making cellulose esters. 2,031,611; Feb. 25.

Manauf, R. L., Company. (See Runge, George C., assignor.)

Mapes, Daniel, Upper Montclair, N. J., assignor to Walter Kidde & Company, Inc., New York, N. Y. Pull box remote control. 2,031,964; Feb. 25.

Mapes, Daniel, Upper Montclair, N. J., assignor to Walter Kidde & Company, Inc., New York, N. Y. Fire extinguishing apparatus. 2,031,965; Feb. 25.

Marathon Paper Mills Company. (See Meier, A. M., and Drake, assignors.)

Marcus, Samuel S. (See Krakauer, S., and Marcus.)

Mark, Hermann. (See Breuers, W., Mark, and Konrad.)

Markel, John M. (See Hendricks, S. B., and Markel.)

Marmon-Herrington Company. (See Herrington, Arthur W., assignor.)

Marsden, George B., Los Angeles, Calif. Radio tuning system. 2,031,841; Feb. 25.

Marsh, Frank L. (See Best, J. C., and Marsh.)

Marsh, Frank L., assignor to The Best Brothers Keen's Cement Company, Medicine Lodge, Kans. Decolorizing gypsum. 2,031,898; Feb. 25.

Martin, Perry S., Harrisonburg, Va. Drinking fountain. 2,031,728; Feb. 25.

Maslin, Albert J. (See Rose, H. A., and Maslin.)
Mason, Barnet, Bronx, N. Y. Form for making concrete roads. 2,031,612; Feb. 25.
Masse, John E., Lawrence, Mass. Sleeve holder. 2,032,292; Feb. 25.
Materials Protector Corporation. (See Schneider, R., and Poelman, assignors.)
Mathias, Robert J., Cincinnati, Ohio. Centrifugal thermoelectric machine. 2,031,966; Feb. 25.
Mathias, Robert J., Cincinnati, Ohio. Thermoelectric motor-generator. 2,031,967; Feb. 25.
Mathias, Robert J., Cincinnati, Ohio. Thermoelectric turbine. 2,031,968; Feb. 25.
Mathieson Alkali Works, Inc., The. (See Vincent, George Pa., assignor.)
Matten, Edward D., assignor to Decatur Brick Manufacturing Company, Decatur, Ill. Indenting and stamping machine for clay products, such as paving brick and the like. 2,031,890; Feb. 25.
Matthews, Guy L., and H. L. Diehl, Chicago, Ill., said Matthews assignor to said Diehl. Tensioning device. 2,032,217; Feb. 25.
Maxwell, Walter, Marshfield, Wis. Tractor wheel. 2,032,293; Feb. 25.
May, Lawrence E., Jefferson City, Mo. Knock-down crib. 2,032,141; Feb. 25.
McAlpine, Isaac J. (See Pritchard, R. E., and McAlpine.)
McBee Company, The. (See Burke, William F., assignor.)
McCarty, Madison P., assignor of one-half to C. E. Boren, Dallas, Tex. Condenser tester. 2,031,840; Feb. 25.
McClelland, Harold L. (See Dyer, F. C., and McClelland.)
McCord, Charles D., Shaker Heights, Ohio. Shower shield. 2,032,180; Feb. 25.
McCortney, Willett J. (See Lee, R. K., and McCortney.)
McCulloch, Leon, Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Cement. 2,032,142; Feb. 25.
McCune, Joseph C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Triple valve device. 2,032,143; Feb. 25.
McDonald, Chestrr E., Schenectady, N. Y., assignor to General Electric Company. Electric heating pad. 2,032,294; Feb. 25.
McElroy, J. H., & Company. (See Howard, James H., assignor.)
McFadden, Elmer D., assignor of one-eighth to H. L. McFadden, Harrisville, and one-eighth to P. R. McFadden, Grove City, Pa. Oil well packer. 2,031,613; Feb. 25.
McFadden, Horrise L., et al. (See McFadden, Elmer D., assignor.)
McFadden, Perry R., et al. (See McFadden, Elmer D., assignor.)
McGohan, George W. (See Canfield, J. J., and McGohan.)
McGregor, Rob R., Swissvale, and R. W. Tillotson, Pittsburgh, assignors to Macbeth-Evans Glass Company, Charleroi, Pa. Purifying glass sand. 2,031,909; Feb. 25.
McKee, Grosvenor S., Athens, Ohio, and H. L. Galson, Philadelphia, Pa., assignors to Baldwin-Southwark Corporation. Valve mechanism and actuating means therefor. 2,031,614; Feb. 25.
McKinney, Edward G., Enid, Okla. Climbing assembly. 2,031,615; Feb. 25.
McKinney, William A., Winnetka, and H. G. Lorensen, assignors to Kitchen Art Foods, Inc., Chicago, Ill. Food product and its manufacture. 2,031,724; Feb. 25.
McNeil, Charles I., Bloomfield, assignor to Eclipse Aviation Corporation, East Orange, N. J. Electrical apparatus. 2,031,784; Feb. 25.
Mead, Samuel N., Amesbury, Mass., assignor to Chas. J. Henschel & Co., Inc., New York, N. Y. Signaling system. 2,031,970; Feb. 25.
Mebmert, Alfred, Boscobel, Wis. Tire spreading machine. 2,032,295; Feb. 25.
Meier, Anton M., Menasha, and R. I. Drake, Appleton, Wis., assignors, by mesne assignments, to Marathon Paper Mills Company, Rothschild, Wis. Container. 2,032,296; Feb. 25.
Meinecke & Company. (See Johnson, Edward, assignor.)
Mellek, John M., Cresskill, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coin collector apparatus. 2,032,218; Feb. 25.
Mellor, Adrien E., Beaumont, Calif. Screen door fastener. 2,031,725; Feb. 25.
Mendenhall, Lewis P., Dover, N. J. Pocket vector. 2,031,661; Feb. 25.
Meng, Harry E., Oak Park, assignor to W. D. Allen Manufacturing Company, Chicago, Ill. Sprinkler head. 2,032,064; Feb. 26.
Mercier, Pierre E., Paris, France. Wing structure. 2,031,662; Feb. 25.
Mergott, J. E. Company, The. (See Hiering, William C., assignor.)
Meyer, George L. N., Milwaukee, Wis. Bottle centering means. 2,031,663; Feb. 25.
Michiana Products Corporation. (See Burchhalter, H. N., and Osburn, assignors.)
Mikulasek, John, Newton, Iowa, assignor to V. Loss, Cornopolis, Pa. Coupling. 2,032,297; Feb. 25.
Miller, Derr, Detroit, Mich., assignor to Dura Company, Toledo, Ohio. Doorlatch mechanism. 2,031,604; Feb. 25.
Miller, Edward J., Minneapolis, Minn. Acoustical wall surfacing. 2,031,900; Feb. 25.
Mine Safety Appliances Co. (See Dym, Joseph B., assignor.)
Mitchell, Elmer C., Chicago, Ill. Toy machine gun. 2,031,842; Feb. 24.
Mitchell, Robert E., Seattle, Wash. Expansion joint filler, shear bar and sleeve alignment device. 2,031,901; Feb. 25.
Mock, James C., Detroit, Mich. Wheeled vehicle. 2,032,219; Feb. 25.
Modine, Arthur B., assignor to Modine Manufacturing Company, Racine, Wis. Radiator core. 2,032,065; Feb. 25.
Modine Manufacturing Company. (See Modine, Arthur B., assignor.)
Moettell, Arnold, Winterthur, assignor to firm Sulzer Frères Societe Anonyme, Winterthur, Switzerland. Apparatus for the dry cooling of coke. 2,031,843; Feb. 25.
Monk, Newton. (See Espenschied, L., and Monk.)
Montgomery Ward & Co. (See Knapp, Leland G., assignor.)
Moore, Hugh K., Berlin, assignor to Brown Company, Berlin, N. H. Manufacture of caustic soda. 2,031,844; Feb. 25.
Moore, John E., Manchester, England. Weft replenishing mechanism of looms for weaving. 2,031,726; Feb. 25.
Morgan, Launcelot R., Tucson, Ariz. Can opener. 2,031,845; Feb. 25.
Morrissey, William J., Brooklyn, N. Y. Light concentrate method and means. 2,031,971; Feb. 25.
Morton, Charles, Pawtucket, R. I. Weighting means for spinning frames. 2,032,298; Feb. 25.
Moser, Frans R., Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Sweetening process. 2,031,972; Feb. 25.
Mott, George A., and C. C. Jones; said Jones assignor of his right to H. S. Lynn, Santa Monica, Calif. Solvent recovery device. 2,032,299; Feb. 25.
Moulded Pulp Corporation. (See Plunkett, Paul, assignor.)
Mouromtseff, Ilia E., and H. V. Noble, Wilkinsburg, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Standing wave oscillating system. 2,032,181; Feb. 25.
Mudge, Charles W., Cranford, N. J., assignor to Standard Oil Development Company. Impregnation of wood. 2,031,973; Feb. 25.
Murdock, Harold E., assignor to The Champion Fibre Company, Canton, N. C. Recovery of chemicals from waste pulping liquors. 2,031,974; Feb. 25.
Murlie, Silvey M. (See Tarkington, Harry K., assignor.)
Murphy, Edward A., and D. F. Twiss, Erdington, Birmingham, and R. G. James, Selly Oak, Birmingham, assignors to Dunlop Rubber Company Limited, London, England. Manufacture of golf balls and the like. 2,032,220; Feb. 25.
Murray, Clifford V., and J. Lloyd, Coventry, assignors to Sir W. G. Armstrong Whitworth Aircraft Limited, Coventry, England. Gun mounting, particularly for aircraft. 2,032,300; Feb. 25.
Murray Company, The. (See Blewett, John, assignor.)
Murrmann, Fred A., et al. (See Tiedemann, Clinton C., assignor.)
Muth, Herbert, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany. Electric oscillation circuit. 2,031,846; Feb. 25.
Myers, Eddie P., St. Louis, assignor of forty per cent to F. D. Reynolds, University City, Mo. Covered receptacle. 2,032,221; Feb. 25.
Myers, Harry L., assignor to American Floor Surfacing Machine Company, Toledo, Ohio. Floor sanding machine. 2,031,665; Feb. 25.
N. V. Philips' Gloeilampenfabrieken. (See Teves, M. C., and van Embden, assignors.)
Naden, James H. (See Deane, H. C., and Naden.)
Nall, Elmer L., Wheaton, Ill. Liquid dispenser. 2,031,616; Feb. 25.
Nardone, Romeo M., assignor to Eclipse Aviation Corporation, East Orange, N. J. Combined engine starter and compressor. 2,032,025; Feb. 25.
Nash, Joseph T. (See Mallory, L. K., and Nash.)
National Aniline & Chemical Company. (See Perkins, Robert L., assignor.)
National Cash Register Company, The. (See Shipley, Bernis M., assignor.)
Naylor, Paul, Long Branch, Ontario, Canada. Overhead sliding door. 2,031,847; Feb. 25.
Neill, Paul. (See Tromp, G. P., and Neill.)
Nelson, Claude A., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,032,144; Feb. 25.
Nelson, Claude A., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,032,145; Feb. 25.
Neumann, Frederick F. (See Sherman, R. M., and Neumann.)
Neves, Anesimo, Livry-Gargan, France, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Steering mechanism. 2,032,146; Feb. 25.
Newman, L., & Sons, Inc. (See Kispert, Joseph J., assignor.)
Newman, Thomas J., Canton, Ohio. Meter test block. 2,032,301; Feb. 25.
New York Air Brake Company, The. (See Campbell, Charles A., assignor.)
New York Air Brake Company, The. (See Cartin, James D., assignor.)
Nieman, Henry W., Bethlehem, and G. B. Linderman, Jr., Pittsburgh, Pa., assignors to Bethlehem Steel Company. Clutch. 2,032,066; Feb. 25.
Niemand, Otto, Long Island City, N. Y. Rotary printing machine. 2,031,727; Feb. 25.
Noble, Harrell V. (See Mouromtseff, I. E., and Noble.)
Norris, Charles E., London, Ontario, Canada. Tire vulcaniser. 2,032,222; Feb. 25.
North, George H., and E. J. Baker, La Crosse, Kans. Firearm. 2,031,785; Feb. 25.
Northam Warren Corporation. (See Bishop, Clifford E., assignor.)
North American Holding Corporation, et al. (See Eaton, Charles F., assignor.)
Northrup, Edwin F., Princeton, assignor to Ajax Electrothermic Corporation, Ajax Park, Ewing Township, Mercer County, N. J. Electrical conductor. 2,031,975; Feb. 25.
Novotny, Anton, assignor to Detroit Gray Iron Foundry Company, Detroit, Mich. Valve. 2,032,302; Feb. 25.
Noxon, Paul A., Bergenfield, N. J., assignor to The Western Union Telegraph Company, New York, N. Y. Synchronising system. 2,031,976 Feb. 25.
Nyquist, Harry, Millburn, N. J., assignor to American Telephone and Telegraph Company. Electrooptical system. 2,031,728; Feb. 25.
Oakite Products, Inc. (See Johnson, Carl, assignor.)
O'Donnell, Bertram W. (See Keihl, Ernest F. W., Jr.)
Oertel, Wilhelm, Berlin-Steglitz, Germany, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland. Electric locomotive with individual axle drive. 2,032,327; Feb. 25.
Ogden, Ronald, Slough, England. Constructional toy. 2,031,848; Feb. 25.
Oldham, John M., assignor to L. A. Young Company, Detroit, Mich. Apparatus for making golf balls. 2,031,786; Feb. 25.
O'Leary, Eugene A., Holyoke, Mass. Apparatus for dispensing liquids. 2,032,095; Feb. 25.
O'Leary, John J., Petersburg, Va., assignor to Atmospheric Nitrogen Corporation, New York, N. Y. Pipe fitting. 2,031,849; Feb. 25.
Olsen, John C., assignor to Flexible Steel Lacing Company, Chicago, Ill. Tool for preparing belt ends. 2,031,977; Feb. 25.
Öman, Erik, Stocksund, near Stockholm, assignor to Industrikemiska Aktiebolaget, Stockholm, Sweden. Evaporating method and means therefor. 2,032,182; Feb. 25.
O'Neil, Joseph F. (See Golden, J. P., and O'Neil.)
Orgitano, Nick, Lebanon, Pa. Exercising machine. 2,032,303; Feb. 25.
Osburn, James M. (See Burckhalter, H. N., and Osburn.)
Osgood, George H., Tacoma, Wash. Barrel head fastener. 2,031,729; Feb. 25.
Ostgaard, Albert, Cadogan, assignor of one-half to W. Ganser, Provost, Alberta, Canada. Oil or gasoline barrel lock. 2,032,223; Feb. 25.
Outboard Motors Corporation. (See Evinrude, Ole, assignor.)
Outboard Motors Corporation. (See Irgens, Finn T., assignor.)
Pacific Marine Supply Company. (See Himberger, Earl W., assignor.)
Packard Motor Car Company. (See Paton, Clyde E., assignor.)
Padgett, Benjamin L., Brooklyn, N. Y. Data indicator. 2,032,304; Feb. 25.
Paine, James W. (See Hambrecht, G. D., and Paine.)
Paine, Roy E., Cleveland, Ohio, assignor, by mesne assignments, to Magnesium Development Corporation. Alloys. 2,031,978; Feb. 25.
Parker, Humphrey F., Detroit, Mich., and E. E. House, assignors to Bendix Brake Company, South Bend, Ind. Brake. 2,031,730; Feb. 25.
Parshad Holding Corporation, et al. (See Eaton, Charles F., assignor.)
Patent and Licensing Corporation, The. (See Dudleston, William G., assignor.)
Paton, Clyde E., Birmingham, assignor to Packard Motor Car Company, Detroit, Mich. Fan. 2,032,224; Feb. 25.
Patten, Thomas C., Tyler, Tex. Rotary drilling machine. 2,031,731; Feb. 25.
Patton, Cleon E., assignor of one-half to W. Carlson, Portland, Oreg. Choke valve controls for multicylindered internal combustion engines. 2,031,902; Feb. 25.
Pearce, W. L. (See Church, Walter L., assignor.)
Penick & Ford, Ltd. (See Widmer, John M., assignor.)
Perkins, Edwin E., Riverside, Ill. Paper envelope. 2,032,067; Feb. 25.
Perkins, Robert L., East Aurora, assignor to National Aniline & Chemical Company, Inc., New York, N. Y. Production of 5-halogen-2-aminotoluenes. 2,031,666; Feb. 25.
Perry, John H., and E. S. Ridler, Shaker Heights, assignors to The Grasselli Chemical Company, Cleveland, Ohio. Sulphuric acid contact process. 2,031,787; Feb. 25.
Persoons, Alphonse. (See Persoons, Jules, and A.)
Persoons, Jules, and A. Persoons, Thildonck, Belgium. Linen washing machine. 2,031,788; Feb. 25.
Peterson, Clarence E., San Diego, Calif. Shell reloading machine. 2,031,850; Feb. 25.
Petznick, Herman P., Davenport, Iowa. Train pipe coupling. 2,032,096; Feb. 25.
Piehl, Sven O., and H. Friberg, Stockholm, Sweden. Apparatus for attaching seal caps on bottles. 2,032,225; Feb. 25.
Pierce, George W., Cambridge, Mass. Acoustic electric energy converter. 2,031,780; Feb. 25.
Pierce, Lawrence, Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electromagnetic contact. 2,032,147; Feb. 25.
Pietzsch, Frank H. (See Campbell, S. H., and Pietzsch.)
Pigrott, Henry A., and G. S. J. White, Blackley, Manchester, assignors to Imperial Chemical Industries Limited, Westminster, England. Waterproofing leather. 2,032,097; Feb. 25.
Pioneer Instrument Company, Incorporated. (See Urfer, Adolf, assignor.)
Pipkin, Maurice E., New York, and E. J. Blake, Rochester, N. Y.; said Blake assignor to said Pipkin. Audible signal device. 2,031,667; Feb. 25.
Pittsburgh Plate Glass Company. (See Clause, Robert L., assignor.)
Pittsburgh Plate Glass Company. (See Galey, Henry J., assignor.)
Pittsburgh Plate Glass Company. (See Geisthary, F., and Fox, assignors.)
Pittsburgh Plate Glass Company. (See Hitner, Harry F., assignor.)
Plunkett, Paul, Port Chester, N. Y., assignor, by mesne assignments, to Moulded Pulp Corporation, Dover, Del. Container for thread bodies. 2,031,851; Feb. 25.
Plym, Francis J., assignor to The Kawneer Company, Niles, Mich. Andiron. 2,031,732; Feb. 25.
Poelman, Armand. (See Schneider, R., and Poelman.)
Poillot, Jean P. E., assignor to Etablissements Cobendet Guinard (Pompes Guinard & Etablissements Pompes Reunis) Chemin de la Fouilleuse, Saint Cloud, France. Meter for liquids. 2,031,852; Feb. 25.
Polysius, Firm G., Aktiengesellschaft. (See Thiefeldt, Johannes, assignor.)
Porcelain Enamel & Manufacturing Company of Baltimore, The. (See Turk, Karl, assignor.)
Porter, Harry F., Harrison Township, Allegheny County, Pa., assignor to Allegheny Steel Company. Electric controller of the variable voltage type. 2,013,733; Feb. 25.
Potts, Ralph H., assignor to Armour and Company, Chicago, Ill. Packaging molten soap. 2,031,853; Feb. 25.
Poulin, François, assignor of one-half to L. Chevalier, Sherbrooke, Quebec, Canada. Dispensing device for collapsible tubes. 2,032,305; Feb. 25.
Pranke, Edward J., Great Barrington, Mass., assignor to E. I. du Pont de Nemours & Company, Inc. Cooling molten material. 2,031,790; Feb. 25.
Pratt, William H., Lynn, Mass., assignor to General Electric Company. Pointer mounting arrangement for measuring instruments. 2,032,306; Feb. 25.
Prevette, B. T. (See Prevette, Leander F., assignor.)
Prevette, Leander F., Thomasville, assignor of one-half to B. T. Prevette, Lexington, N. C. Folding aeroplane wing. 2,032,307; Feb. 25.
Prickett, Thomas E. (See Harrison, J. W., and Prickett.)
Prins, Dietrich. (See Kühle, W. E., Prins, and Herriger.)
Pritchard, Reginald E., Old Trafford, and I. J. McAlpine, Urmston, assignors to W. T. Glover and Company Limited, Manchester, England. Roller closing die arrangement for use in stranding machines. 2,032,308; Feb. 25.
Purnell, Enoch, et al. (See Ingels, James J., assignor.)
Radford, William H., Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Thermostat mounting. 2,032,069; Feb. 25.
Radio Corporation of America. (See Batsel, C. N., and Kellogg, assignors.)
Radio Corporation of America. (See Braden, Reno A., assignor.)
Radio Corporation of America. (See Chouinard, Oscar, assignor.)
Radio Corporation of America. (See Dimmick, Glenn L., assignor.)
Radio Corporation of America. (See Finch, James L., assignor.)
Radio Corporation of America. (See Hansell, Clarence W., assignor.)
Radio Corporation of America. (See Holden, Harold C., assignor.)
Radio Corporation of America. (See Kellogg, Edward W., assignor.)
Radio Corporation of America. (See Kellogg, E. W., and Read, assignors.)
Radio Corporation of America. (See Sachtleben, Lawrence T., assignor.)
Radio Corporation of America. (See Schiff, Frank, assignor.)
Radio Corporation of America. (See Thomas, Adolph A., assignor.)
Radio Corporation of America. (See White, Sidney T., assignor.)
Radio Corporation of America. (See Zimmerman, Arthur G., assignor.)
Railway Devices Company. (See Campbell, S. H., and Pietzsch, assignors.)
Ramisé, Cécile, Suresnes, France. Electrically actuated pulsator pump. 2,032,148; Feb. 25.

Rapid Roller Company. (See Wightman, Andrew M., assignor.)

Rare Chemicals, Inc. (See Ach, L., and Dircheri, assignors.)

Rash, Ben C., Henderson, Ky. License plate for automobiles. 2,032,026; Feb. 25.

Rasmussen, Charles H., assignor to Ferdinand Gutmann & Co., Brooklyn, N. Y. Container closure. 2,031,979; Feb. 25.

Rawlins, Herbert L., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit interrupter. 2,032,149; Feb. 25.

Rawlings Manufacturing Company. (See Whitley, William P., assignor.)

Raytheon Manufacturing Company. (See Bush, Vannevar, assignor.)

Read, Sidney, Jr. (See Kellogg, E. W., and Read.)

Rechard, Ottis H., and O. F. Kuhlman, York, Pa., assignors, by mesne assignments, to American Chain Company, Inc., New York, N. Y. Service jack. 2,032,809; Feb. 25.

Reda Pump Company. (See Brown, C. C., Van Wert and Arutunoff, assignors.)

Reedy, Franklin G. (See Reedy, Melvin E., assignor.)

Reedy, Melvin E., Tulsa, Okla., assignor to Franklin G. Reedy, Warren, Ind. Drill bit. 2,032,828; Feb. 25.

Rees', Hans, Sons, Inc. (See Rees, Louis du B., assignor.)

Rees, Louis du B., assignor to Hans Rees' Sons, Inc., New York, N. Y. Method and apparatus for impregnating leather. 2,032,027; Feb. 25.

Rees, Louis du B., assignor to Hans Rees' Sons, Incorporated, New York, N. Y. Impregnating apparatus. 2,032,028; Feb. 25.

Reich, Gustave T., Drexel Hill, Pa. Purifying yeast. 2,031,668; Feb. 25.

Reich, Gustave T., Drexel Hill, Pa. Dehydrating esters. 2,031,669; Feb. 25.

Reich, Gustave T., Philadelphia, Pa. Recovering non-sugars from saccharine materials. 2,031,670; Feb. 25.

Reiche, Karl A. M., Dresden, Germany, assignor to T. C. Weyrandt Company, New York, N. Y. Mold. 2,032,329; Feb. 25.

Reinert, Joseph F., Quakertown, Pa. Hosiery drier. 2,032,310; Feb. 25.

Renner, Maynard S. (See Tucker, G. R., Kennedy, and Renner.)

Rex-Hide, Incorporated. (See Kempel, Arthur B., assignor.)

Reynolds, Frederick D. (See Myers, Eddie P., assignor.)

Richards, Willard F., Depew, assignor to The Gould Coupler Company, New York, N. Y. Coupler. 2,031,617; Feb. 25.

Richards, William F. (See Ungnade, O., and Richards.)

Richardson, Conrad, assignor to Ring Containers Limited, London, England. Lifting sheet material from a support or pile. 2,032,150; Feb. 25.

Richardson, Harris P. (See Smith, Herschel D., assignor.)

Richter, George A., assignor to Brown Company, Berlin, N. H. Surface-finished paper. 2,031,854; Feb. 25.

Richter, Robert, assignor to the firm of Carl Zeiss, Jena, Germany. Anastigmatic objective for photography and projection. 2,031,792; Feb. 25.

Ricks, Fred. H. E. Elliott and F. C. Choice, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J. Sewing machine. 2,032,311; Feb. 25.

Riddick, William N., De Ridder, La. Post sizing and peeling machine. 2,031,903; Feb. 25.

Riddle, Parker, Pittsburgh, Pa. Window sash locking means. 2,031,791; Feb. 25.

Ridler, Earl S. (See Perry, J. H., and Ridler.)

Riebel, Frederick, Jr., D. M. Dow, and L. W. Child, assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio. Vacuum cleaner. 2,031,734; Feb. 25.

Ring, Andrew D., Washington, D. C., assignor to General Electric Company. Carrier wave signaling system. 2,032,312; Feb. 25.

Ring Containers Limited. (See Richardson, Conrad, assignor.)

Rising, Harry A., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Lubricating system. 2,031,671; Feb. 25.

Risser, Arthur L., assignor to U. S. Bottlers Machinery Co., Chicago, Ill. Container closure applying apparatus. 2,031,735; Feb. 25.

Rittershausen, Fritz, and H. Kerschan, Essen, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Machine parts and apparatus intended for high temperature operation. 2,031,904; Feb. 25.

Roberts, Joseph E., Waterbury, Conn., assignor to The F. B. Shuster Company, New Haven, Conn. Long stock fabricating machine. 2,032,098; Feb. 25.

Roberts, Joseph K., and M. T. Carpenter, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill. Gasoline manufacturing process. 2,032,330; Feb. 25.

Robins Conveying Belt Company. (See Robins, Samuel D., assignor.)

Robins, Samuel D., Manhasset, N. Y., assignor to Robins Conveying Belt Company, Passaic, N. J. Bearing and carrier. 2,031,818; Feb. 25.

Robinson, Preston, Williamstown, assignor to Sprague Specialties Company, North Adams, Mass. Electrolytic device. 2,031,793; Feb. 25.

Robinson, William J. (See Galligan, J. J., and Robinson.)

Recard, Yves, assignor to La Radiotechnique, Paris, France. Radio receiving system. 2,031,786; Feb. 25.

Roeder, Charles, New York, N. Y. Metal frame and rail for tile. 2,032,226; Feb. 25.

Rollason, Charles H., assignor to Wheeling Steel Corporation, Wheeling, W. Va. Sanitary shipping container. 2,031,855; Feb. 25.

Romnes, Haakon I., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Gain control circuit. 2,031,980; Feb. 25.

Rosales, Arturo, Panama, Panama. Crate. 2,031,737; Feb. 25.

Ross, Herbert A., Wilkinsburg, and A. J. Mastin, Sharpsville, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Ignition transformer. 2,032,151; Feb. 25.

Rosenberg, Heyman, New York, N. Y. Fastener and producing same. 2,032,093; Feb. 25.

Rosovsky, Nathan, assignor to Elite Specialty Metal Co., Inc., New York, N. Y. Handbag. 2,032,227; Feb. 25.

Ross, Charles W. (See Goodell, F. H., and Ross.)

Ross, Frederick N., Grosse Pointe Park, and H. L. Johnson, assignors to Briggs Manufacturing Company, Detroit, Mich. Sewing machine mechanism. 2,031,905; Feb. 25.

Ross, Frederick N., Grosse Pointe Park, and H. L. Johnson, assignors to Briggs Manufacturing Company, Detroit, Mich. Upholstery sewing machine. 2,031,906; Feb. 25.

Ross, King. (See Safranski, P., and Ross.)

Rossman, Edwin F., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Shock absorber. 2,032,183; Feb. 25.

Rowe, William H., New York, N. Y. Multiple coin actuated plunger. 2,032,228; Feb. 25.

Rowton, Harold S., and J. L. Rowton, Aberdeen, Scotland. Machine for filleting fish. 2,031,856; Feb. 25.

Rowton, John L. (See Rowton, Harold S. and J. L.)

Rueb, Theodore O., assignor to Sherman-Klove Company, Chicago, Ill. Display container for wrenches. 2,032,321; Feb. 25.

Rumford Chemical Works. (See Fiske, A. H., and Bryan, assignors.)

Rundlett, William D., North Adams, assignor to The James Hunter Machine Company, North Adams, Mass. Selvage opener for tentering machines. 2,032,070; Feb. 25.

Runge, George C., assignor to E. L. Mansur Company, Chicago, Ill. Tape ladder for Venetian blinds. 2,031,981; Feb. 25.

Runkel, Roland. (See Freudenberg, Richard, and H. Runkel, and Lange.)

Ruppel, Frederick H. (See Fisk, Arthur E., assignor.)

Ryan, John A., Bronx, N. Y. Window construction. 2,031,907; Feb. 25.

S. M. A. Corporation. (See Barnett, H. M., Frahling, and Germann, assignors.)

S. M. A. Corporation. (See Cross, Robert J., assignor.)

S. M. A. Corporation. (See Ungnade, O., and Richards, assignors.)

Sachtleben, Lawrence T., Camden, N. J., assignor to Radio Corporation of America. Phonographic apparatus. 2,031,857; Feb. 25.

Sachtleben, Lawrence T., Camden, N. J., assignor to Radio Corporation of America. Phonographic apparatus. 2,031,858; Feb. 25.

Safranski, Paul, and E. Ross, New York, N. Y. Moving picture sound recording and reproducing apparatus. 2,031,794; Feb. 25.

Salzman, George S., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Apparatus for producing bimetallic strip. 2,031,796; Feb. 25.

Salzman, George S., Cleveland Heights, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Making bearings. 2,031,982; Feb. 25.

Sargent, Leonard M. (See Winning, C., Sargent, and Dudley.)

Saupe, Georg, Limbach, Germany. Flat warp knitting machine. 2,032,152; Feb. 25.

Sawin, Emilyn J., administratrix. (See Sawin, Lester M.)

Sawin, Lester M., deceased, Chicago, Ill., E. J. Sawin, administratrix, assignor to The Susse Nut Company, Chicago, Ill. Apparatus for treating toasted nuts. 2,031,903; Feb. 25.

Saxe, Arthur C., assignor to The Jaeger Machine Company, Columbus, Ohio. Well paint. 2,031,983; Feb. 25.

Schaefer, Frank M., Chicago, Ill. Oil can. 2,031,972; Feb. 25.

Schapira, Carl, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Acoustic apparatus. 2,031,869; Feb. 25.

Schelske, Adolph. (See Fiedler, William J., assignor.)

Schiedel, Joseph. (See Smith, H., Schiedel, and Asbury.)

Schiff, Frank, Hampstead, London, England, assignor to Radio Corporation of America. Sound gate. 2,032,134; Feb. 25.

Schlesmann Aktiengesellschaft. (See Triebiagbans, Louis, assignor.)

Schloesmann Aktiengesellschaft. (See Gansen, Josef, assignor.)

Schneider, Hermann, Altona-on-the-Elbe, Germany. Multicompartment container. 2,032,153; Feb. 25.

Schneider, Robert, Paris, and A. Poelman, Charenton, France, assignors to Materials Protector Corporation, Newark, N. J. Protecting leathers, skins, fabrics and the like during their manipulation or making up into manufactured goods. 2,031,673; Feb. 25.

Schneider, Robert, Paris, and A. Poelman, Charenton, France, assignors to Materials Protector Corporation, Newark, N. J. Protecting shoes during their manufacture. 2,031,674; Feb. 25.

Schoch, Fred C., Oak Park, Ill. Magnetically releasable latch. 2,031,738; Feb. 25.

Scholz, Herman A., Oak Park, assignor to United States Gypsum Company, Chicago, Ill. Cementitious paint and plastic composition. 2,032,071; Feb. 25.

Schwarzmann, Wolfgang E. (See Wild, J. E., and Schwarzmann.)

Schweiger, Curt W., Munich, Germany. Sewing machine. 2,031,675; Feb. 25.

Schweitzer, William K., East Cleveland, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Soldering flux. 2,031,909; Feb. 25.

Sciaky, David, Paris, France. Transmission system for a pressure-operated member such as a hydraulic press. 2,032,185; Feb. 25.

Sealtest System Laboratories, Inc. (See Johnson, A. H., and Trebler, assignors.)

Servanton, Jacques, and J. M. Consail, Paris, France. Telephone call apparatus. 2,032,229; Feb. 25.

Seymour, George W., Cumberland, Md., assignor to Celanese Corporation of America. Cellulose derivative solvents. 2,031,619; Feb. 25.

Shaffer, Hosea, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va. Mold aligning apparatus. 2,031,739; Feb. 25.

Sharp & Dohme, Incorporated. (See Daughenbaugh, Paul J., assignor.)

Sheehan, William M., Merion, Pa., assignor to General Steel Castings Corporation, Granite City, Ill. Railway car structure. 2,032,156; Feb. 25.

Shell Development Company. (See Deanesly, R. M., and Hearne, assignors.)

Shell Development Company. (See Meser, Franz R., assignor.)

Shenton, Francis. (See Small, N. M., and Shenton.)

Sherman-Klove Company. (See Rueb, Theodore O., assignor.)

Sherman, Ralliston M., Glastonbury, assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn. Liquid fuel burner. 2,032,332; Feb. 25.

Sherman, Ralliston M., Glastonbury, assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn. Liquid fuel burner. 2,032,824; Feb. 25.

Sherman, Ralliston M., Glastonbury, and F. F. Neumann, West Hartford, Conn., assignors to The Silent Glow Oil Burner Corporation, Hartford, Conn. Range burner. 2,032,833; Feb. 25.

Shindel, Harry F., assignor to Willson Products, Inc., Reading, Pa. Eye protector. 2,031,676; Feb. 25.

Shipley, Bernis M., assignor to The National Cash Register Company, Dayton, Ohio. Cash register. 2,031,860; Feb. 25.

Short, Haden M., assignor to Lyon Cover Company, Detroit, Mich. Fenderwell support for tires. 2,031,984; Feb. 25.

Shuster, F. B., Company, The. (See Roberts, Joseph H., assignor.)

Shyvers, Kenneth C., Chicago, Ill. Game. 2,031,740; Feb. 25.

Sickles, Royal F., Springfield, Mass. Condenser. 2,031,910; Feb. 25.

Silent Glow Oil Burner Corporation, The. (See Sherman, Ralliston M., assignor.)

Silent Glow Oil Burner Corporation, The. (See Sherman, R. M., and Neumann, assignors.)

Silesia, Verein Chemischer Fabriken. (See Kellner, Gerhard, assignor.)

Silex Company, The. (See Frank, Hugo, assignor.)

Simek, Joseph F., Omaha, Nebr. Switch box lath clamp. 2,031,821; Feb. 25.

Simmons, Arthur W., King's Cross, London, England, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,032,184; Feb. 25.

Simpson, John M., Muncie, Ind., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Freewheeling attachment for automobiles. 2,032,325; Feb. 25.

Sinfra A. G. St. Gallen (Switzerland). (See Hanf, Ferdinand, assignor.)

Sirian Lamp Company. (See Brasseltes, Chester H., assignor.)

Small, Norman M., and F. Shenton, assignors to Frick Company, Waynesboro, Pa. Oil recovery device. 2,032,230; Feb. 25.

Smellie, Donald G., Canton, assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,031,811; Feb. 25.

Smidth, F. L., & Co. (See Vogel-Jorgensen, Mikael, assignor.)

Smith, George L., assignor to United States Ordnance Company, Washington, D. C. Indicator. 2,031,741; Feb. 25.

Smith, Herschel D., assignor of one-half to H. P. Richardson, Buffalo, N. Y. Pneumatic automobile spring. 2,031,862; Feb. 25.

Smith, Hugh, Buffalo, J. Schiedel, Hamburg, and A. B. Asbury, Buffalo, N. Y. Self-adjusting brake. 2,031,742; Feb. 25.

Smith, John F., Quincy, Mass., assignor to Compo Shoe Machinery Corporation, New York, N. Y. Cutting machine. 2,031,744; Feb. 25.

Smith, Ralph M., Detroit, Mich. Circuit breaker. 2,032,072; Feb. 25.

Smith, Ray B., Tacoma, Wash. Glass beveling machine. 2,031,745; Feb. 25.

Snell, Samuel A., assignor to The Bingham Stamping & Tool Company, Toledo, Ohio. Welded article and process therefor. 2,031,863; Feb. 25.

Society of Chemical Industry in Basle. (See Bonhôte, Gérald, assignor.)

Society of Chemical Industry in Basle. (See Bonhôte, G., and Apotheker, assignors.)

Sole, John H. (See Duguid, J. M., and Sole.)

Sorensen, Rasmus C. P., Brooklyn, N. Y. Circuit breaker. 2,032,187; Feb. 25.

Spaeth, Charles P., Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Blasting cap charge. 2,031,677; Feb. 25.

Spamer, Richard F. (See Johnson, C. C., Hopkins, and Spamer.)

Spear, Lambert E., assignor to Blue Moon Cheese Products, Inc., Minneapolis, Minn. Measuring and filling mechanism. 2,031,912; Feb. 25.

Spencer, Alexander, Westminster, London, England. India rubber spring. 2,032,100; Feb. 25.

Sperlich, Herman A., Highland Park, Mich. Extensible support for use in conjunction with cabinets and the like. 2,032,188; Feb. 25.

Sprague Specialties Company. (See Robinson, Preston, assignor.)

Staege, Stephen A., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical differential oil well drilling system. 2,032,155; Feb. 25.

Standard Car Truck Company. (See Webb, Edwin W., assignor.)

Standard-I. G. Company. (See Klee, Stephen A., assignor.)

Standard Oil Company. (See Roberts, J. K., and Carpenter, assignors.)

Standard Oil Company of California. (See Maker, Frank L., assignor.)

Standard Oil Company (Indiana). (See Sullivan, Frederick W., Jr., assignor.)

Standard Oil Development Company. (See Buc, Hyym R., assignor.)

Standard Oil Development Company. (See Donlan, Theodore R., assignor.)

Standard Oil Development Company. (See Frolich, Per K., assignor.)

Standard Oil Development Company. (See Mudge, Charles W., assignor.)

Standard Oil Development Company. (See Stratford, R. K., and Huggett, assignors.)

Standard Oil Development Company. (See Winning, Carl, assignor.)

Standard Oil Development Company. (See Winning, C., Sargent, and Dudley, assignors.)

Standard Steel Works. (See Gredell, Otto N., assignor.)

Standard Stoker Company, The. (See Anderson, Howard P., assignor.)

Stengl, Rudolph J. (See Davis, S. H., Anderson, and Stengl.)

Stephens, Susan, Louisville, Ky. Slipper. 2,031,796; Feb. 25.

Stevens, Horace D., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Apparatus for treating plastic material. 2,032,073; Feb. 25.

Stewart-Warner Corporation. (See Hansmann, Elwood, assignor.)

Stewart-Warner Corporation. (See Zerk, Oscar U., assignor.)

Stilling, William H., London, assignor to Isaac Braithwaite & Son Engineers Limited, Kendal, England. Automatic time release device. 2,032,189; Feb. 25.

Stoddard, Edgar S., Berwyn, assignor to The Conover Company, Chicago, Ill. Dishwashing machine. 2,032,156; Feb. 25.

Stoll, Hermann, assignor to Robert Bosch Aktiengesellschaft Stuttgart, Germany. Incandescent igniter. 2,031,985; Feb. 25.

Stollberg, Walter C., Quincy, Ill. Overflow device. 2,032,231; Feb. 25.

Stonebraker, Fred. Sr., San Diego, Calif. Display sign. 2,031,620; Feb. 25.

Stratford, Reginald K., and J. L. Huggett, Sarnia, Ontario, Canada, assignors to Standard Oil Development Company. Lubricants and manufacturing the same. 2,031,986; Feb. 25.

Strauss, Theodore O., assignor to Casteel Research Laboratories, Inc., New York, N. Y. Moving picture film reel. 2,032,336; Feb. 25.

Streeter-Amet Company. (See Brendel, Max E., assignor.)

Strickland, Royal F., Cleveland Heights, Ohio, assignor to General Electric Company. Incandescent lamp and manufacturing the same. 2,032,232; Feb. 25.

Stubbs, Robert S., Hanna, Alberta, Canada. Direction indicator. 2,032,029; Feb. 25.

Stubaitz, Maurice, assignor to Fort Pitt Bedding Company, Pittsburgh, Pa. Combination air and spring cushion seat and the like. 2,031,745; Feb. 25.

Sturges, Thomas B. (See Ferguson, John A., assignor.)

Sugden, Walter J. (See Drysdale, William D., assignor.)

Sullivan, Frederick W., Jr., Hammond, Ind., assignor to Standard Oil Company (Indiana), Chicago, Ill. Conversion of hydrocarbons. 2,031,987; Feb. 25.

Sullivan, William D., West New York, N. J. Fume and dust eliminator. 2,032,101; Feb. 25.

Sulzer Frères Societe Anonyme. (See Moettell, Arnold, assignor.)

Surface Combustion Corporation. (See Branche, Nelson T., assignor.)

Surface Combustion Corporation. (See Branche, N. T., and Beam, assignors.)

Susu Nut Company, The. (See Swain, Lester M., assignor.)

Swan, Charles W., executor. (See Swan, John C.)

Swan, John C., deceased, Marietta, Ohio, C. W. Swan, executor. Apparatus for processing gas. 2,032,074; Feb. 25.

Symington Company, The. (See Barrows, Donald S., assignor.)

Taguchi, Juuso, Yotsuya-ku, Tokyo-shi, Japan. Attachment for artificial teeth. 2,032,102; Feb. 25.

Talen, Charles G. W., New Orleans, La. Building construction. 2,032,030; Feb. 25.

Tarbox, John P., assignor to Budd Wheel Company, Philadelphia, Pa. Fixture for assembling rubber articulated joints. 2,031,797; Feb. 25.

Tarkington, Harry K., assignor of one-half to S. M. Murlie, Los Angeles, Calif. Dynamic microphone. 2,031,678; Feb. 25.

Tantz, Herbert E., assignor to Delta Manufacturing Company, Milwaukee, Wis. Band saw guide. 2,032,233; Feb. 25.

Taylor, Edward A., Shaker Heights, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Zinc chloride base flux. 2,031,913; Feb. 25.

Taylor, William L., Spondon, near Derby, England, assignor to Celanese Corporation of America. Manufacture of artificial materials. 2,031,786; Feb. 25.

Taylor, William L., and A. H. Woodruff, Spondon, near Derby, England, assignors to Celanese Corporation of America. Apparatus for feeding and winding textile threads. 2,031,790; Feb. 25.

Teidemann, Clinton C., assignor of one-third to W. W. Austin, and one-third to F. A. Marrmann, South Bend, Ind. Door mat. 2,031,867; Feb. 25.

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Kühle, W. E., Prinz, and Herriger, assignors.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Muth, Herbert, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Schapira, Carl, assignor.)

Teves, Martin C., and H. J. M. van Embden, assignors to N. V. Phillips' Gloeilampenfabrieken, Eindhoven, Netherlands. Photoelectric tube. 2,031,864; Feb. 25.

Thiele, Harry E. (See Frede, C. F., and Thiele.)

Thiele, William A., North Tonawanda, N. Y. Preserving jar. 2,031,800; Feb. 25.

Thomas, Adolph A., New York, N. Y., assignor to Radio Corporation of America. System and apparatus for recording and reproducing sound. 2,031,865; Feb. 25.

Thomas, Adolph A., assignor to Radio Corporation of America, New York, N. Y. Electric recording and reproducing apparatus. 2,032,190; Feb. 25.

Thomas, Charles C., assignor to Kelvinator Corporation, Detroit, Mich. Refrigerating apparatus. 2,032,235; Feb. 25.

Thomas, Charles C., and D. G. Ellis, assignors to Kelvinator Corporation, Detroit, Mich. Low temperature display case. 2,032,234; Feb. 25.

Thomas, Ralph B., assignor to Hygrade Sylvania Corporation, Salem, Mass. Lamp, tube, and similar device. 2,031,746; Feb. 25.

Thompson, Elmer J., assignor to Globar Corporation, Niagara Falls, N. Y. Manufacture of silicon carbide resistors. 2,032,077; Feb. 25.

Thums, Adolphus E., Newark, N. J. Article carrier. 2,031,866; Feb. 25.

Tillotson, Edwin W. (See McGregor, R. R., and Tillotson.)

Timken Roller Bearing Company, The. (See Buckwalter, Tracy V., assignor.)

Tips Tool Company. (See Bodendieck, Henry W., assignor.)

Tise, Thomas H., Winston-Salem, N. C. Air conditioning conduit. 2,032,103; Feb. 25.

Tjaarda, John, Birmingham, Ala., assignor to Briggs Manufacturing Company, Detroit, Mich. Plumbing fixture. 2,031,819; Feb. 25.

Tobelman, Gustave H., South Orange, N. J., assignor to Bridgeport Brass Company, Bridgeport, Conn. Carrier tube. 2,031,963; Feb. 25.

Torsen, Martin G., Louisville, Ky. Air conditioning apparatus. 2,032,127; Feb. 25.

Toscano, Joseph, Brooklyn, N. Y. Shoe lasting jack. 2,031,868; Feb. 25.

Trebler, Henning A. (See Johnson, A. H., and Trebler.)

Trent, Walter E. (See Whitmore, F. C., Homeyer, Jones, and Trent.)

Trico Products Corporation. (See Horton, E. C., and Huber, assignors.)

Trico Products Corporation. (See Huber, H., and Horton, assignors.)

Trojan Powder Company. (See Wyler, Joseph A., assignor.)

Tromp, Gerard P., Brooklyn, N. Y., and P. Neill, East Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Circuit controller. 2,032,191; Feb. 25.

Trouth, John E., Gladewater, Tex. Mechanism for emptying containers. 2,031,869; Feb. 25.

Tryon Viscostor Corporation. (See Blanchard, Adna F., assignor.)

Tucker, Charles W., administrator. (See Tucker, G. E., Kennedy, and Renner.)

Tucker, George E., deceased, by C. W. Tucker, administrator, North Andover, H. L. Kennedy, Arlington, and M. S. Renner, Cambridge, assignors to Dewey and Almy Chemical Company, North Cambridge, Mass. Concrete and hydraulic cement. 2,031,621; Feb. 25.

Turgard, Inc. (See Turner, William E. D., assignor.)

Turgot, Robert C. L. P., Saint Etienne de Cuines, Savoie, France, assignor, by mesne assignments, to Bendix Brake Company, South Bend, Ind. Brake. 2,031,747; Feb. 25.

Turk, Karl, assignor to The Porcelain Enamel & Manufacturing Company of Baltimore, Baltimore, Md. Producing decorative surfaces. 2,032,236; Feb. 25.

Turnbull, William J., West Vancouver, British Columbia, Canada. Game table. 2,031,989; Feb. 25.

Turner, William E. D., assignor to Turgard, Inc., Portland, Oreg., Brush. 2,031,990; Feb. 25.

Tuthill, Jay L., Dormont, Pa. Wall covering. 2,031,680; Feb. 25.

Twiss, Douglas F. (See Murphy, E. A., Twiss, and James.)

Tyrer, Daniel, Norton-on-Tees, assignor to Imperial Chemical Industries, Limited, London, England. Burning of pyrites. 2,031,801; Feb. 25.

Tyrer, Daniel, Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited. Recovery of sulphur dioxide from gas mixtures. 2,031,802; Feb. 25.

Udell, Louis N. (See Barrett, A. M., and Udell.)

Umstott, Harold F., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Waffle iron heater. 2,032,104; Feb. 25.

Underwood Elliott Fisher Company. (See Dobson, William A., assignor.)

Ungnade, Otto, and W. F. Richards, Mason, Mich., assignors to E. M. A. Corporation, Cleveland, Ohio. Recovering pigments. 2,031,991; Feb. 25.

U. S. Bottlers Machinery Co. (See Risser, Arthur I., assignor.)

United Aircraft Corporation. (See Caldwell, Frank W., assignor.)

United American Bosch Corporation. (See Wild, J. E., and Schwarzmann, assignors.)

United-Carr Fastener Corporation. (See Chaffee, Raymond O., assignor.)

United Research Corporation. (See Haas, Paul, assignor.)

United Shoe Machinery Corporation. (See Hadaway, John B., assignor.)

United Shoe Machinery Corporation. (See Ricks, F., Elliott, and Cloyce, assignors.)

United Shoe Machinery Corporation. (See Rhing, Harry A., assignor.)

United States Gypsum Company. (See Scholz, Herman A., assignor.)

United States Ordnance Company. (See Smith, George L., assignor.)

United States Rubber Company. (See Galligan, J. J., and Robinson, assignors.)

Urfer, Adolf, assignor to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y. Rate of climb instruments. 2,031,803; Feb. 25.

Van Brunt Manufacturing Company, The. (See Erdman, Theodore J., assignor.)

Van Dresser Specialty Corporation. (See Van Dresser, William C. and W. B., assignors.)

Van Dresser, Wesley B. (See Van Dresser, William C. and W. B.)

Van Dresser, William C. and W. B., assignors to Van Dresser Specialty Corporation, Detroit, Mich. Fastener. 2,032,157; Feb. 25.

Van Embden, Hendrik J. M. (See Teves, M. C., and Van Embden.)

Van Poelvoorde, Pieter J., The Hague, Netherlands. Stable gyroplane aircraft. 2,031,992; Feb. 25.

Van Wert, Samuel N. (See Brown, C. C., Van Wert, and Arstundel.)

Varden, Patrick S., Albany, N. Y. Shingle. 2,031,993; Feb. 25.

Vertuno, Louis A., Oak Park, Ill. Pneumatic appliance. 2,031,870; Feb. 25.

Verwys, Andrew J., Oswego, N. Y. Adapter for valve caps. 2,031,618; Feb. 24.

Veysey, Vernon V., and H. R. Andersen, Neenah, Wis. Interchangeable electric light fixture hanger and gasket. 2,031,914; Feb. 25.

Victori, August T., Pawtucket, R. I., assignor to Artcraft Venetian Blind Company, Hazleton, Pa. Venetian blind. 2,031,804; Feb. 25.

Vietor, Frederick A., Great Neck, N. Y. Piano keyboard. 2,031,748; Feb. 25.

Vincent, Edward T., assignor to Continental Motors Corporation, Detroit, Mich. Engine. 2,031,871; Feb. 25.

Vincent, Edwin H., Springfield, Mass. Power transmission apparatus. 2,031,749; Feb. 25.

Vincent, George P., Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Manufacture of calcium chlorite. 2,031,681; Feb. 25.

Visking Corporation, The. (See Hewitt, Alfred G., assignor.)

Visomatic Systems, Inc. (See Jenkins, J. E., and Adair, assignors.)

Vogel-Jorgensen, Mikael, Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y. Conveying pulverulent material. 2,032,337; Feb. 25.

Von Bichowsky, Foord, Cleveland, Ohio, assignor to Krebs Pigment and Color Corporation, Wilmington, Del. Purifying titanium sub-oxide materials. 2,031,750; Feb. 25.

Von Platen, Baltzar C. (See Alm, Johan E., assignor.)

Wakefield, C. C., & Company Limited. (See Griffith, A. A., and Helmore, assignors.)

Walker, John S., Pittsburgh, Pa. Knee pad. 2,031,622; Feb. 25.

Walworth Patents Inc. (See Cotton, Charles H., assignor.)

Wappler, Frederick C., administrator. (See Wappler, Reinhold H. and F. C.)

Wappler, Reinhold H., deceased, Yonkers, N. Y., F. C. Wappler, administrator, and F. C. Wappler, New York, N. Y. Electrosurgical severance of adhesions. 2,031,682; Feb. 25.

Wardell, William J., Mount Vernon, assignor to American Can Company, New York, N. Y. Pouring spout container. 2,031,623; Feb. 25.

Watt, Anthony M. (See Watt, John V. and A. M.)

Watt, John V. and A. M., Waterford, N. J. Toy road scraper. 2,031,751; Feb. 25.

Watts, Noble H., Bridgeport, Conn., assignor to General Electric Company. Clothes washing machine. 2,032,226; Feb. 25.

Weaver, John F., Dallas, Tex. Apparatus for removing noncondensible gases from refrigerating systems. 2,032,158; Feb. 25.

Webb, Edwin W., assignor to Standard Car Truck Company, Chicago, Ill. Car truck. 2,031,805; Feb. 25.

Weber, Walter C., assignor to Corning Glass Works, Corning, N. Y. Shearing mechanism. 2,032,075; Feb. 25.

Wedlock, Albert W. H., Leyton, London, England. Manufacture of an improved vitreous material. 2,032,239; Feb. 25.

Weinbrenner, Jules, Thann, France. Lap forming apparatus. 2,032,076; Feb. 25.

Weisman, Harry, New York, N. Y. Clothing. 2,032,031; Feb. 25.

Weiss, Arthur J., St. Albans, assignor to Robert Gair Company, Inc., New York, N. Y. Knock-down polygonal webbed end-closing container. 2,031,806; Feb. 25.

Wej-Lock Manufacturing Company. (See Handel, Charles E., assignor.)

Welch, Edgar F., Columbus, Ohio. Display and dispensing device for ribbons and the like. 2,032,105; Feb. 25.

Werner, Oscar, Cleveland, Ohio. Power transmitting device for automotive vehicles. 2,031,807; Feb. 25.

Western Electric Company. (See Williams, R. R., and Kemp, assignors.)

Western Union Telegraph Company, The. (See Noxon, Paul A., assignor.)

Westhaver, John L., assignor of fifty per cent. to R. B. Hill, San Diego, Calif. Carbon reservoir and feeding mechanism therefor. 2,032,240; Feb. 25.

Westinghouse Air Brake Company, The. (See Baughman, George W., assignor.)

Westinghouse Air Brake Company, The. (See Craig, John F., assignor.)

Westinghouse Air Brake Company, The. (See Farmer, Clyde C., assignor.)

Westinghouse Air Brake Company, The. (See Farmer, C. C., and Hewitt, assignors.)

Westinghouse Air Brake Company, The. (See Hewitt, Ellis E., assignor.)

Westinghouse Air Brake Company, The. (See Logan, John W., Jr., assignor.)

Westinghouse Air Brake Company, The. (See McCune, Joseph C., assignor.)

Westinghouse Air Brake Company, The. (See Nelson, Claude A., assignor.)

Westinghouse Air Brake Company, The. (See Neveu, Anselme, assignor.)

Westinghouse Air Brake Company, The. (See Simmons, Arthur W., assignor.)

Westinghouse Electric & Manufacturing Company. (See Bayle, Russell M., assignor.)

Westinghouse Electric & Manufacturing Company. (See Boleslav, John D., assignor.)

Westinghouse Electric & Manufacturing Company. (See Brecht, Winston A., assignor.)

Westinghouse Electric and Manufacturing Company. (See Conrad, F., Aalborg, and French, assignors.)

Westinghouse Electric & Manufacturing Company. (See Forsthoeffel, Gregg F., assignor.)

Westinghouse Electric & Manufacturing Company. (See Jackson, R. P., and Biebel, assignors.)

Westinghouse Electric & Manufacturing Company. (See Kovalsky, Joseph F., assignor.)

Westinghouse Electric & Manufacturing Company. (See Lee, Paul R., assignor.)

Westinghouse Electric & Manufacturing Company. (See Lowry, Erwin F., assignor.)

Westinghouse Electric & Manufacturing Company. (See Ludwig, Leon R., assignor.)

Westinghouse Electric & Manufacturing Company. (See Läbeke, Ernst, assignor.)

Westinghouse Electric & Manufacturing Company. (See McCulloch, Leon, assignor.)

Westinghouse Electric & Manufacturing Company. (See Mouromtseff, I. E., and Noble, assignors.)

Westinghouse Electric & Manufacturing Company. (See Pierce, Lawrence, assignor.)

Westinghouse Electric & Manufacturing Company. (See Rawlins, Herbert L., assignor.)

Westinghouse Electric & Manufacturing Company. (See Rose, H. A., and Maslin, assignors.)

Westinghouse Electric & Manufacturing Company. (See Staege, Stephen A., assignor.)

Westinghouse Electric & Manufacturing Company. (See Umstott, Harold F., assignor.)

Weston Electrical Instrument Corporation. (See Goodwin, William N., Jr., assignor.)

Weygandt, T. C., Company. (See Reiche, Karl A. M., assignor.)

Wheeler, Frank I., Jr., Glen Ridge, N. J. Toy. 2,032,192; Feb. 25.

Wheeling Steel Corporation. (See Rollason, Charles H., assignor.)

White, George S. J. (See Piggott, H. A., and White.)

White, Sidney Y., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Electron tube system. 2,032,198; Feb. 25.

Whitehead, George E., Rhiwbina, near Cardiff, South Wales. Contacts for electric circuit breakers, switches, connecters and the like. 2,032,241; Feb. 25.

Whitler, William P., Clayton, assignor to Rawlings Manufacturing Company, St. Louis, Mo. Baseball glove or mitt. 2,031,808; Feb. 25.

Whitmore, Frank C., State College, Pa., A. H. Homeyer, St. Louis, Mo., D. M. Jones, Forty Fort, and W. R. Trent, State College, Pa., assignors to Mallinckrodt Chemical Works, St. Louis, Mo. Highly branched, long chain organic acids. 2,032,159; Feb. 25.

Whitney, Maurice P., Elmira, assignor to Eclipse Machine Company, Elmira, N. Y. Coaster brake for bicycles. 2,031,994; Feb. 25.

Whiton, Arthur L., Evanston, assignor to Chicago Mill and Lumber Company, Chicago, Ill. Collapsible box with end wall latches. 2,032,032; Feb. 25.

Whittier, Albert E., Bristol, Conn. Thermometer. 2,031,624; Feb. 25.

Whyte, Samuel, Redhill, England. Fuels for internal combustion engines. 2,032,242; Feb. 25.

Widmer, John M., Cedar Rapids, Iowa, assignor to Penick & Ford, Ltd., Inc., New York, N. Y. Sugar manufacturing process. 2,032,160; Feb. 25.

Wiebusch, Charles F., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Vibration translating device. 2,032,194; Feb. 25.

Wiener, Martin L., assignor to Cadaco, Ltd., San Leandro, Calif. Percussion toy. 2,032,161; Feb. 25.

Wightman, Andrew M., assignor to Rapid Roller Company, Chicago, Ill. Roller. 2,031,872; Feb. 25.

Wild, Julius E., Springfield, and W. E. Schwarzmann, Longmeadow, assignors to United American Bosch Corporation, Springfield, Mass. Regulating device for internal combustion engines. 2,031,625; Feb. 25.

Williams, Elmer R., Tulsa, Okla. Liquid dispenser. 2,031,873; Feb. 25.

Williams, Leo C. (See Daneke, D., and Williams.)

Williams, Robert R., Roselle, and A. R. Kemp, Westwood, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Producing insulation for submarine cables. 2,031,916; Feb. 25.

Willson Products, Inc. (See Shindel, Harry F., assignor.)

Winning, Carl, Elizabeth, N. J., assignor to Standard Oil Development Company. Spray container. 2,031,918; Feb. 25.

Winning, Carl, L. E. Sargent, and J. F. Dudley, Elizabeth, N. J., assignors to Standard Oil Development Company. Inhibiting gum formation in naphthas and products obtained thereby. 2,031,917; Feb. 25.

Wired Radio, Inc. (See Gebhard, Louis A., assignor.)

Wolff, Otto, Neunkirchen, Germany. Sheet iron piling. 2,032,243; Feb. 25.

Wolff, Paul, Frankfort-on-the-Main-Hochst, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Acid triphenylmethane dyestuffs and preparing them. 2,032,033; Feb. 25.

Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Automatic splicing mechanism. 2,032,244; Feb. 25.

Wood, Horace O., assignor to A. P. Green Fire Brick Company, Mexico, Mo. Block press. 2,032,034; Feb. 25.

Wood Newspaper Machinery Corporation. (See Wood, Henry A. W., assignor.)

Woodruff, Alfred H. (See Taylor, W. L., and Woodruff.)
Woodruff, George, Providence, R. I., assignor to Arteraft Venetian Blind Company, Hazleton, Pa., Venetian blind. 2,031,762; Feb. 25.
Wotring, Gaylord H., Scotia, N. Y., assignor to General Electric Company. Flow meter. 2,032,245; Feb. 25.
Wright, Frank P., Long Beach, Calif. Rubber heel. 2,031,783; Feb. 25.
Wyler, Joseph A., Allentown, Pa., assignor to Trojan Powder Company. Purification of trinitrotoluene. 2,032,038; Feb. 25.
Yost, Frank A., Hopkinsville, Ky. Pastry cooker. 2,031,995; Feb. 25.
Young, L. A., Company. (See Oldham, John M., assignor.)
Z-Flex Piston Ring Corporation, The. (See Zahodiakin, Victor F., assignor.)
Zahodiakin, Victor F., Cincinnati, Ohio, assignor to The Z-Flex Piston Ring Corporation, New York, N. Y., Internal combustion engine valve. 2,032,163; Feb. 25.
Zawistowski, Martin, Huntington, N. Y. Cloth cutting machine. 2,031,626; Feb. 25.
Zeiss, Firm Carl. (See Richter, Robert, assignor.)
Zelesnick, William A., Philadelphia, Pa. Dental construction. 2,031,906; Feb. 25.
Zerk, Oscar U., assignor, by mesne assignments, to Stewart-Warner Corporation, Chicago, Ill. Centralized lubricating system. 2,032,036; Feb. 25.
Zimmerman, Arthur G., Westmont, N. J., assignor to Radio Corporation of America. Camera mounting. 2,031,909; Feb. 25.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Cap or similar article, Knitted. A. Epstein. 19,866; Feb. 25.
Electron discharge device with indirectly heated cathode. E. A. Lederer and J. W. Marden. 19,870; Feb. 25.
Envelope blanks and the like, Folding of. M. Geder. 19,867; Feb. 25.
Flue gas cleaning apparatus. H. Hielbron and J. B. Eberlein. 19,868; Feb. 25.
Food product and manufacturing the same. G. Grindrod. 19,863; Feb. 25.
Gang operated switch. J. J. Desmond. 19,864; Feb. 25.
Gasket, Skeleton metal-backed. J. H. Victor. 19,876; Feb. 25.
Hose coupling. J. P. Eastman. 19,865; Feb. 25.
Paper strips, Apparatus for handling multiple. W. C. Pfeiffer. 19,871; Feb. 25.
Shock chill in precipitating substances from liquids, Method and apparatus for avoiding. L. D. Jones. 19,869; Feb. 25.
Television device. F. W. Adsit. 19,862; Feb. 25.
Vehicle brake. E. S. Sanford. 19,872; Feb. 25.
Water heating system, Hot. H. A. Thrush. 19,873; Feb. 25.

LIST OF PLANT INVENTIONS

Rose. W. Spandikow, Jr. 167; Feb. 25.

LIST OF DESIGN INVENTIONS

Airplane. V. J. Burnelli. 98,660; Feb. 25.
Airplane. P. M. Lewis and F. Landgraf. 98,727; Feb. 25.
Battery box. W. Joy. 98,676; Feb. 25.
Bottle. H. C. Berkowitz. 98,711; Feb. 25.
Bottle. E. J. McCullough. 98,730; Feb. 25.
Bottle. F. J. Petty, 98,733; Feb. 25.
Bottle. G. Smith, Jr. 98,739; Feb. 25.
Bowl and stand, Combined fish. L. K. Franklin. 98,718; Feb. 25.
Box. L. Cole. 98,662; Feb. 25.
Brooch. L. Fago. 98,666; Feb. 25.
Buckle. J. B. Freysinger. 98,668; Feb. 25.
Buckle. S. Furtman. 98,691; Feb. 25.
Burner casing and support therefor, Combined oil. M. R. Knox. 98,725–6; Feb. 25.
Carpet. M. S. Miller. 98,746; Feb. 25.
Chair frame. H. J. Terker. 98,696–9; Feb. 25.
Closure cap or similar article. J. R. Fleisch. 98,717; Feb. 25.
Container, Plant. L. H. Elmer. 98,665; Feb. 25.
Container, Toilet powder. G. Taleb. 98,741; Feb. 25.
Crib, Baby's. E. S. Swasey. 98,697; Feb. 25.
Dental floss magazine. C. E. Orrison. 98,734; Feb. 25.
Dispensing device. E. B. Nichols. 98,732; Feb. 25.
Doll. F. L. McCulloch. 98,731; Feb. 25.
Drawer pull or similar article. K. Bettich. 98,683–4; Feb. 25.
Dress. A. Markowitz. 98,723; Feb. 25.
Dress. M. Porpora. 98,736; Feb. 25.
Dress, Ensemble. A. Greenspan. 98,719; Feb. 25.
Elastic fabric. O. E. Huber. 98,727–8; Feb. 25.
Elastic fabric. C. D. Maurer. 98,729; Feb. 25.
Elastic fabric. A. K. Strupp. 98,740; Feb. 25.
Food mixer. A. F. Fukal. 98,669; Feb. 25.
Food mixing device, Portable electric. R. E. Patton. 98,689; Feb. 25.
Goblet or similar article, Footed. H. Bell. 98,659; Feb. 25.
Handkerchief or similar article, Paper. C. A. Fourness. 98,745; Feb. 25.
Hanger, Garment. G. J. Bachmeyer. 98,710; Feb. 25.
Holder or similar article, Fruit. W. Rogers. 98,690; Feb. 25.
Humidifier. W. Feldermann. 98,716; Feb. 25.
Humidifier, Electrical. P. E. Edelman. 98,664; Feb. 25.
Identification emblem. L. F. Cargill. 98,714; Feb. 25.
Lace. H. W. Hucknall. 98,672; Feb. 25.
Lace. J. D. Wiener. 98,701–5; Feb. 25.
Level, Dumpy. A. Langsner. 98,681; Feb. 25.
Level support. A. Langsner. 98,683; Feb. 25.
Level, Y. A. Langsner. 98,682; Feb. 25.
Light for an automobile, Display. D. Duff, J. C. Elliott, and J. J. Flickinger. 98,663; Feb. 25.
Link for cravat holders or analogous articles, Character bearing. H. G. Anderson. 98,707–9; Feb. 25.
Loudspeaker faceplate. B. A. Engholm. 98,715; Feb. 25.
Mirror and support therefor, Combined truck. O. C. Ritz-Woller. 98,695; Feb. 25.
Phonograph, Coin controlled. B. B. Richardson and R. W. Willey. 98,737; Feb. 25.
Pipe, Soap bubble. G. A. Mausolf. 98,687; Feb. 25.
Razor handle. A. F. Reilly. 98,692; Feb. 25.
Saddle. R. W. Faulhaber 98,667; Feb. 25.
Setting for precious stones. M. Waldman. 98,742–3; Feb. 25.
Shoe. T. R. Atkins. 98,657; Feb. 25.
Shoe. H. D. Baldwin. 98,744; Feb. 25.
Shoe. A. Gordon. 98,670; Feb. 25.
Shoe. H. J. Meyer. 98,688; Feb. 25.
Shoe. C. V. Watson. 98,700; Feb. 25.
Shoe or article of analogous nature. R. A. Hyde. 98,673–4; Feb. 25.
Shoe or article of analogous nature. H. Klein. 98,676; Feb. 25.
Shoe or article of analogous nature. S. L. Kleven. 98,677; Feb. 25.
Statuette. D. Briner. 98,713; Feb. 25.
Suspenser. H. Schiller. 98,738; Feb. 25.
Telephone base and pad holder, Combined. L. A. Meltzer. 98,732; Feb. 25.
Telescope. A. Langsner. 98,685–6; Feb. 25.
Textile fabric. A. Hafner. 98,671; Feb. 25.
Textile fabric, Embroidered. G. Bischof. 98,712; Feb. 25.
Textile fabric or similar article, Printed. M. R. Hamre. 98,720–2; Feb. 25.
Transit. A. Langsner. 98,678; Feb. 25.
Transit plate. A. Langsner. 98,680; Feb. 25.
Transit support. A. Langsner. 98,679; Feb. 26.
Tray and powder pad display, Combined supporting. S. L. Pomerantz. 98,690; Feb. 25.
Tray, Ash. L. S. Winkler. 98,706; Feb. 25.
Valve, Ball float. C. Crary. 98,661; Feb. 25.
Vial housing suit. A. Langsner. 98,684; Feb. 25.
Wreath. A. J. Barocas. 98,658; Feb. 25.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive supporting member and producing same. K. H. Bowen. 2,032,249; Feb. 25.
Accessory system for motor vehicles. H. Hueber and E. C. Horton. 2,032,321; Feb. 25.
Acid: *See*—
Long chain organic acid.
Acid contact process, Sulphuric. J. H. Perry and E. S. Ridler. 2,031,787; Feb. 25.
Acid derivatives of sulphurized cinchona bark alkaloids, Carboxylic. R. R. Lawrence. 2,031,895; Feb. 25.
Acid esters and their production, Propionic. H. S. Holt. 2,031,603; Feb. 25.
Acoustic apparatus. C. Schapira. 2,031,859; Feb. 25.
Acoustic electric energy converter. G. W. Pierce. 2,031,789; Feb. 25.
Acoustical wall surfacing. E. J. Miller. 2,031,900; Feb. 25.
Adapter for valve bags. A. J. Verwys. 2,031,915; Feb. 25.
Adhesions, Electrosurgical severance of. R. H. and F. C. Wappler. 2,031,682; Feb. 25.
Aeropuane wing, Folding. L. F. Prevette. 2,032,307; Feb. 25.
Air brake. C. A. Campbell. 2,032,002; Feb. 25.
Air conditioning apparatus. M. G. Torsen. 2,032,237; Feb. 25.
Airplane. V. J. Burnelli. 2,031,876; Feb. 25.
Alarm system, Burglar. R. V. L. Hartley. 2,031,951; Feb. 25.
Alarm, Waterflow retard. C. C. Johnson, R. M. Hopkins, and R. F. Spamer. 2,032,092; Feb. 25.
Alloys. R. E. Paine. 2,031,978; Feb. 25.
Alloys, Refining of. T. R. Hagiund. 2,031,947; Feb. 25.
Amplifying system. A. F. Bennett and M. K. Gordon, Jr. 2,031,919; Feb. 25.
Amplifying system, V. Bush. 2,032,258; Feb. 25.
Anastigmatic objective for photography and projection. R. Richter. 2,031,792; Feb. 25.
Anchor, Expansible. C. E. Handel. 2,032,089; Feb. 25.
Anchorage, Orthodontic. R. E. Irish. 2,032,282; Feb. 25.
Andiron. F. J. Plym. 2,031,782; Feb. 25.
Aqueous mixtures of lower aliphatic acids and anhydrides, Azeotropic dehydration of. H. Dreyfus. 2,031,647; Feb. 25.
Arch building construction. L. Davidson. 2,031,937; Feb. 25.
Arsenic derivatives of sugars. P. J. Daughenbauch. 2,032,263; Feb. 25.
Article carrier. A. E. Thums. 2,031,866; Feb. 25.
Artificial materials. Manufacture of. W. I. Taylor. 2,031,798; Feb. 25.
Automobile spring, Pneumatic. H. D. Smith. 2,031,862; Feb. 25.
Axle driving construction. W. S. Austin. 2,031,534; Feb. 25.
Axle generator drive. W. A. Brecht. 2,032,112; Feb. 25.
Axle, Roller bearing. T. V. Buckwalter. 2,031,818; Feb. 25.
Azodyestuffs, Blue dyeing. G. Bonhôte and C. Apotheker. 2,032,111; Feb. 25.
Bag frame fastener. W. C. Hiering. 2,032,055; Feb. 25.
Bag frame latch. W. C. Hiering. 2,032,056; Feb. 25.
Bags, Apparatus for filling. B. A. Hannewald and E. Ingstad. 2,031,708; Feb. 25.
Bale tie. E. F. W. Keihl, Jr. 2,032,285; Feb. 25.
Ball scrubber, Golf. G. A. Brillhart. 2,031,633; Feb. 25.
Ball swivel union, Angular. A. J. Coutu. 2,031,878; Feb. 25.
Balls and the like, Manufacture of golf. E. A. Murphy, D. F. Twiss, and R. G. James. 2,032,220; Feb. 25.
Balls, Apparatus for making golf. J. M. Oldham. 2,031,786; Feb. 25.
Barrel head fastener. G. H. Osgood. 2,031,729; Feb. 25.
Bearing and carrier. S. D. Robins. 2,031,618; Feb. 25.
Bearing pulling tool. L. V. Bliss. 2,031,996; Feb. 25.
Bearings, Making. G. S. Salsman. 2,031,982; Feb. 25.
Bed or the like, Dog. J. G. Bins. 2,032,248; Feb. 25.
Belt fastener. B. F. Crick. 2,032,006; Feb. 25.
Bicycle, Motor. O. Evinrude. 2,031,881; Feb. 25.
Bimetallic strip, Apparatus for producing. G. S. Salsman. 2,031,795; Feb. 25.
Bird feed receptacle. L. Butler and J. D. Butler. 2,031,874; Feb. 25.
Bit: *See*—
Drill bit.
Blasting cap charge. C. P. Spaeth. 2,031,677; Feb. 25.
Blind, Venetian. A. T. Victori. 2,031,804; Feb. 25.
Blind, Venetian. G. Woodruff. 2,031,752; Feb. 25.
Block: *See*—
Floor block. Meter test block.
Block press. H. O. Wood. 2,032,034; Feb. 25.

Book end. J. Fansol. 2,031,668; Feb. 25.
Booster. M. A. Garrison. 2,031,828; Feb. 25.
Bottle centering means. G. L. N. Meyer. 2,031,963; Feb. 25.
Bottle filling and capping machine. W. A. Barrett. 2,032,040; Feb. 25.
Box: *See*—
Outlet box.
Box with end wall latches, Collapsible. A. L. Whiton. 2,032,032; Feb. 25.
Bracket. P. Lisicke. 2,032,023; Feb. 25.
Braid, Elastic. R. T. Dawes. 2,032,265; Feb. 25.
Brake: *See*—
Air brake. Self-adjusting brake.
Electro-pneumatic brake. Vehicle brake.
Fluid pressure brake.
Brake. A. Y. Dodge. 2,031,762; Feb. 25.
Brake. B. E. House. 2,032,058; Feb. 25.
Brake. H. F. Kohr. 2,031,717; Feb. 25.
Brake. H. F. Parker and B. E. House. 2,031,730; Feb. 25.
Brake. R. C. L. P. Turgot. 2,031,747; Feb. 25.
Brake beam safety support. R. H. Campbell and F. E. Pietzsch. 2,031,691; Feb. 25.
Brake control, Fluid pressure. J. W. Logan, Jr. 2,032,177; Feb. 25.
Brake for bicycles, Coaster. M. P. Whitney. 2,031,994; Feb. 25.
Brake lock. G. W. Godsey. 2,031,829; Feb. 25.
Braking device for feeding means of pilgering mills. J. Gassen. 2,032,277; Feb. 25.
Braun tube. S. Loewe and P. P. Fries. 2,031,722; Feb. 25.
Bread slicing machine. H. J. Criner. 2,032,118; Feb. 25.
Brush. W. E. D. Turner. 2,031,990; Feb. 25.
Brush assembly. I. H. Dunham. 2,032,084; Feb. 25.
Brushmaking machine. J. E. Jones. 2,031,658; Feb. 25.
Bucket, Live bait. F. J. Fence. 2,032,274; Feb. 25.
Building construction. A. F. Bemis. 2,031,631; Feb. 25.
Building construction. C. G. W. Talen. 2,032,030; Feb. 25.
Building material. W. G. Dudleston. 2,032,083; Feb. 25.
Building material. N. P. Harshberger. 2,031,950; Feb. 25.
Buildings, Apparatus for ventilating. H. M. Chance. 2,032,080; Feb. 25.
Bumper, Vehicle. H. S. Jandus. 2,031,954; Feb. 25.
Burner: *See*—
Liquid fuel burner. Range burner.
Cabinet construction. G. F. Forsthoefel. 2,031,701; Feb. 25.
Calcium chlorite, Manufacture of. G. P. Vincent. 2,031,681; Feb. 25.
Camera, Photographic. H. Küppenbender. 2,032,060-1; Feb. 25.
Camera, Sound and picture. E. W. Kellogg and S. Read, Jr. 2,031,836; Feb. 25.
Can: *See*—
Oil can.
Capacitor motor. R. P. Jackson and H. M. Biebel. 2,032,129; Feb. 25.
Caps on bottles, Apparatus for attaching seal. S. O. Piehl and H. Friberg. 2,032,225; Feb. 25.
Car, Railway hopper. C. F. Frede and H. E. Thiele. 2,032,204; Feb. 25.
Car structure, Railway. W. M. Sheehan. 2,032,186; Feb. 25.
Car truck. G. T. Johnson. 2,031,777; Feb. 25.
Car truck. E. W. Webb. 2,031,805; Feb. 25.
Car underframe structure. W. O. Ashe. 2,032,165; Feb. 25.
Carbon reservoir and feeding mechanism therefor. J. L. Westhaver. 2,032,240; Feb. 25.
Carburetor. S. F. Hunt. 2,031,709; Feb. 25.
Carotene, Extracting. H. M. Barnett, W. O. Frohring and A. F. O. Germann. 2,032,165; Feb. 25.
Carotene from soaps, Recovering. R. J. Cross. 2,032,006; Feb. 25.
Carrier: *See*—
Article carrier.
Carrier tube. G. H. Tobelman. 2,031,983; Feb. 25.
Carton. T. A. Kundtz. 2,031,963; Feb. 25.
Case: *See*—
Display case.
Cash register. B. M. Shipley. 2,031,860; Feb. 25.
Cathode for heavy duty service, oxide coated. E. F. Lowry. 2,032,179; Feb. 25.
Cathodes, Method of manufacturing highly emissive. S. Loewe. 2,031,721; Feb. 25.

Cellulose esters, Making. C. J. Malm and C. L. Fletcher. 2,031,611; Feb. 25.
Cement. L. McCulloch. 2,032,143; Feb. 25.
Cement, Concrete and hydraulic. G. E. Tucker, H. L. Kennedy, and M. Remer. 2,031,811; Feb. 25.
Chair: *See*—
Reclining chair.
Chair and lamp, Combination. A. A. Granovsky. 2,031,648; Feb. 25.
Chase. G. H. Higgins. 2,031,602; Feb. 25.
Chemicals from waste pulping liquors, Recovery of. H. R. Murdock. 2,031,974; Feb. 25.
Chlorine compound, Dry soluble. A. E. Johnson and H. A. Trebler. 2,032,173; Feb. 25.
Cigarette vending machine. W. H. Brown. 2,032,001; Feb. 25.
Cinematographic rectifying system. J. L. Baird. 2,032,164; Feb. 25.
Circuit breaker. H. E. Cebb. 2,032,115; Feb. 25.
Circuit breaker. R. M. Smith. 2,032,072; Feb. 25.
Circuit breaker. E. C. P. Sorensen. 2,032,187; Feb. 25.
Circuit, Control. J. M. Duguid and J. H. Sole. 2,031,942.
Circuit control for electric brakes. G. W. Seagraves. 2,032,106; Feb. 25.
Circuit controller. G. P. Tromp and P. Neill. 2,032,191; Feb. 25.
Circuit, Electric oscillation. H. Muth. 2,031,646; Feb. 25.
Circuit, Electromechanical oscillator. L. A. Gebhard. 2,031,767-8; Feb. 25.
Circuit, Gain control. H. I. Romnes. 2,031,980; Feb. 25.
Circuit interrupter. H. L. Rawlins. 2,032,149; Feb. 25.
Circuit, Photoelectric cell. W. N. Goodwin, Jr. 2,032,010; Feb. 25.
Circuits for space discharge devices, Energizing. R. A. Braden. 2,032,199; Feb. 25.
Clamp: *See*—
Switch box lath clamp.
Clasp, Lingerie. W. J. Bomber. 2,031,885; Feb. 25.
Cleaner: *See*—
Suction cleaner. Windshield cleaner.
Vacuum cleaner.
Climbing assembly. E. G. McKinney. 2,031,615; Feb. 25.
Closure member for fill openings. O. N. Gredell. 2,031,885; Feb. 25.
Cloth cutting machine. M. Zawistowski. 2,031,626; Feb. 25.
Clothes hanger. J. L. Baum. 2,032,246; Feb. 25.
Clothes washing machine. N. H. Watts. 2,032,238; Feb. 25.
Clothing. H. Weisman. 2,032,031; Feb. 25.
Clutch. H. W. Nieman and G. B. Linderman, Jr. 2,032,066; Feb. 25.
Clutch control mechanism. V. W. Kliesrath. 2,031,716; Feb. 25.
Coffee maker. H. Frank. 2,032,317; Feb. 25.
Coin collector apparatus. J. M. Melick. 2,032,218; Feb. 25.
Coke, Apparatus for the dry cooling of. A. Moetteli. 2,031,643; Feb. 25.
Collapsible container. E. A. Heifetz. 2,031,887; Feb. 25.
Collecting member for trolley systems. O. Conradty. 2,031,819; Feb. 25.
Color screen device. A. J. Macy. 2,032,139; Feb. 25.
Comb, Fountain. L. and W. Helfrich and O. H. Corvington. 2,031,774; Feb. 25.
Compressor. W. D. Drysdale. 2,031,940; Feb. 25.
Compressor governor construction. C. C. Farmer. 2,032,122; Feb. 25.
Condensation products from alcohols and phenols, Manufacture of. H. Langwell and C. E. Maddocks. 2,031,719; Feb. 25.
Condensation products, Manufacture of. J. Blumfeld and J. Kuchenbuch. 2,031,586; Feb. 25.
Condenser. E. F. Sickles. 2,031,910; Feb. 25.
Condenser tester. M. P. McCarty. 2,031,840; Feb. 25.
Conduit, Air conditioning. T. H. Tice. 2,032,103; Feb. 25.
Connecter: *See*—
Rod or tool connecter.
Contacts for electric circuit breakers, switches, connecters and the like. G. B. Whitehead. 2,032,241; Feb. 25.
Container: *See*—
Collapsible container. Pouring spout container.
Dispensing container. Sanitary shipping container.
End-closing container. Spray container.
Merchandise container.
Multicompartment container.
Container. A. M. Meier and R. I. Drake. 2,032,296; Feb. 25.
Container closure. C. H. Rasmussen. 2,031,979; Feb. 25.
Container closure applying apparatus. A. I. Risser. 2,031,735; Feb. 25.
Container for lip sticks and the like. A. Limbach. 2,031,839; Feb. 25.
Container for thread bottles. P. Pinnhutt. 2,031,851; Feb. 25.
Container for wrenches, Display. T. G. Rush. 2,032,231; Feb. 25.

Control fixture, Combined diverting and hot-cold. E. S. Cornell, Jr. 2,031,932; Feb. 25.
Control head for indicators. B. B. Holmes. 2,032,019; Feb. 25.
Control mechanism. M. E. Brendel. 2,032,113; Feb. 25.
Control mechanism for burners. N. T. Branche. 2,032,046; Feb. 25.
Control of catalytic reactions. J. W. Harrison and T. B. Prickett. 2,031,690; Feb. 25.
Control system. J. F. Kovalsky. 2,032,176; Feb. 25.
Cooker, Pastry. F. A. Yost. 2,031,905; Feb. 25.
Cooking apparatus. F. E. Jones. 2,032,178; Feb. 25.
Cooler for refrigerators. B. Herwitz. 2,031,655; Feb. 25.
Corset. J. J. Kispert. 2,032,210; Feb. 25.
Cotton or other cellulosic fibers, Production of immunized. J. E. Jones. 2,031,657; Feb. 25.
Coupler. W. F. Richards. 2,031,617; Feb. 25.
Coupling: *See*— Pressed-on hose coupling.
Extensible coupling. Train pipe coupling.
Hose coupling.
Coupling. J. Mikulasek. 2,032,297; Feb. 25.
Coupling on to a hose, Pressing a. J. P. Eastman. 2,031,824; Feb. 25.
Cover: *See*— Medicine glass cover.
Ironing board cover.
Covered receptacle. E. P. Myers. 2,032,221; Feb. 25.
Crate. A. Rosales. 2,031,787; Feb. 25.
Crib, Knockdown. L. E. May. 2,032,141; Feb. 25.
Cultivator. T. J. Erdman. 2,032,085; Feb. 25.
Currency holder. R. L. Halperin. 2,031,778; Feb. 25.
Currents into direct current or vice versa, Conversion of alternating. J. E. Alm. 2,031,582; Feb. 25.
Curtain, Locomotive cab. J. E. Hooper. 2,032,068; Feb. 25.
Cushion, Carpet. A. L. Clements and W. H. Calumer. 2,032,114; Feb. 25.
Cushion, seat and the like, Combination air and spring. M. Strumits. 2,031,745; Feb. 25.
Cushioning mechanism. D. S. Barrows. 2,032,341; Feb. 25.
Cutter and edger, Sheet metal. J. J. Ingels. 2,031,604; Feb. 25.
Cutting and folding mechanism for printing machines, Rotary. F. Lamatsch. 2,031,780; Feb. 25.
Cutting machine. J. F. Smith. 2,031,744; Feb. 25.
Damper device, Thermostatically controlled. A. S. Hopping. 2,031,652; Feb. 25.
Data indicator. B. L. Padgett. 2,032,304; Feb. 25.
Decorative device, Illuminated. E. J. Graf. 2,031,641-2; Feb. 25.
Decorative surfaces, Producing. K. Turk. 2,032,236; Feb. 25.
Dental construction. W. A. Zelesnick. 2,031,666; Feb. 25.
Device for removing drills or other articles from their shafts. R. A. Bedford. 2,031,814; Feb. 25.
Device for simultaneously twisting and winding knitted threads. F. Hanf. 2,031,707; Feb. 25.
Diaper. D. B. Kennard. 2,032,131; Feb. 25.
Diazoimino compounds, Water soluble. M. A. Dahlen. 2,031,634; Feb. 25.
Diazo salts and making same, Stable solid. G. Bonhôte. 2,032,110; Feb. 25.
Die arrangement for use in stranding machines, Roller closing. R. E. Pritchard and I. J. McAlpine. 2,032,308; Feb. 25.
Differential control apparatus. B. Beck. 2,032,041; Feb. 25.
Direction indicator. R. S. Stubbs. 2,032,029; Feb. 25.
Discrete particles and vapors, Method of and apparatus for treating. F. E. Kemmer. 2,032,215; Feb. 25.
Dishwashing machine. E. L. Blakeslee. 2,031,816; Feb. 25.
Dishwashing machine. E. S. Stoddard. 2,032,156; Feb. 25.
Dispenser: *See*—
Liquid dispenser. Water dispenser.
Dispensing container. E. A. Heifetz. 2,031,886; Feb. 25.
Dispensing device. H. B. Crawford. 2,031,820; Feb. 25.
Dispensing device for collapsible tubes. F. Poulin. 2,032,305; Feb. 25.
Display and dispensing device for ribbons and the like. E. F. Welch. 2,032,105; Feb. 25.
Display case, Low temperature. C. C. Thomas and D. G. Ellis. 2,032,234; Feb. 25.
Display device for merchandise. C. W. Kress. 2,031,718; Feb. 25.
Display sign. F. Stenebraker, Sr. 2,031,620; Feb. 25.
Dimiphides from mercaptothiazoles, Production of. G. Kallner. 2,031,714; Feb. 25.
Door fastener, Screen. A. R. Mellor. 2,031,725; Feb. 25.
Doorlatch mechanism. D. Miller. 2,031,664; Feb. 25.
Door, Overhead sliding. P. Naylor. 2,031,847; Feb. 25.
Draft rigging. D. S. Barrows. 2,032,340; Feb. 25.
Drawer construction, Slide. N. A. Gussack. 2,032,064; Feb. 25.
Drier: *See*—
Hosiery drier.
Drill bit. M. R. Reedy. 2,032,328; Feb. 25.
Drilling machine, Rotary. T. C. Patten. 2,031,731; Feb. 25.
Drinking fountain. F. G. Martin. 2,031,723; Feb. 25.
Driving mechanism. F. Linder. 2,031,753; Feb. 25.

Dyes and their preparation, Azo. R. F. Hitch, M. A. Dahlen, and M. E. Friedrich. 2,031,651; Feb. 25.
Dyes and their preparation, Monoazo. H. Jordan and M. A. Dahlen. 2,032,093; Feb. 25.
Dyestuff and its production, Diazo. A. Kreb ser. 2,032,133; Feb. 25.
Dyestuffs and preparing them, Acid triphenylmethane. P. Wolf. 2,032,063; Feb. 25.
Dynamic characteristics, Measuring. E. L. Bowles. 2,031,923-5; Feb. 25.
Elastic material, Crinkled. J. J. Galligan and W. J. Robinson. 2,031,703; Feb. 25.
Electric controller of the variable voltage type. H. F. Porter. 2,031,783; Feb. 25.
Electric heating pad. C. R. McDonald. 2,032,294; Feb. 25.
Electric meter. E. L. Bowles. 2,031,926; Feb. 25.
Electric recording and reproducing apparatus. A. A. Thomas. 2,032,190; Feb. 25.
Electrical apparatus. C. I. McNeil. 2,031,784; Feb. 25.
Electrical conductor. E. F. Northrup. 2,031,975; Feb. 25.
Electrical conversion system. L. R. Ludwig. 2,032,138; Feb. 25.
Electrical device. O. M. Glunt. 2,031,945; Feb. 25.
Electrical impulses, Recording and reproduction of. E. W. Kellogg. 2,031,835; Feb. 25.
Electrical selecting or connecting device. J. F. T. Engblom. 2,032,270; Feb. 25.
Electrode, Flux-coated. P. R. Judy. 2,032,322; Feb. 25.
Electrolytic device. P. Robinson. 2,031,798; Feb. 25.
Electromagnetic contactor. L. Pierce. 2,032,147; Feb. 25.
Electron tube system. S. Y. White. 2,032,183; Feb. 25.
Electrooptical system. F. Gray. 2,031,508; Feb. 25.
Electrooptical system. J. W. Horton. 2,031,962; Feb. 25.
Electrooptical system. H. Nyquist. 2,031,729; Feb. 25.
Electropneumatic brake. J. F. Craig. 2,032,167; Feb. 25.
End-closing container, Knock-down polygonal webbed. A. J. Weiss. 2,031,906; Feb. 25.
Engine: *See*—
Internal combustion engine. Two-stroke engine.
Engine. E. T. Vincent. 2,031,871; Feb. 25.
Engine starting apparatus. R. P. Lansing. 2,031,781; Feb. 25.
Engine starting mechanism. R. P. Lansing. 2,031,782; Feb. 25.
Engine valve, Internal combustion. V. F. Babodiakin. 2,032,162; Feb. 25.
Engraved patterns for silverware and the like, Producing. H. M. Ballou. 2,032,039; Feb. 25.
Envelope, Paper. E. E. Perkins. 2,032,067; Feb. 25.
Esters, Dehydrating. G. T. Reich. 2,031,640; Feb. 25.
Esters of sulphonated carboxylic acids. H. Bertsch. 2,032,314; Feb. 25.
Esters, Production of. H. Bertsch. 2,032,313; Feb. 25.
Evaporating method and means therefor. E. Öman. 2,032,182; Feb. 25.
Evaporation. H. E. A. Gäth. 2,032,067; Feb. 25.
Exercising machine. R. Orsitano. 2,032,303; Feb. 25.
Extensible coupling. J. M. Bacigalupi. 2,031,784; Feb. 25.
Extensible table. W. B. Harrington. 2,031,649; Feb. 25.
Extrusion apparatus. A. G. Hewitt. 2,032,171; Feb. 25.
Eye protector. H. F. Shindel. 2,031,676; Feb. 25.
Fan. C. R. Paton. 2,032,224; Feb. 25.
Fan and motor construction. W. B. Bowen. 2,031,668; Feb. 25.
Fastener: *See*—
Bag frame fastener. Door fastener.
Barrel head fastener. Sash fastener.
Belt fastener.
Fastener. A. W. Grosshans and H. H. Evans. 2,032,280; Feb. 25.
Fastener. R. S. Kelley. 2,031,960; Feb. 25.
Fastener and producing same. H. Rosenberg. 2,032,099; Feb. 25.
Fastener installation and fastener for the same, Rotary operative. R. O. Chaffee. 2,032,315; Feb. 25.
Fastening means. B. Lee and F. P. Bovia. 2,032,022; Feb. 25.
Felly, rim, and tire structure, Combined. F. N. Chiasson. 2,032,241; Feb. 25.
Fenderwell support for tires. B. M. Short. 2,031,984; Feb. 25.
Fibrous material, Converting a. R. and H. Freudenberg, R. Runkel, and G. Lange. 2,032,123; Feb. 25.
Fibrous materials, Apparatus for fluid treating. E. J. Abbott. 2,031,588; Feb. 25.
Filling machine. E. B. Bagby. 2,032,163; Feb. 25.
Film driving apparatus. A. J. Bradford. 2,031,817; Feb. 25.
Film feeding mechanism for films having sound track. E. Boecking. 2,031,756; Feb. 25.
Film magazine, Photographic. A. S. Howell. 2,032,213; Feb. 25.
Film magazine, spool, and film therefor, Photographic. A. S. Howell. 2,032,214; Feb. 25.
Film reel. H. A. De Vry. 2,031,633; Feb. 25.
Film reel, Moving picture. T. O. Strauss. 2,032,236; Feb. 25.
Filter: *See*—
Gas filter.
Filter. R. N. Burckhalter and J. M. Osborn. 2,031,539; Feb. 25.
Filter. C. R. Cuno. 2,031,935; Feb. 25.
Filter device. L. R. Mallory and J. T. Nash. 2,032,140; Feb. 25.
Filters, Forming. C. H. Cuno. 2,031,936; Feb. 25.
Fingernail polish remover. C. E. Bishop. 2,032,042; Feb. 25.
Firearm. G. H. North and R. J. Baker. 2,031,785; Feb. 25.
Fire extinguishing apparatus. D. Mapes. 2,031,965; Feb. 25.
Fishing device, Surf. E. A. Azuara. 2,031,511; Feb. 25.
6-halogen-2-aminotoluenes, Production of. E. L. Perkins. 2,031,666; Feb. 25.
Fixture for assembling rubber articulated joints. J. P. Tarbox. 2,031,797; Feb. 25.
Floor block. C. C. Fulbright. 2,031,896; Feb. 25.
Floor sanding machine. H. L. Myers. 2,031,665; Feb. 25.
Flotation apparatus. A. C. Daman. 2,031,590; Feb. 25.
Flow meter. G. H. Wetring. 2,032,245; Feb. 25.
Fluid from deep oil and water wells, Raising. C. C. Brown, R. M. Van Wert, and A. Arutunoff. 2,032,000; Feb. 25.
Fluid pressure brake. C. C. Farmer and E. M. Hewitt. 2,032,119; Feb. 25.
Fluid pressure brake. C. C. Farmer. 2,032,120; Feb. 25.
Fluid pressure brake. E. E. Hewitt. 2,032,172; Feb. 25.
Fluid pressure brake. C. A. Nelson. 2,032,144-5; Feb. 25.
Fluid pressure brake. A. W. Sturmcon. 2,032,154; Feb. 25.
Fluids, Halogenation of organic. R. M. Deanesly and G. Hearne. 2,031,938; Feb. 25.
Folding and gluing mechanism. D. Daneke and L. C. Williams. 2,031,670; Feb. 25.
Food product and its manufacture. W. A. McKinney and H. G. Lorensen. 2,031,724; Feb. 25.
Footrest. W. C. and W. B. Van Dresser. 2,032,157; Feb. 25.
Form for making concrete roads. B. Mason. 2,031,812; Feb. 25.
Fountain: *See* —
Drinking fountain.
Fractional distillation, Apparatus for. F. L. Maher. 2,031,410; Feb. 25.
Frame: *See*—
Handbag frame.
Frame and rail for tile, Metal. C. Roeder. 2,032,276; Feb. 25.
Framework, Metallic structural. J. A. Ferguson. 2,031,765; Feb. 25.
Freewheeling attachment for automobiles. J. M. Simpson. 2,032,235; Feb. 25.
Fruit conveyer. T. Catea. 2,032,258; Feb. 25.
Fuel, Apparatus for burning. A. J. Boynton. 2,031,757; Feb. 25.
Fuel, Process and apparatus for burning. H. S. Lee. 2,032,135; Feb. 25.
Fuels for internal combustion engines. S. Whyte. 2,032,241; Feb. 25.
Fume and dust eliminator. W. D. Sullivan. 2,032,101; Feb. 25.
Game. K. C. Shivers. 2,031,740; Feb. 25.
Game table. W. J. Turnbull. 2,031,969; Feb. 25.
Games, Appliance for use in practicing or playing. H. C. Deane and J. H. Naden. 2,032,061; Feb. 25.
Garment, Lady's. H. S. Kohler and F. R. McKinnon. 2,032,323; Feb. 25.
Gas, Apparatus for processing. J. C. Swan. 2,032,074; Feb. 25.
Gas filter. B. Cori. 2,032,263; Feb. 25.
Gas or vapor discharge valve, Uniformly controllable. E. Liberis. 2,032,117; Feb. 25.
Gases from gaseous mixtures, Recovering acidic. R. R. Bottoms. 2,031,682; Feb. 25.
Gases from refrigerating systems, Apparatus for removing noncondensible. J. F. Weaver. 2,032,155; Feb. 25.
Gasoline manufacturing process. J. E. Roberts and M. T. Carpenter. 2,032,329; Feb. 25.
Gate: *See*—
Sound gate.
Gauge: *See*—
Tank gauge.
Gear transmission, Friction. D. H. Heynau. 2,032,015; Feb. 25.
Gearing, Transmission. A. W. Herrington. 2,032,318; Feb. 25.
Generator: *See*—
Motor-generator.

Ignition transformer. H. A. Rose and A. J. Maslin. 2,032,151; Feb. 25.
Impregnating apparatus. L. duB. Rose. 2,032,028; Feb. 25.
Indenting and stamping machine for clay products such as paving brick and the like. R. D. Matteo. 2,031,990; Feb. 25.
India rubber spring. A. Spencer. 2,032,100; Feb. 25.
Indicator: *See*—
Data indicator. Direction indicator.
Indicator. G. L. Smith. 2,031,741; Feb. 25.
Installation for compiling and collaborating statistical data. C. Borel. 2,031,686; Feb. 25.
Insulation for submarine cables, Producing. E. R. Williams and A. R. Kemp. 2,031,916; Feb. 25.
Internal combustion engine. F. T. Irgens. 2,031,891; Feb. 25.
Ironing board cover. H. H. Finck. 2,031,895; Feb. 25.
Jack: *See*—
Lifting jack. Shoe lasting jack.
Service jack.
Jar, Preserving. W. A. Tricle. 2,031,909; Feb. 25.
Joint filler, shear bar and sleeve alignment therefor, Expansion. R. B. Mitchell. 2,031,901; Feb. 25.
Keg and dispensing mechanism, Beer. H. H. Lecker. 2,032,024; Feb. 25.
Keyboard. A. A. C. Degen. 2,032,168; Feb. 25.
Kitchen utility device. A. C. Gilbert and A. A. Arnold. 2,031,768–70; Feb. 25.
Knee pad. J. S. Walker. 2,031,632; Feb. 25.
Knife, Coring. G. D. Gardner. 2,031,766; Feb. 25.
Knitting machine and method of knitting. R. H. Lawson and A. N. Cloutier. 2,032,324; Feb. 25.
Knitting machine, Flat warp. G. Raupe. 2,032,153; Feb. 25.
Lacquer. R. F. Johnston. 2,031,606; Feb. 25.
Lap compensating device. P. Kellman. 2,031,887; Feb. 25.
Lamp. C. H. Bramitas. 2,031,927; Feb. 25.
Lamp and manufacturing the same, Incandescent. H. H. Strickland. 2,032,232; Feb. 25.
Lamp, tube and similar device. R. B. Thomas. 2,031,748; Feb. 25.
Lap forming apparatus. J. Weinbrenner. 2,032,076; Feb. 25.
Latch: *See*—
Bag frame latch.
Magnetically releasable latch.
Leather, Method and apparatus for impregnating. L. duB. Rose. 2,032,027; Feb. 25.
Leather product and producing it. B. H. Bower. 2,032,250; Feb. 25.
Leather, Waterproofing. H. A. Piggott and G. S. J. White. 2,032,097; Feb. 25.
Leathers, skins, fabrics and the like during their manipulation or making up into manufactured goods, Protecting. R. Schneider and A. Poelman. 2,031,673; Feb. 25.
Level indicating apparatus. H. F. Hitner. 2,032,016; Feb. 25.
License plate for automobiles. B. C. Rash. 2,032,026; Feb. 25.
Lifting jack. L. C. Berman. 2,031,815; Feb. 25.
Lifting jack. W. J. Fiedler. 2,031,700; Feb. 25.
Light concentrate method and means. W. J. Morrissey. 2,031,971; Feb. 25.
Light fixture hanger and socket, Interchangeable electric. V. V. Veyney and H. R. Andersen. 2,031,914; Feb. 25.
Lighter and case, Combined cigarette. F. LeVoci. 2,032,094; Jan. 26.
Lighter, Cigarette. I. Florman. 2,032,273; Feb. 25.
Lining for fruit boxes and the like. E. D. Croce. 2,031,694; Feb. 25.
Link Coupling. E. W. Himberger. 2,031,889; Feb. 25.
Liquid cooling device. G. Jurkat and W. A. Ehert. 2,032,130; Feb. 25.
Liquid dispenser. E. L. Nall. 2,031,616; Feb. 25.
Liquid dispenser. E. R. Williams. 2,031,873; Feb. 25.
Liquid fuel burner. R. M. Sherman. 2,032,332; Feb. 25.
Liquid fuel burner. R. M. Sherman. 2,032,334; Feb. 25.
Liquids, Apparatus for dispensing. E. A. O'Leary. 2,032,096; Feb. 25.
Lister-planter. S. R. Hendricks and J. M. Markel. 2,031,650; Feb. 25.
Loaf, Mechanism to assemble a composite. W. W. Hartman. 2,031,949; Feb. 25.
Lock: *See*—
Brake lock. Oil or gasoline barrel lock.
Lock for interlocking fasteners. E. R. Jordan. 2,032,019; Feb. 25.
Locomotive with individual axle drive, Electric. W. Oertel. 2,032,327; Feb. 25.
Long chain organic acid, Highly branched. F. C. Whitmore, A. H. Homeyer, D. M. Jones, and W. H. Treat. 2,032,150; Feb. 25.
Loom stock fabricating machine. J. H. Roberts. 2,032,098; Feb. 25.
Lubricants and manufacturing the same. R. K. Stratford and J. L. Huggett. 2,031,986; Feb. 25.
Lubricating system. H. A. Rising. 2,031,671; Feb. 25.
Lubricating system, Centralized. O. U. Zerk. 2,032,036; Feb. 25.
Machine for cleaning seed cotton and for extracting the seed cotton from burrs and hulls. J. Blewett. 2,031,587; Feb. 25.
Machine for filleting fish. H. S. Rowton and J. L. Rowton. 2,031,956; Feb. 25.
Machine for tamping earth. J. Eggert. 2,031,695; Feb. 25.
Machine for washing, drying, and polishing tumblers, cups, and like articles. A. Griffiths. 2,032,018; Feb. 25.
Machine parts and apparatus intended for high temperature operation, F. Rittershausen and H. Korschan. 2,031,904; Feb. 25.
Magazine vending machine. A. Graillat. 2,032,278; Feb. 25.
Magnetically releasable latch. F. C. Schoch. 2,031,728; Feb. 25.
Magnetron. W. E. Kühle, D. Prins, and F. Harriger. 2,031,778; Feb. 25.
Marking machine. C. F. Eaton. 2,031,763; Feb. 25.
Mat, Door. C. C. Teidemann. 2,031,867; Feb. 25.
Material, Conveying pulverulent. M. Vogel-Jorgensen. 2,032,237; Feb. 25.
Materials, Impregnation of. W. Breuers, H. Mark, and E. Konrad. 2,031,929; Feb. 25.
Materials, Manufacture and treatment of. H. Dreyfus. 2,031,594; Feb. 25.
Measuring and filling mechanism. L. E. Spear. 2,031,919; Feb. 25.
Mechanism for emptying containers. J. E. Trouth. 2,031,909; Feb. 25.
Medicine glass cover. E. Johnson. 2,031,892; Feb. 25.
Merchandise container. H. W. King. 2,031,896; Feb. 25.
Metal articles for coating. J. J. Canfield and G. W. McGahan. 2,032,256; Feb. 25.
Metal surfaces, Cleaning. C. Johnson. 2,032,274; Feb. 25.
Meter: *See*—
Electric meter. Flow meter.

Slipper. S. Stephens. 2,031,796; Feb. 25.
Snap valve. F. A. Gauger. 2,032,053; Feb. 25.
Soap, Packaging molten. R. H. Potts. 2,031,858; Feb. 25.
Soda, Manufacture of caustic. H. K. Moore. 2,031,944; Feb. 25.
Soldering flux. W. K. Schweitzer. 2,031,909; Feb. 25.
Solvent recovery device. G. A. Mott and C. C. Jones. 2,032,298; Feb. 25.
Solvents, Cellulose derivative. G. W. Seymour. 2,031,619; Feb. 25.
Sound from sound films, Method of and system for reproducing. O. Chouinard. 2,032,200; Feb. 25.
Sound gate. F. Schiff. 2,032,184; Feb. 25.
Sound reproducing apparatus, Electrodynamic. D. T. Hinchen. 2,031,775; Feb. 25.
Sound, System and apparatus for recording and reproducing. A. A. Thomas. 2,031,865; Feb. 25.
Sound system for visually observing, Short wave. J. L. Gray. 2,031,884; Feb. 25.
Sound vibrations on flexible records, Apparatus for engraving. M. A. Lichten. 2,032,062; Feb. 25.
Splicing mechanism, Automatic. H. A. W. Wood. 2,032,244; Feb. 25.
Spool holder. L. C. Hogan. 2,031,890; Feb. 25.
Spouts to containers, Attaching. W. F. Leonhart. 2,031,838; Feb. 25.
Spray container. C. Winning. 2,031,916; Feb. 25.
Spring: *See*—
Automobile spring. India rubber spring.
Springs together, Apparatus for tying coil. B. Krakauer and S. S. Marcus. 2,031,894; Feb. 25.
Sprinkler head. H. E. Meng. 2,032,064; Feb. 25.
Stand and book-rack, Combination lamp. J. P. Golden and J. F. O'Neil. 2,032,086; Feb. 25.
Starter and compressor, Combined engine. R. M. Nardone. 2,032,025; Feb. 25.
Static and interference balance system. J. M. Kane. 2,031,607; Feb. 25.
Steering mechanism. A. Neveu. 2,032,146; Feb. 25.
Stiffener, Collar point. J. De Benedetti. 2,032,266; Feb. 25.
Stiffening of double collars. H. Hönigsberg. 2,031,776; Feb. 25.
Stoker conveyer. H. P. Anderson. 2,032,338; Feb. 25.
Stopper, Automatic bottle. J. B. Della Libera y Silicani. 2,031,821; Feb. 25.
Stopper, Bottle. A. B. Dodge. 2,031,880; Feb. 25.
Stopper, Nonrefillable bottle. W. H. Kern. 2,031,715; Feb. 25.
Stretcher, Curtain. S. Hausbach. 2,032,090; Feb. 25.
Strip moistener, Gummed. T. J. Gray. 2,031,697; Feb. 25.
Suction cleaner. D. G. Smellie. 2,031,911; Feb. 25.
Sugar manufactering process. J. M. Widmer. 2,032,160; Feb. 25.
Sulphur dioxide from gas mixtures, Recovery of. D. Tyrer. 2,031,802; Feb. 25.
Support: *See*—
Brake beam safety support. Tubing support.
Table leaf support.
Support for use in conjunction with cabinets and the like, Extensible. H. A. Sperlich. 2,032,188; Feb. 25.
Supporter grip, Hose. W. F. Fassett. 2,031,699; Feb. 25.
Sweetening process. F. R. Moser. 2,031,972; Feb. 25.
Switch: *See*—
Gang operated switch.
Switch box lath clamp. J. R. Simek. 2,031,861; Feb. 25.
Switching arrangement for four-wire circuits. L. Espenschied and N. Monk. 2,031,696; Feb. 25.
Synchronizing system. P. A. Noxon. 2,031,976; Feb. 25.
Table: *See*—
Extensible table. Game table.
Table leaf support. F. L. Casper. 2,031,759; Feb. 25.
Tank car. K. S. Howard. 2,032,212; Feb. 25.
Tank gauge. L. H. Bogart. 2,031,999; Feb. 25.
Tape ladder for Venetian blinds. G. C. Runge. 2,031,981; Feb. 25.
Teeth, Attachment for artificial. J. Taguchi. 2,032,102; Feb. 25.
Telegraph system, Printing. T. L. Corwin. 2,031,934; Feb. 25.
Telephone call apparatus. J. Servanton and J. M. Consael. 2,032,229; Feb. 25.
Telephone pay station apparatus. G. A. Long. 2,032,063; Feb. 25.
Telephone system. F. A. Bonomi. 2,031,922; Feb. 25.
Telephone system. A. Carson. 2,031,692; Feb. 25.
Temple for eyeglasses. F. L. Grier. 2,031,771; Feb. 25.
Tensioning device. G. L. Matthews and H. L. Diehl. 2,032,217; Feb. 25.
Tentering and drying machine. M. Hahn. 2,032,014; Feb. 25.
Testing machine. C. L. Dennis. 2,032,202; Feb. 25.
Tetraphosphates, Making. A. H. Finke and C. S. Bryan. 2,031,827; Feb. 25.
Textile machinery. J. Jabouley. 2,031,655; Feb. 25.
Textile material, Coated. S. A. Atkins. 2,031,629; Feb. 25.
Thermoelectric machine, Centrifugal. R. J. Mathias. 2,031,966; Feb. 25.
Thermometer. A. E. Whittier. 2,031,624; Feb. 25.
Thermostat, Compensated pilot-controlled. N. T. Branche and V. O. Beam. 2,032,045; Feb. 25.
Thermostat, Manual reset. P. R. Lee. 2,032,136; Feb. 25.
Thread printing apparatus selector mechanism. D. B. Bonner. 2,032,043; Feb. 25.
Thread restoring tool. G. A. Boettcher. 2,032,198; Feb. 25.
Threads, Apparatus for feeding and winding textile. W. I. Taylor and A. H. Woodruff. 2,031,799; Feb. 25.
Tile spacer. F. H. Berger. 2,031,684; Feb. 25.

Timepiece and the like. R. C. Graseby. 2,031,705; Feb. 25.
Time release device, Automatic. W. H. Stilling. 2,032,189; Feb. 25.
Tire spreading machine. A. Mehnert. 2,032,295; Feb. 25.
Tire vulcanizer. C. E. Norris. 2,032,222; Feb. 25.
Titanium sub-oxide materials, Purifying. F. von Bichowsky. 2,031,750; Feb. 25.
Toaster, Electric. I. Jeppson. 2,031,856; Feb. 25.
Toasting and similar apparatus. C. A. Feltman. 2,032,272; Feb. 25.
Toilet seat hinge, Lock-on. W. A. Carmichael. 2,032,257; Feb. 25.
Tool: *See*—
Bearing pulling tool. Thread restoring tool.
Geometric tool.
Tool for preparing belt ends. J. C. Olsen. 2,031,977; Feb. 25.
Tooth curve for rotors and gears. M. F. Hill. 2,031,888; Feb. 25.
Torch for welding seams along curving surfaces. J. L. Anderson. 2,031,583; Feb. 25.
Toy. F. I. Wheeler, Jr. 2,032,192; Feb. 25.
Toy, Constructional. R. Ogden. 2,031,848; Feb. 25.
Toy machine gun. E. C. Mitchell. 2,031,842; Feb. 25.
Toy, Percussion. M. L. Wiener. 2,032,161; Feb. 25.
Toy road scraper. J. V. and A. M. Watt. 2,031,751; Feb. 25.
Tractor. T. Brown. 2,031,758; Feb. 25.
Tractor wheel. W. Maxwell. 2,032,293; Feb. 25.
Train pipe coupling. H. P. Petsnick. 2,032,096; Feb. 25.
Transmission and braking mechanism, Automotive. F. W. Cotterman. 2,032,050; Feb. 25.
Transmission system for a pressure-operated member such as a hydraulic press. D. Sciaky. 2,032,185; Feb. 25.
Transmitting system. C. W. Hansell. 2,032,208; Feb. 25.
Trimming apparatus. J. Q. Holmes. 2,032,127; Feb. 25.
Trinitrotoluene, Purification of. J. A. Wyler. 2,032,035; Feb. 25.
Tube: *See*—
Braun tube. Photoelectric tube.
Carrier tube.
Tubing support. J. H. Howard. 2,031,654; Feb. 25.
Turbine, Thermoelectric. R. J. Mathias. 2,031,968; Feb. 25.
Two-stroke engine. A. L. R. Bernard. 2,032,108; Feb. 25.
Typewriter attachment. M. W. Krauth. 2,031,962; Feb. 25.
Typewriting machine. C. W. Brenn. 2,031,928; Feb. 25.
Typewriting machine. W. A. Dobson. 2,031,593; Feb. 25.
Upholstery for seat backs. W. A. Gedris. 2,031,583; Feb. 25.
Vacuum cleaner. F. Riebel, Jr., D. M. Dow, and L. W. Child. 2,031,734; Feb. 25.
Valve: *See*—
Engine valve. Pressure regulating valve.
Gas or vapor discharge valve. Pressure relief valve.
Snap valve.
Heat responsive valve. Water relief valve.
Valve. C. H. Cotton. 2,032,316; Feb. 25.
Valve. A. Novotny. 2,032,302; Feb. 25.
Valve cap for use with wheel or tire covers. H. S. Jandus. 2,031,955; Feb. 25.
Valve controls for multicylindered internal combustion engines, Choke. C. E. Patton. 2,031,902; Feb. 25.
Valve device, Triple. C. C. Farmer. 2,032,169; Feb. 25.
Valve device, Triple. J. C. McCune. 2,032,143; Feb. 25.
Valve mechanism and actuating means therefor. G. S. McKee and H. L. Galson. 2,031,614; Feb. 25.
Valve testing device. C. C. Farmer. 2,032,121; Feb. 25.
Vanity case or compact. H. B. Clegg. 2,031,933; Feb. 25.
Vehicle, Wheeled. J. C. Mock. 2,032,219; Feb. 25.
Vibration damping device. H. C. Harrison. 2,031,948; Feb. 25.
Vibration translating device. C. F. Wiebusch. 2,032,194; Feb. 25.
Vibratory screen. E. B. and I. F. Deister. 2,032,082; Feb. 25.
Viscosity device, Comparative. A. F. Blanchard. 2,032,197; Feb. 25.
Vitreous material, Manufacture of an improved. A. W. H. Wedlock. 2,032,239; Feb. 25.
Waffle iron heater. H. F. Umstott. 2,032,104; Feb. 25.
Wagon for transportation by rail and by road. J. B. L. Degiarge. 2,032,267; Feb. 25.
Wall covering. J. L. Tuthill. 2,031,680–1; Feb. 25.
Washing machine, Linen. J. and A. Persoons. 2,031,788; Feb. 25.
Water dispenser, Drinking. A. Gudmundsen. 2,031,599; Feb. 25.
Water heater, Electric. M. S. Gaselle. 2,032,125; Feb. 25.
Water heater, Instantaneous electrical. R. Holt. 2,032,210; Feb. 25.
Water level indicator for steam boilers. L. O. Gunderson. 2,031,644; Feb. 25.
Water, Purifying of. M. Jaenicke and G. Bailleul. 2,031,711; Feb. 25.
Water relief valve, Steam line. L. C. Hyatt. 2,031,953; Feb. 25.
Wave oscillating system, Standing. I. E. Mouromtseff and H. V. Noble. 2,032,181; Feb. 25.
Web roll controlling mechanism for printing machines. H. V. Ball. 2,032,339; Feb. 25.
Weft replenishing mechanism of looms for weaving. J. E. Moore. 2,031,726; Feb. 25.
Weighting means for spinning frames. C. Morton. 2,032,298; Feb. 25.
Welded article and process therefor. S. A. Snell. 2,031,862; Feb. 25.
Well drilling apparatus. W. L. Church. 2,031,931; Feb. 25.
Well packer, Oil. E. D. McFadden. 2,031,613; Feb. 25.
Well point. A. C. Saxe. 2,031,983; Feb. 25.
Wheel: *See*—
Rail car wheel. Tractor wheel.
Wick feed oiler. W. N. Hallanger. 2,031,648; Feb. 25.
Windshield cleaner. E. Hansmann. 2,031,830; Feb. 25.
Windshield cleaner. E. C. Horton and H. Hueber. 2,032,319; Feb. 25.
Window and screen, Combination storm. H. O. Doble. 2,031,875; Feb. 25.
Window construction. O. R. Hankins. 2,032,126; Feb. 25.
Window construction. J. A. Ryan. 2,031,907; Feb. 25.
Window unit, Sliding. A. B. Fisk. 2,032,170; Feb. 25.
Wing structure. P. E. Mercier. 2,031,662; Feb. 25.
Wire feeding apparatus. V. J. Chapman. 2,032,260; Feb. 25.
Wood impregnation. C. W. Mudge. 2,031,978; Feb. 25.
Yarns, Manufacture of spun. F. C. Hale. 2,031,647; Feb. 25.
Yeast, Purifying. G. T. Reich. 2,031,668; Feb. 25.
Zinc chloride base flux. E. A. Taylor. 2,031,913; Feb. 25.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 25, 1936

NOTE.—First number—class, second number—subclass, third number—patent number

2— 3: 2,032,203
14: 2,031,676
19: 2,031,898
24: 2,031,622
87: 2,032,216
73: 2,032,031
2,032,223
132: 2,031,776
2,032,206
4— 148: 2,032,190
230: 2,032,237
5— 98: 2,032,141
8— 5: 2,032,009
19: 2,031,899
20: 2,031,957
10— 1: 2,032,196
161: 2,032,089
12— 17: 2,031,744
122: 2,031,868
142: 2,031,645
2,031,674
15— 13: 2,031,987
16: 2,031,911
97: 2,031,633
161: 2,031,867
167: 2,031,900
213: 2,032,013
258: 2,031,820
16— 72: 2,032,078
17— 3: 2,031,886
18— 2: 2,032,079
8: 2,031,788
2,031,799
15: 2,032,171
18: 2,032,223
30: 2,031,766
50: 2,032,220
54: 2,031,636
59: 2,031,720
19— 1: 2,031,647
37: 2,031,857
125: 2,032,208
162: 2,032,076
20— 5: 2,032,053
8: 2,031,896
19: 2,031,847
48: 2,031,907
23— 2: 2,031,632
48: 2,031,974
85: 2,031,681
106: 2,031,837
178: 2,031,787
178: 2,031,802
202: 2,031,750
226: 2,031,801
24— 16: 2,032,232
27: 2,032,235
30: 2,032,005
201: 2,032,200
208: 2,031,949
248: 2,031,939
269: 2,031,695
25— 1: 2,031,809
103: 2,032,084
118: 2,031,612
26— 65: 2,032,070
29— 86.1: 2,031,814
88.2: 2,031,797
2,031,824
2,031,906
148.2: 2,031,936
149.5: 2,031,963
155.83: 2,032,017
30— 13: 2,032,261
32— 8: 2,032,103
14: 2,032,223
29: 2,031,906
33— 27: 2,031,920
92: 2,031,661
204: 2,032,018
34— 48: 2,032,014
36— 7.3: 2,032,062
9: 2,031,796
11.5: 2,032,206
75: 2,031,753
37— 153: 2,032,088
40— 125: 2,032,026
126: 2,031,620
41— 24: 2,032,039
43— 58: 2,032,274
44— 9: 2,031,917
2,032,262
45— 24: 2,032,090
77: 2,032,054
46— 31: 2,031,848
40: 2,031,751
91: 2,032,192
194: 2,031,785
200: 2,032,161
47— 61: Pl.Pt.167
49— 14: 2,032,075
33: 2,032,009
45: 2,032,008
69: 2,031,739
77: 2,031,980
81: 2,032,003
